Judge MONTAGUE. That is true. The industry resents people writing these regulations and restrictions who don't know the problems of the industry. Yet every man in the industry would gladly cooperate in an effort to bring about order by supporting the War Meat Board, which is essentially the creature of the industry.

Mr. KLEBERG. I desire to thank you, and for my part, may I say in concluding the section of this discussion which has to do with beef and beef cattle that references made to the situation confronting the Nation in the beef shortage merely is a part of the national picture involved in both food and inflation, which are the major problems of the home front today.

Mr. Speaker, I have been unable in my own research to find any reason which could stand up for the regulation which involved the fixing of quotas based on a

percentage of what the slaughtering section of the industry killed in 1941.

At the time which was selected as a base date from which to start restrictions, this Nation was not at war. This Nation had a national income, based upon figures of governmental source, indicating $95,600,000,000 as the national income of 1941. With this income, and with one person at work then where two are working today, and in this year of 1943, with indications pointing toward a national income in excess of $140,000,000,000 I do not believe it makes sense, if there is real truth in the administrative proposition that these quotas and restrictions are placed as a part of the administration's war on inflation, when the base is itself laid by its own statement on the great discrepancy between excess income and consumer's goods.

How can public confidence be maintained in the face of such reasons given by those high in authority as a basis for producing the beef shortage which we have today? I would warn the administration, as a humble Member of Congress, never for one moment to forget that the United States was built starting with tremendous conflicts between early pioneers, the elements, and the ruthless, savage aborigines. The traditions of this Nation furnish the basis for our national law and knowledge of natural and elemental laws, as well as some of the things we learned from the Indian.

The Indian was always a friend to the white man who told him the truth, but he never forgave the white man who sought to take advantage of him by misrepresentation of the truth. And such a proposal flies directly in the face of the known and developed intelligence and education of my countrymen, and along with them, I resent it. I am perfectly sure that the day has come for the Congress of the United States, which represents the 130,000,000 people of this Nation, to not only take cognizance of the amazing situation which confronts us, but upon its return to institute immediate remedial action looking toward correcting it, and letting the American way, which we Americans know so well, do the job.

I believe now, before discussing the second of the original problems mentioned at the outset of my remarks—food and inflation—referring to inflation, that you should have the benefit of the results of calculations by the National Industrial Conference Board with reference to the cost of living, which shows that since August 1939 this cost had risen 21.2 percent by February of 1943. In the same period average hourly earnings of workers in 25 manufacturing industries had risen 36.4 percent. The weekly earnings of these workers had risen 60.9 percent. The hourly earnings of bituminous coal miners had risen 140 percent from May 1933 to December 1942, during which period the cost of living had advanced only 33 percent.

It is estimated that the introduction of the 6-day, 42-hour week has added another 30 percent to the weekly wages of the miners. This is exemplary of one phase which apparently has escaped the attention of those within the administration who are leading the fight against inflation.

On July 3, viewing this situation from a different angle, I give you an excerpt from the Kiplinger agricultural letter. I quote:

Here is what Bureau of Agricultural Economics says in current Marketing and Transportation:

"Actual expenditure for food, in percentage of national income, is now at the lowest point in history, 21 percent. 'The average United States consumer is able to purchase a food basket of specified foods for smaller share of his income than at any period of record—true even when the cost of the food is compared with consumer's disposable income after payment of direct personal taxes. Advances in retail food prices since start of the war have been much less proportionately than the average increase in consumer incomes. Total expenditures for food have risen more rapidly than retail food prices, reflecting advances in standards of food consumption and increases in services obtained with food.'

"As for wages, Senator REED, of Kansas says, in the CONGRESSIONAL RECORD, that Bureau of Agricultural Economics and Bureau of Labor Statistics figures prepared for him show there has not been a week or a month since January 1939 when factory and mill wages have not increased more than the cost of living, and that the hourly wage increased 57.9 percent, weekly wage 92.9 percent, while the cost of living has increased only 24.1 percent.

"As for wage and farm price increases based on 1909–14 as 100, Senator SHIPSTEAD, of Minnesota, quoting figures prepared for him by Bureau of Agricultural Economics, says that hourly wage rate indices in March of this year were up to 449, weekly wages 365. Farmers' prices were up to 182, retail food costs up to 177, and cost of living 178.

"Such figures may explain the conciliatory Commodity Credit Corporation veto message."

Because of the great confusion concerning just what kind of inflation we are supposed to fear, just what composes it or makes it up, there is one school of thought, which has appeared reasonable to me, which checks into the possibilities of discussing the four primary categories into which the inflation problem has been divided for purposes of review and assay.

The first of these is purchasing power, which is viewed both from the rate of increase as well as the amount of increase. Both rate and amount are due, shall we say, principally to what may be referred to as expedient, or, shall we say, political or Government influence, which result from unusual preferences and advantages for workers in war industry and discrimination, or, shall we say, forgetfulness against workers or of workers in nonwar production and distribution, as well as agricultural workers.

For the purpose of being logical and consistent, if the inflation which we fear is due to excess income over consumer goods, this would be the first place to exert an applied effort to control inflation. It is not necessary to call your attention to the prevailing policy, which is opposite to this line of thought.

Second, consider the supply of consumer goods. Of this, food is more than an inconsequential part. We have here the evidences of the theory which calls upon the American people to sacrifice for the sole sake of sacrifice, evidenced by reckless and irrational reduction in civilian supplies, without essential regard for military need.

Confronted as we are with the need to control inflation, the second battle line must be drawn at the point which is now looking toward the immediate effort to increase civilian supplies as the natural and patent means of soaking up excess purchasing power. This, of course, means with careful regard to ways and means, looking toward prevention of improper reduction of supplies for legitimate military needs.

Third, let us look at savings. In this category there had already been much done looking to the control of inflation. Reliable sources of information indicate that the savings of individuals, as differentiated from banks, and others going into Federal securities, had risen to a point approximating a billion dollars a month.

Fourth, taxation. And in this category I believe it is safe to say that reasonable study will indicate that taxation properly used as an inflationary control has been increased to a point way ahead of the proper marginal line with respect to income of $5,000 per year and over. Certainly, it has when comparisons with the other three categories, purchasing power, consumer goods, and savings are considered.

Therefore, it seems rational that further use of taxation as a weapon against inflation is questionable in its application save to incomes of $5,000 per year and under, if the sole object is to be the freezing of purchasing power and the reduction of this excess pressure on price levels.

I quote from Treasury Department Release to Financial Writers, No. 3:

Treasury economists estimate that seven-eighths (87½ percent) of Nation's current incomes after taxes goes to persons earning less than $5,000 per year.

In the war going on against inflation there is manifest evidence that considerable confusion exists in the mind of those presently engaged in this battle, administratively speaking, between the meaning of control of inflation and the word "freezing." To better illustrate this, we have but to look at the traditional function of price in inducing production and in allocating or apportioning supply. Where need for additional production exists, the most potent means of inducing it is by an increase in stipend paid or price therefor. But above this, in importance, is to maintain a proper, sane equilibrium and thereby control the rate of increase.

Next in importance is to remember that there is no point in increasing prices above what additional production is worth. If the cost of something you desire and obtain is in proper proportion to the value of what you get, you have your feet on the ground and are pursuing the time-honored effective means of getting it.

After review and assay of the problem from the viewpoint just expressed, let us look at a few of the things that are being

done and suggested as weapons to be used against inflation. Let us for a moment look at the subsidy and the subsidy and roll-back proposals.

At the outset may I say that, in my opinion, unless this proposal is rescinded by Congress upon its return, it bears every earmark of possibly costing the Nation billions of extra dollars, while at the same time contributing to the shortage of food and foodstuffs and the intensification of the real danger of inflation.

First, it is rational to state that one cannot eat subsidies. Second, a subsidy cannot put flesh on a dead cow or a dead chicken or a chicken that is not in esse.

Let us look, too, to the effect of proposing a subsidy to a man for the performance of his duty and the impact of this proposal on both his intelligence and his pride, multiplying this individual by the number of those who are of like thought, and see what the impact of this group would do to the public confidence of this Nation which, after all, is made up of Americans.

The people of the United States, I take it, are, in a tremendous majority, rational folk, possessed of the power to exercise American reason. A long time ago the Constitution of the United States was ratified by States which were then fewer than now. Today, 48 States adhere to its principles, and the people of these States are bound to support this compact as the very heart of our system of freeman's government, representative democracy. This organic law of ours is evidence of both the reasoning power and the faith of the American people. When the reasoning faculties of the American people have this question proposed, if the administrative policy of 5-percent roll-back on prices of food has real merit, why would not a roll-back of 15 percent, 25 percent, or 75 percent have even more merit, the answer is plain.

No one has told us where the roll-back would start or stop. Will roll-back be increased again and again, until all of us, rich and poor alike, will be supplied with food by the Government at the expense of the taxpayers? Will not subsidies destroy the American price system, the mechanism which through the years has been the most effective ever devised for distribution? Shortly, if this policy is carried on, every group affected by subsidies could become dependent upon the Government for favors. What would be its impact and final effect upon our private enterprise system and our constitutional form of government? How, in the field of American reason, can the claim be substantiated that this proposal would do less than force inflation upon us at just such pace as the subsidies might be put into effect and increased, while at the same time consumer goods, due to added confusion and the natural prejudices of man, would dwindle?

Caesar tried this, doling bread out to the Romans, as a function of government performing its duty. Down at home, when we had feed for cattle, we measured it out to them in troughs.

Subsidies might seem to the heedless and unthinking to lessen the cost of food to the consumer, but somebody pays for them, and that somebody is the American taxpayer, who is a consumer, too. This peculiar deception would leave more unspent money in circulation by reason of lower costs to consumers, and would finally be used to build up the price of other goods in other channels.

We already have inflation in this country. Inflation has always been the product of war and has always accompanied it during wartimes. In 2 years prices have risen nearly one-third. Our dollar of 2 years ago represents 75 cents worth of purchasing power today. Inflation is already here. Why speed it up by decreasing consumer goods and leaving more excess spending money in the hands of those who will spend?

Look at this other side of the picture. How could we expect to reduce inflationary effects when a large percentage of the productive capacity of this Nation is turned to the making of war goods and materials? Of course, the production of civilian goods must go down in such conditions. When supply of civilian goods decreases and the purchasing power of the public is increased through high employment rate and high wages, of course the public has more buying power and less goods on which to spend it, and of course it bids more for the goods in the decreased stock pile of consumer goods as they are needed and desired. And of course prices go up.

Of course, the President is right when he declares that we must wage unrelenting war against inflation on the home front. Following World War No. 1 we had but to look at the pitiful plight of Germany. Inflation in Germany was in many ways more devastating than the war itself. The value of the German mark was so depressed that the prices of ordinary things rose to billions and trillions. At one time the price of a dozen eggs was in excess of 1,000,000 marks. Of course, catastrophe and national bankruptcy followed.

Even though history were not replete with instances to prove the devastating effects of inflation, together with a record of how its devastation had been checked, in the field of American reason it seems perfectly simple that like any other disease or disaster it should be attacked at its source. Removing the cause, if not too long delayed, has always saved the patient.

What are we doing about the cause? Are we attempting to remove or decimate it in its various phases, or are we, in fact, proposing ways and means of feeding it and causing it to flourish? Of course, there are always two strong forces opposite to each other. Everyone wants higher wages, salaries, and at the same time everyone wants lower prices. Likewise, everyone who thinks, knows that you cannot have higher wages and at the same time have lower prices. The old adage "You can't eat your cake and have it too" applies with peculiar force.

As a Member of Congress, I recall a message by the Chief Executive to the Congress with reference to farm prices, where he insisted that Congress do something to hold them down, and that he would do something about wages. You all know what Congress did. What has the administration done?

I would ask Mr. Lewis and other labor leaders how they rate the importance of defending the Little Steel formula as against defending the American system and way of life; how they rate the defense of the total gains of organized labor without sacrifice against their insistence that other folks sacrifice for the sake of sacrifice.

The administration is acquainted with these facts. It is needless for the sake of informing the administration for me to say anything about them, but it is not needless to remind the American people of this peculiar and vicious situation. Between 1939 and 1942 our national income has increased a little in excess of $42,000,000,000, according to the best sources from which statistics come. A little later I want to call your attention to statistics. Of this $42,000,000,000, only 14 percent went to agriculture, 86 percent going to nonagricultural sources, to industry, yet the assertion is repeated time and again that rising farm prices, not rising wages, have caused a rise in the cost of living. Do your own thinking. How does it look to you?

The number of employed persons since January of 1941 has increased 40 percent. Rates of pay are up 35 percent. Hours worked per week have risen 15 percent. The combined effect of these on total pay rolls has increased them 117 percent. What part do you think this plays in causing inflation? I am asking you.

Certainly, no one will deem it good politics to oppose wage increases, but at least the wage earner should know that the situation just mentioned is responsible in the main for the rising cost of living, which always kicks back at the wage earner. No human is responsible for this, but an all-wise and beneficent Destiny, the God in whom we trust, has so ordained it in the operation of the natural laws which He administers.

Our Chief Executive, in a recent veto message, admitted to the Congress that wage increases do raise prices. So it is patent that what I have said does not leave me alone in this belief.

The people of the Nation cannot continue to be misled and misguided in these beliefs:

First. That any group, including labor, can escape the essential economic sacrifice incident to war; second, that the cost of living can be kept from rising in spite of continued widespread wage increases; third, that raising farm prices to fair levels was the major cause of higher living costs; fourth, that labor could not only maintain its gains but elevate its own standard of living without sacrifice. As long as war continues, shortages of manufactured goods in the main can be expected, and, of course, prices for these

goods will continue to rise unless something is done about it.

What, then, can we do about this situation of inflation before its impact reaches true destructiveness?

First. We can stop or control to a proper degree increases in wages, in salaries.

Second. We can siphon off the public's excess spending power, which is purchasing power. Taxation is, of course, unpopular, but after all, we must pay the cost of this war, and at the same time cut down spending and buying power.

Third. We can encourage the production of necessities by permitting their prices to rise a little and permitting the automatic price mechanism, as far as possible, to control the situation, instead of rigid price fixing by Government bureau or agency.

The power of taxation should never be used save for its legitimate and limited purposes, as set out in the Constitution. It should not be used as a weapon in domestic wars which arise out of appeals to class prejudice; nor should taxation be used to accomplish ends which are not tested in the field of American reason. After all, the so-called wealthy class received less than 12½ percent of the Nation's current income after taxes, as has just been shown in the previously quoted statement from the Treasury. Taxation as a weapon against inflation must be used fairly and equally to all who have increased in earnings and to all who have added to the increase in inflationary spending power. Purchases of War bonds, forced savings, together with highly commendable thrift, if there be such, desirable as they are, cannot remove the dangers of inflation. They can only retard the evil day of consummation of disaster.

We in the Congress can and must do something about it. It is a part of our responsibility, regardless of what others do.

I would like at this juncture to add a fourth thing that we can do, and this is a major thing: Increased production automatically checks rising prices. The development of surplus in any commodity inevitably lowers prices. That opportunity has been called to your attention and stressed somewhat in the example I gave with reference to the beef industry, and the distinction between beef and live cattle. As long as we have a surplus of live cattle, we can produce, if necessary, a surplus of beef, if we are truly serious in our intentions to win the war and save the American way of life; and I am sure we are, because through our national history the American people have again and again shown that they will support those who fight for the right, regardless of consequences. They will do it again. And the days are here now when we must speak out against dangerous policies.

I think, as seriously as I have ever thought before, that the time is here, and now is the time, to sum up some vital facts. Here they are as I see the picture, and while looking at them, may I say, in fact and earnestly, that I see a greater America as the result of the test which is upon us, an America that we have known in our dreams, an America that the flower of our youth is fighting to bring to reality, the America, yes, of the dreams of our fathers and of their fathers. This America stands solidly upon the most vital rock of ages, the rock of unshattered public confidence of the American people that will be defended to the last by all of those who are true sons.

The most recent and best estimates show we have a population of upward of 135,000,000 souls. Of these—and referring, of course, to those who are not dependent and who have reached the age of thinking for themselves—I call your attention to the fact that they represent the group whose opinions are a part and parcel of the public opinion of the United States as individuals, and as a whole they make it up in toto.

It has been said repetitiously down through the centuries that man's mind and heart are most sensitive in the regions brutally described as belly and pocketbook. There seems, therefore, to be some definite relationship between food and inflation which affects them both. Man's reasoning powers and his ability to make decisions when at its height of efficiency is, of course, measured by an accompanying physical fitness. For instance, a person suffering from sea-sickness undergoes various phases during the development of mal de mere. There comes a time when the afflicted finds difficulty in deciding whether it would be preferable to live or die. Now, later, if land has not been reached and if the crescendo of sea-sickness increases, the position is reached where the only desire remaining is to die as quickly as possible—forthwithly, in other terms. This, even though land might be in sight through a porthole, and though only 30 minutes might be required to reach it, which would indicate to one with unimpaired reasoning faculties that surely, in 30 minutes, he would be well.

So much for this example. But human reason and the reactions of the heart—not considered as a vital pumping plant to keep up circulation, but as a part and parcel of the motivating reactions which make up opinion and action—are affected by more than sea-sickness. There are reactions occasioned by confusion, by the inability of loyal beings to accept without reason being given therefor, certain things which affect this reason in an unacceptable way. So the problems of food and inflation as presented by this discourse are weighed in their presentation for the purpose of not producing impacts which destroy in part or portion that thing known as confidence in the mind and heart reactions of the individuals who make up the public opinion of the people of the United States.

It is impossible for a normal mind charged with high responsibility to accept proposals which, when passed through the reasoning machinery, do not provide a proper Q. E. D. And so it is—with reference to the discussion which I have attempted to present thus far—within me a problem which produces the temerity which I described at the outset of my discussion in approaching this subject.

Let us look at some of the things that disturb me. While I would have your reactions to them, I must be satisfied with merely stating them.

Here I stand, as a citizen, charged with high responsibility and under oath in the sight of God to perform a function as one of 435 Members of this body, which function affects the present and future welfare of each one of the 135,000,000 who make up the population of the United States.

Let us see what the impact of the statistical information that we have $142,000,000,000 worth of national income in the offing for 1943 may be. And let me, with such reason as I possess, present to you the effect of this statement:

First. What is this national income composed of? After due thought, I see it to be composed of earned increment which comes from the soil and from the rendering of service through applied effort or labor. Added to this, if I am a farmer or if I am a member of organized labor, I find an addition to my earnings as a farmer of certain Government payments; if I am a member of organized labor, I see increased wages which are the results of organized pressure. Both of these increases come by action of Government.

What does this mean with reference to the first part which makes up this income, earned increment from the soil, the original source of wealth, and applied effort?

Second. Government payments or increases in earnings by reason of pressure. Who pays this? I soon find out when the tax collector comes around, because I find though I have earned it in part and part of it has been paid me by a different line of endeavor, still I have more to pay back out of it. So much for this reaction.

I then come to the conclusion that I had better begin looking at figures in their true light. I had better begin being inquisitive about statistical statements and the soundness of the picture which they present. For instance, presented from another angle, on December 1, 1941, the total interest-bearing securities outstanding and paid for and upon which interest is paid to the holder amounted to $56,786,000,000 in round numbers. In December of 1942, following Pearl Harbor, these interest-bearing securities reached a total of $102,559,000,000. And in March of this year—the last figure which I have available—this had jumped to $103,633,000,000. And, based on the rate of increase up to March, it is safe to assume that these interest-bearing securities now total at least twice the $56,786,000,000 which they represented on December 1, 1941.

In savings bonds outstanding December of 1941 showed $1,133,600,000. In December of 1942, they had increased to $6,923,000,000. And on the 1st of May 1943, they had reached the figure of $10,709,000,000, over 10 times what they were just before Pearl Harbor.

There are, of course, considerable additions to these figures to be found in the figures which represent other lines of Government securities and investments, but for exemplary purposes they will do.

Let us deal briefly, in round numbers. Take national income at the figure of $140,000,000,000, and reduce therefrom $85,000,000,000, which represents the total consumer goods available. This leaves $55,000,000,000. Of that amount, let us subtract $30,000,000,000 for 1943 in the form of taxes of various kinds, and another $10,000,000 involved in mortgage and Army and Navy expenditures abroad. This leaves a remnant of $15,000,000,000. Out of this, do what you will with the $9,000,000,000 expended for savings bonds, which represents a round-number increase since 1941; or subtract $7,000,000,000, which represents the increase in the 12 months following December 1, 1941, leaving $2,000,000,000 as the expenditure thus far in 1943. Say we subtract $2,000,000,000 from the $15,000,000,000—we have $13,000,000,000 left. And then let us subtract $6,000,000,000, which represents the interest-bearing securities sold between December 1942 and March 1, 1943. This leaves $7,000,000,000.

To my way of thinking, we are still on fairly solid ground if we use our heads the American way in the battle against inflation. This Nation cannot be destroyed by $7,000,000,000 of unaccounted-for excess spending power.

In the beef-cattle situation, alone, together with the other food problem, an increase in consumer supplies can be made between now and the 1st of January 1944, which will leave us short of spending money to purchase the addition to the consumer goods supply which can be made by the application of American ways and means.

So, boiled down, my colleagues, while the situation requires immediate, earnest, and constructive attention, it is not yet too late, even though it is certainly not too soon, to start an attack upon this situation, by giving the American people the green light, by regulation and otherwise, to solve this problem the way we have ofttimes solved others in the past.

I do not desire to take up more time, but I would earnestly adjure you, upon your return, to remember, first of all, our obligation to the legion of good and true friends and fellow citizens who sent us here as their representatives, charged prominently with a high and vital public responsibility—yes; and charged directly with expressing the voice of the American people in the halls of state.

Connected with the problems of food and inflation is the basis for great uncertainty and legitimate concern in the minds of those people we represent. This is the reason for the internal struggle which is today upon us. We must see to it, as the only defenders of the most important fundamental in the American way of life and liberty and that involves the continuity of the voice of the people in the halls of state so that a government of the people, for the people, and by the people shall not vanish from this earth.

Irrigation Projects Awaiting on the Shelf for the Benefit of Ex-Service Members

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MURDOCK. Mr. Speaker, yesterday I introduced a bill (H. R. 3179) to provide for the giving of preference to ex-service members of the armed forces of the United States in any foreign wars in approving applications for entry to public lands on reclamation projects. This bill is a revised form of one I introduced in the Seventy-seventh Congress which was H. R. 7680. The present bill has been broadened in some respects and represents a legislative proposal which has been taking shape in my mind for several years past.

Some years ago Congressman JAMES SCRUGHAM, of Nevada, and I considered the possibility of a small irrigation project on the land bordering the Colorado River in the southern tip of Nevada and across the river in Mohave County, Ariz. This land was below the site of the Bull's Head Dam and in the neighborhood of old Fort Mohave. Our original plan was to pump water from the river on both sides at a point about 9 or 10 miles below the Bull's Head site, for watering small tracts of land which could be made productive and suitable for homes for ex-servicemen.

We made some progress with the idea, even to the extent of authorizing surveys of the land and getting plans prepared for a suitable pumping plant. The lands were surveyed by the Bureau of Reclamation and a considerable sum of money was earmarked for the erection of a pumping plant. At this juncture the European war changed matters because our national defense plan called for the production of more electric power for use in the Southwest.

Accordingly an appropriation was made for the building of a dam at the Bull's Head site and $3,500,000 were appropriated to start the work. In view of the fact that the land, originally intended to be watered by pumping, is below and only 9 miles away from the dam site, it occurred to me that the Bull's Head Dam—which was later called the Davis Dam by the Bureau of Reclamation—should not only be made to produce power but should also serve as a diversion dam to furnish water by gravity to all feasible areas which might be irrigated below it. It is my understanding that the feasibility of gravity irrigation on the Arizona side of the river is readily acknowledged by Reclamation engineers.

Another turn of affairs was later occasioned by war conditions and the construction of Davis Dam was halted by a stop order of the War Production Board about a year ago because of a lack of materials. This happened in spite of the fact that there is a shortage of food which might be produced on the rich bottom land along the Colorado River under a tropical sun during 12 months of the year. Furthermore, the stop order was issued in spite of the fact that the Davis Dam is a rock-filled dam requiring a minimum of steel, concrete, and critical materials.

These facts lead us to hope that the stop orders may be removed soon. Furthermore, that the food-producing possibilities of the lands along the Colorado River to be watered may bring about a resumption of work on this dam in the near future.

A BROADER IDEA

While this specific project was proposed for the benefit of ex-servicemen before the outbreak of the Second World War, it contains the germs of a much bigger idea. At the conclusion of the Second World War there will undoubtedly be greater numbers of partially disabled men, and now women, who will want to supplement their incomes from the Government by making homes on the soil.

Experience has shown that before World War No. 2, when the Government opened up many new irrigation projects, there were many times more applicants among ex-service men than there were tracts of land to be had. This condition is bound to be aggravated in the future, even though we hope in the near future many reclamation projects will be open. By giving preference to ex-service members, both men and women, there will be so many more applicants than entries that a high degree of selection will be possible to get the best class of entrymen.

It is common knowledge that our country has experienced the greatest shock in its economic history in recent months in its conversion from peacetime economy to an all-out war footing. When peace comes again and the armies are disbanded, there will be an equal shock in reverse order in getting the returning soldiers back into civilian life. Businessmen and Government officials and all thinking persons are considering ways and means of lessening the conversion to a productive civilian life.

There will be many public and private works planned for that time. I feel that irrigation projects in the West, when carefully worked out by engineers, constitute one means of employment and homemaking which should be utilized. Therefore, I think reclamation has a big part to play in post-war efforts for the returning soldier and the good of the country.

The bill in its revised form, H. R. 3179, will give veterans preference on any land in the public domain which may be reclaimed by the Bureau of Reclamation and the water provided for the land, and repayments made to the Government over a period of years. At the present time the law specifies 40 years for repayment, the construction charges being amortized with an interest rate of 3 percent.

My bill contemplates that veterans who can qualify under the terms of the bill and under the rules of the Department may obtain fee-simple title to their

land, if it had formerly been in public ownership, in the same way as any other entryman on the project. However, there are differences to be accorded the ex-service entryman because of his, or her, war service. If the entryman meets the qualification of the bill and the Department regulations, the Government shall pay the first two annual assessment charges for such entryman, thus reducing the number of amortized payments by two. Beginning with the third annual assessment charge the Government will pay half of this annual charge for any entryman who has been an ex-service member of our armed forces.

One of the conditions imposed by the bill itself is that the ex-service member, before qualifying as an entryman must show that he or she has an income from the Government equivalent to at least one-half of the annual charge on the entry. In this way it is hoped that those who are injured in body or health who probably need some outdoor living and exercise, and are able to do a certain amount of work with profit to their health will qualify as entrymen on some projects such as may be completed in the yet undeveloped West.

The text of the bill is as follows:

Be it enacted, etc., That notwithstanding any other provision of law, any person who has had not less than 90 days' service in the armed forces of the United States in any foreign war and who has been honorably discharged therefrom and who meets requirements herein prescribed shall have preference as an applicant for entry on any public lands irrigated or reclaimed by the Bureau of Reclamation after the date of this enactment.

Each application for entry by any such ex-service member to public lands on any reclamation project, on that part of such project which is public domain, shall be given preference in every case in which such ex-service member (1) is qualified under the first paragraph, (2) shows his ability to pay on his entry, out of any monetary benefits which he receives as a veteran, one-half of the yearly charges (including construction costs and interest at 3 percent per annum) amortized over the legal period, and (3) has such other qualifications as the Secretary of the Interior by regulation may prescribe.

In the case of any ex-service member whose application for entry to public lands on a project is accepted under the foregoing provisions, repayment charges shall begin to run as in the case of all other entrymen, but the first two annual charges shall be paid by the United States for such ex-service entryman and the United States shall pay thereafter into the repayment fund for each such ex-service member annually an amount equal to that paid by such entryman.

Fighting Sons of Guns

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BLAND. Mr. Speaker, under dates of April 7 and June 4, 1943, I extended my remarks in the CONGRESSIONAL RECORD on the great work the Coast Guard is doing in this war. As one editor said:

No longer can Coast Guard men be dubbed "shallow water sailors." They're on the job whether the water is shallow or deep, the task easy or tough. They're just fighting sons of guns.

The service has been long known for its distinguished service in saving life and property at sea, in fighting floods, in providing protection against icebergs, and in battling danger wherever it appears. I have spoken of it as the great humanitarian service of the United States, and this commendation is sustained by the bare, cold facts.

The Advertiser, of Montgomery, Ala., under date of June 4, 1943, under the caption "United States Coast Guard in the War," pays fitting tribute to the Coast Guard, as follows:

UNITED STATES COAST GUARD IN THE WAR

"United States Coast Guard cutter sinks sub and captures crew in sea attack," said a three-column headline in Wednesday afternoon's Alabama Journal. The story, bearing a Washington date line, told in dramatic fashion of the spectacular manner in which men normally associated by the reading public with rescuing passengers and crewmen from foundering ships battled it out, shot for shot, with desperate crew members of a damaged German submarine and then captured the whole shebang.

Thus was brought into the limelight one of the least known—insofar as combat operations are concerned—arms of Uncle Sam's fighting forces. In peacetimes a unit of the Treasury Department charged with saving the lives of our seafaring men and guarding our shores from racketeers of the smuggling fraternity, the United States Coast Guard is doing yeoman service as a branch of the Navy. In time of war the "shallow-water sailors" automatically become a part of the Navy and perform valiant deeds with little or no fanfare. There aren't many public-relations officers on their crew rosters or war correspondents on their passenger lists.

It is a far cry from the ice patrol of the North Atlantic to sink a submarine in mid-Atlantic. Yet that latter feat merely emphasizes their versatility. They can truly lay claim to being potent factors on land, on sea, and in the air, for they utilize all three means of carrying out their objectives.

The Coast Guard was there at Guadalcanal guiding the landing boats that put those other fighting men of the sea, the marines, ashore. Their cutters and other ships skelter in, out, and around the slower merchant ships as they methodically carry out convoy assignments. Their planes soar overhead along our coast lines on the lookout for victims of U-boat prowess and the U-boats themselves. Ashore their men patrol beaches afoot, on horseback, and in the mighty little jeeps; it was a Coast Guard man, if you will remember, who first discovered the German espionage agents who landed on a New England shore some months back and turned in the alarm. All the while these doughty lads with the shield on their right sleeve to denote their branch of service are still on the lookout for smugglers and such other folks as have no business coming into Uncle Sam's realm without credentials or honest purpose.

No longer can Coast Guard men be dubbed "shallow-water sailors." They're on the job whether the water is shallow or deep, the task easy or tough. They're just fighting sons of guns.

COAST GUARD MEN HELP LAND ARMY TROOPS IN FIRST PACIFIC OFFENSIVE

A recent release from headquarters shows that when the United States launched its first offensive operation in the Pacific—the occupation of the Tonga Islands—Army troops were put ashore by Coast Guard invaders assigned to landing barges and tank lighters aboard naval transports.

A participant in the landings at Tonga was Chief Boatswain's Mate Whitney C. Guptill, 27, of Newburyport, Mass., who likened the operation to a routine practice maneuver.

Assigned to duty on the landing barges aboard one transport, Guptill, together with other Coast Guard men, had previously been to England with American troops, before participating in the Tonga landings in May 1942.

There was absolutely no opposition to our landings—

Guptill related.

The natives were most friendly and pitched in to help us with the unloading of the boats. They sure went for our cigarettes, but I believe most of them helped us more out of curiosity than anything else.

After landing troops and supplies at Tonga, Guptill later landed some of the first marines to occupy Guadalcanal on August 7, and subsequent to that made 11 more trips to the "Canal," as men out there call it.

Enlisted in the Coast Guard in September 1936, at Boston, Guptill holds the American Defense Service Medal, the Good Conduct Medal, the Expert Rifle Medal, and all three campaign ribbons authorized for this war.

He is married and has three children, the youngest of which, born last June, he has not yet seen.

DANIEL J. TARR, CHINCOTEAGUE ISLAND, VA., SILVER STAR HERO

Back from action in the southwest Pacific is 26-year-old Coast Guardsman Daniel J. Tarr, of Chincoteague Island, Va.—Tarr, a good name for a sailor—was coxswain of a landing barge which put the marines ashore on the isle of Tulagi during the invasion of the Solomons.

Although under withering enemy fire, Coast Guardsman Tarr was able to land his boatload of marines without the loss of a man. He then made several more trips to the shell-raked beach, carrying ammunition and supplies. For his "conspicuous gallantry in the invasion of the Solomons," Admiral Chester W. Nimitz, United States Navy, has decorated Coast Guardsman Tarr with the Silver Star Medal; thus he has become one of the first four Coast Guardsmen ever to receive that award in the present war. Also in recognition for his service in the Solomons, Tarr recently was elevated to the rating of chief boatswain's mate in the United States Coast Guard.

Tarr was in the Solomon Isles aboard one of the old four-stack destroyers built during World War No. 1 and converted to an auxiliary transport at the beginning of the present war. The vessel had been assigned to the task of transporting the first raider battalion of the United States Marine Corps.

It was 4 a. m., August 7, 1942, that the vessel reached Tulagi and the skipper received word that the marines were to be taken ashore to wipe out Japanese positions. The landing boats were lowered, and a coxswain was assigned to each of the craft.

Coast Guardsman Tarr was coxswain of the No. 1 boat in that first assault wave. For 3 hours before he put his marines ashore our cruisers had been bombarding the Jap positions on Tulagi with shot and shell; our planes had been lambasting the enemy positions from the air; our bombers had destroyed the 18 Jap seaplanes based at Tulagi before they could get off the water. Shells and bullets were still whining overhead as Coast Guardsman Tarr led the invasion boats toward a coral reef which was the first landing point.

The marines were landed without the loss of a single man. Tarr took his boats back to the transport ship and then made two more trips to the island, despite the heavy shell fire which was bursting from enemy guns on all sides of Tulagi. This time he brought the marines their supplies and more ammunition.

The second morning of the invasion word came that the marines were still encountering stiff and stubborn resistance and must immediately have additional supplies. Twice more Coast Guardsman Tarr took his landing barge back to Tulagi with the badly needed ammunition.

At 11 o'clock that morning his work was interrupted by an air raid of 40 Japanese planes. They were intercepted by American fighters and only 20 of the enemy aircraft managed to get as far as the American transport ships. All but 1 of these Jap planes were knocked down. Tarr's vessel was credited with bringing down 2 out of the 19.

Tarr says his closest escape in the Solomons came about a month after the invasion of Tulagi. At the time, he was landing the marines on Guadalcanal for a commando raid at dawn. Tarr disembarked the first load of marines and took his boat back to the transport for another load. When he returned to the Guadalcanal beach head with these, he found that the first load of marines had captured a big Japanese gun only 15 yards from the spot where he had landed them. Tarr says that why the gun never opened fire upon them is still a mystery.

Chief Tarr enlisted in the Coast Guard 6 years ago at Pope's Island, Va. Part of his citation by Admiral Nimitz reads as follows:

For distinguishing himself conspicuously by gallantry in action. His conduct was in keeping with the finest traditions of the Coast Guard.

Chief Tarr is from my congressional district, and the people of that district as well as the people of Virginia and of the Nation are proud of the splendid record he is making.

"ESCANABA"

The United States Coast Guard cutter *Escanaba* sank in the North Atlantic following an explosion of undetermined cause.

The entire complement aboard the cutter was lost with the exception of two men, Melvin Baldwin, boatswain's mate, second class, United States Coast Guard, 21, son of Mr. and Mrs. Arthur J. Baldwin, 124 Demers Avenue, East Grand Forks, Minn., and Raymond F. O'Malley, Jr., boatswain's mate, second class, United States Coast Guard, 23, son of Mrs. Cecilia Bruno, 11 East Ohio Street, Chicago, Ill., whose wife and daughter live at 1704 Clayborne Avenue, Chicago.

The *Escanaba*, under the command of Lt. Comdr. Carl Uno Peterson, of Newtonville, Mass., sank almost immediately after it was rent by a terrific explosion amidships.

Observers aboard the United States Coast Guard cutter *Storis*, the vessel nearest the *Escanaba*, said a large cloud of smoke and flame billowed upward into the air and the cutter sank, leaving only small bits of wreckage afloat. The ship sank so quickly it had no time to send out signals.

The United States Coast Guard cutter *Raritan* picked up the two enlisted men, who said they had no idea what caused the explosion.

The *Escanaba* distinguished itself earlier in the war for effecting the rescue of 133 men from a torpedoed ship in the North Atlantic.

Members of the crew of the cutter went over the side into the icy waters to fasten lines around the torpedoing victims and haul them aboard the *Escanaba*. Other crew members went out in rubber suits, swimming to life rafts to tow them to the cutter.

This rescue operation by the *Escanaba* evoked the highest commendation from medical officers aboard her. Nine men volunteered to plunge into the freezing waters to bring in survivors who were unable to make their own way to the cutter. As a result of the action of the *Escanaba* crew, only 1 man of the 133 brought aboard the cutter died from the effects of exposure in the frigid waters.

The United States Coast Guard cutter *Escanaba*, one of six cutters of her class, was built at the Defoe Works, Bay City, Mich., and was completed in 1932.

Steel-strengthened for ice breaking, the *Escanaba*, before entering upon convoy duty in the North Atlantic, was used on the Great Lakes with Grand Haven, Mich., as her permanent station.

She displaced 718 tons and was 165 feet in length with a beam of 36 feet and a draft of 13 feet 4 inches. Her normal complement was 60. Her rated speed was 13.5 knots.

The *Escanaba* carried two 3-inch 50-caliber guns and two 6-pounders. She was powered with turbine machinery with double reduction gear.

LT. COMDR. CARL UNO PETERSON, UNITED STATES COAST GUARD

Another hero in the service is Lt. Comdr. Carl Uno Peterson, United States Coast Guard, who commanded the *Escanaba*, and who was born in Lynn, Mass., on November 12, 1906.

He was educated at the Lynn Classical High School, Northeastern University, and the Coast Guard Academy at New London, Conn. He was commissioned ensign in the Coast Guard service May 15, 1930.

Throughout his career, Commander Peterson was particularly interested in the radio engineering field, although he spent most of his time as a line officer at sea.

He was on the cutter *Tampa* from his graduation at the academy until September 1931, and then was on the *Conyngham* until May 1933. On both these vessels Commander Peterson served in Atlantic waters. He was assigned to the *Cayuga* until 1936 as engineering officer and assumed command of the *Guthrie* in 1936, later changing to the *Harriet Lane* the same year as commanding officer.

Commander Peterson did postgraduate work at the Capital Radio Engineering Institute, Washington, during the year 1936–37. The following year he was on special assignment in connection with radio engineering at General Electric Co. in Schenectady, N. Y. In April 1938, Commander Peterson was assigned to headquarters at Washington in the radio engineering section.

Late in 1941, Commander Peterson was detached from headquarters to assume duties aboard the *Escanaba*. He was promoted to lieutenant commander on March 16, 1942, and 3 days later took command of the *Escanaba*. On this vessel he served in both the Great Lakes district and the Atlantic.

Commander Peterson married the former Miss Esther May Conant, of Boston, Mass., at Brookline, Mass., on August 27, 1932. They have a 3-year-old son, Harvey Conant Peterson. The family has been making their home at 172 Harvard Street, Newtonville, Mass.

COMMANDER JAMES A. HIRSHFIELD

Commander James A. Hirshfield, United States Coast Guard, who was in command of the cutter *Campbell* when she rammed and sank a German submarine in the Atlantic last winter, was presented the Navy Cross on July 5, 1943, in recognition of his leadership. The award was made by Vice Admiral Russell R. Waesche in the presence of high Coast Guard officials, including Rear Admirals Lloyd Chalker, Robert Donohue, C. A. Park, and Frank J. Gorman.

Commander Hirshfield's citation, signed by Admiral R. E. Ingersoll, United States Navy, Commander in Chief, Atlantic Fleet, follows:

For extraordinary heroism and distinguished service in action as commanding officer of the United States Coast Guard cutter *Campbell* when an enemy submarine was severely damaged and sunk, and during the ensuing period when the United States Coast Guard cutter *Campbell*, which was damaged in the engagement, was towed safely into port.

The United States Coast Guard cutter *Campbell* was engaged in escort operations when she caught an enemy submarine on the surface, collided with it in an attempt to ram, and finally sank it with gunfire and depth charges, taking several prisoners. Commander Hirshfield, although injured by flying splinters, remained in command throughout the action and subsequent operations, and exhibited an extraordinary degree of coolness and ability.

The outstanding courage, leadership, and devotion to duty displayed by Commander Hirshfield in the action and during the ensuing period described, reflect great credit on the naval service.

Commander Hirshfield previously received the Purple Heart for injuries received in the same action.

Within the 24 hours preceding the ramming, the *Campbell* had engaged five other U-boats with varying degrees of success. After the ramming, the cutter, crippled and powerless, was towed in to an eastern port where repairs were made.

Commander Hirshfield is now stationed at United States Coast Guard headquarters in Washington, D. C. He also served as duty officer at United States Coast Guard headquarters from 1937 to 1939, and during that period studied law at George Washington University Law School, graduating in 1939.

He and Mrs. Hirshfield, with their two children, Katherine, 7, and James A., Jr., 4, live at 33 Wesley Street, Newton, Mass.

I began these remarks with a tribute from the Advertizer, of Montgomery, Ala., and I will conclude them with an editorial in the Journal, Lansing, Mich., under date of June 28, 1943:

OLD BUT UNSUNG UNITED STATES SERVICE

Coast Guard Man Donald Munro asked, "Did they get off?" and then doubtless answered, "I'll say they did." It was Munro who supervised the evacuaton of nearly 500 beleaguered marines at Guadalcanal and who gave his life in the rescue of his fellow warriors. His words are typical of the United States Coast Guard, the most unsung of the Nation's armed forces.

This unannounced and unheralded fighting outfit, long the silent partner behind many of our country's greatest military feats, boasts a reputation of achievement unrivaled for daring and genuine accomplishment.

Few Americans realize that the Coast Guard is this Nation's oldest naval service, its origin dating back to the dim days of 1790. George Washington and Alexander Hamilton were two pioneer patriots who were largely instrumental in its establishment.

The Coast Guard is inordinately proud of its record of firsts and it rightly deserves to glow over its colorful history. This service was the first to do any fighting for the United States when it engaged the French in the undeclared war of 1798. The first ships to fight pirates and patrol the Pacific were Coast Guard ships, and in the present war the Coast Guard was the first branch of the armed services to engage the enemy with the seizure of enemy Axis installations in frozen Greenland.

In peace and war this sterling unit plies the seas on its errands of mercy and in its constant battle against murderous enemy undersea marauders. Such valiant Coast Guard cutters as the *Campbell, Icarus,* and *Spencer* attest to the skill of these maligned "shallow water" sailors. No sight chills an enemy U-boat commander more than the appearance of a speedy Coast Guard subbusting cutter.

Throughout the present conflict the Coast Guard has maintained its enviable record. It has landed troops at Guadalcanal and Africa, and its system of convoy protection has established a reasonable security for our Allied ships on the briny deep. The coming invasion of enemy territory abroad will be another test of its skill in convoy escort and landing barge operations. And the Coast Guard won't fail.

Gradually America is becoming aware of this plucky service and the invaluable work it is doing. The Coast Guard men of action are veterans and victors of many high-sea encounters. Today they are displaying their skill in wider channels, and they are winning well-earned acclaim.

As an old salty bosun put it, "You have to go out, but you don't have to come back."

The Coast Guard's history proves that it is doing exactly that.

"As Ye Sow—"

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. LAMBERTSON. Mr. Speaker, the following account published in the weekly magazine section of the Christian Science Monitor was written about a retired traveling salesman and hotel commissioner in my district. When Phil Zimmerman's doctor advised him to retire from active business he settled down at his home and began raising flowers. He is especially interested in the propagation of the morning glory:

Formerly Congressmen supplied their constituents with seeds; now Phil Zimmerman, of Topeka, Kans., supplies them to Congressmen and to thousands of others. In the past 5 years he has given away more than 10,000 packages of seeds of new and choice flowers—all grown by him.

Flowers from his seeds are growing in every State.

Since he does not have mailing privileges, he distributes at conventions, legislatures, and through organizations. Hundreds come to his home after local papers announce that the seeds are ready.

For all this he refuses a cent from any source.

Let's Do It Now, Lest We Forget

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. MURDOCK. Mr. Speaker, some time ago I received a letter from an ex-serviceman in Arizona who said:

Now is the time to pass legislation, while the war is on, for the benefit of those who are now in the armed forces to provide for them on their return to civil life. Besides hospital care each returning soldier should have his pay for 6 months or a year after honorable discharge from the Army. This will give him time to get back into civilian life without selling apples on the street or being a burden on relatives as were so many at the close of the last war.

In full agreement with this veteran of the First World War, who was turned down for service in this present war, and, wishing to propose legislation that will help to ease the shock of the transfer from the armed forces to civilian life, I have introduced H. R. 3181, to continue the pay of all persons serving in the armed forces of the United States for 1 year after the termination of the present conflict.

Numerous legislative proposals have been offered, and mine differs from the others in certain respects. This bill would continue the base pay of all honorably discharged persons from the armed forces for 1 year unless their base pay exceeded $100 a month. The bill would provide for pay up to $100 per month for a period of 12 months after discharge, not to exceed $100 per month unless the ex-serviceman had served overseas. This bill is offered for the consideration by Congress and a grateful country of a just and equitable transfer of our returning soldiers to civilian life. Of course, those who are disabled must be more adequately cared for than through the provisions contained in this measure.

The text of the bill is as follows:

Be it enacted, etc., That the pay, exclusive of allowances, of all persons in the armed forces of the United States on or after December 8, 1941, and at the date of the termination of the present conflict, unless previously honorably discharged, and who shall have served at least 90 days, shall be continued for a period of 1 year from the date of their honorable discharge, separation, or release from active service, during which 1-year period such persons shall be members of the reserve forces: *Provided,* That the monthly pay of any such persons, during the 1-year period shall not exceed $100 unless recalled for active service: *Provided further,* That notwithstanding the monthly pay limitation imposed herein, the increased percentage in pay allowed for foreign service shall apply where any such service is shown.

Address of Hon. George W. Armijo, Spanish War Veteran and State Senator in New Mexico, at the Dedication of Camp Luna, Las Vegas, N. Mex.

EXTENSION OF REMARKS

OF

HON. A. M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. FERNANDEZ. Mr. Speaker, at the dedication of Camp Luna in Las Vegas, N. Mex., on June 6, 1943, the Honorable George W. Armijo, State Senator of New Mexico, was appropriately chosen to deliver the address of dedication. As a young man, he fought alongside Capt. Maximiliano Luna, in whose honor the camp was named, with Theodore Roosevelt's Rough Riders in Cuba. Had Senator Armijo not been wounded in Cuba, he would have been most likely with Captain Luna in the Philippines, where the latter gave his life in the service of his country. By unanimous consent of the House, I append herewith the address of Senator George W. Armijo at the dedication of Camp Luna, which is as follows:

Friends and comrades, it is a far cry from Siboney, Las Guasimas, and San Juan Hill in 1898, to Bataan and Corregidor in 1942. Yet, how closely they are connected. But

for the former, it is not likely that there would have been the latter.

The hero, in whose honor your camp was named, Capt. Maximiliano Luna, served his country in the Cuban and the Philippine campaigns. Little did he dream that 45 years later the Nation would be called upon to defend with its lifeblood the conquest it made toward the close of the last century. Were he living today, no doubt, he would be at the side of General MacArthur, as he was at the side of General Lawton in Cuba and in the Philippines.

Maximiliano Luna came from a proud and valiant ancestry. He was a direct descendant of Don Domingo Count de Luna, who came to New Mexico more than 200 years ago and established himself with his family, his entourage and his flocks on a hacienda located in what is now Valencia County, the county seat of which, Los Lunas, was named for his family, just as in later years, Luna County was named in honor of the late Solomon Luna, another distinguished descendant of the pioneer, Don Domingo.

These early conquistadores and colonists were no weaklings. They faced dangers as grim as human kind is ever called upon to encounter and that without the weapons, equipment, and comforts that fortunately a generous nation provides for us. Starvation was no stranger to them; torture and cruel death from hostile Indians often was their portion. They met bitter defeat with firmness; exile and martyrdom always threatened. They trod weary hundreds and thousands of miles over pathless desert and trackless mountains so that even today a goodly portion of New Mexico is known as the Jornada del Muerto, "the Journey of Death." They sought new worlds to conquer, more pagans to convert, to plant the cross where white man had never been before.

It is from this noble breed that came the Honorable Tranquilino Luna, twice elected to the United States Congress by the people of New Mexico, the father of Capt. Maximiliano Luna. The wife of Don Tranquilino and mother of Captain Luna, was Amalia Jaramillo, daughter of another distinguished pioneer family tracing its ancestry to heroic days in Spain.

Born in Los Lunas on June 16, 1870, Captain Luna attended St. Michael's College in Santa Fe, and the Jesuit College in Las Vegas. Perhaps he frequented this very spot upon which we honor his memory this June day. He matriculated in Georgetown College, District of Columbia, which counts among its alumni many a native son of New Mexico. He had just reached his majority when he was elected probate clerk of Valencia County and also served as chief clerk, as I have myself, of the upper house of the New Mexico Legislature. Elected sheriff of his county when only 24 years old, he functioned so acceptably to the people that they sent him to the thirty-first territorial legislative house and 4 years later to the thirty-third assembly where he was chosen speaker of the house. It was written of him at that time: "He is a young man of great ability, finely educated, and an eloquent and convincing public speaker, very popular and greatly liked by all who knew him. He was kind-hearted, courteous, and true to his friends and his convictions." Truly, an exemplar to the ambitious young man of today, or for that matter, of any time.

Early in life, Luna interested himself in military affairs and attained the rank of captain in the New Mexico National Guard. He married the daughter of Maj. E. H. Keys, of the United States Army. He volunteered immediately upon Governor Miguel Otero receiving the request of President McKinley for four troops of cavalry from New Mexico at the outbreak of the Spanish-American War. He was commissioned captain in the First United States Volunteer Cavalry, popularly known as the Rough Rider, and took command of Troop F. It was my privilege to serve under him as sergeant of the company. But for the wound received at Las Guasimas, I would no doubt have been with him when the guidon of Company F was among the first three to be planted on the brow of San Juan Hill, overlooking the city of Santiago de Cuba and the bay in which the fleet of Admiral Cervera had anchored.

The Spanish-American War, 45 years ago, was a minor and short conflict as compared with World Wars Nos. 1 and 2, but it was world shaking in its results. Let it be recalled, too, that a bullet from a Spanish Mauser fired with smokeless powder, then first coming into use, stung just as sharply as the missiles of today; that swamps and chaparral of Cuba swarming with mosquitoes and vermin were no more pleasant shelter than those of Guadalcanal; the yellow fever of those days was as deadly as the tropical diseases of today. Medical equipment and medical personnel did not measure up to today's efficiency, and as in the poem about the soldier who lay dying in Algiers:

> "There was lack of women's nursing
> And lack of women's tears."

The plight of the wounded groaning in the broiling Cuban June sun was more pitiful than that of the wounded in the modern war, pitiful as it is in any event.

But to return to the June days in 1898, in which Captain Luna played so gallant a role. It was on June 1 that the Rough Riders arrived by train at Tampa, Fla., from San Antonio, Tex. Only three of the four New Mexico troops were to sail for Cuba. To determine which of two troops was to sail, Captains Luna and Curry tossed a coin. Captain Luna won for his Troop F and sailed on June 14 on the transport *Yucatan*, escorted by battleships, cruisers, and torpedo boats. Like in all other wars, the United States was caught totally unprepared for the conflict, and as a result there were more casualties and far more suffering than should have been. On June 22, the troops disembarked at Daiguiri after a most uncomfortable voyage.

Brigaded with the First and Tenth Regular Cavalry as the Second Brigade under Brigadier General Young, which, with the First Brigade, formed a division of cavalry under Major General Wheeler, a noted Confederate veteran, the force was ordered to advance on June 24 from Siboney. The Spanish veterans were no push-over. A wilting fire met our advancing men. In our New Mexico troops a number fell wounded, Henry J. Haefner among them, mortally injured. His comrades dragged him behind a tree where he was propped up. Asking for his canteen and rifle, which were handed him by Col. Theodore Roosevelt, later President of the United States, in person, he began loading and firing until he fell dead. The loss to the Rough Riders in this first battle of the campaign, known as the Battle of Las Guasimas, was 8 killed and 34 wounded. A mere skirmish, you say, but to the individual and his family involved, it was just as important as the battles of Tunisia were to the individuals taking part in that glorious victory.

General Young, stricken seriously ill, was succeeded by Col. Leonard Wood, with Col. Theodore Roosevelt in command of the Rough Riders.

On June 30, came the order to storm the defenses of Santiago de Cuba, the main objective of the campaign. Records the historian: "Artillery opened the barrage on the following day. The heat was intense and many of the men showed fatigue. The mauser bullets drove in sheets through the trees and chaparral, but as the Spaniards used smokeless powder, their location was not immediately spotted." There was no aerial reconnaissanee or protection in those days. Man after man fell dead or wounded. Confusion ensued and the day was only saved by Colonel Roosevelt, who, taking the initiative and without orders, waving his sombrero aloft (there were no steel helmets at this time), shouted the command to charge Kettle Hill, separated from San Juan Hill by a narrow depression. The New Mexico troops and other scattered commands rallied around him. The first guidons to be planted on the crest were those of Troops F, E, and G, the first under command of Captain Luna.

From the trenches and ranches just taken, Colonel Roosevelt and his Rough Riders rushed forward, driving the Spaniards through a line of palm trees and over the crest of a chain of hills overlooking Santiago. The Spaniards counterattacked but were repulsed. The troops slept that night on the hill top. They were attacked again at 3 o'clock the next morning, but drove the enemy back into his trenches. At dawn, the attack was renewed and the battle continued until July 3. Fighting was resumed on July 10, and it was not until the 17th that the Spaniards finally surrendered. But remember, there was no chow such as Uncle Sam provides these days, even to advance posts; no evacuation by plane of the wounded, no drugs to stop infection, no blood plasma, no modern anesthetics as are used these days to still pain.

The entire division was marched back to the foothills. Many of the officers and men fell ill and for a time it seemed they had become the forgotten men of a victorious campaign. As a rule, less than 50 men were fit for any kind of work. All clothing was in rags. Even the officers had neither socks nor underwear. It was another Valley Forge, except that enervating heat supplanted the bitter cold. It was not until August 7, that the Rough Riders sailed on the Miami and landed 7 days later at Camp Montauk on Long Island. They were not discharged until a month later, because the Nation feared that the men might spread yellow fever in this country. They returned home, in many instances weakened from illness and to find their jobs gone. Their heroism was soon forgotten and few there are today, even in our schools, who have any knowledge of this momentous campaign, which threw Puerto Rico and the Philippines into our laps, with what consequences of responsibility in the Pacific, we are only learning today.

Tried and proven in the Cuban campaign and despite his bitter experience of hardship and ingratitude, Captain Luna was one of the first to offer his services when the President called for volunteers for the war in the Philippines. Few, too, remember the war or wars in the Philippines to subdue rebellion under Aguinaldo, and insurrections by Moro chieftains and Igorrote head-hunters, foes as cruel and treacherous as any that we encounter today.

Mustered out after the Cuban War on September 15, 1898, Luna was again commissioned the following June as First Lieutenant and Adjutant of the 2d Battalion of the Thirty-fourth United States Volunteer Infantry. You will notice the importance of June, the month of his birth, in his career. He sailed with his regiment from San Francisco and reached Manila on October 12, Columbus' birthday, and was immediately assigned to duty as an aide on the staff of Maj. Gen. W. H. Lawton. His perfect knowledge of Spanish made him of invaluable help in the campaign in northern Luzon, that followed. After the suppression of the insurrection in that part of Luzon, he returned to the vicinity of Manila. A brief cable on November 18, 1899, announced: Lawton reports the drowning of Lt. Maximiliano Luna, Thirty-fourth Infantry, his aide, and two men of his escort, crossing the Agno River. The following month, General Lawton him-

self was killed at San Mateo, near Manila, by an insurgent bullet.

Although death came to Maximiliano Luna when he was only 29 years of age, he had already carved out for himself a brilliant career and achieved a place high on history's scroll. In recognition of this, the Territorial legislature in 1901 unanimously adopted the following resolution:

"Whereas Maximiliano Luna, who was one of the most progressive, public-spirited, and brilliant young men of this Territory, and who had endeared himself by his many lovable and sterling qualities and at the early age of 28 years had acceptably filled the position of speaker of the house of representatives of the thirty-third legislative assembly, thereof, and who gallantly upheld the traditions of his distinguished family, and of his nationality, and the honor of his country in the war in Cuba and in the present campaign in the Philippine Islands; and lost his life while at the post of duty as an aide to General Lawton, near Manila, by drowning in the month of November 1899, be it

"*Resolved*, That there shall be placed in the niche behind the speaker's stand in the hall of representatives of the Capitol Building of this Territory a bust of the Honorable Maximiliano Luna."

This was done and with it was placed this bronze tablet, which upon my suggestion has been ordered by the Sixteenth State Legislature of New Mexico, with the approval of the Honorable John J. Dempsey, Governor of New Mexico, to be placed on this martial field, so that all those who pass here may be reminded of the patriotism of one of New Mexico's heroic sons. I would like to believe that the spirit of Maximiliano Luna is with us this day. Some of you, perhaps, may be among the hosts that will return triumphantly to Manila with General MacArthur in the not-far-distant future. I hope you will recall at that moment the valiant Luna, Lawton, Keyes, and the many others who laid down their lives a generation ago to bring the American way of life to the far outpost in the Pacific and those who fought and fell on Corregidor only in recent days.

"Gentlest and bravest in the battle brunt,
The champion of the truth,
He bore his banner to the very front
Of our immortal youth!"

W. P. B. Charged With "Double Talk" on Steel Shortage—Congressional Action Can Abolish Vicious Practices of Big Steel

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. KING. Mr. Speaker, I have just received a copy of a news summary issued by the Maritime Commission indicating that the Nation's shipyards delivered 168 cargo vessels, totaling 1,676,500 deadweight tons, in the month of June. Of this sum the west coast produced 82 ships, totaling 870,800 deadweight tons, or 51.94 percent, of the national total. There is no disputing the fact that this achievement is a remarkable one, and when one considers that the development of an iron-and-steel industry in the West has been stifled by the Steel Trust, and that the steel used by these western shipyards had to be shipped from the East by rail, the achievement of these west coast yards becomes miraculous. However, the ironic joker in the whole picture is that every ton of steel that went into those 82 ships could have been produced within a few miles of those shipyards from western iron ore deposits within close proximity to local sources of fuel and power. Is there any logical reason why millions of tons of steel should be hauled from eastern mills over railroads already choked with other necessary transportation? Of course not. But there is a reason. Big Steel has successfully prevented the establishment and development of independent steel plants on the west coast. Why? Because they are worried about post-war competition, and the consequent destruction of the monopolistic character of the entrenched Steel Trust. The facts apparently bear this out. About $1,000,000,000 in Federal funds were provided for the purpose of expanding steel-production facilities. Were those funds utilized to establish steel production facilities in various war-production areas in the United States, for example, the west coast, where over 51 percent of the cargo ships and over 55 percent of the aircraft manufactured in the United States is being produced? Again I must say "No."

These funds were allocated to the existing large steel companies in spite of the fact that allocations to small independent companies would have opened up new resources for our urgent war-production program, which at present finds itself hampered by a shortage of steel. Let me quote certain excerpts from a general letter issued by the Steel Division of the War Production Board to all steel producers, dated July 2, 1943.

GENTLEMEN: For the third quarter of 1943 the various claimant agencies presented allotment requests totaling about 23,500,000 tons of alloy and carbon steel as against an estimated supply figure of about 17,250,000 tons. Naturally, a considerable portion of all of the requests had to be denied by the Requirements Committee in making allotments of steel for the third quarter, with the result that many of the agencies were unable to allot steel for some important programs.

Lack of allotments, of course, results in inability to place orders. * * * However, the obvious danger in this situation is that the decreasing pressure on producers may be misinterpreted as a falling off in demand. This is definitely not the case. Additional steel could very profitably be utilized for urgent war needs if it were available.

So we find ourselves in the position of being about six and one-quarter million tons of steel short for the third quarter of 1943 and still no establishment of new and independent facilities that could obliterate this critical shortage. In fact the Big Steel interests are secretly worried about this critical shortage, not because it is hampering our war effort, no, no. Rather they are worried that the American people will discover the tragic steel situation and by the great pressure of public opinion smash this combine that has placed self-interest above the interests of the Nation. Witness the News Release of the War Production Board under date of June 29, 1943, just 3 days before they issued the letter excerpts of which I have quoted above. I quote excerpts:

The demand for steel is huge and our production is being stepped up to meet it.

Note how Mr. H. G. Batcheller, Director of War Production Board's Steel Division, in making that statement refrains from making public the critical steel shortage of 6,250,000 tons for this third quarter, which he so clearly points out to steel producers, in the letter I quoted from, a few moments ago. When Mr. Batcheller so casually states that "production is being stepped up" to meet the huge demand he is conveying the impression to the American people that all that has to be done is push a switch and presto we have all of the steel we need.

Let me quote further from this W. P. B. news release:

The Government's expansion program will be virtually completed by the end of this year. At that time the Nation will have nearly 7,000,000 tons of additional open-hearth capacity; 2,400,000 tons of additional electric-furnace capacity; 11,000,000 tons of new blast-furnace capacity; and about 7,500,000 tons of added coke-oven capacity as compared with capacities in existence shortly before Pearl Harbor.

Interesting, gentlemen, but does Mr. Batcheller make any statement that this expansion will provide all of the steel demanded by our war program? No. Because he knows it will not. Does he indicate anywhere that despite this expansion program steel production will run millions of tons short of the war demands? No. Why? Apparently he does not want the American people to know.

I ask you, Why did not that news release carry the same information that Mr. Batcheller's letter did to all steel producers? Why this double standard of information? There can only be one answer. Big Steel and its representatives on the War Production Board does not want the American people to know the facts. You ask why? Because they fear public opinion. Big Steel is worried that the American people will learn of its inability to produce and, as a consequence, demand the establishment of independent iron and steel plants throughout the United States, using newer processes, depending upon the natural resources situated in the various parts of the country. The sponge-iron process, for example, is one that could be utilized in many States of the Union accessible to deposits of iron ore and such low-grade fuels as lignite, peat, or natural gas. Mind you, this process is not limited to those few areas in the Nation gifted with deposits of high-grade coking coal. This process, once established, would continue to flourish in peacetime in the hands of small independent iron producers. They would forever threaten the steel kingdom of Pittsburgh, which has thus far been

protected by the steel masters through the use of doubtful trade practices. Witness the vicious practice of Pittsburgh plus pricing of delivered steel, which the Honorable Knute Hill so graphically described to the Members of the Seventy-seventh Congress on the 16th day of December 1942. I quote:

This Pittsburgh-plus pricing system was conceived to create fabulous profits for the new steel masters and at the same time weld them into a permanent monopoly group.

Pittsburgh-plus is so simple that a child in grammar school can figure its operations. Its cardinal principle is the refusal of any member of the trust to quote a price for finished products other than a delivered price. While the base price for a certain grade of steel at Pittsburgh might be $50 per ton, the delivered price at Chicago, for instance, is $58.50 per ton.

Now, suppose you wished to become a manufacturer in Chicago. Your process called for a certain tonnage of steel. So you, in seeking the nearest source of steel, would quite naturally approach a steel mill at Chicago. They, in turn, would be happy to fill your requirements. At the base price quoted in Pittsburgh? Oh, no, gentlemen. At the base price quoted in Pittsburgh plus an added amount equal to what the freight charges would be from Pittsburgh to your plant. Of course, the steel you bought in Chicago was not actually shipped from Pittsburgh, but you paid the freight over the 400 miles between Pittsburgh and your plant or factory just the same. You were not permitted to have the benefit of your nearness to sources of steel and the actual saving in freightage; the Steel Trust takes for itself the benefit of the short haul. No matter where you bought your steel or where it was made, the price you paid was the Pittsburgh mill price plus a fictitious freight charge. That, gentlemen, was an important part of the plunder-profit system by which the Steel Trust piled up an enormous reserve for its ruthless war of extinction against local economy—against the small independent iron and steel industry of this country.

This system has now developed into a so-called multiple-basing-point system, which in reality is the Pittsburgh-plus system under a new name, and which runs to the effect that different steel products have a different pattern of mill bases to which is added the transportation in calculating the delivered cost. Under the system the delivered price of steel, at any point in the United States, is the base price plus the freight from the nearest governing mill that has been classified as the governing mill for that particular product. For example, the price of structural shapes in Kansas City will be the Chicago price plus the rail freight to Kansas City no matter whether the purchases are actually made from Pueblo, Colo.; Birmingham, Ala.; Chicago, Ill.; St. Louis, Mo.; or from Sheffield steel in Kansas City itself.

By virtue of this practice Big Steel has itself not developed the iron and steel industry on the Pacific coast or other areas, because they can make more money by selling at Chicago-plus, Birmingham-plus, or Pittsburgh-plus, and they will continue to so operate. Even if Big Steel saw fit to build a steel mill in the West or on the Pacific coast, that does not necessarily mean that they will depart from the policy of Chicago-plus pricing. It would merely mean that any savings accruing by virtue of this coastal mill would go to the steel companies instead of west-coast consumers so long as the basing-point system of pricing prevails.

As a result, gentlemen, the war production effort finds itself hamstrung by the selfish interests of Big Steel that refuses to expand in war areas, and, even if they did, the move would be meaningless without the abolishment of their vicious pricing methods, which, of course, they refuse to do. Not satisfied with this selfish position, they have consistently opposed and fought the establishment of independent iron and steel plants that could have adequately met our wartime demands for steel, which Big Steel failed to do and thereby precipitated our present critical steel shortage.

I repeat, gentlemen, Big Steel fears public opinion, and well may they fear it. When the American citizen is fully educated as to the reasons for our critical steel shortage, there are bound to be repercussions. I am happy to say that progress is being made in this direction and day by day the demand for action by the Congress of the United States is increasing in tempo. I look for the climax within a very short time.

Seventy-eighth Congress Recovers and Exercises Its Constitutional Powers

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. ROBSION of Kentucky. Mr. Speaker, on July 8, 1943, the Congress, by a joint resolution, recessed until September 14, 1943. The Congress has been in almost continuous session since September 1939. It recessed only 23 days in all that period of time. Congress was in the longest continuous session of any Congress during the history of our country. During this long period, Congress had been confronted with the problem of preparing our country for war and in helping to conduct the war. This war has touched almost every heart and hearthstone in the land, and Congress has had to deal daily with national as well as world problems, and aid their constituents in their domestic and personal affairs. The Members of the House and the Senate by reason of this long and exacting service, find themselves very tired and worn. Congress has completed its work, and it has been advised by the President that he had no further matters to submit to the Congress at this time for consideration, and in order to secure some necessary rest, as well as to visit their constituents and give them an opportunity to confer with their Members of Congress, and to give the Members of Congress a chance to get first hand information as to the needs of their respective districts and States and in that way be better able to serve our country and expedite the winning of the war, I think that Congress has acted wisely in taking this recess. This, of course, does not mean that the Members of Congress will be permitted to sit down and fold their hands, they will be busy daily in handling the mail and communications from their constituents, and in conferring with the people of their respective districts and States.

The adjournment resolution very wisely provided that the Democratic leaders of the House and Senate, if they think it necessary and desirable, may call the Congress into session before September 14, 1943, and the Republican minority leaders of the House and Senate may do likewise. Furthermore, the President, under his constitutional authority, may call on Congress to reassemble at any time. Under this arrangement, any emergency coming up in connection with the war or other matters can be met by the Democratic leaders as well as by the Republican leaders, and the President. I know that it will be very helpful to me to return to my district and have an opportunity to visit the various counties and secure information and suggestions from the people that I have the honor to represent, and when we get back on September 14, or earlier, with renewed vigor and with more first-hand information relating to the great problems of the war, agriculture, industry and labor, I shall be better able to serve the people of my district and our country.

SEVENTY-EIGHTH CONGRESS EXERCISES ITS CONSTITUTIONAL POWERS

For 10 long years a large group of the American people and the press have complained that Congress and the courts were subservient to the Executive and this, with other acts of the administration, brought about a reaction among the people, and for the first time in 14 years a majority of the votes cast in the 1942 election were for the Republican candidates for Senator, Representative, and governor. If it had been a Presidential election, and the Republicans had carried the same States, they would have elected a Republican President by a substantial majority. The Republicans had neither the organization, money, or the fighting spirit to win. The result of this election was a rebuke to the administration by the American people. It was a remarkable victory considering the fact that the administration had about 3,000,000 Federal office holders, extraordinary powers, and hundreds of billions of cash and contractual authority in their hands. It was one of the greatest turn-overs in the history of this country. I am wondering what would have happened if the Republicans had had a good active organization, money with which to make a campaign, and the American people knew what might be done.

While the Democrats have a small majority in the House, the administration has lost practically every important fight in the House and Senate that has come up since the November election in 1942. The Republicans and anti-New Dealers

have been responsive to the will of the American people, as expressed in that election, and the Seventy-eighth Congress has recovered and exercised its constitutional power for the first time in 10 years. The Seventy-eighth Congress has become again one of the three great coordinate branches of our Government. It was never intended by our founding fathers in writing and adopting the Constitution that the Congress or the courts should ever become subservient to the Chief Executive. Each one of these great coordinate branches has a definite service to perform to the American people and neither one of them should infringe upon the constitutional prerogatives of the other. Our Government cannot be truly free and a representative democracy unless each one of these coordinate branches honestly and efficiently performs the functions delegated to it and cooperates with the other branches.

Some of the New Dealers have criticized the Seventy-eighth Congress because of its independence. In my opinion, nothing has happened in this Nation since its founding that is more heartening to those who believe in our democracy and our American way of life than this change of attitude upon the part of Congress. Italy first destroyed her legislative branch, then the courts became subservient, and we have a Mussolini. In Germany the lawmaking body became subservient to Hitler, and later on he dominated the courts and then blossomed forth a dictator. The Congress and the courts must remain the guardian of the liberties of free Americans. We have not yet fully recovered that freedom of the Congress and the courts that is necessary for a healthy democracy.

MANY RIGHTS TO BE RECOVERED

President Roosevelt and his administration have for years through the guise of emergencies and the constant acquisition of power and more power, money and more money, regimented agriculture, industry, and labor. Through these subservient Congresses, the President has been granted blank checks for tens and tens of billions. He has sought and been granted extraordinary powers in peacetime over the people and over agriculture, labor, and industry. Beginning with 530,000 officeholders, with these enormous sums of money and extraordinary powers, he has built up a great bureaucracy consisting of scores and scores of bureaus, commissions, and other Federal agencies with a personnel of more than 3,000,000 people. He has regimented the economic and social life of 132,000,000 people.

In most cases Congress has refused to extend the life of many of these radical and socialistic laws. This administration has created emergency after emergency. It still has tremendous power because of the great war with which we are now confronted. This administration, with the bureaucrats, has but one great purpose in mind and that is to perpetuate their power over and their control of the American people.

The President has the veto power. The Republicans and anti-New Dealers are not sufficient in number to pass a measure over the President's veto, and therefore, many of the oppressive and many of the unwise laws now on our statute books will remain until the American people vote a change of administration and change of control of the House and Senate.

WIN THE WAR QUICKLY

It can be truthfully said that the Congress has stood from the attack on Pearl Harbor, December 7, 1941, down to the present time, 100 percent in support of our war effort. Not a single Member of Congress has hesitated to give the President and those in charge of our armed forces every dollar and all the powers that they have asked for. In fact the records of history will disclose that no war President has had such a loyal and united Congress in the prosecution of any war, as has been given to President Roosevelt and his administration. They have sought and been granted more power than any President or any administration has had in the conduct of any one of our other wars, and, of course, they have asked for and been granted many times as much money as any administration has received in wartime.

From the time Congress met early in January 1943, until it recessed on July 8, 1943, a little over 6 months, Congress at the behest of the administration voted one hundred and fifteen billions of new appropriations, and fifteen billions more were reappropriated; therefore, there was placed at the disposal of the President and his administration beginning July 1, 1943, the astronomical sum of one hundred and thirty billions, about one hundred and twenty-five billions of this to go for war purposes. This appropriation of one hundred and thirty billions in 6 months represents almost $1,000 for every man, woman, and child in the United States.

The records of the Census Bureau show that the assessed valuation of all the property of every kind and character in the United States—real property, personal property, mixed property, money, notes, bonds, and all other intangible property, is about one hundred and fifty billions, therefore the Congress in the last 6 months at the behest of the administration, voted within twenty billions of the amount of all the assessed property of every kind and character in the United States, according to the records of the Census Bureau. We have heretofore pointed out that Great Britain last year spent twenty-two and one-half billions on the war, while we spent nearly eighty billions. Great Britain this year cut down her war budget to twenty and one-half billions, and therefore, Congress has given this administration six times as much as the budget of Great Britain. Russia is spending about fifteen billions, and China about five billions a year.

This $130,000,000,000 represents more than Great Britain, Russia, China, and the other nations allied with us, and Germany, Japan, Italy, and other Axis Powers—in other words, this $130,000,000,000 is more than all of the other nations involved in this war will spend for the year beginning July 1, 1943. No ruler involved in this war has more power than President Roosevelt. Many of us feel that a lot of this money is being wasted, and many of these extraordinary powers have been unwisely used, because they are being administered by incompetent persons, and some of this money and these powers are being used to change our American way of life. It has been shown by indisputable evidence that many persons in key positions do not believe in the American way of life. They want to make of this country a socialistic or communistic state. The administration has refused to get rid of such persons and a lot of this money is being used for propaganda purposes to promote the fourth term of the President and to keep this crowd of bureaucrats and New Dealers in power.

Every Member of Congress desires our country to have the biggest and best equipped Army and Navy in the world, and the biggest and best equipped air force, and the biggest and best equipped submarine force—the best paid, the best fed, the best clothed, and the best cared for fighting force in the world—but it burns us up to see a lot of the bond money and tax money of the American people used for political purposes, and to promote the fourth term for President Roosevelt, and to continue him in power and control of this great army of bureaucrats. They have been and they are oppressing the American people with their orders, regulations, and directives. This administration is a flop on the home front. They have hamstrung industry and agriculture.

Our fighting forces are doing a wonderful job, while the President is given credit for being a great strategist, but the real credit should go to General Marshall, General MacArthur, General Eisenhower, and our other great generals and admirals who have worked out and are executing military and naval operations. The President and his inner circle of New Dealers are too busy promoting a fourth term and staying in power to conduct the home front or the battle front. What would the production be had it not been for the ability and experience of Mr. Jeffers, Mr. Nelson, Admiral Land, and others, who have done a splendid job in our war production, but it is the incompetence in the O. P. A. and the other New Deal agencies that have brought about the confusion and discord in industry, agriculture, and labor on the home front, and have wasted billions of dollars of the people's money. The President and his bureaucrats say they must have a fourth term, and after that, of course, they will want a fifth term. The American people ought to begin to think what a threat this fourth term is to their freedom and liberties and the American way of life. I believe that they will be swept out of power next year from one end of the country to the other. The American people can and will win this war. When it is over, they want their Government and their liberties restored. We want our sons and daughters in the service to come back to opportunities here. If this administration continues, there will be nothing for our boys and girls to come back to except bankruptcy, taxes, and bureaucratic control of their lives.

Gen. Wladyslaw Sikorski

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles and editorials relating to my dear friend, the late Gen. Wladyslaw Sikorski, Premier of the Polish government in exile, and Commander in Chief of the Polish Armed Forces. In his untimely passing Poland and the United Nations have lost a great friend, a great statesman, and a superior officer. In his appearances before the Foreign Affairs Committee he gave us an exceptionally clear picture of conditions abroad. His plans for the future were most enlightening. American statesmen realize now the excellence of his work, especially in whatever negotiations took place between Poland and the United States. I knew him well and his loss is a deep personal one.

The articles and editorials follow:

[From the New York Times of July 6, 1943]

POLAND'S FALLEN LEADER

Premier Sikorski of the Polish Government in exile died at a moment when his hopes for his native land may have been higher than at any time since 1939. He had been visiting Polish troops in the Near East and had found them, as he said, "spoiling for action." In his last public statement, made at Cairo on Friday, he had spoken of plans for a Slavic bloc in central Europe, with Poland and Czechoslovakia working on close and friendly terms with Russia. Certainly the strained relations between the Poles and the Russians had eased a little. The Polish Premier, soldier and engineer, was enough of a realist to know that his country could never be secure except within the framework of some kind of European federation with Russia's willing consent. Had he lived he might have clarified the Polish future. The work now passes to other hands.

Sikorski had one of those careers possible only in dramatic transitional periods. Only 61 at the hour of his death, he had fought in the first World War, served as chief of the general staff, Premier and Minister of Military Affairs in the early nineteen twenties, fallen into disfavor because his courageously expressed liberal views were not those of the pre-war Polish Government. It was natural that the Poles should turn to him in the democratic revival that followed their military defeat in 1939. Dying with his daughter and 14 others in a crash which only the badly injured Czech pilot survived, he leaves behind him a heroic memory for patriotic Poles and a hope of better days to come in the harassed Slavic marshlands of central Europe.

[From the New York Herald Tribune of July 6, 1943]

THE GIBRALTAR TRAGEDY

It is a peculiarly tragic accident which has cost the life of Gen. Wladyslaw Sikorski. The plane which plummeted suddenly into Gibraltar Harbor not only carried with it the Polish Prime Minister and commander in chief; it took his only daughter as well, together with the chief of the Polish general staff, the chief of its operations section, and other valued officers. One of these was Col. Victor Cazalet, a British soldier and former member of Parliament, who was well and widely known in the United States as one of the keener minds among the younger British Conservatives. There will be many to feel these losses in a personal sense. But to the loss of General Sikorski there also attaches an international importance which will be grievously felt not only by his own country but by all the United Nations.

He had been called to a singularly difficult role, which he had discharged with firmness and statesmanlike ability. Between the Nazi tyranny under which his country lay prostrate, the overriding power of Soviet Russia, the uncertainties of Allied policy, and the intranigeance and divisions of many of his own countrymen it was not easy to find the wise and workable course; and probably few other Polish leaders could have held so successfully to the essentials of Poland's problem. General Sikorski divined them clearly, and the Polish-Soviet treaty, which he secured on July 30, 1941, not 6 weeks after the Nazi invasion of Russia had transformed the whole face of the war, was an act of statesmanship for which all members of the anti-Hitler coalition have reason to be grateful.

He grasped the absolute necessity of an understanding with Russia at the very beginning; he understood it at the end, and in his last published interview, in Cairo on Friday, he expressed a desire to reopen Soviet-Polish relations. He was never, however, subservient to the Kremlin; he knew how to maintain Poland's position and dignity on the one hand, while combating with the other the more extreme Polish views which might have operated so disastrously both for Poland and for the United Nations' alliance. Mistakes were made, and it unfortunately proved impossible to prevent the deterioration of Polish-Soviet relations, ending in Moscow's peremptory break. But General Sikorski was on the side of moderation and wisdom. In a critical time he will be very difficult to replace; but the best tribute which Poland could now pay him would be to maintain the policies for which he stood.

In this large effort Colonel Cazalet played a useful role with unflagging zest. There can be few other Englishmen of our time who have touched so many nations and so many individual citizens upon terms of understanding and friendship. What he did for Poland he literally did around the world. Here in America his friends were countless. They included every type of human being, from governmental dignitaries to figures of the literary and artistic world. Doubtless his official reports to his own government were of constant value; but it was as an understanding observer and appreciative visitor that Americans held him in affection and will remember him. To that post-war world, which must lean heavily upon men of good will if peace and justice are to prevail, Victor Cazalet is a heavy loss.

[From the New York Times of July 7, 1943]

ABROAD—GENERAL SIKORSKI WAS A KEY FIGURE IN A KEY PROBLEM

(By Anne O'Hare McCormick)

General Sikorski was a soldier and a statesman. Mr. Churchill did not exaggerate when he described the tragic accident at Gibraltar as one of the heaviest strokes the Allied cause has suffered. If any man can be called indispensable to his country at a given moment of history, it was Sikorski at the time of his death. He emerged from the defeat of Poland and the obscurity in which he had lived because of his opposition to the policies of its pre-war Government as the natural leader and authentic spokesman of the crucified and indestructible nation.

Those who came to know General Sikorski during his visits to this country, the last one 6 months ago, recognized in him the spirit of Polish democracy, which was obscured and muted, as he was, by the rule of "the colonels" in the sultry years while the war was brewing. Polish nationalism is fiercer than almost any other nationalism because it has been driven underground so often and forced to feed upon itself. General Sikorski was a flaming patriot, a conspirator for Polish freedom in his student days in Lwow, but he was a man of the world in the sense that Paderewski was.

One man was primarily a soldier, concerned with building up a new fighting force out of the remnants of the Polish Army, and the other an artist, but both played a similar role, Paderewski in the last war and Sikorski in this, in the liberation of their country. Both had faith in freedom as the prescription for the ills of Poland and of Europe. Both opposed the Pilsudski regime for the same reason—because it took responsibility away from the people and therefore, in their view, weakened the foundations of the new state.

Sikorski was 62 years old, and yet he stood out among the national leaders in exile as a man of the new Europe rather than of the old. Perhaps because he was not in power but in opposition when the war broke, he seemed more flexible, more aware of and ready for change than many of his colleagues in his own and other refugee governments. He worked for a federation of the neighboring states of eastern Europe because he believed that this war proved beyond question that the smaller countries had no chance of independence except in combination. He was thinking of protection against a renascent Germany rather than of a "cordon sanitaire" against Russia, but he was thinking most of all of the security of his own country in the future.

As a matter of fact, no man in Europe gave more convincing proof of his desire to cooperate with the Soviet Government than Sikorski. It took courage and statesmanship of no mean order for the head of the Polish Government in exile to go to Moscow after Hitler's invasion of Russia to negotiate a treaty of friendship and mutual assistance with the power that had divided his country with Germany. Yet though his policy of conciliation caused a split in his own government, Sikorski decided instantly, and held to his decision, that Poland must be on good terms with Russia. His main objectives were to obtain the release of the interned Polish soldiers and equip them to fight the Germans and to adhere to the line adopted by the British and American Governments in holding the frontier question in abeyance until the end of the war. In this he was more realistic than Stalin, for the Soviet leader must know that the one thing a government in exile cannot do is to surrender national territory while the nation he represents is helpless and voiceless.

Despite all that has happened since, including the brusque action of Moscow in breaking relations with his government in April, Sikorski did not waver in his course. In his addresses to the soldiers he reviewed in the Middle East—all former prisoners in Russia—he explained his policy of seeking and maintaining an honorable agreement with the Soviet Union. In his last public statement, in Cairo, he implied that a change had taken place in the situation which might lead to a speedy reestablishment of friendly relations.

This change is generally connected with the letter President Roosevelt dispatched to General Sikorski by special courier at Beirut only a few days after former Ambassador Davies returned from Moscow bearing the reply to the President's sealed letter to Stalin. Mr. Roosevelt is greatly troubled by the Polish-Russian rupture—the first open breach in the United Nations' front. He sees the

dispute as a test of the capacity of the members of the grand alliance to reach post-war agreements on the basic principles of order and security. It is not unlikely, therefore, that the correspondence with Stalin touched on this issue.

The new leaders developing in the agony of Poland we do not know, but we can be sure they will be passionate nationalists. The plans for the future cannot forget that this force must still be reckoned with. Outside Poland no figure had anything like the stature and balance of Sikorski. He was in close and regular communication with the underground resistance. He was the idol of the army—fifth in size among the allied forces. He had the firm friendship of Mr. Churchill from the day he refused to surrender when France fell and took the legions he was training in France to fight in England. He was liked and respected in this country.

Sikorski's death is untimely for Europe, as well as tragic for his country, because he was a key figure in a key problem.

[From the New York Sun of July 6, 1943]

GENERAL SIKORSKI

The death of Gen. Wladyslaw Sikorski, Premier of the Polish Government in exile and leader of all Polish armed forces, is a severe loss to the Polish cause and to the United Nations as well. The circumstances under which General Sikorski and 14 others perished make an investigation of the accident inevitable, yet it is unlikely that such an investigation will reveal more than an ordinary accident. The airplane has made it possible for leaders of the United Nations to put a girdle about the earth in hours, but it has not been done without cost. As the Duke of Kent and Lt. Gen. Frank M. Andrews perished, so died General Sikorski. The cause for which he fought will go on to final triumph, but his comrades in that fight will miss his counsel and his spirit.

[From the Washington Star of July 11, 1943]

APOSTOLIC DELEGATE CELEBRATES MASS FOR GENERAL SIKORSKI

In commemoration of Gen. Wladyslaw Sikorski, Premier of the Polish Government in exile, who was killed in a plane crash July 4 near Gibraltar, mass was celebrated yesterday at the Shrine of the Immaculate Conception at Catholic University.

Representatives of all the United Nations were present at the service, which was planned by Ambassador and Mrs. Jan Ciechanowski of Poland. The Most Reverend Amleto G. Cicognani, apostolic delegate, was celebrant at the mass.

Following the service, Ambassador and Mrs. Ciechanowski and Col. Leon Mitkiewicz, assistant chief of staff of the Polish Army, received those officials present, among whom were Gen. Edwin M. Watson and Admiral Wilson Brown, military and naval aides to the President; Adolph Berle, Assistant Secretary of State; Justice Felix Frankfurter of the Supereme Court; and Bishop John M. McNamara, auxiliary Bishop of Baltimore and Washington.

Among the United Nations' officials present at the service were Lord and Lady Halifax, H. B. Butler, Minister from Great Britain; Ambassador Mehmet Munir Ertegun of Turkey; Count Robert van der Straten-Pontkoz, Belgian Ambassador; Ambassador Constantin Fotitch of Yugoslavia; Senor Juan Francisco de Cardenas, Spanish Ambassador; Dr. Aurelio F. Concheso, Cuban Ambassador.

Greek Ambassador Cimon P. Diamantopoulos; Hugues Le Gallais, Minister from Luxembourg; Ralph William Close, Minister from South Africa; Dr. Joao Antonio de Bianchi, Minister from Portugal; Dr. Alfred Bilmanis, Minister from Latvia; Vladimir Hurban, Minister from Czechoslovakia; and W. Bostrom, Minister from Sweden.

[From the Washington Post of July 6, 1943]

GENERAL SIKORSKI

The untimely death of Gen. Wladyslaw Sikorski, killed when the plane that was taking him from Gibraltar to London crashed into the sea, is a tragic blow both to the Polish nation and people and to the United Nations generally. General Sikorski was a gallant soldier and a far-seeing statesman. Commander of Poland's armed forces in the period following the conquest of that land by the Nazis, he was also premier of the Polish Government at London. In that capacity he visited Moscow, soon after the German attack on Russia, and in the face of bitter criticism from reactionary elements among his own people, reached an agreement with Russia which looked to the reestablishment of Russo-Polish friendship. His efforts in this sphere were temporarily thwarted by the Kremlin's sudden action in breaking off relations with the Polish Government. But he did not allow the temporary frustration of his plans to weaken his efforts to build a bridge to Russia. In fact he was preoccupied by the problem to the very end of his life.

A man of considerable breadth of vision and deep and abiding democratic instincts, General Sikorski's dream was to see Poland reestablished as a democratic republic in a democratic and federated Europe. Both as the leader of the Polish armed forces, which have played and are playing so heroic a role in the war, and as the guiding genius of the Polish Government, Sikorski helped lay the foundations of the Europe that is to be. We can only hope that when the Continent emerges from the fog of war, as it ultimately will, Polish statesmen of equal vision will be on hand to establish once more the principles for which General Sikorski fought.

[From the Kansas City Times of July 6, 1943]

SIKORSKI DEATH A BLOW—SOLUTION OF RUSSO-POLISH ISSUE DEPENDED LARGELY ON HIM—PLANE CRASH VICTIM ALSO WAS CHIEFLY RESPONSIBLE FOR POLISH MILITARY CONTRIBUTION TO ALLIES

(Article by Glenn Babb)

The death of Gen. Wladyslaw Sikorski, Premier of the Polish Government in exile, in an airplane crash at Gibraltar is a real loss to the cause of the United Nations. Not only was Sikorski's leadership chiefly responsible for the considerable and growing Polish military contribution to the alliance, but on him depended largely the hope of an early solution of the Polish issue on which there is a dangerous lack of accord between the Soviet Union and the western Allies.

His death draws attention again to the tragic plight of his country. Not only has the Polish fatherland been overrun in one of history's most ruthless conquests, but the Poles today are still without assurance that the defeat of their conqueror will mean the rebirth of their nation in anything like the form they desire.

Most of them hope for the reestablishment of the Polish state within the boundaries it occupied from 1919 to 1939. There is no power able and willing to promise this. On the contrary the power on whose friendship their future most largely depends, Soviet Russia, has given notice that the eastern half of Poland as constituted by the Treaty of Versailles is now considered an integral part of the Soviet Union.

WASHINGTON, July 5.—Secretary Hull issued a statement today terming the death of Gen. Wladyslaw Sikorski a loss not only to the Polish people but to the United Nations and the cause for which they are fighting.

"I am inexpressedly shocked," Hull said, "at the sad news of the death of General Sikorski, the prime minister of Poland and commander in chief of the Polish armed forces, in an airplane accident.

"The death of General Sikorski, who symbolized so vividly the indomitable spirit of the Polish people, is a very real loss, not only to the Polish Government and people but to the United Nations and the cause for which we are fighting.

"The American people share the sense of loss of the Polish people at the tragic death of General Sikorski, his daughter, and his distinguished compatriots who perished with him."

[From the Buffalo Evening News of July 7, 1943]

POLAND'S LEADER FALLS

The death of Gen. Wladyslaw Sikorski, Premier of the Polish Government in exile and commander in chief of the Polish armed forces, is an irreparable loss not only to his people but to all the United Nations. A liberal and a democrat who had devoted a lifetime to the cause of Polish independence, General Sikorski saw the essential problem of victory as one of real unity among the freedom-loving nations. He also saw the need for a spirit of cooperation and accommodation among the Slavic peoples, including the people of Poland and the Soviet Union as a fundamental of lasting peace in central and eastern Europe. To this end he was exerting all his efforts at the time of his tragic death toward reparation of the breach between Russia and the exiled Government he headed.

It is encouraging to learn that the Polish Government in London intends to follow the policies he laid down, though it is difficult to see how anyone can fill the unique place he occupied both in the esteem of the other Allied leaders and the affections of the Polish people themselves. As Professor Kot, the Polish Minister of Information, commented, the people inside occupied Poland know and cared only about the name of Sikorski—the details of Polish Government politics were unimportant to them.

Premier Sikorski was no less important as a military leader than as a statesman. He had personally supervised the organization and training of a new Polish army that is fifth in size among the United Nations, and he had sworn to lead his troops back to Polish soil. In fact, his death was the result of his dedication to these tasks. He was killed on his return from an inspection of Polish troops in the Middle East when the plane in which he was traveling plummeted into Gibraltar Harbor immediately after the take-off. The tragedy also took the lives of his daughter, the chief of the Polish general staff, and other important officers, including Col. Victor Cazalet, a popular and promising younger member of the British Parliament who had been serving as political liaison officer to the Premier. It is a loss that will long be felt, but the inspiration of General Sikorski's life and heroic struggle for a free, democratic Poland will remain to encourage the Polish patriots who are fighting in the same cause.

[From the St. Louis Star-Times of July 6, 1943]

DEATH OF SIKORSKI

The death of General Sikorski, Premier of the Polish Government in exile, is a major disaster to the United Nations. If another Polish leader can be found who, with equal dignity of spirit, is equally realistic about reconciliation with Russia, the anti-Axis coalition will be fortunate.

There is a quarrel between the Poles and Soviets over the eastern Provinces of pre-1939 Poland. These Provinces were incorporated into Russia when the Red Armies moved in following the Nazi attack. The Soviet Government has made it clear that she intends to keep them. Stalin and other officials have declared their desire for a "strong and independent" Polish state, but in Russia a separate Polish army—not under the jurisdiction of the Government in exile in London—is a sign that the Soviets mean to hold what they have taken.

Behind this is the Russian desire for strategic security against a revived Germany and also, perhaps, the frank recognition that anti-Soviet feeling among most Polish officials might make Poland sometime an open ally of the new German military machine.

Behind it is the Russian theory that the peace settlement of 1919 should have confined Poland to the so-called Curzon line—the boundaries recommended by Lord Curzon as proper, and roughly the boundaries which Russia now would leave the Poles.

Of all the Polish leaders in London, only Sikorski showed any clear sense of the need for some compromise with Russia which would form the basis of stability in eastern and middle Europe. Without weakness, he was able to approach his complicated problem in a spirit of good will and a clear desire to find a mutually acceptable settlement.

That was a great asset to Poland and to the United Nations, and Sikorski's leadership will be sorely missed. London and Washington will need to redouble their efforts to mediate between Poland and Russia.

[From the Richmond Times-Dispatch of July 7, 1943]

SIKORSKI'S DEATH HURTS POLISH-SOVIET AMITY

(Carl Hartman for Overseas News Agency)

WASHINGTON.—Prospects for a Soviet-Polish reconciliation were struck a heavy blow by the death of Polish Premier Wladyslaw Sikorski, informed sources said today.

This feeling was reflected in the official statement of regret by Secretary of State Cordell Hull, who said:

"The death of General Sikorski, who symbolized so vividly the indomitable spirit of the Polish people, is a very severe loss not only to the Polish Government and people, but to the United Nations and the causes for which we are fighting."

Hopes had been raised by a confidential letter from President Roosevelt which the Polish leader had received at Beirut while inspecting his army in the Near East. On his way back to London from this trip, Sikorski's plane crashed at Gibraltar.

Neutral and pro-Soviet spokesmen agreed that Sikorski was the only prominent figure in Polish affairs with sufficient stature and breadth of view to make reconciliation possible. Other exiled Poles have often criticized him as pro-Russian.

Moscow broke off relations with the Polish Government 2 months ago, indignant over a Polish demand for a Red Cross investigation of Nazi charges that the Soviets had murdered 10,000 Polish officers. The Soviets declared that members of the Polish Government were plotting with the Germans.

The Katyn Forest affair, as the Nazi charges were called, only precipitated the break. Behind it was a long-standing dispute between the Soviets and Poles over boundary and military questions.

Poland claims its pre-1939 boundary. Moscow says the regions it took over following the Polish defeat of that year have been permanently incorporated into the Soviet Union as a result of plebiscities, and in any case were wrested from it by force after the first World War.

As a result of an agreement made following the Nazi invasion of Russia in 1941, Gen. Wladyslaw Anders organized a Polish Army on Russian soil Disagreements that soon arose were settled by evacuating the Polish force to the Middle East. The Soviets charge that the Poles refused to fight at the side of the Red Army, and accuse Polish officers of espionage.

Recently, a new Polish military formation was organized in Russia under the auspices of a group called the Union of Polish Patriots, and named the Kosciusko Division after the Pole who helped this country win its independence. Head of the Union of Polish Patriots is Wanda Wasilewska, wife of a Soviet Ukrainian writer named Alexander Korneichuk. Korneichuk became a Soviet vice-commissar of foreign affairs following publication of a newspaper article he had written in vigorous denunciation of Poles who insist on Poland's pre-1939 boundaries.

Some Poles here charge that the Soviets plan to organize a puppet Polish Government, based on the Union of Polish Patriots. Informed sources doubt whether Moscow has any such immediate intentions, but it is admitted that unless the Poles find leadership that will reconcile them with the Soviets, Mme. Wasilewska's position will gain strength.

[From the Cleveland Press of July 6, 1943]

SIKORSKI AND A UNITED EUROPE

General Sikorski's death is used by Nazis trying to split the United Nations. Their fantastic tale is that the plane crash off Gibraltar, which killed the Polish Premier and his party, was a case of murder by British or Russian agents. This is the kind of enemy propaganda to be expected. But Polish statements in London, that Sikorski had been warned by his own underground not to make his middle-eastern trip, do more damage.

Naturally the Polish commander was as willing to take flying risks as the generals of other armies, and as Prime Minister Churchill and President Roosevelt. His London friends, who now talk of advance warnings, are unintentionally playing into the hands of the enemy propagandists. That is poor service to a brave and able leader, lost in the line of duty.

Polish patriots are particularly sensitive on this matter of letting the Nazis split the Allies because Hitler made such good use of the break between Poland and Russia. That was a situation where both sides fell into a trap of their own emotions, which could have been avoided by reasonable restraint. It is unthinkable that the costly mistakes of the past shall be repeated now.

Sikorski only 2 days before his death reaffirmed his desire for a resumption of Polish-Russian relations. If he had lived, he probably would have succeeded in that aim. His death should not make it harder to achieve.

Whatever mistakes Sikorski may have made, we believe history will approve his major effort for a regional European federation. He had the intelligence to see that the smaller states cannot be secure against a large aggressor if each stands alone. And he had the courage to accept the consequence of his logic—an amalgamation of the small which would be large enough and strong enough to facilitate prosperity and peace.

In Cairo last Friday he said:

"The purpose of a federation with the Czechs and a looser federation with the Yugoslavs and Greeks is to avoid war by forming anti-German blocs. It will also have a tendency to cooperate economically with the Soviet Union. * * * The Soviet Government will eventually agree because such organizations correspond to the interests of the Union of Socialist Soviet Republics."

Unfortunately, Stalin has not yet agreed. He fears the federation might be turned against Russia, and as a result the Benes group of Czechs has cooled toward the idea. Obviously such a federation could be misused, as any power can be misused, but that is hardly sufficient reason to damn it. If divided Europe cannot find economic health and political security through some form of union, it is apt to be the future prey of its own weakness and of some other Hitler.

The only way Russia or Britain or the United States really can help Europe is to help her help herself. Sikorski, a great Polish nationalist, knew that nationalism was not enough. He knew that his country to survive must be part of Europe able to help herself. We hope Sikorski's successor will have the same practical vision.

[From the Newark (N. J.) Evening News of July 6, 1943]

PREMIER SIKORSKI

Among the heads of the various exiled governments functioning at London, Premier Sikorski of Poland was outstanding. He realized, from the moment of Hitler's invasion of Russia, that Polish hopes for the future, in this war and thereafter, depended upon a firm and viable understanding with Moscow. He reached such an understanding. While relations between Poland and Russia were afterward strained, the atmosphere had been improving and there was even a project for a Slavic federation in eastern Europe, in which Czechoslovakia and Poland would each have a part at the moment of Premier Sikorski's death in an airplane accident.

Poland's cause suffers much in this loss. But other leadership will be developed to represent the interests of a great land and a proud tradition. Poland's troops in the Near East, which Premier Sikorski had just visited, will have opportunities to prove that his faith and pride in them, no less than his faith in the future of Poland, were not in vain.

The Fifth Freedom

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. HORAN. Mr. Speaker, the Congresswoman from Massachusetts has raised a vital issue right now with the concurrent resolution she has introduced. She proposes that we recognize a fifth freedom, that of individual enterprise and initiative.

And right now when individual initiative is often called upon to "cool its heels" whilst government makes up its collective mind, is a good time to inquire into such a basic problem.

Around it hinges the whole principle of government as proposed by the founders of this Nation. We today could well determine whether government should restrain and control individual enterprise in the specious name of "regulated security" or whether government should concern itself with progressive efforts to open doors and enlarge the vision of those productive individuals who know that every man's security comes from the combined and exchangeable production of all men. Like the spirit in the chambered nautilus, we might aspire, at last, to be free.

It is rather useless to speak of freedom if we accept or permit systems of limitations. I think it was Brand Whitlock who said:

> If we define freedom we limit it, and if we limit it we destroy it altogether.

Yet government today, enduring the pains of readjustments to industrial growth, has turned to systems of limitations and of complete control. Always, of course, in the name of common good. We have rejected that school of reform which assumes some native honesty or faith among men. Without these latter, democracy must languish—and, short of their reassertion, the very goals we die for at this hour must fail of our attainment.

Government proposes to achieve freedom from fear, freedom from want, freedom of worship, and freedom of speech. And, all of us rejoice. And now the fifth freedom—freedom of individual enterprise and individual initiative. In other words, the freedom to work and to produce.

This freedom must precede and, therefore, take precedence over such a misleading promise as "freedom from want." Government can give freedom only by actually granting it—without strings, without recourse.

Yet it surrounds men who would raise potatoes with insurmountable restrictions in the form of inedible laws and regulations. We approach pretty close to martial, rather than civil law right now and all because we have left out the fundamental basis of freedom.

Creation is the first fundamental. The right to create and to recreate is the greatest human right—more than a right; it is a duty.

The individual who honestly labors creates both for himself and for his neighbor. Government's reciprocal duty is to protect him in his desire to be productive. Government cannot grant him the first essential, that of genius or industriousness, but it can protect those who have ability in their employment of it.

Freedom from want has to come out of the ground—you cannot find it in marble halls. Government's reciprocal duty here is to make sacred all aspects of production.

Freedom of worship begins when men grow thankful of the privilege of achieving. Even freedom of worship to those addicted to envious prayer can avail men or nations of no joy.

Freedom of speech becomes a blessing when men have learned the glory of discussions that lead to positive good.

Freedom, freedom for the individual, for individual enterprise and initiative—it is indeed the keystone of the arch, and government's greatest contribution lies in preserving it.

Yet this concept is not new. John Stuart Mill, in 1854, ended his famous essay on liberty with this observation:

> A government cannot have too much of the kind of activity which does not impede but aids and stimulates individual exertion and development. The mischief begins when, instead of calling forth the activity and powers of individuals and bodies, it substitutes its own activity for theirs; when, instead of informing, advising, and, upon occasion, denouncing, it makes them work in fetters, or bids them stand aside and does their work instead of them. The worth of a state in the long run is the worth of the individuals composing it; and a state which postpones the interests of their mental expansion and elevation to a little more of administrative skill or of that semblance of it which practice gives, in the details of business; a state which dwarfs its men in order that they may be more docile instruments in its hands even for beneficial purposes, will find that with small men no great thing can really be accomplished; and that the perfection of machinery to which it has sacrificed everything will in the end avail it nothing, for want of the vital power which, in order that the machine might work more smoothly, it has preferred to banish.

And today when the productiveness of every one of us is so essential to victory and the peace, it seems to me that we up in the grandstands should be humble indeed when we shout "hold the line."

The line should and can be held. But it will come from fair treatment to the boys down there in the field. The ones with perspiration on their brows and their hands in the soil. It will come from gaining their confidence in the need for holding the line.

It will come from full recognition of their just rewards from the faithful employments of their talents and time in individual enterprise. It will come from recognizing their right to govern through representatives of their own choice, and not through the shallow excuse, "This is war, and we must, therefore, govern you."

Expenditures of War Shipping Administration and Maritime Commission

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. BLAND. Mr. Speaker, on July 6, 1943, the gentleman from Ohio [Mr. JONES] addressed the House on the subject of the Lend-Lease and the War Shipping Administration. In view of the misconceptions which might follow from some of his remarks about the War Shipping Administration and the Maritime Commission, I wish to point out the following facts:

First. The War Shipping Administration has not ignored or disregarded the ruling of the Comptroller General of the United States pertaining to section 902 of the Merchant Marine Act of 1936, but has observed it to the letter. It should be noted that the War Shipping Administrator sought the opinion of the Comptroller General on this difficult question, when it appeared that some differences in points of view might exist.

Second. The ruling of the Comptroller General on the meaning of section 902 does not confine the compensation payable for requisitioned ships to 1939 values, but requires only that such values be used as the basic starting point of the Administrator's determinations.

Third. The reports of the Comptroller General concerning certain actions of the Maritime Commission have been the subject of hearings conducted by the Committee on the Merchant Marine and Fisheries. The conclusions of the committee have not yet been submitted to the House of Representatives, but it can be stated categorically that no evidence of looting of the Treasury or anything remotely akin thereto has been discovered. The situation is very fully covered in hearings on H. R. 2731 and particular reference is made to those hearings and Committee Document No. 20, both of which are available upon request.

Fourth. The activities of the Maritime Commission and the War Shipping Administration have been examined from one standpoint or another by no less than six separate committees of the House and Senate. Typical of their conclusions as a whole is the following paragraph from the report of the Committee on Appropriations of the House of Representatives on H. R. 2968, the War Agencies appropriation bill, one of the most recent measures considered by the Congress:

> The American merchant marine is rendering a heroic service and writing an illustrious chapter in this war. When the full history of World War No. 2 is written, the programs, the administration, and the functioning of the Maritime Commission and the War Shipping Administration, both through construction and operation, from the top admiral down the commissioned line to ships' officers and seamen, and from the civilian directory to the supplementary civilian personnel, will be found to be a significant contribution to victory.

Fifth. The popularity of the War Shipping Administrator, Rear Admiral Emory S. Land, who is also chairman of the Maritime Commission, which is alleged to have deadened the scrutiny that Congress otherwise might be giving to the expenditures of Government funds, appears from the record to transcend personality and to be based upon the fundamental character of the man.

The reappointment of Admiral Land to the Maritime Commission was confirmed by the Senate by a vote of 70 to 5. In the course of debate in the Senate, the following observations were made:

> Senator VANDENBERG. It is my opinion that Admiral Land is the man above all others whom America must thank for the couriers upon the seven seas who are making it possible for American armies to survive around the world.
>
> Admiral Land is as honest as the day is long, if I know anything about men. If it were my money, I would trust him with every cent without a bond. I think his nomination should be confirmed.
>
> Senator WHITE. In my opinion Admiral Land is the outstanding figure who has served on the Maritime Commission during the past interval of 27 years. He has brought to his task intelligence and industry. He has brought ability, he has brought character, and he has brought courage.
>
> Senator BURTON. I wish to state, in my opinion, that Admiral Land is the most strikingly direct witness I have heard before any

committee, either in open or closed hearings. His testimony always has been not only the truth but also, to a refreshing and universal degree, the whole truth and nothing but the truth. Although serving as a civilian, his devotion to duty is on the high seas of that of a naval officer on active duty. His devotion to duty has carried with it a courage and a willingness to disregard private considerations which are greatly to be desired and rarely found. His integrity is so clear that it is not questioned. His diligence, his courage, and his technical knowledge are not questioned.

With these assets, I think Admiral Land can be relied upon to carry out completely and fearlessly the policies laid by the Congress. I am convinced that he can be counted on to resist any and all private pressures, however great, because his devotion to his public duty is many times greater.

Senator TRUMAN. I should like to say that it has been the duty of the committee of which I happen to be the chairman—the Special Committee to Investigate the National Defense Program—to look into a great many shipyards and shipping contracts. In none of these investigations have we ever found anything which would in any way reflect on Admiral Land or Admiral Vickery. There are a number of things of which we did not approve, such as matters of policy; but these gentlemen have delivered the ships, and I think it would be disastrous, under the circumstances, not to confirm the nomination of Admiral Land.

Sixth. Various subcommittees and special committees of the Committee on the Merchant Marine and Fisheries are continuing the special investigation of the activities of the Maritime Commission and the War Shipping Administration as authorized by the Seventy-eighth Congress. This commitee is interested in the facts only and will report them to the Congress as occasion may require, without fear or favor. This commitee welcomes criticism of all agencies under its jurisdiction and will be glad to investigate at any time any action of those agencies considered to be inimical to the public interest.

Formal Congressional Inquiry Necessary on W. P. B. Scrap-Iron Management—Optimism Characterizes Handling of Affairs—Over-all Program Needed

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. KING. Mr. Speaker, scrap metal from the home, garage, farm, and basement of every American citizen has become an actual part of the tanks, ships, guns, and planes of the United States Army, Navy, and Marine Corps, that are so capably being utilized against the foes of democracy. Again I say, thanks to alert millions of citizens and the newspapers the importance of scrap was impressed upon the whole Nation in the great scrap collecting drives of last year, which prevented the shut-down of our war plants because of the steel shortage precipitated by the shortage of scrap metal. Without that scrap steel could not be produced. Every American citizen, therefore, has a vital interest in the matter of steel production today for his very home is the source of one strategic element vital to the production of America's weapons of war. It was in the interest of these American citizens and the Nation as a whole that I directed the attention of the House of Representatives on June 3 to the scrap-iron situation existing in the country today. Following that occasion officials of the Scrap Division of the W. P. B. indicated a desire to discuss the matter in conference. Following those conferences I came to certain conclusions which I incorporated in a letter, along with certain recommendations, and directed the same to the Honorable FRANK W. BOYKIN, chairman of the Steel Shortage Investigating Committee of the House. Mr. Speaker, I herewith submit that letter:

The Honorable FRANK W. BOYKIN,
Chairman, Steel Shortage Investigating Committee, United States House of Representatives.

DEAR CONGRESSMAN BOYKIN: After my statement on June 3 to the House on the critical scrap supply situation, I was contacted by officials of the War Production Board Salvage Division who were anxious to present their point of view before any legislative inquiry was contemplated.

After a full opportunity had been given them to discuss the matter orally and in writing, and after examination of voluminous and in many cases irrelevant exhibits, I still am unable to get satisfactory answers to the major questions which I have raised, chief among them the question as to what plans have been developed to give reasonable assurance that we will be protected in raw material supplies for vital steel production.

With pressure by the Office of War Mobilization for at least 2,000,000 tons more of steel during the last half of 1943; with coal strikes, and delays in new blast-furnace construction creating additional demands for scrap; with the collection of obsolescent scrap slowing up materially, and certain major sources of such scrap drying up, I find a serious concern in responsible circles about scrap supply for next fall and winter. I am impressed, however, with certain conditions which I think will merit inquiry by the Steel Shortage Investigating Committee of the House.

NEED FOR OVER-ALL PLAN FOR SCRAP SUPPLY LACKING

1. I find no master plan or comprehensive program projected into the near future, for assuring scrap supplies. Scrap supply in 1944, when the steel industry will have built up its capacity to 97,000,000 net tons (or 5,000,000 tons more than this year) is not even mentioned in any discussions or data that I have seen.

A great deal of reliance is placed on normal inventory of scrap existing today, but little thought is given to organizing replacements or accumulating reserves. The same complacency that everything will turn out all right exists throughout the entire scrap picture as far as the War Production Board is concerned.

In a country that has the richest reserves of potential scrap that require proper organization and translation into usable scrap tonnages, the major contribution of the War Production Board Salvage Division would appear to be the reworking of slag dumps at steel plants, whose potentialities are limited to approximately 500,000 tons.

Inquiry should determine why no master plan is available, and whether constructive suggestions may not be proposed to develop new sources of scrap, and to organize and facilitate the flow of substantial tonnages by removing such obstacles and handicaps to said flow as may be revealed by an inquiry.

UNRELIABLE STATISTICS USED AS BASIS FOR PLANNING

2. In trying to determine how the War Production Board arrived at its optimistic conclusions last January concerning 1943 scrap supply, I found that we were dealing with elusive figures and very narrow margins, with admissions of the necessity for frequent revisions, requiring changes in plan or pace. It was revealed that the War Production Board had overlooked exports of millions of tons of finished steel under lend-lease and commercial commitments, with a resulting loss in scrap to us of a very large tonnage, which error has raised some doubt on the original accounting of estimates. It should be the subject of inquiry to determine why, in a commodity like scrap that is subject to so many changes, any agency should make estimates without allowing the widest possible safety factors for the benefit of the Government program to take care of the many changes affecting scrap supply that should have been foreseen.

DOMINATION BY VESTED INTERESTS COUNTENANCED

3. I find that in establishing estimates that influence vital decisions concerning scrap, outside interests, both in the steel industry and in the scrap industry, who are under no oath to the Government and who are opposed to Government stock piles because of their threat to normal business, are playing a most important part, almost to the surrender of certain responsibilities by sworn Government officials. Inquiry should determine why we can't have reliable independent Government estimates, surveys, and judgment applied to this problem.

OBSOLETE SCRAP, THE KEY TO PROBLEM, IGNORED

4. I find little understanding of the basic problem involved. There is much talk of "home" scrap and new industrial scrap production, with credit asked by the War Production Board for these things that need no stimulation or organization on their part, and little talk, except sympathy, for the scrap collector and obsolescent scrap, both of which require continuous organization and intensive stimulation, since they hold the key to raw-material problem. Inquiry should center attention on the problems involved in the collection of obsolescent group, of which there has been a sharp falling off, and to the instrumentality for the collection, preparation, and distribution of this type of scrap—the scrap industry.

USEFULNESS OF BUREAU, NUMBERING 700 EMPLOYEES, IN DOUBT

5. I find that a large organization of 700 people is working on the scrap problem in the War Production Board Salvage Division. I have no doubt that a great deal of work is performed, but I am not prepared to say whether it is pertinent work for the problem at hand. Inquiry should evaluate their services and should determine whether, in a task that requires imagination and practical scrap experience, any of the 700 employees are properly qualified by scrap experience, and whether the concentration of effort on obsolent scrap would not require fewer than 700 people.

ABSENCE OF CENTRAL SCRAP CONTROL JEOPARDIZES WAR STEEL OUTPUT

6. I find divided authority on the domestic scrap situation, particularly between Office of Price Administration and War Production Board, in connection with scrap policy.

Many agencies make their contribution to scrap, but there is no inter-relationship between them, each disavowing the other's responsibility. Inquiry should determine not only the effects of such divided authority on the collection and the flow of scrap, but whether centralized control and direction over the entire domestic scrap picture is not indicated.

In 1942 many steel furnaces shut down because of lack of scrap. We are concerned that a repetition of this crisis shall not occur. It calls for continuous and intensified effort by Government agencies, foresight in developing new sources of scrap as reserves and replacement, without relaxation for one moment on the part of any Government agency charged with responsibility for scrap supplies. I feel confident that legislative inquiry will establish the facts by which to evaluate the work already done by the War Production Board in connection with scrap, and will also establish the foundations for a farsighted, comprehensive program, which appears to be lacking today.

Yours very truly,

CECIL R. KING,
Member of Congress.

If Woodrow Wilson Should Rewrite That Book Today

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 7, 1943

Mr. MURDOCK. Mr. Speaker, if Prof. Woodrow Wilson, who six decades ago wrote the monumental textbook entitled "Congressional Government," were today writing a book with the same title, he would probably make it less a contrast between congressional powers and duties and Presidential powers and duties, which contrast is so prominently displayed in his well-known text. Today he undoubtedly would make it a study of the relationships between the national lawmaking body and the whole executive department, but the functions which he pictured so many years ago as belonging to the Presidential sphere of action would now be divided into many departments and agencies of the executive department. Therefore such a study in our times would more appropriately be a comparison of congressional government versus bureaucracy. Nor does it invalidate this statement to point out that the executive department is made up of the various bureaus.

Although the term "bureaucracy" has current, well-known meaning, it has come to be applied too frequently as a term of contempt. I am not using it here either as a term of contempt, or of justification, but rather to indicate conveniently the many subdivisions of administrative agencies making up the executive department of our Government. More of actual government in our country today is done by officials in the executive department than ever was done before.

In the year of our Lord 1943 there is no single term heard so frequently in debate in Congress—and almost invariably with a tone of contempt—as is heard the term "bureaucracy." Congressmen do not usually stop to define the term, for it is taken for granted that everybody knows what it means. Whoever comes under the meaning of that term is evidently regarded by Congressmen as exceeding their authority, doing something they ought not to do, probably incompetent to do that which they are supposed to do, and a more or less useless, if not dangerous, element in the Government. That seems to be the average Congressman's attitude toward the bureaucrats. Although it should be noted that the term is most frequently used by political opponents of the present administration.

Of course, the term "bureaucrat," strictly applied, should refer to an administrative officer of the Government at the head of one of the many bureaus into which the executive department is divided. The term has come to be used loosely—as loosely as probably erroneously—to any important administrative officer of the Federal Government, whether he be the head of a bureau, or an underling, or an overling in a bureau. Therefore, the term "bureaucrat," likely as not, might be hurled at the venerable Cordell Hull, head of the Cabinet as Secretary of State, or at an agricultural agent or a forest ranger in some isolated spot of our country. Those who criticize the administrative officers seem inclined to lump such officers together and to brand them "bureaucrats."

Of course, the increasing complexity of government, especially under the Franklin D. Roosevelt administration, during the period of the great depression and following the outbreak of the greatest of all wars, has seen an enormous increase in the functions of government and a corresponding increase in the number of executive and administrative agents of the Federal Government. Old bureaus and agencies may have had their function transferred to a newer one, but the old one has continued on with little decrease in personnel, even if considerable decrease in work; new agencies have been created, and they have grown like the proverbial snowball rolling down hill. It is not strange, then, that economy-minded Congressmen, as well as the big taxpayers, have come to feel that the most difficult thing in the world to exterminate is a no longer needed agency of our Federal Government.

As we well know, the founders of this Government provided for a separation of powers among the three great departments and provided that there should be some overlapping of functions in such a way that each of the departments should have checks upon the other two. Just how far would the founding fathers sanction the transfer of power, or the delegation of authority by Congress to the President or to any officials under him to carry on the work of our Government? Has Congress gone too far in recent years and delegated away too much of its authority? How much merit is there in the oft-heard demand today that Congress resume its proper function and conduct out Government after taking it away from the bureaucrats?

"SON, BE A LAWMAKER"

Mr. Speaker, on Jefferson's birthday in 1938 the gentleman from Texas, Judge SUMNERS, was one of several who recalled that the day was Jefferson's birthday and made interesting comments as to a Congressman's duty in keeping with the Jeffersonian philosophy of government. At that time, as at the present, there was a clash between the President and Congress, which strain had been growing more severe in nature after the introduction of the court reform bill early in 1937 and later augmented by controversy over reorganization bills. The gentleman from Texas was telling us, in all seriousness, that we as Congressmen must recognize our responsibility and do our duty so that the lawmaking branch should again function as one of the three equal and coordinate branches of the Government under out tripartite division.

The distinguished jurist from Texas has a keen appreciation of the significance of legislative processes and an even keener appreciation of the part the people must play in our American scheme of government. On this particular occasion some years ago the judge was not considering the judiciary apparently, for he spoke of the necessity of teamwork on the part of the President, of Congress, and of the people. As he read the signs of the times on April 13, 1938, he thought he saw existing conditions to be very bad, that the ship of state was heading for the rocks, and, although he did not expect it to strike upon the rocks, he did think there must be a change of direction. On that occasion he called upon us to do our duty in a spirit of give and take so that effective teamwork might result, but he was far from advocating a rubber-stamp Congress. The gentleman from Texas, Judge SUMNERS, is but one of several thoughtful Members seriously disturbed by a noticeable shift of power in our Government, the end results of which no one could quite foresee.

That day I reminded the judge that in every great crisis of American history the Executive, under the Constitution, assumes more power than usual, and he is constitutionally intended in cases of war to be virtually a dictator. I pointed out such was true of Lincoln in the Civil War, true of Wilson during the First World War, and true of Franklin D. Roosevelt during the period of the great depression, where conditions were very similar to that of war. I also reminded the Members that toward the conclusion of each crisis Congress resumed its powers, usually in great haste and sometimes with a spiteful spirit, which was harmful to the country's welfare. The gentleman from Texas stated that, according to his observations, such had been historically the case, but expressed the hope that it might not be true in the case of the present occupant of the White House. He hoped Congress and the President could achieve cooperation and effective teamwork without the strife and evils which had heretofore followed emergencies.

WHAT DID THE FATHERS INTEND?

In any study of the theory underlying the American system of government it must be pointed out that our American constitutional plan provides three equal and coordinate departments, but that same Constitution provides that there shall be checks on each department by each of the others. No doubt the founding fathers expected, or at least they hoped, that by their system of checks and balances the three great departments would function coordinately and no one of the three should usurp power from the others so as to become dangerously out of line. Well, that may have been the theory. Actually the opposite has happened. American history affords numerous instances, or at least periods, where one or another of these supposedly equal departments of government has grown in power out of due proportion and has overtopped the others. I would say that equality of the three departments is not the normal state of affairs, but rather towering inequality of some one of the three over the others is the natural or usual state of affairs.

For short periods the Presidency is apt to tower over the other two departments. This has been usually during a war or some period of great economic emergency. In the period immediately following a war or great emergency it is the usual thing for Congress to seize the opportunity and recapture its lost or delegated powers and to assume control. It has been usually in a period of extended peace that the Supreme Court—that amazingly powerful institution which has no armed force to assert its power—by pure reasoning, legalistic logic, builds up its influence until it overshadows the other departments of government.

Institutions are said to be but the lengthened shadows of great men. Well apparently during those periods when the Supreme Court of the United States stood head and shoulders above the other departments of Government, it was so because a great jurist presided over the Court as Chief Justice. That was the situation for a third of a century when John Marshall presided over the high court—in times of peace. In our times it was the situation when Charles Evans Hughes was Chief Justice. In my mind there is no doubt but that the three departments of Government, constitutionally supposed to be equal, were not at all equal while John Marshall was Chief Justice nor while Charles Evans Hughes was Chief Justice.

During those periods when the Presidency arose to its height it was due to the stature of some great man. Certainly that was true in the days when Washington was President—and also of a half dozen successors, such as Jackson, Lincoln, and Franklin D. Roosevelt. During any period when Congress arose above the average level of power there were a few outstanding men among the membership in the House or Senate. I would not call them in every case great men, but they were powerful men, and usually very determined men, and they have left a mark for good or ill upon our history.

THEORY OR ACTUALITY

The thing I am trying to say is that the actual working of our American political and constitutional history has been quite different from that even coordination which the fathers planned when they gave us this three-team Government, expecting each of the teams to carry its load, and thus distribute the scope of government equally among the three. The actual fact is that at any given moment in our history—if not a transitional period—one of the three is out ahead of the others, exerting probably more power and force than the fathers intended. Now, such is not a good state of affairs for getting a big job well done. Every farm boy knows that it is not well for a team of horses attached to a heavy load to behave in that fashion.

It is interesting to inquire why there has been so much unevenness in the functioning of the three great so-called coordinate departments of our Government and what is the remedy for such unevenness and how much better the job would be done if ideal teamwork could be had. I can here only point out the obvious lack of teamwork and hope that some philosopher will come along to cooperate with the gentleman from Texas in telling us how better teamwork may be obtained. I do have some ideas along that line, but they probably are not worth very much. However, I cannot close this discussion without saying again, as I did to Judge SUMNERS back in 1938, that the very safety of our country depends upon more discretion on the part of Congress when it takes back the powers which it has delegated away than it has shown on former occasions. I sincerely trust that good sense will be shown by this Congress in this necessary but delicately vital matter.

"This One Thing I Do"

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. CANNON of Missouri. Mr. Speaker, we are at a critical period of the war. The United States is now fighting on every front. In Europe, Asia, Africa, Alaska, and Australia, American armies have met the first shock and are advancing. The real test is now at hand. The next few months will be decisive.

Congress is adjourning today after one of the most momentous sessions in the history of the Nation. Congress has made every provision for the war. Without reference to party or politics or partisanship, it has appropriated the money and enacted the legislation required by the Army and the Navy. It has set in motion unexampled and unparalleled production of arms and munitions. It has mobilized the manpower of the Nation on the home front and in the field. It has now completed its work for the time being. The safety of the Nation and the destiny of the world now rests in the hands of the President and the people—the people as well as the President—because we must have their support and cooperation to win. There is much talk about sacrifice. But outside the men at the front, and those at home anxiously awaiting their return, many have more to spend and are living better than ever before.

How inconsequential and how ill-timed, therefore, are the querulous complaints and fretful criticisms of unthinking American citizens against the unavoidable restraints which war places on a nation at war—and especially a war in which the last liberty, the last dollar, and the last drop of blood of every American are at stake. No one would dream of imposing the draft, price ceilings, rationing regulations, taxes, and all the irritating limitations and irksome annoyances necessary in every country at war, if there were any way to avoid them. Within the narrow latitude which the imperative requirements of the war permit, all of us from the President down are seeking to so adjust and minimize these necessary regulations as to render them as practical and workable as possible without endangering the lives and success of our men at the front. And every patriotic citizen will cooperate in the war effort by adapting himself to their requirements—although in some instances they may seem, and may be, inequitable.

Likewise, every citizen will realize that war is not an economical business and unavoidably involves huge wastage regardless of who is in command. It always has been so and always will be so. Compared with former wars, and taking into consideration the vast number of men and quantities of material involved, there is less waste in this war than in any war we have ever fought from the Civil War down. Every effort is made to stop leaks and our committees of investigation are uncovering and correcting mistakes and maladministrations as fast as they occur. No one is allowed to make unconscionable millions out of the war as in former wars and our system of renegotiations—never before used by any nation—is every day returning millions of dollars from the profits of the war contractors to the United States Treasury. War and economy do not go together and never have gone together, but more precaution is being taken against waste in this war than in any previous war, as Treasury receipts convincingly demonstrate.

And yet there are radio broadcasters and newspaper columnists—and thoughtless American citizens who take their cue from them—who never mention the great victories we are winning in production and in the care of our men—victories against incredible handicaps of distance and supplies, on a thousand battle fronts—such victories as were never won before by any people. All they can see, and all they can talk about, are the flyspecks of their per-

sonal discomforts and personal peeves over coffee or sugar, or the wages some neighbor is getting, when our allies are being bombed daily and enduring unimaginable privations and horrors without a whimper.

We must win the war and we must win it in the quickest time possible. Every additional month, every additional day, every additional hour, means terrible losses.

Unconstructive criticism of matters which cannot be avoided in time of war only serve to interfere and discourage at home and at the same time encourage the enemy abroad. We do not want to have to win this war by frontal assaults of massed American troops against concentrated machine-gun fire in Germany and Japan. We want to drive home to the enemy that their cause is hopeless—that the American people are united and will support the war program until the last foe lays down his arms. Once convinced of that fact, once convinced that they must lose in the end, they will crumple from within and the lives of a million American boys will be saved. Avoid casual or chronic criticism unless it serves some positive and definite purpose. When you comment, praise the saving of life in camp and in battle. Commend the remarkable success of the war program against merciless enemies trained for war and ready to the last buckle and the last gun before we started.

Let us acquit ourselves like men. Let us endure with patience the ills we cannot cure. How unimportant they are in comparison with all we have at stake in this critical hour. Let us sacrifice to maintain the liberties our fathers sacrificed to establish. Let us give the war our undivided support and cooperation, that this Nation created under God, this "Government of the people, by the people, and for the people, may not perish from the earth."

"Our Flag Was Still There"

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. AUCHINCLOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which recently appeared in the Collector, a magazine for autograph and historical collectors, published in June 1943, about the writing of the Star-Spangled Banner, the national anthem. This article was based on a recently discovered letter written by one Severn Teackle and sheds some interesting historical light on the writing of the Star-Spangled Banner:

"OUR FLAG WAS STILL THERE"

By the dawn's early light of a September morning nearly 130 years ago, two figures paced the deck of a flagship anchored in Chesapeake Bay, near the mouth of the Patapsco.

Fort McHenry had been under bombardment throughout the long night—but before daylight the firing had ceased. Had the fort surrendered? Or had the attack been abandoned?

In dread silence the two Americans, who were being detained on a flagship by the British, peered anxiously through the graying mist. Was it the Union Jack—or was it the Stars and Stripes floating over the fort?

Hope finally turned to certainty—

"And the Star-Spangled Banner in triumph doth wave * * *."

The growing light revealed the enemy stealthily retreating to their ships.

Sensing the keen drama of the moment, one of the two Americans pacing the deck stopped at the rail, drew a letter from his pocket, and on the back of it scribbled some brief lines.

Later, in a boat on his way to shore, he completed his notes.

In those inspired moments, Francis Scott Key had composed his immortal hymn, destined through centuries to lift men's hearts in a paeon of thanksgiving—

"Blest with vict'ry and peace, may the Heav'n rescued land
Praise the Power that hath made and preserved us a nation."

In its theme lies its immortality; not a call to arms—not glorification of a leader—but a prayer of simple gratitude.

Soon after the abandonment of the attack by the British, Key and his companions were able to land and learn the particulars of the engagement. When they reached Baltimore, still fired by the thrilling experience, he wrote out his poem in its present form and showed it to Judge Nicholson, a relative, who was also one of the defenders of Fort McHenry. The latter thought so highly of it that he had a broadside printed and circulated within a few hours.

Who was the author? How did he happen to be aboard the flagship anchored in Chesapeake Bay during the bombardment? Who was the other American pacing the deck with him?

Francis Scott Key was a young lawyer by profession and a volunteer in Major Peter's light artillery. He had set out from his home in Georgetown to intercede for the release of a friend, Dr. Beanes, who had been captured by the British at Marlborough because of activities in connection with the punishment of a few marauders, stragglers from the British Army who were disturbing the populace of his community.

With Key was John Stuart Skinner, commissioner of exchange of prisoners, the Paul Revere of 1812, who had ridden 90 miles in the night to announce to Washington the approach of the British forces.

Citing Dr. Beanes' generous care of wounded British officers, Key had been able to secure his friend's release. But in the meantime the enemy sailed up the Patapsco and anchored off Fort McHenry, preparing for an attack on Baltimore. To prevent the Americans from giving information that might interfere with the plan, they held them prisoners on the flagship during the bombardment.

The courageous defense of Fort McHenry which so inspired Mr. Key has been vividly recalled to our minds of late by an extraordinary eye-witness account of one of the fort's defenders—Severn Teackle. Faithfully today we tend the eternal light in honor of the Unknown Soldier. By a curious paradox it is an unknown soldier of long ago who now illumines for us some of those dark hours of struggle, when our Nation had not yet attained her present stature, when her fate actually may have rested upon the outcome of this closely contested battle.

In a letter dated September 23, 1814, the writer settles for all time the circumstances surrounding our national anthem and the scene that gave it birth. His story stirs our imagination to a new understanding and appreciation of the intensity of those fervid moments when the young lawyer from Georgetown scratched down the symbols of his high emotion on the back of an old letter, words that were to ring through the years.

We quote in part the newly unearthed description of the engagement at Fort McHenry:

"On the Sunday that the British Fleet made their appearance we were ordered to take our blankets to the battery and not to leave there untill ordered. In that situation we remained untill the Thursday morning following, sleeping (if it may be so called—for I could not sleep untill excessive fatigue drove me to it during the cannonade of the enemy) in the Open air and two thirds of the time it rained excessively hard. In that Situation wet—hungry & fatigued on Tuesday morning about 6 we were greeted with the discharge of about forty Bombs—

"'And the rockets' red glare, the bombs bursting in air * * *.'

"From such a rattleing & whistleing Good Lord forever deliver me—they continued the Bombardment untill about twelve, when two of their Bomb ships warped in a little nearer—we immediately opened all the Batterys on them and in fifteen minutes compelled them to cut cables & shear off—The Bombardment continued until 5 when they ceased—

"'At the twilight's last gleaming * * *.'

"and commenced again at 9 at night and continued an incessant roar untill two on Wednesday morning when they abated their fire and occasionally fired as the men were to be seen. About 11ock at night they sent (as Mr. Skinner of the Flag of Truce afterwards reported to us who was lying off with the fleet and not permitted to come home) twelve hundred & Fifty picked Seamen in Barges and a Schooner to land in the rear of the fort and storm it.—They were however seen by Sert. Covington and a Six gun Battery—

"'On the shore dimly seen through the mists of the deep'—

tho not seen by us from the Darkness of the night.

"These two Batterys of 24 guns kept up an incessant shower of shot for more than two hours on the Barges—and they were distinctly heard to say more than once By Gd. they'l blow us out of the water. About Two in the morning they returned and we got a glimpse of them and immediately opened the lower Battery which must have done considerable execution. I did not conceive it possible that the same number of men & Boats could be kept as still as they were that night—

"'The foe's haughty host in dread silence reposes.'

"We have one of their Boats, a 74 launch which was lost full of men said to be 60 or 70—

"'And where is that band who so vauntingly swore?'

"On Thursday morning the Patapsco was full of men floating about—

"'Their blood has washed out.'

"(Some) were sewed up in linen and others just as they were. Admiral Cochrane commanded in person.—He hoisted (his) broad flag on board the *Menalaus* frigate commanded by his Son.—Previous to the attack he asked Mr. Key, a Lawyer from Georgetown who was on board the flag, whether there was any person in the fort Authorized to Surrender that and the shipping as he should send in a Summons that day at 3ock which

I believe was started from the Admls ship but our battery being uncommonly annimated at that hour she put about and returned. The loss in the fort was comparatively smal only 7 killed and 23 wounded.

" 'Through the perilous fight'

"Of the latter our company has seven severely—but none killed dead. I was Blown up once whilst in the act of Removing the Powder from the Magazine—but received no other damage than getting my pantaloons torn nearly off me."

"Severn Teackle" does not ring familiarly in our ears.[1] Some descendant of his may perhaps happen upon this account, and throw light upon the circumstances of his life. But should his identity remain forever as shrouded in mystery as that of the unknown youth lying in Arlington Cemetery, still he is a part of that immortal company—one of the many figures in the colorful pageant of America's epic past.

Young "Severn"—for so he signs his letter to his friend Philip Wallis, of Easton, Md., concludes his stirring narrative without even the formality of a new paragraph:

"We have a song composed by Mr. Key of G. Town which was presented to every individual in the Fort in a Separate sheet—you may have seen it, if not at some future day I will shew it you."

Those early patriots seemed to have a sense of the future's problems as well as their own—

"O! thus be it ever when freemen shall stand,
Between their lov'd home, and the war's desolation."

[1] Since this article went to the printer, Miss Dorothy Miner, librarian and keeper of manuscripts at the Walters Art Gallery, of Baltimore, commenting on this letter, writes: "There was in the nineteenth century a well-known Baltimore lawyer called Severn Teackle Wallis, whose name combines several of the names mentioned in your letter."

In this hour when the destinies of nations hang in the balance, it is well for us to turn backward to simple records such as this, to distill from them new values, new guidance, and new hope. Inspiration and balance lie in the realization that we of our age are not alone in our sacrifices; others of bygone days as well have put aside their personal joys and sorrows to merge their lives in one great effort—have given that "last full measure of devotion" to secure the American way of life for all who tread on American soil.

Social-Security Protection for Servicemen, War Workers, and Civilian Population

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. WAGNER. Mr. President, in further explanation of the social-security bill, S. 1161, which I introduced in June, prior to the recess, for myself and the junior Senator from Montana [Mr. MURRAY], I ask unanimous consent to have printed in the Appendix a statement I made on August 14, the eighth anniversary of the original Social Security Act. Among other provisions, this bill covers some of the major recommendations for returning servicemen set forth in the President's recent radio speech.

In the same connection I ask to have printed also a Gallup poll showing overwhelming public approval of this means to pay as we go now for post-war social security. This confirms polls taken by other organizations and periodicals, which I inserted in the Appendix of the CONGRESSIONAL RECORD on July 1.

There being no objection, the statement and poll were ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. ROBERT F. WAGNER, OF NEW YORK, SENATE SPONSOR OF THE ORIGINAL SOCIAL SECURITY ACT

This day marks the eighth anniversary of the Social Security Act. In the midst of war, it is fitting to note this great milestone of our democracy's progress toward the goal of security for the average man and his family. In good times as well as bad times, the Social Security Act has afforded a floor of protection to millions, helped stabilize the entire free enterprise system, and bulwarked the democratic institutions we are fighting to defend and perpetuate.

When our military victory is won overseas and we are secure from external attack, the Nation's first objective will be the fullest possible employment in private industry of returning servicemen, war workers, and others in the civilian working force. An extended and improved social insurance system is an important aspect of that goal of post-war readjustment. It would serve as a stabilizing force when the national economy is functioning at or near full employment, and as a first line of economic defense if we do not attain that level. Once the fighting ends, we will look to the social insurance system to help guide servicemen and other workers to private jobs, through the employment service; to enable older workers to retire with a secure income, thus leaving more job openings for others; and to provide minimum purchasing power and security for the wage earner and his family when he moves from one job to another, or from military service to private employment, or when wages are cut off in periods of illness or permanent disability.

The present law, with its limited coverage and scope, is inadequate to meet the major demands that will be made upon it when hostilities cease. These needs will be fully met by the comprehensive, unified social insurance program embodied in the bill recently introduced in the Senate by Senator MURRAY and myself, and in the House by Congressman DINGELL.

Among other features, this bill (S. 1161) covers some of the major recommendations put forward by the President in his recent radio speech and developed in the report submitted to him on demobilization and readjustment. In direct aid of returning servicemen and women—

1. The bill creates a national United States Employment Service, which is directed, among other duties, to establish and develop all necessary facilities and services for assisting men and women who have served in the armed forces to secure and maintain private employment.

2. Where jobs are not immediately available, the bill provides for the payment of unemployment insurance benefits to those demobilized, ranging from $12 to $30 a week, depending upon the number of their dependents, for a possible maximum of 52 weeks of unemployment.

3. Demobilized servicemen are given full credits toward their own and their wives' old-age insurance benefit for the entire period of military service.

4. Demobilized servicemen are given full credits toward survivor's insurance protection for the entire period of military service, so that their wives and children will be assured of protection in case of their death before they have worked long enough again in private industry to become reinsured through their own insurance contributions.

5. Demobilized servicemen and women are given credits for their period of military service, toward both permanent disability and temporary sickness benefits, in case they become disabled before they have worked long enough again in private industry to become insured through their own insurance contributions.

6. Demobilized servicemen, and their wives and children, are guaranteed medical and hospital care for a full year after discharge from military service, during which time they can become insured, for themselves and their families, through their own insurance contributions.

The cost of the social-security protection above mentioned to the individuals engaged in military service is to be met by the Federal Government out of general revenue. Financing of the expanded social insurance program to cover war workers and millions of other civilians is provided by increasing social-insurance contributions to 6 percent of wages earned by the worker, and 6 percent of pay roll paid by the employer. For employers, this represents only a 1-percent increase above the rate payable next year under the present law, and no increase above that now scheduled by law for 1949. The bulk of the increased contribution—at least $5,000,000,000 above present collections in the first year of operation—would thus come from increased payments by employees. The great labor organizations of the country, speaking for their millions of members, are heartily supporting the bill because these increased contributions will be matched by increased benefits.

By this widely accepted and conservative principle of social insurance, based upon the machinery of the Social Security Act, we would provide one unified comprehensive plan whereby the bulk of the population could pay as they earn now for post-war social security. At the same time we would provide a substantial share of the billions in new savings needed to hold the line against inflation during and immediately after the war.

This legislation should be considered and adopted promptly if it is to serve effectively in the fight against inflation and in our plans for demobilization and post-war readjustment. Sponsors of the legislation expect to urge full committee hearings promptly upon reconvening of Congress.

EXPANSION OF SOCIAL SECURITY FAVORED BY LARGE VOTE IN SURVEY ON EIGHTH ANNIVERSARY—SICKNESS AND MEDICAL BENEFITS FAVORED—WILLING TO PAY 6 PERCENT IN PAY ROLL TAX

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., August 13.—Eight years ago tomorrow—August 14, 1935—President Roosevelt signed a bill which was destined to become one of the most popular and best-liked single pieces of legislation in the history of the New Deal.

On this eighth anniversary of the Social Security Act there are a number of basic amendments pending in Congress which would greatly broaden the scope of the social security program. The public, which approved the original act by the overwhelming vote of 89 percent, is in favor of many of the proposed amendments, and a substantial number of Americans are willing to pay 6 percent on their wages and salaries in order to make the enlarged program possible. Under the existing law employees pay only 1 percent this year, and 2 percent next year.

The increase to 6 percent in pay-roll deductions, as proposed in the Wagner-Murray-Dingell bill now before Congress, would go largely toward increasing present pension benefits and toward establishing a new feature of social security—payment of benefits for sickness, disability, doctor and hospital bills.

There have been heated arguments in the medical profession over the advisability of setting up socialized medicine programs such as this.

While a division of sentiment also exists on the part of the public, nevertheless the majority of voters favor the proposed change.

An Institute survey from coast to coast put the issue before the people as follows:

"At present the social-security program provides benefits for old age, death and unemployment. Would you favor changing the program to include payment of benefits for sickness, disability, doctor and hospital bills?"

The vote is:

	Percent
Yes	59
No	29
Undecided	12

All those who favored the program were then confronted with the fact that this would mean an increase in the amount of money deducted from their wages or salaries. They were asked whether they would be willing to accept this larger deduction:

"Would you be willing to pay (or have your husband pay) 6 percent of your salary or wages in order to make this program possible?"

The vote of the 59 percent approving the program divides as follows:

	Percent
Yes	44
No	11
Undecided	4
	59

TO INCLUDE NEW GROUPS

Another of the many proposals contained in the bill now before Congress is that social security be broadened to include farmers, domestic servants, government employees, professional persons, and others who are not now included under the program.

By a large vote the public favors expanding social security to include these groups:

"At present farmers, domestic servants, government employees, and professional persons are not included under Social Security. Do you think the social-security program should be changed to include these groups?"

	Percent
Yes	64
No	19
Undecided	17

Report of Committee on Foreign Policy and International Relations of the Republican Advisory Council

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the report of the Committee on Foreign Policy and International Relations, adopted by the Republican Advisory Council, at Mackinac Island, Mich., September 7, together with editorials on the subject from the New York World-Telegram, the Washington Star, the Detroit News, and other newspapers.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

REPORT OF THE COMMITTEE ON FOREIGN POLICY AND INTERNATIONAL RELATIONS

The members of this council are aware of the gravity of the problems our Nation faces. We are fighting a desperate war, which must be won as speedily as possible. When the war is ended, we must participate in the making of the peace. This puts upon the Nation a triple responsibility.

(a) We must preserve and protect all our own national interests.

(b) We must aid in restoring order and decent living in a distressed world.

(c) We must do our full share in a program for permanent peace among nations.

At this time a detailed program for the accomplishment of these great objectives would be impractical, and specific commitments by this council, by the Republican Party, or by the Nation, would be unwise. We cannot know now what situation may obtain at the war's end. But a specific program must be evolved in the months to come, as events and relations unfold.

Therefore, we consider it to be our duty at the beginning of our work as an advisory council of the Republican Party to declare our approval of the following:

1. Prosecution of the war by a united nation to conclusive victory over all our enemies, including—

(a) Disarmament and disorganization of the armed forces of the Axis;

(b) Disqualification of the Axis to construct facilities for the manufacture of the implements of war;

(c) Permanent maintenance of trained and well-equipped armed forces at home.

2. Responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world.

In making this recommendation we ground our judgment upon the belief that both the foreign policy and domestic policy of every country are related to each other so closely that each member of the United Nations (or whatever cooperative organization, perpetuating existing unity, may be agreed upon) ought to consider both the immediate and remote consequences of every proposition with careful regard for—

(1) Its effect upon the vital interests of the Nation.

(2) Its bearing upon the foreseeable international developments.

If there should be a conflict between the two, then the United States of America should adhere to the policy which will preserve its constitutionalism as expressed in the Declaration of Independence, the Constitution itself, and the Bill of Rights, as administered through our republican form of government. Constitutionalism should be adhered to in determining the substance of our policies and shall be followed in ways and means of making international commitments.

In addition to these things this council advises that peace and security ought to be ultimately established upon other sanctions than force. It recommends that we work toward a policy which will comprehend other means than war for the determination of international controversies, and the attainment of a peace that will prevail by virtue of its inherent reciprocal interests and its spiritual foundation, reached from time to time with the understanding of the peoples of the negotiating nations.

In all of these undertakings we favor the widest consultation of the gallant men and women in our armed forces who have a special right to speak with authority in behalf of the security and liberty for which they fight.

It is determined that this council make complete examination of the means by which these aims may be fully achieved with due regard for all American interests and responsibilities.

The council invites all Americans to adhere to the principles here set forth to the end that our place among the nations of the world and our part in helping to bring about international peace and justice shall not be the subject of domestic partisan controversy and political bitterness.

[From the New York World-Telegram]

MACKINAC FOREIGN POLICY

We like the unanimous foreign policy declaration of the Republican Post-War Advisory Council at Mackinac. We think most Americans will like it, because it points in the direction they want to go. They want a strong and free America, taking full part in the cooperative building of future world peace and justice. And that is the common ground upon which Republican leaders of various shades of opinion have agreed to stand.

Of course, Mr. Roosevelt ridicules the G. O. P. declaration. Perhaps that is the natural thing for him to do as Democratic Party leader and a fourth-term candidate, who does not want to see Republicans get together. But it might be better politics—and certainly higher statesmanship—for him to welcome this and try to duplicate it among the divided Democrats, so that foreign policy could be lifted above political partisanship. We doubt that he really dissents.

Some may wonder why the Mackinac declaration is not more definite, and extremists on both ends will be disappointed that it does not include their pet panaceas for perpetual peace. It could not take either extreme, of isolationist or superstater, and represent the majority of Americans.

As for definiteness, it obviously would be absurd for Republican leaders to fix details in a rapidly changing world situation on which no foreign government is yet committed. Indeed, experts as far apart as President Roosevelt and ex-President Hoover agree that final detail decisions cannot even be made promptly after the war, but probably must be matured over a transitional period.

This is as definite as it can be without goldbricking the public: "Responsible participation by the United States in postwar cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world."

We like also the G. O. P. emphasis on adequate American armed forces, and on sticking to constitutional methods in determining foreign commitments. Any foreign policy not approved by the people and Congress is a dangerous delusion. But we are convinced that the people will support vigorously the general aims of the Mackinac declaration, which are exclusively neither Republican nor Democratic but American.

[From the Washington Star]

G. O. P. FOREIGN POLICY

Despite efforts by the President and others to ridicule it, the foreign policy statement adopted by the Republican Post-War Advisory Council seems well suited to the needs of this time and the probable requirements of the future.

Mr. Roosevelt was unable to understand the statement. Others, while having no difficulty in this respect, profess disappointment that the Republicans did not go further and commit themselves to some specific form of post-war world organization and an international police force. The fact is, however, that the Republicans have gone quite far. To the extent that men can see into the future, the statement is clear and it is specific.

The heart of the document is in the paragraph which calls for "responsible participation by the United States in post-war cooperative organizations among sovereign nations to prevent military aggression and to obtain permanent peace with organized justice in the world." Senator VANDENBERG, chairman of the council's foreign policy committee, said that the statement of policy was designed to commit the Republican Party, first, to defending and preserving the essential interests and institutions of our own country, and, second, to cooperation in complete good faith with our allies in the post-war effort to end military aggression forever and to create dependable peace with justice in a free world. These objectives, he contended, are not incompatible.

Other participants in the discussion emphasized that cooperative organization meant some form of organization, by whatever name it may be called, with other sovereign nations for the establishment and perpetuation of peace, and that the use of the phrase "organized justice" means that the Republicans would be committed to some form of world court to litigate disputes among nations. And, from this, it certainly follows that responsible participation by the United States in such a program means that this country, should need arise, would be prepared to make its contribution to forcible attainment of these objectives.

For a political party which had become identified as the champion of "isolation," this is a long step forward. The G. O. P. has its eyes on the future, and if the statement of the advisory council is adopted at the party's next national convention it will have buried the past. To put it another way, this means that the question of the willingness of the United States to assume its legitimate responsibilities in the world of tomorrow would no longer be a subject of partisan politics, and, with a national election in the offing, this is eminently desirable.

The President and those others who seem disposed to ridicule what the Republicans have done would be well advised to consider the importance of removing the question of this country's post-war international stand from the realm of purely political debate. Instead of belittling the Republican program, it might be better for them to concentrate on persuading the Democrats to do as well.

[From the Detroit News]

IT IS NOTICE TO THE WORLD OF UNITY IN AMERICA

Though the President was pleased to feign a humorous ignorance of what went on at the Mackinac Island Republican meeting, it is safe to say that the entire world read with great interest of the Republican resolution on foreign policy.

This resolution will be interpreted abroad as eliminating the question of post-war collaboration with other nations as an issue between the two major American political parties. It will be taken as assurance that history will not repeat and that the Republican Party will not again be the instrument or exploiter of any post-war revulsion toward isolationism.

The effect, as the President well knows, will be to strengthen his hand tremendously in dealings with our allies, with the wavering allies of our enemies, and with neutrals. As was true a quarter of a century ago, there is popular faith throughout the world in the disinterestedness of the American desire for international peace and justice. The apparent assurance that this time the United States will play out the game realistically and determinedly cannot fail to lend our efforts an influence they otherwise might lack.

The action of the Mackinac meeting on foreign policy, in the estimation of the News, was carried out on a high plane of statesmanship. It is our hope it will find in other quarters that emulation which will realize its utmost possibilities for good.

It obviously sought and apparently has provided the basis for resolving Republican differences on foreign policy. Men sympathetic with the ideas of Wendell Willkie were present at the meeting and helped shape the resolution.

But the further opportunity exists to make of this resolution a basis of national unity on foreign policy. As suggested by one of the Mackinac conferees, Representative EATON, of New Jersey, the Democratic and Republican National Conventions both might adopt the resolution as a common foreign policy plank.

The expedient is feasible, even though novel. The resolution in its essential parts is brief but explicit enough. It favors an organization of nations to preserve world peace under a system of organized justice. This is, if anything, more explicit than any Democratic pronouncement to date on the subject, yet certainly goes no further than either the President or, we believe, the people would want.

The resolution itself invites all Americans to adhere to the principles here set forth to the end that our place among the nations of the world and our part in helping to bring about international peace and justice shall not be the subject of domestic partisan controversy and political bitterness.

That invitation, as good an evidence as any of patriotic sincerity, should be accepted in the spirit inspiring it.

[From the New York Times]

REPUBLICAN FOREIGN POLICY

It is sheer coincidence that the policy-makers of the Republican Party happened to be meeting in Michigan as Italy prepared to surrender, but the coincidence dramatically increases the importance of what they had to say. We are a long stride nearer to the winning of the war and to the inescapable answer that must be given to the question whether the United States will accept its proper share of responsibility for safeguarding peace when it is won. By chance, the Republican policy-makers spoke in one of the great moments of history.

To their credit they spoke well and plainly. Nor, apparently, did they find it hard to do so. From the beginning of the Mackinac Island conference it was evident that the isolationist thinking so long dominant in the councils of the congressional Republicans had been routed by events and that there would be no battle over isolationism in this conference. International cooperation has become the order of the day, and the sole question at Mackinac was on ways and means of asserting American responsibility and leadership in world affairs. Here the only real point of difference was between the point of view of those who preferred to proceed somewhat slowly and the forthright advocacy by Governor Dewey of a continuing military alliance between the United States and Great Britain to keep the peace after the war is won.

The statement of policy ultimately agreed upon received a unanimous vote of approval. It is cast in general terms, but it lays the basis for a sound policy. It calls for "responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world." Every one of these phrases points in the right direction. "Responsible participation" can only mean participation backed by the armed might of the United States. "Post-war cooperative organization" promises a new League or its equivalent. "Sovereign nations" means an association of willing partners. "Permanent peace with organized justice in a free world" encompasses the full measure of what we hope that victory will mean.

The Republicans who met at Mackinac have made a contribution to the unity of the Nation on questions of foreign policy and to the cause of post-war reconstruction.

Meat for America

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 8, 1943

Mr. PLOESER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a speech entitled "Meat for America," delivered by me over National Broadcasting Co., Washington, D. C., on Friday, July 9, 1943, as follows:

The question of meat supply for America is most critical—more critical, perhaps, at the present moment than ever before. It threatens to become even more serious and more critical in the weeks ahead. Why are Americans suffering from lack of meat? Is it because we have a shortage in supply, or is it because of poor management? When the facts are known and recognized, these questions more or less answer themselves.

MORE CATTLE THAN EVER BEFORE

America today has a greater herd of beef cattle than at any other time in history. It is also true that the demand for beef is greater. But the supply is ample to satisfy the demand. It appears today that the total herd of cattle in America approximates 80 or more million head. Therefore, at the source we have ample supply. Our needs comprise supplies for the Army, Navy, Lend Lease, and the civilian population. Why, therefore, is America meat hungry?

CONTRARY TO LAW

Your Government has attempted to carry out a program of price control. Your Congress erected the foundation for a program in the price-control law. This law is specific and clear in providing safeguards against evils certain to arise if price-control authorities attempted to leave the well-marked trail and follow paths which lead to the disruption of normal business channels of distribution. Many members of the Congress being experienced in business foresaw the very catastrophe which now threatens the Nation. Notwithstanding the foresight which was displayed in the drafting of the price-control law, and notwithstanding the clear and specific prohibitions therein, the Office of Price Administration insisted upon ignoring the law. The result is chaos.

The meat problem became acute in this Nation early last fall. It has now reached the stage of a crisis. The Army, Navy, and Lend Lease require about 30 percent of the entire meat output of the Nation.

MISMANAGEMENT

The first step in the Office of Price Administration program to restrict the civilian supply to 70 percent was to put slaughtering quotas into effect and give each slaughterer a civilian quota. All meat butchered over the quota had to be sold to the Army, Navy, and Lend Lease. The meat industry depends upon more channels of trade than just slaughterers. The meat you eat may come directly from the slaughterhouse, but the chances are that after being slaughtered, it comes to you by way of a meat processor, or a wholesaler, for distribution to your retail butcher.

The people then depend ultimately upon the corner butcher. He supplies them with their meat for the dinner table. When the Office of Price Administration gave a quota to the slaughterers, it did not give a quota to the nonslaughtering processors or to the wholesalers or to the retail butcher. It was error sufficient to cause trouble when quotas were not allowed all along the line of meat distribution, but the Office of Price Administration added additional oil to the fire by establishing a ceiling price at only one level. The Office of Price Administration did not put a ceiling price on the live animals, with the result that the price of live animals continued to advance long after the ceiling had been placed on processed meats. The result was inevitable—every time a slaughterer killed an animal for meat he lost several dollars per carcass. This caused financial loss to all of the slaughtering houses in the country and caused hundreds to close.

In addition to destruction of the independent packing-house business in the country, the independent processors and wholesalers were deprived of meat. The result was that their customers were also deprived of meat. Ultimate result—a few sections of the country received plenty of meat—many sections received very little—and some sections received none. Your butcher added to all his other wartime hardships the unnecessary hardship of having his meat refrigerator empty and his customers meat-hungry.

O. P. A. has admitted the hardships caused by these rulings, but the only answer forthcoming from the Administration to date was a move which further aggravated the situation.

ECONOMIC BLUNDER

The answer to the meat problem at the first of June of this year was a 10-percent roll-back in price, with a promise to pay a subsidy to the meat packers for the 10 percent. This 10-percent roll-back offered no appreciable benefit to anybody. It did have what was thought to be political appeal. Its announcement brought chaos in the meat industry. American packers were losing money every time they killed a steer and now they were told to roll back prices another 10 percent. To be sure the Government would pay the subsidy. Pay the subsidy how and when and by what authority of law? The subsidy program and the price roll-back was in effect by Presidential order 2 weeks before the packers had received from the Office of Price Administration a rule book on how the program was to work, how frequently the subsidy would be paid, and who would pay it. This proves that the subsidy was not a well-considered program, but rather a makeshift political expedient. Congress passed a bill which ruled out this makeshift subsidy program. The President vetoed the bill and in the attempt to pass it over the veto, the Congress failed by a few votes. The Presidential veto message attempted to brand the bill as a food-shortage bill, but failed to mention that the food shortage had already been caused by the poor management of the present administration. Review of all this serves only to freshen our memory and make plainer the present situation. It does not relieve the meat shortage. In view of certain stubborn factors which have been created, let's be realistic.

PLOESER PROGRAM

Last Saturday, July 3, I addressed a letter to Economic Stabilizer Fred Vinson, to War Food Administrator Marvin Jones, and to Price Administrator Prentiss Brown. This letter embodied a program which I suggested to relieve this false meat shortage. The President has asked for a suggested program instead of criticism. Criticism can be helpful and in the case of the management of meat, I have been extremely critical. While being critical I have studied carefully the problem as it has grown and become accentuated by error after error. Having studied the problem for months, as a member of the Small Business Committee of the House, I have conferred with some of the best brains in the meat industry. These men represented all branches of the industry from the grower of livestock to the retailer of dressed meats. Out of these consultations came the program, which I have presented in answer to the President's public invitation.

STUBBORN POLITICS

The present situation is uneconomic. In the face of maldistribution and processing losses, the 10-percent roll-back, with or without subsidy, was a most harmful move. The claim that the retail price of meat had been reduced by 10 percent had no economic value to the Nation or the individual consumer. But the fact remains that the people are not getting meat and that there is plenty of livestock. The fact also remains that the roll-back can mean nothing to the person who cannot get meat at any price, when it is not available to the consumer. I have tried in my program on meat to deal with these factors realistically. The administration has no intention whatsoever of yielding ground on the 10-percent roll-back, or in its great desire to pay subsidies to somebody. These factors, as uneconomic as they are, at the moment are standing like a stone wall. It is behind this wall where we must find a way to bring into the market ample supply of meat to feed our people.

MUST BE REALISTIC

The Ploeser program considers the roll-back as fixed and proposes a solution of the problem with that as a known factor. The plan which I propose provides for ceilings at all steps in the growing, feeding, slaughtering, processing, and retailing of beef. It emphasizes the need for the retention in the meat industry of all normal, customary, and traditional channels of distribution. It safeguards against destructive price squeezes. It protects the feeding costs of live animals and allows for deficiencies in the proportionment of the over-all price range—from producer to consumer—to be aided if, and when, necessary by incentive Government assistance. It protects the independents in the meat industry by equitable allocation of available supply. If we must have subsidy, then let's put it to work as an incentive for production, which is the only point at which it will do any good.

While the Ploeser plan was drafted specifically for beef, it is equally applicable to lamb, veal, pork, and poultry. In other words, it is an over-all plan for the meat industry. Beef is the No. 1 problem of maldistribution and consumer shortage. There is not a shortage of live cattle. Lacking proper consumption and normal distribution a critical situation may easily develop. A drought could cause bankruptcy for every cattle grower in the Nation. The solution seems to rest in the proper adjustment of by-product prices, protection of feed costs, and proper proportionment of the retail price.

IN THE MIDDLE OF A MUDDLE

I realize fully that the rancher and the feeder of cattle does not welcome the idea of ceiling prices on live animals. None of us welcome the idea of an over-all managed economy in any line of trade. But, we must realize that we are not living in a free economy during the war. Whether we like it or not, we must be realistic if we are to feed the Nation. You and I would have managed the entire program differently from the beginning. Now we must accept the fact that we are not at the beginning—we are in the middle—in the middle of a muddle—with certain unrelenting political conditions which cannot be corrected overnight or within the next few weeks. If around these conditions we can build a program which will at least start into action the marketing and normal distribution of meat—then that is the program we must, at least temporarily, demand. This program, I believe, will permit all branches of the meat industry to live; and not only to live, but to feed the people and supply the armed services and lend-lease. I ask for your support of this program—I ask for the administration's adoption of this program.

Congress Curbs the Bureaucrats

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. MICHENER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the gentleman from Massachusetts, Hon. JOSEPH W. MARTIN, Jr., minority leader of the House of Representatives, at a luncheon of the Kiwanis Clubs in Denver, Colo., on August 25, 1943:

The unconquerable American courage to uphold the right, the courage to accomplish miracles in the face of any kind of difficulty, is today manifesting itself in every part of the globe. In cooperation with our brave allies, we are winning the war for freedom on the fields of battle. The dictators are in retreat; the slave-driven hordes are falling back in defeat before the courage and determination of free men fighting for their ideals and their own liberties. Already the dictators in their shell-proof hide-outs are haunted by the enemy from whom they can never escape—the fear of the just punishment which soon will be meted out to them.

The American people are, of course, profoundly proud of their fighting men and women. Their faith in the officers and men of the Army, the Navy, the Marines, the Air Forces, the Merchant Seamen, as well as in the many thousands of enthusiastic and patriotic women on the home front is unbounded. All of these devoted men and women are daily risking their lives and enduring hardships and sacrifices so the American ideal of life and liberty may be protected and perpetuated through a complete victory. Of course, we all long for the return of the fighting forces to their homes.

It is needless for me to say that a united American people are behind this greatest war effort of all time. We are all contributing to the victory, whether we be in the military ranks, or in civilian life, or in the actual fray on the battle fronts, or in the struggles of the home front. The victory which we

are determined to win, and without which we will never cease fighting will have been achieved not by any single group, or class, but through the common effort of us all.

We are moved to profound thankfulness for the achievements and successes of our fighting men and women; we are all determined that when the war is won, when victory crowns our efforts, the result shall not be a futile victory for the men and women who have endured the hardships, the privations, and the sacrifices.

As a matter of inevitable American impulse, as a matter of common justice which is inherent in the very nature of Americans, we must and we will make our plans now for the proper rehabilitation of the disabled, and for a reabsorption of our fighting forces back into peacetime pursuits. I doubt if we could find any American man or woman who would not instantly declare, if asked, that when the men and women of the military forces have completed their work they will be entitled to jobs; they will be entitled to a good livelihood in the period of transition from war activities to peace pursuits. This is the traditional American way of treating its defenders, and it is both effrontery and unconscionable assumption of virtue to attempt to usurp as the possession of any party or group the intention to do justice to the returning soldiers.

If any man, or any party, even hinted at doing otherwise, the wrath of the American people would drive them into deserved oblivion.

Several committees of the Congress have for months been studying this problem. These studies have been entirely nonpartisan in character. No attempt, as far as I know, has been made either by Democrats or Republicans to inject politics. To do so would outrage the finest instincts of the American people.

Of course, there will be no delay in the Congress passing legislation to deal justly and generously not only with the disabled, the permanently incapacitated, but with the rest of the forces in such a way that without undue hardship their readjustment into peaceful pursuits can be accomplished at the end of the war. It is needless for me to tell you that I shall demand, and continue to demand, that such legislation be given immediate consideration, when the Congress reconvenes in September. The Congress can be depended upon to do full justice to our fighting men and women, and as a Member of that branch of the Government, I can state definitely Congress will be glad to give this justice on its own initiative and we will do it promptly.

We all know that it is part of the American creed that those who are good enough to fight for their country deserve to get full justice when the fighting is over.

While we depend upon our military and naval forces to win the fight for freedom against the dictators on the far-flung battle lines, there is an equally important job to be done by the patriots on the home front. It would be tragic beyond expression if our boys were to win the victory in the conflict at arms, and while they were doing so, we should allow any pressure groups, any self-seekers, any influence, of any character whatsoever, to lose the peace at home. How unutterably tragic it would be for these heroic men and women to return from victory at the fighting front to discover the battle has been lost on the home front.

The only way the American people could possibly be brought under the shadow of danger on the home front would be by planned confusion and regimented chaos, designed so to bewilder our people as to shake, temporarily, their faith in themselves and in their Government by consent of the governed.

Signs are multiplying that Lincoln spoke with the vision of a prophet when he said: "You can fool some of the people all of the time, and all of the people some of the time, but you can't fool all the people all of the time."

The American people are aroused now to the dangers which threaten, and it is becoming abundantly evident that they are determined their liberties, both economic and political, shall be preserved, in spite of the obstinate determination otherwise of a powerful political bureaucracy, which has, over the past 10 years, been built up in Washington and throughout the whole of America. The new spirit of independence in the Congress, which has been so much in evidence in more recent months, is a reflection of the spirit of the country.

For some years a small group in our Nation have, in the press, over the air waves, on the platform, in books and pamphlets, tried vigorously to undermine American institutions, American ideals, and our American way of life. They have tried to break down the confidence of the people in their special instrument of control over their Government, and their Governors, the Congress, as an institution.

Those thus engaged in this plan to smear American ideals have insisted that the founding fathers were mercenary and selfish. They have asserted over and over again that the men and women whose pioneering efforts on farms, in factories, and in the mercantile establishments have made America a rich and mighty country were actuated by ulterior motives. They have had the effrontery, I should say the insolence, to declare that the forebears of the people of America, those who made this great country the object of yearning to the peoples of all the other countries of the world, were buccaneers and cutthroats. These professional scandalmongers in their efforts to break down the finest traditions which find expression in our American life today, have declared the American system is outmoded. They have insisted that if we are to have security we must hand over our liberty to the custody of the bureaucrats. They have declared private enterprise, which helped to bring this country to its greatness, has failed. This in the face of the most magnificent job that any industrial institution in any country in the world ever accomplished in a like period. They shut their eyes, and they would have us shut our eyes to the astounding fact that in 2 years loyal American industry, backed by American labor and backed by American brains, and American determination, and American dexterity, has overcome the lead which Hitler and Mussolini hoped they had achieved by 15 years of careful planning, and of driving their industries and their peoples, day and night. This cannot be denied, it is not denied by these detractors of the American system; they simply try to ignore it, and, in the face of it, ask that the control of industry, of business, of agriculture, be turned over to their inept and selfish management. Were it not so dangerous and tragic, it would be the joke of the century.

There is one grave danger, to which I think the American people must be alert; that is, that in this group who thus try to smear our American institutions, and our American ideals, we are not dealing entirely with citizens who are sincere but mistaken; on the contrary we are dealing with some plotters who, definitely, and deliberately, are planning to take control of our financial system, of our industrial system, of our agricultural system, and of our political and social system. They will take over that control if they possibly can. They will wreck our American system of government, if they possibly can.

For years our people have accepted New Deal promises of good government. For many, a meager existence was called security, and was purchased at the cost of political freedom.

Taking advantage of a smoke screen of fears kept dense by declarations of a succession of crises and emergencies this political bureaucracy marched forward. Commissions and bureaus multiplied. The Federal Government usurped the rights of the States in many ways. New controls and supervision were fastened upon the people under the guise of urgent emergencies which never emerged.

Yes; bureaucracy was on its way to becoming, as someone has well said, "The masters of the people from the cradle to the grave."

The war brought new anxieties to the Nation, but to the bureaucrats it meant only a new and better opportunity for them to try to consolidate their positions and become all-powerful. They reached into the judicial branch of the Government, and men flitted back and forth between the executive and judicial branches in such a way as seriously to undermine public faith in our judicial institution.

Finally, these bureaucrats thought the great moment had come for their ultimate conquest. They sought the reduction of the Congress, the legislative branch of the Government, to a mere formality—a confirmed, suppliant, and permanent rubber stamp. They first began to defy the Congress. If they desired a law and Congress refused to pass it, the bureaucrats achieved their purpose through some regulation supported by ready legal opinion. If an appropriation for one of their pet projects was refused by the Congress they promptly turned to an Executive allocation of blank check funds, regardless of the fact that such action necessarily violated the trust imposed by the people and the Congress in the executive department of the Government.

These bureaucrats actually had the insolence—and I may say the bad judgment—to believe a Nation should grovel at their feet. They thought they had the power, the money, and sufficient control of the Government, to destroy any who might oppose them. For a long time they rode high. Fear was everywhere. No one dared to venture into business without extensive legal advice. Any citizen who dared to question these would-be Caesars was denounced as an unpatriotic reactionary and an American Fascist.

All of this is the more remarkable, when we stop to remember that many of these bureaucratic so-called experts, before being placed in their exalted, powerful, and lucrative positions in the Government, never knew what it was to have authority over anything, or anyone. Nevertheless, some of them overnight danced their way into a reputation as geniuses. Their alleged marvelous abilities, and great capacity for leadership, were extolled by 30,000 paid propagandists, more or less, who have cost the taxpayers of this Nation more than $30,000,000 a year. The cattle raisers of Colorado can get some conception of this huge annual sum which they, as taxpayers, have to pay out each year to provide this personal publicity for these bureaucrats if they will figure how many head of cattle they would have to produce in this State to pay that $30,000,000 each year. The farmers of Colorado might appraise the value of a mile of beet rows, and compute how many hundreds of thousands of miles of beet rows they must plant and harvest to pay that $30,000,000 a year for bureaucratic publicity.

This publicity propaganda literally drenched the air waves, to the exclusion of more worth-while programs. It was dinned into the ears of the American people from platform and radio. It met the eyes of the American people from newspapers, booklets, and pam-

phlets, printed at the expense of the overburdened taxpayers and scattered through this Nation by the millions of copies—literally, and actually, by the trainloads.

But, said Mr. Lincoln, "You can't fool all the people all the time." The bureaucrats reached too far. With their insatiable lust for power, they reached too high. When they set out to discredit the Congress, to make that institution the scapegoat for the bungling, and the confusion, and the contradictory policies, which characterized the executive department, they attempted something that could not succeed with the American people. At first there was, or appeared to be, some popular reaction to this campaign of "smear the Congress." The people were for some months uneasy. They did not want to do anything which would interfere in the slightest with the war effort. But as the ineptitude, the internal quarrels, the contradictions, the conflicts, the confusion, and the unreasonableness of much of the operation of these bureaucrats in the executive department of the Government became more and more apparent, the people were convinced that the difficulty lay, not with the Congress but with bureaucrats who, with unparalleled boldness and insolence, had endeavored to put themselves, under cover of the war necessities, beyond the control of the Congress and to usurp the legislative functions.

The people of the South, who had hopefully accepted all the nostrums handed out as democratic medicine, became worried. They saw the States' rights for which many a gallant southern leader had died vanishing, as they were cajoled and coerced with their own money. Some of the most able leaders of the Southland became disturbed as they anxiously peered into the future and got some hint of what would lay ahead for them if this trend toward centralized Federal Government should continue.

The anxieties and fears of the South were shared by the people of New England. These anxieties spread all over the East and began to spread westward to your own lovely State of Colorado and on across the Rockies to the Pacific. Everybody began to wonder what was going on in Washington. They didn't like the look of much they observed. Although they had had some help from the United States Treasury, because nobody could spend billions without giving some help, the people began to realize more keenly that, after all, this was really their own money—money which they would be obliged to repay in taxes.

The people were whole-heartedly in favor of a vigorous and victorious prosecution of the war. They would pay taxes and sacrifice for this great effort without stint. But they wanted the war fought not as a partisan conflict but as a war of all the American people to crush and destroy a threat to the lives and the liberties of the American people. Little wonder the people became so seriously disturbed over the confusion and the bewilderment and the contradiction which characterize the efforts of little men in big administrative posts, struggling with each other for power while war production lagged. Doubt gave way to dismay as the people witnessed the sad spectacle of men in important war posts bitterly accusing each other of delaying the war efforts while they played personal power politics. So, then, it was the American people, an aroused and worried American people who decided in their own homes and in their own communities to do something about this unconscionable official bungling in Washington. They decided to try to crush out partisan politics in the war effort. That was what precipitated the change in the complexion of the Seventy-eighth Congress.

The new Congress, backed by the people, asserted itself. It began to put the bureaucrats somewhat in their places. It began what historians, some day, will record as an epochal fight to reclaim delegated powers extended in a sincere desire to facilitate the war effort, but which had been shamefully abused, and misused, by self-seeking bureaucrats, who thought more of their own power and profit than they did about the welfare of their Nation. When the turmoil of war is ended, when events can be seen in their true perspective, history will find that it was in the first session of the Seventy-eighth Congress in 1943 that the march of the bureaucrats toward supreme power was halted. With popular support the fight can be continued to a complete victory.

Even though the smear artists may seek to blot the names of those great, grand men who laid the foundations of this Nation, it will stand forever as a mark of their great wisdom that the founding fathers placed in the Constitution the power of appropriation in the hands of the people's representatives in the Congress. That they meant to do this to meet just exactly the danger which has confronted the Nation in this growth of bureaucratic power was testified to by Thomas Jefferson when he said:

"The representatives of the people in Congress are alone competent to judge of the general disposition of the people, and to what precise point of reformation they are ready to go."

Along with its new assertion of responsibility, the Congress must have a definite program of action, if we are to measure up to the expectations of the Nation.

We shall, of course, continue to give full, vigorous support to the war effort, as every Member of the Congress has done in the past. The conduct of the war, in large measure, almost wholly, rests with the Army and the Navy, and the Congress has not failed, and will not fail, to give them everything needed as they press forward to bring about the earliest possible victory.

The Congress must be watchful of the conduct of the war. It must be, and is, ready to protect the interests of the people. It must, without fear or favor, point out any errors of omission or commission. It must make constructive suggestions, if and when the occasion demands. This all must be in a cooperative spirit. There is no inclination on the part of the great majority of the Members of the Congress to want to take, even for a moment, the control or direction of any war plan, or war strategy, out of the hands of the military and naval experts.

This, fellow citizens, is no time for petty fault finding. It is no time for anybody to pursue a course of narrow partisanship. America is imperiled both abroad and at home. The call to protect it is above the interest of any party, or any section, or any group, or any man.

The Congress has delegated great powers to the several branches of the executive department of the Government. This was necessary because the details of war activity must be carried out by the executive machinery of the Government. It remains a fact, however, that the Congress, having yielded these powers, has a direct and solemn obligation to the people to watch carefully their use. Congress must ever be ready to amend, restrict, or even to recall any authority granted if new conditions, or misuse of the powers, should make it essential to the public interest to do so. Above all, it is the imperative duty of the Congress to take back these powers when the war is over. We do not want to copy Hitler. We do not want to fight a war against dictatorship abroad, and set up a dictatorship in America as a permanent fixture.

Pursuant to its responsibility, the Congress has intervened in several matters to save or to attempt to save the people from bungling inefficiency as in the O. P. A. The Members of Congress saw that a group of inexperienced novices were badly upsetting the economic life of the Nation and moved in with the constructive requirement that the head officials of the different branches of the O. P. A. should have had some practical knowledge and experience with the handling of the commodity over which they were given power to pronounce a life or death sentence. Congress believed, and I am sure you will agree, that a little practical experience wouldn't be a handicap, even for a bureaucrat.

The responsibility rests upon the Congress to protect the country from the natural impulses of any group of zealots who would, under cover of the war, impose their particular brand of totalitarian economics upon the people. Sheer fairness to our millions of fighting men and women decrees that if we are to consider any fundamental change in our form of government, and our system of free enterprise, we should wait until they are back home and can have something to say about what choice shall be made.

Aware that this group of experimentalists who would make the Nation a vast collection of social and economic guinea pigs if they could, the Congress moved to rescind the regulation—which it had previously emphatically rejected—that no one could receive a salary of more than $25,000 a year. The bureaucrats wanted to enforce this plan. They asked the Congress to legalize their desires by an act. The request was refused, and assurances demanded that the act which contained this power would not be used for such a purpose. The ink was hardly dry on the signatures making the act a law when the promise to the Congress was boldly and cynically broken. Then the Congress acted—as it should have—and rescinded the regulation. This is but one of several instances in which the most solemn promises of the bureaucrats made to the Congress have been insolently and cynically broken the moment the Congress accepted those promises. The issue here was not the merit or lack of merit of the particular regulation. It was whether the bureaucrats or Congress should make the laws of the land. Changes of this wide-sweeping character must remain within the direction of Congress if we are to have popular government.

Congress must protect and perpetuate the American system of free enterprise. We hear a lot of talk about maintaining the rights and the privileges of the common man, and rightfully so. America was founded on the rights and privileges of the common man. It grew great through a system of free enterprise in which the rights and privileges of the common man were exercised and enjoyed by the common man. That is exactly why, throughout all the years of our Nation's history, the son of the poorest common man in the country could aspire to wealth in business or the White House in politics and have as much hope of realizing his dreams as any other boy in the Nation if he had the stuff in him. I can speak with heartfelt sincerity and real knowledge on his subject, because I started life as the son of a poor family. I can testify as to the blessings of the rights and privileges of the common man, both in business and in politics. My country's system of free enterprise and free politics has been good to me, and I testify that it is the greatest system on earth for the common man. And we don't want any experimentalists with strange and foreign ideas as to how humanity ought to be run to destroy that system so rich with blessings and opportunities for the common man and the children of the common man. Misguided zeal must not

make the common man always remain a common man.

The most drastic economy in nonessential expenditures is an absolute necessity if we are to maintain national solvency. The proponents of borrowing ourselves out of debt and of spending ourselves back into prosperity will land the Nation in the swamp of bankruptcy if we don't curb them.

In the first session of the present Congress we saved the taxpayers more than a billion dollars a year and the potential savings through useless bureaus eliminated will go higher. And I submit that a billion dollars a year is still a lot of money in any man's language.

Congress must guard against the absorption of States' rights by means of Federal grants-in-aid. If Federal appropriations for aid of States are necessary, let them be made, but keep control of State activities and State policies within the States themselves.

We are learning with great uneasiness that important and far-reaching commitments are being made by the executive department of the Government to other nations. The American people are being committed to responsibilities they know nothing of. This should not be. Our constitutional system provides for the ratification by the Senate of foreign treaties and important commitments, and this is the only safe and proper way. Yet every day we are hearing and reading of secret conferences, star-chamber sessions in which the results are so censored the Congress and the people are kept in complete ignorance of anything but the bare information that they have been committed to some new course of world action. This is utterly dangerous, and the Congress must insist on more information and more part in these conferences, and, certainly, in the final decisions. It has become a popular, and exceedingly dangerous game among the bureaucrats in Washington of bypassing Congress. That means they are bypassing the American people as well. Congress should insist upon having representatives at all conferences.

These are a few of the responsibilities which confront the Congress. The people should make known to their Representatives their will in these matters. They have not lost their right of petition to their Congress They have not relinquished their absolute right to tell their public servants what they want done—and they never should. There have been many attempts lately to convince the Nation that in some mysterious way the people have suddenly become subjects and the bureaucrats the masters. But this isn't so. These petty tyrants can remain petty tyrants only if the people permit them to. Public opinion is still by far the strongest power, economic and political, in America.

The Congress wants the United States to assume all proper responsibilities in readjusting the post-war world, but Congress wants the people to know what adjustments will be necessary and what responsibilities America must undertake. We want to help all the other peoples of the world back to sanity, peace, and progress, but we can only help them if they are willing to help themselves; we cannot alone achieve that sanity, peace, and progress for all the rest of the world.

We all realize the desirability of a peaceful, prosperous world. We all want all the peoples of the world to be free—when they want freedom, and are ready for it.

Only a safe, sane, sound, solvent America can help the rest of the world back to peace and prosperity. Nobody ever saved a drowning man by jumping in and sinking with him.

Our first job, our first duty to ourselves and to our posterity, and to the rest of the world is to keep America strong, solvent, free, to be a beacon of hope, a torch of progress, a ready help for all people of the rest of the world who want to achieve freedom and who want to live in peace. Let us see to it that we perform that duty fully and earnestly; that those who are making the supreme sacrifice in this war, together with those who in past wars have yielded up their all upon the altar of their country's defense shall not have died in vain.

Let us see to it that this Nation, under God, shall survive and go on, under a government of, by, and for the people.

Moore Dry Dock Co., of San Francisco and Oakland, Calif., Receives Maritime M

EXTENSION OF REMARKS

OF

HON. THOMAS ROLPH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. ROLPH. Mr. Speaker, Americans have but a single purpose—winning the war. We shall leave no stone unturned in making sure of defeating those who would so ruthlessly destroy our way of life. Never again will the people of this Republic permit treacherous oppression to rear its ugly head. Mercy and freedom shall prevail.

Last August 14 I had the privilege of attending a most unique ship-launching ceremony at the Moore yards. The Moore Dry Dock Co. maintains its office in San Francisco and plant in Oakland, Calif. The Moore organization was prepared for the war shipbuilding program and has made an enviable record. August 14, 1943, will long be remembered in the history of San Francisco Bay area. The Moore shipbuilders launched three splendid vessels and, at the same time, received the coveted maritime M award. The day also marked the seventieth birthday anniversary of Joseph A. Moore, chairman of the board.

Ships and shipping are synonymous with San Francisco. My home city has produced a long line of shipping men. But no one has contributed more to the shipbuilding industry than Joe Moore, and I am pleased to enter in the CONGRESSIONAL RECORD Mr. Moore's remarks. Also, I insert addresses by Admiral Emory S. Land, Chairman of the United States Maritime Commission; Vice Admiral John W. Greenslade, commandant of the twelfth naval district; Carl W. Flesher, west coast regional director of the Maritime Commission; and Joseph A. Moore, Jr., president of the Moore Dry Dock Co.

The sponsors of the three ships were Joe Moore's daughter and daughters-in-law. Mrs. John E. Mock christened the steamship *Spitfire*, Mrs. Joseph A. Moore, Jr., the *Monarch of the Seas*, and Mrs. James Rolph Moore *Herald of the Morning*.

The occasion was one of loyalty, patriotic devotion, and sentiment. It is fitting for the Nation to take pride in such stirring events.

Chairman of the day, William Baldwin, in presenting Mr. Moore said:

It is sentimentally significant that the Moore Dry Dock Co. and employees should be honored with the award of the maritime M on the birthday of its chairman. Mr. Moore has led his organization through wars and peace, a pioneer shipbuilder on the Pacific coast since the turn of the century. It is my privilege to present to you Mr. Joseph A. Moore.

Joseph A. Moore responded:

Thank you, Mr. Baldwin. This is probably the greatest day in the history of the Moore Dry Dock Co. Personally, I am very proud and happy to congratulate the employees of this company for their efforts which have enabled them, and the company, to win the merit award to be presented by the United States Maritime Commission. The design and workmanship on vessels constructed in our yards require exceptional ability and experience, and our success in attaining the maritime M is due to the fact that the employees of this organization have possessed those qualifications. I cannot too highly compliment them on the work they have accomplished. The reputation for quality of workmanship, which has stood through many years, is something in which all of them may have personal pride; it has been built by the production of fine ships, as well as through the performance of difficult repair and conversion work. Many of the men and women in our yards are engaged in an entirely new line of work and the successful adjustment of their lives to the changed conditions and environment is the best possible tribute to their loyalty, and to their determination to play a part in this great cause of freedom and decency.

We've had a tough job to perform thus far and yet, it may well be there's still a bigger job ahead. No one knows when the end of this war will come, and until it does it's our task to go all out in our efforts. We must build and repair more and more ships to carry equipment and supplies to those heroic men out on the battle fronts. Thousands of our own men are out there—over fifteen thousand from our yard are in the armed forces—some have gone to the great beyond—and I believe that every man and woman in this organization is determined that these sacrifices shall not have been in vain. We'll fight for production on this home front until our soldiers and sailors and aviators all come home with the flag of victory flying high. That's our job and we propose to do it.

It gives me great pleasure to welcome the vast audience of employees and guests who are here today to witness the presentation of the Merit Award and the triple launching which will take place immediately after the award is made. And further I would like to say that we were very happy to be advised by Rear Admiral H. L. Vickery, vice chairman of the United States Maritime Commission, that the presentation would be made by Admiral Greenslade. And so, ladies and gentlemen, I take great pleasure in presenting to you our very good friend, Vice Admiral John W. Greenslade, commandant of the Twelfth Naval District.

ADMIRAL GREENSLADE

Mr. Moore, Mr. Moore, Jr., Mr. Flesher, distinguished guests, and employees and executives of the Moore Dry Dock Co.—

1. It is a pleasure as well as an altogether agreeable duty to be here this morning with you men and women of Moore Dry Dock Co. and to share with you in the ceremonies recognizing and honoring your accomplishments. It is an added personal pleasure to congratulate Mr. Moore, chairman of the board, upon the occasion of his birthday. Both are memorable events—milestones in

the history of an able man and in the record of a company's distinguished service.

2. Although I speak now by invitation of the Maritime Commission and as the Commission's official representative, I assure you that your Navy is likewise vitally interested and concerned in all phases of your effort. So are the other services, our whole civilian population, our allies and, in fact, every person who waits and works for the utter defeat of Japan and Germany.

3. It has become universally apparent, I am sure, that the steadily increasing pressure of Allied offensives on both land and seas has followed paralleled improvements in the shipping situation. Our successes in the southwest Pacific, the Aleutians, and the Mediterranean have been finally dependent upon ship-borne men and ship-borne supplies and ship-borne weapons. When other fronts are opened, these, too, will call imperatively for ever-increasing tonnages. We are invasion-bent for victory; record-breaking production goals have been set because victory itself can come only as a record-breaking achievement.

4. Because of outstanding work, you men and women here before me have been singled out by the Maritime Commission as a select group worthy of a signal honor. The repair and conversion program of your company has resulted in the return to service of one ship already in commission every 16 hours since Pearl Harbor. The new, fast cargo ships which leave this yard add important volume to the transportation lines which are carrying defeat to the Axis powers. It is undoubtedly a particular source of pride—and rightly so—to Moore employees and management alike that operational methods in these departments of cargo ship construction, conversion, and repair have reached such an enviable degree of efficiency.

5. But you all must remember also that you assume major responsibilities with the granting of this Maritime "M" award. You have proved your mettle. The growing pains of a remarkable, as well as dislocating, plant expansion are behind you now. You are largely a seasoned lot, with an established minimum capacity which must be dependably maintained. With this fund of experience to call upon, you will be prepared for such future production changes and contingencies as may arise—and can be expected to take these in stride.

6. It may be that victory is just around the corner. I would not presume to contradict the soothsayers who appear to be much more certain on this score than I can pretend to be. But I would suggest that there already have been many such apparent corners in this war—yet we still fight on. There were Dunkerque, the blitz of Britain, Pearl Harbor, and Stalingrad.

7. We and our allies have risen from disaster. We have assumed the offensive, yes. But war-weariness and let-down are dangerous and expensive luxuries in any such finish fight. Our enemies have more than once hoisted fraudulent white flags, then mercilessly slaughtered the victims of their ruse. Now they must come to us with upraised arms or be destroyed. And the men and women of Moore Dry Dock Co. will continue, I am confident, to stand by their tools and ignore the white flags of prophecy. Let the German and Japanese masters, together with their completely dominated industrial workers and slaves, surrender unconditionally to democracy and free labor before you relax your guard.

8. So, with confidence in final victory and confidence in you, it gives me great pleasure to present on behalf of the United States Maritime Commission, this maritime M pennant and the victory fleet flag. This award, Mr. Moore, is a symbol of achievement earned by you and your employees. May you continue to fly it with the pride of accomplishment and as full partners in democracy until victory is ours.

JOSEPH A. MOORE, JR.

Admiral Greenslade, distinguished guests and fellow workers, it is a real honor and privilege to accept this maritime M pennant and victory fleet flag in behalf of the men and women of Moore Dry Dock Co. This award is made in recognition of the quality and quantity of work performed in the construction, conversion and repair of merchant vessels.

Moore Dry Dock Co. is a pioneer organization on the Pacific coast. The pioneer tradition which has developed here is one of which we can all be proud. Pioneers have always striven toward new goals, toward new horizons. To all of us here, this flag will serve as a beacon to draw us to still higher and greater goals of achievement.

I should like, at this time, to acknowledge with thanks the untiring assistance that has come to us from the Maritime Commission and its west coast regional director and his staff; furthermore, our subcontractors and vendors have worked with us heart and soul and to all of these groups goes much of the credit. It is a pleasure to acknowledge their continuing efforts.

I know that to each of us this award means recognition of the time that we put just a little more into the job, of the time when we did a little more than our best. The memory of this occasion will help us all to remember our obligations to those who are serving in the armed forces around the world. This spirit will remain with us as we fly the maritime pennant and assume its accompanying responsibilities. This award will be a symbol of our continued fight toward greater speed and efficiency in the production and repair of ships; thus we may aid in the service of our country.

It is with pride in that which has been accomplished and sincere appreciation of the work that remains to be done that we raise the maritime M pennant and the Victory fleet flag over the shipyards of the Moore Dry Dock Co.

In offering congratulations Admiral Emory S. Land, speaking over the radio, from Washington, had this to say:

It is a matter of great personal gratification to be privileged today to congratulate Joe Moore and every man and woman associated with him in the Moore Dry Dock Co. on the occasion of his seventieth birthday.

Rounding out more than a half century of active association with shipping and shipbuilding, it is fitting that this dean of Pacific coast shipbuilders and his company should receive the Maritime Commission's merit award for distinguished service. It is the first such award made for outstanding achievement in shipbuilding, repairing and conversion, and it is a testimonial to the broad scope of the service the Moore Dry Dock Co. is rendering this Nation in the all-out war effort. Your organization made one of the finest shipbuilding contributions to the last World War. In the interval between that war and this, you have continued in the face of complicated and severe conditions to make further valuable contributions to the Nation's maritime progress.

Now, with a greatly enlarged plant and a force of more than 34,000 employees, of whom about 5,000 are women, you are making further shipbuilding records that will live to your everlasting credit in the history of your Nation's merchant marine and Navy.

To Joe Moore should go the grateful recognition of the American shipbuilding industry for his adoption and development of the most modern methods, such as prefabrication and welding. Those methods today are responsible in a great degree for the astounding shipbuilding records being made by the entire industry. Today you launch three C-2 ships for the Maritime Commission. That in itself is a fine testimonial to the vigor, the enthusiasm, and the ability of Joe Moore. It is an achievement that entitles him, his able sons, and every one of you associated with them to wear with the honor you so justly deserve the merit insigne of the Maritime Commission. That is as truly a decoration for distinguished service as any award made to the men of our fighting forces. It is full proof that workers and management have cooperated in the plant of the Moore Dry Dock Co. with a keen patriotic desire to make every possible contribution to victory for their Nation and its allies. It has taken brawn and brains to bring these results.

God gave us two ends to use. One to think with. One to sit with. The war depends on which we choose. Heads to win. Tails we lose.

The record of the Moore Dry Dock Co. could only have been attained because all of you have adopted the heads-we-win policy. On behalf of the Maritime Commission and the people of the Nation I desire to express our deep appreciation for your fine accomplishments.

Our wish is that Joe Moore and his great organization may go on together for many more years—to victory and far beyond, with continued health, prosperity, and happiness.

My personal congratulations to each of the charming sponsors—daughters of the boss.

And my special congratulations to every man and woman in the yards. You have arrived the hard way. More power to you. And give the Axis—you know what.

Each employee received an insignia of recognition. Carl N. Flesher conferred the badges with these words:

Admiral Greenslade, management and employees of the Moore Dry Dock Co., and honored guests, today is indeed a signal occasion for the management and employees of the Moore shipyard. No shipyard on the west coast has been confronted with such a complex production problem, for you are building ships for both the Navy and the Maritime Commission, and these of dissimilar design. In addition to new construction you have a tremendous amount of repair and conversion work, which adds further difficulties. Your accomplishment during the past year, however, is evidence that the management and men of this yard have what it takes to handle such a complicated problem.

The M flag is not given lightly; it is given only to those with steadfast purpose and constant effort who set production records for others to emulate. Men on the fighting front receive medals for valor beyond the call of duty. It is only fitting and proper that your Government should likewise give due recognition to the people on the home front for excellency in production, and that is the real meaning of the merit badges that every employee of the Moore Dry Dock Co. is now entitled to wear. Today is to be packed with one stirring event after another, but I feel it would be incomplete if we did not also celebrate Mr. Moore's seventieth birthday for, after all, this occasion has been made possible only through his many years of hard work, enterprise, and perseverance. He has, I am sure, steered this yard through many rough seas. One of Mr. Moore's favorite songs is The Builder, and it is indeed appropriate, for not only has he built the finest ships to sail the seven seas but, far more important, he has, over a period of years, built character in hundreds of men and women who have been associated with him. Many men in the shipyards on the west coast received their first training under the

guidance of Mr. Moore; and well has he schooled his own sons and daughters to follow the work of his chosen profession.

Admiral Land has just expressed his appreciation for your fine accomplishments and loyalty, and I wish to express my sincere appreciation on behalf of the west coast regional office for the important part that you thousands of men and women of the Moore Dry Dock Co. have played in contributing to this miracle of shipbuilding.

And now I am happy to present the merit insignia to three representative employees, Mrs. Pearl E. Lane, of the purchasing department; Mr. Frank A. Forthaus, of the hull department; and Mr. Frank H. Nyman, of the machine shop. As soon as distribution can be made, every employee of the company will receive this same award, a symbol of recognition of individual work well done.

A Remarkable Construction Achievement

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, when the new MacArthur lock was opened at Sault Ste. Marie, Mich., on July 11, 1943, it marked the completion of one of the most remarkable construction achievements in the history of this Nation. This $14,000,000 lock was completed in less than 14 months. The last preceding lock constructed at the same point took over 6 years to build at a cost of approximately $2,000,000.

A chronological history of the construction of this new MacArthur lock, together with an account of the program of the dedication ceremony, appeared in the Evening News of Sault Ste. Marie, in the issue of July 10, 1943.

Under permission to extend my remarks in the RECORD, I include the article at this point:

CEREMONY IN UNITED STATES PARK AT 2:30 SUNDAY—E AWARDED TO COMPANY IN MORNING; BOAT TRIP IN THE AFTERNOON—MANY NOTABLES COMING

Sault Ste. Marie's new Victory lock on Victory Canal will be dedicated officially Sunday, July 11, to victory of the United Nations and named for Gen. Douglas MacArthur, hero of Bataan and commander of all Allied forces in the south Pacific.

Dedication of the lock, further assurance that the Allied cause will not lack for steel, will be in three parts:

Ten a. m. at the lock park, presentation of the Army-Navy E for excellence to the Great Lakes Dredge & Dock Co.

One p. m., Hotel Ojibway, luncheon as guests of Great Lakes for 250 with Col. P. N. Strong, district engineer, as host.

Two-thirty p. m., trip by guests through the MacArthur lock aboard the freighter *Carl Bradley* and dedication of lock by Brig. Gen. David McCoach.

After the passage of the *Bradley*, the lock will accommodate the first down-bound boat to come along, and then thrown open to play its mighty part in sending 95,000,000 tons of iron ore to steel mills for armaments and arsenals of nations.

SABIN ALSO NAMED

Officially named at the same time will be the Sabin or fourth lock in the battery of four. The Sabin, 1,350 feet long, was opened in 1919 and popularly known since as the Sabin but never officially so designated. Now an act of Congress has placed upon it the name of L. C. Sabin, at that time civilian engineer here and now vice president of the Lakes Carriers Association.

Completed in 14 months compared to an original schedule of 20 months, the MacArthur lock will be used to supplement the work of the three existing modern locks of the vital waterway through which the big ore and grain ships move from Lake Superior into the St. Mary's River and thence to Lake Huron and the receiving ports of the Great Lakes.

Exact dimensions of the MacArthur lock and details of the present flow of shipping through this most important of the world's fresh-water canals are Army secrets, but it is commonly supposed to be 80 feet wide, 800 feet long, and 30 feet deep.

The United States engineers, which directed the work of the private contractors, revealed that 200,000 cubic yards of concrete were poured into the side walls, approach piers, and floor area, covering more than 60,000 square feet.

POURED DURING WINTER

Much of the concrete was poured during winter months at temperatures as low as 30° below zero. Plywood houses built around each section of the lock and heated with electric blowers enabled the work to go forward despite the weather.

MacArthur lock, opening Lake Superior to ocean traffic, is regarded as insurance against military action or sabotage aimed at the canal. Other projects were considered, including the bringing of iron ore by rail from the Minnesota and upper Michigan mines to Escanaba, Mich., on Lake Michigan, and huge docks have been brought to near completion for emergency use in event anything happened to the locks.

The Sault Ste. Marie Canal dates from 1855, when the first small lock was built so that boats could enter and leave Lake Superior. The rapids of the St. Marys River are impassable because of rocks and the swift current. The Weitzel lock, built under Federal supervision, came next. The MacArthur lock is located on its site.

The first of the big locks was built in 1896 and named for Col. O. M. Poe. The two modern locks, Davis and Sabin, are identical.

The canal consists now of the four big locks, each of which can be used separately to bypass the rapids.

Generally speaking, the locks of the canal can be filled or emptied in about 13 minutes and the gates opened in 1½ minutes. Electricity generated by water power is used for operating the machinery and 400 men are required to run the canal, exclusive of the military guard.

In the construction of the MacArthur lock as much as 2,000 cubic yards of concrete was poured each day, with 1,000 men employed by the Great Lakes Dredge & Dock Co., the principal contractors. Much of the excavation was done in hard rock, necessitating considerable blasting. For this, holes 11 feet deep were drilled in rows 3 feet apart, filled with sticks of blasting gelatin and sand, and detonated simultaneously by electricity.

Sunday's ceremonies are scheduled to be attended by Maj. Gen. Samuel T. Lawton, commander of the Sault Ste. Marie military area district; Brig. Gen. David M. McCoach, Assistant Chief of Engineers; Col. R. G. Barrows, division engineer, Great Lakes division; Gov. Harry F. Kelly, of Michigan, and Representative Fred Bradley, of the Eleventh Congressional District, all of whom will make speeches.

Lt. Col. Donald E. Antes, of the Office of the Chief of Engineers, Washington, will present the Army-Navy E award to the Great Lakes Dredge & Dock Co., following which all the officials will board an up-bound boat for the first lockage.

Chronologically, highlights in the construction of the MacArthur lock are:

January 16, 1942: The Senate Commerce Committee has unanimously recommended adoption of a bill offered by Senator Prentiss M. Brown (Democrat, Michigan) to provide for construction of a new lock at Sault Ste. Marie, Mich., at an estimated cost of $8,000,000.

The committee reported that the bill was introduced at the request of the O. P. M. (Office of Production Management) with the War Department approval.

January 17: The Senate Friday approved legislation authorizing construction of a new $8,000,000 lock on the St. Marys Falls Canal at Sault Ste. Marie, Mich.

Senator Brown (Democrat, Michigan) said that the new lock was needed to speed movement of iron ore required by the war effort.

January 27: The urgency of construction of a new lock on the St. Marys River at Sault Ste. Marie was held up by dispute today, with one critic suggesting that political reasons may have motivated backers of the plan in taking it directly to the Senate.

February 3: The House Rivers and Harbors Committee rejected today a motion by Representative BENDER (Republican, Ohio) to recommend passage of a Senate approved bill to authorize immediate construction of an $8,000,000 lock for the Sault Ste. Marie (Mich.) Canal was attached to the pension-repeal bill by Senator Prentiss M. Brown yesterday.

The rider, with which Brown sought to force speedy House action on the proposed project was accepted on a voice vote.

March 2: With only a score of Members present, the Senate today passed legislation completing action in the passage of the Sault lock bill as a rider to the pension-repeal bill. The bill now awaits the signature of the President.

March 28: A bill appropriating $9,300,000 for construction of a new lock and related works at Sault Ste. Marie contained in a Senate amendment to the War Department civil functions appropriation bill was passed yesterday by the House.

It now goes back to the Senate because the House rejected other amendments.

May 4: Work began today on the new lock with a dredge and derrick tearing away the Weitzel Lock walls above and below the upper gate.

Main contract for the job was awarded by the United States Engineers to Great Lakes Dredge & Dock Co. last week.

May 6: The Poe Lock was closed today while lockmen made inspections to see if any damage had resulted to the lock's wall from dynamiting operations for the new lock.

May 12, 1942: The lock is now an area of digging, dredging, and blasting.

Except for spots near the upper and lower gates, Joshua and his trumpet have had nothon the Great Lakes Dredge and Dock crew that now has nearly all of the walls torn down. A bulldozer is piling the tumbling earth.

Fitted steel piling is being driven preliminary to the construction of the cofferdam which will make possible the pumping out of water and removal of rock. The rock will be taken out on trucks and dumped onto scows.

May 27, 1942: The lower gates of the Weitzel lock were torn down in the forging of the new lock canyon.

Spiles are being driven across the end of the lock connecting the northwestern pier with the southern bank.

June 1, 1942: Workmen have completed driving spiles for the lock's cofferdam and trucks are hauling clay to fill in the cylinders above the lock. Half of the cylinders are filled.

June 3, 1942: Lt. Col. Paschal N. Strong arrived in the Sault today to take over duties as supervising engineer, United States Engineer Corps, of the new lock construction. Colonel Strong will have his offices in the administration building.

June 3, 1942: Huge dump trucks of Speedway in Chicago have now the task of filling in the upper cofferdam about three quarters completed.

June 5, 1942: The upper cofferdam unit was completed today and water in the Weitzel lock lowered to a level with Lake Huron. Already explosive air hammers are ripping away at the cement in order to tear down an upper gate.

June 11, 1942: Workmen of the Great Lakes Dredge & Dock Co. have just completed removal of the Weitzel lock gates.

July 7, 1942: Sault people are now accustomed to having their windows rattle and beds shake from the blasting which is loosening rock on the floor of the new lock. A 9½-pound rock that ended its flight through a window and onto the floor of the Booth Produce Co., on Portage West has been the first tangible sign of the blasting. Showers of smaller rock and clay land on the street.

July 10, 1942: Speedway Wrecking Co. trucks are busy hauling out dynamite-loosened rock from the lock bottom. The trucks roll up a road that has been graded into the valley, travel on Portage Avenue, and then up a wooden ramp that has been constructed at the head of the locks. From the wooden ramp their load is dumped onto scows that dispose of it in a deep part of Lake Superior.

July 11, 1942: Drillers whittling away the concrete lock wall beside the Administration building are setting up a machine-gun-like barrage. Within the lower cofferdam the water is a coffee color and hydraulic pumps are being set in operation to remove the liquid. The coral red clay within the lock colors pools of water on the lock floor.

July 15, 1942: Speed is the keynote of the construction with trucks rushing a load of red rock and clay out of the valley every 2 minutes the clock around, and bright lights making it possible for work to continue in the night. The hydraulic pumps have lowered water in the cofferdam 8 feet already. Steel spiles have been erected to strengthen the weakened Poe lock walls.

September 1: The tearing down is nearly completed and the actual building up of a new lock began this week as the first wooden forms are being laid against the south wall in the western end of the lower cofferdam.

The forms are of wood and will support steel rods. Concrete will be poured into the forms to make the blocks or monoliths that will form the lock walls.

September 10: The first blocks of concrete are being poured into the wooden forms from trucks of the Cleveland Builders & Supply Co. The concrete is brought in liquid form from the company's yard below the bascule bridge and is mixed on the trucks on the way to the lock. It then goes through a hydraulic "pumpcrete" which directs it evenly into the wooden form.

September 16: Two shafts are being sunk somewhere on the locks to start an underground tunnel that will be 500 feet long and a hundred feet down. The tunnel is to be used for carrying electrical cables and other operating equipment. The depth will make it bombproof. The tunnel will be lined with concrete and is the work of the John C. Tully Co., subcontractor.

September 30: Ten of the concrete blocks to form the new lock walls have been completed by the 11 trucks on the job. Since skilled truck drivers are scarce, some of the drivers are working a double shift. As soon as the concrete hardens in the form the outer frame is torn off.

The north wall and side of the lock are still being widened and deepened.

November 5: A thousand truckloads of the red clay that was hauled out of the lock pit have now been dumped in the slot between the concrete blocks and the Magazine Street wall. Later, sand will be dumped on top of the clay for topping.

November 5: Water seeping through small cracks in the lock wall is forming pools on the lock floor, making working conditions difficult. Some men have quit because of the dampness, coupled with the cold weather.

November 17: Forms to hold the gates that will swing the new lock are being placed in the pit by Great Lakes Dredge & Dock workmen and the bases to hold the gates in place have already been set in the arc-shaped pits dug for them in the upper west end of the "diggin's."

First outside appearance of the service tunnel being built by John C. Tully Co. is under the administration building, where it comes out on a level with the floor of the pit. The horizontal tunnel is about 12 feet high and 11 feet wide.

The new lock wall is beginning to take shape. On the side of the pit nearest to Portage Avenue the wall, over a hundred feet high, is completed from the east end of the cofferdam to a point opposite the administration building, and work is being done to build a lock wall beside the administration building.

Steam heating apparatus has been keeping the concrete from freezing and the pipes carrying steam vapor form a web to many different parts of the project.

December 19: Cold weather is here, but it isn't stopping Great Lakes Dredge & Dock Co. workmen. Last night they worked on the ice-slippery wooden forms through 11-below weather and a stiff wind. Some donned as many as three pairs of trousers for the ordeal.

Work from now on will consist mainly of the construction of forms and pouring of concrete. Some clay is still being hauled from the immense pit's floor.

The wooden forms surrounding the cement also serve as a framework for a large green canvas within which the men work and manage to keep warmer and away from the wind.

The accident rate has increased some due to the ice on the forms.

February 20, 1943: Cleveland Builders & Supply Co. poured the one hundred thousandth cubic yard of concrete into forms today, marking the approximate halfway point in concrete pouring for the lock walls.

March 10: Concrete is now being poured to make the additional blocks to fill in the empty spaces between the blocks poured in the first round. In the making of the first set of blocks room was left between each two of the gigantic concrete forms for another block. This empty space gave room to work in. Now the empty spaces are being filled and a solid wall is in the formation.

Filling-in operations are still taking place with the heavy dump trucks emptying their loads of red clay behind completed sections of the wall.

April 16: Sections and machinery that will go into the new lock are beginning to arrive by train and are run into the job on a track that leads from the D. S. S. & A. station to the locks.

June 5: The lock pit is now filled with a maze of steel. The massive gates are being set into place requiring the aid of cables, derricks, and other machines to lift the sections into place.

The cofferdam has been removed following the completion of the wall below the locks and now those wishing to cross over to the other locks are obliged to use an auxiliary gate in line with the Osborn Boulevard entrance and the administration building.

Above the locks another auxiliary gate holds back the water where the cofferdam was removed. Dredges are working a 24-hour shift removing the clay that piled on the bottom when the dam's clay-filled cylinders were torn apart.

June 25: Operations on the MacArthur lock are rapidly drawing to a close and Great Lakes Dredge & Dock Co. reports that the lock will be ready to turn over to the Government on July 4.

The last concrete was poured with the making of a stairway from the level of below the lock to the level of the lock wall. A similar set of steps was part of the old Weitzel lock.

Final tightening and riveting operations are being conducted to get the gates in shape and Great Lakes Dredge & Dock equipment is being moved out.

July 2: Sault's new lock was filled with water last night and today and will undergo a series of tests to be conducted by Great Lakes Dredge & Dock Co. before being turned over to the Government.

July 4: The Great Lakes Dredge & Dock Co. today turned over the $14,000,000, MacArthur lock to the Corps of Engineers for final testing before the lock is put into operation. Tests conducted by the construction company found everything satisfactory, a representative of the company said.

Sunday, July 11: Official opening of MacArthur lock.

NEW LOCK FACTS

Built by United States Corps of Engineers.

Contractor, Great Lakes Dredge & Dock Co.

Started May 4, 1942, finished July 4, 1943.

Construction time, 14 months; estimated 20 months.

Approximate cost, with incidental works $14,000,000.

Dedicated July 11, 1943.

Named for Gen. Douglas MacArthur, commander in chief of United Nations forces in south Pacific.

The Task Before Congress

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the New York Times of Tuesday, September 14, 1943.

While I do not always agree with the New York Times' editorials, I am impressed with this editorial because it gives expression to the thoughts of many of my constituents.

The editorial follows:

THE TASK BEFORE CONGRESS

After a 2 months' vacation, Congress resumes its session today. The demands upon it have not lessened. It is faced with some of the most momentous decisions that a

national legislature has even been called upon to meet. In what spirit, and by what method, shall it meet them?

There is an influential school of thought which holds that it is the main if not the sole function of Congress to "cooperate" with the President. It is true that it is one of the functions of Congress to cooperate with the President to the extent that it reasonably can—otherwise the prosecution of the war would be impeded and we should have a continual stalemate between the Executive and the legislature. But if to "cooperate" with the President is interpreted to mean, as it so often is, that it is the duty of Congress merely to act as a rubber stamp for the President, and to accept blindly whatever he proposes, then there would be no need for a Congress at all.

The whole purpose of a legislative body is to reflect the national will, and the multitudinous interests of the people, in a way in which no single man, no matter how gifted or sensitive, can possibly reflect them. A national legislature, with the opinions of one representative balanced against those of another, and with the consequent need for moderate compromises, is a guarantee against government by whim or caprice. It is a guarantee of government by discussion and popular participation. An independent and vigorous legislature, in short, is a necessary guarantee of democracy and domestic liberty.

The role that Congress can play, therefore, is an indispensable and potentially a great one. Unfortunately, it cannot be said so far to have measured up to its responsibilities. It has left undone much that it should have done and has done badly even the little that it has attempted. One need merely cite a few outstanding examples. Congress has had the opportunity as well as the duty to examine in a spirit of constructive criticism the conduct of the war. Its committees have made a few good reports and corrected some abuses. The Truman committee, in the Senate, has unquestionably done some useful work. But its general lack of judicial balance, its straining for the headlines, its championship, against expert opinion, of cotton instead of rayon for tire cord, its unsubstantiated charges against the P–40, and the nose dive in the manufacture of Wright motors which its methods helped to bring about, have led the committee so far to do more harm than good to the war effort.

In the field of labor, Congress has tolerated all sorts of abuses, most of which should never have been tolerated even in peacetime, let alone in war. There has been an imperative need for a reconsideration of the whole body of Federal labor laws. But instead of undertaking this, after the careful and comprehensive study that was called for, Congress hastily passed an ill-considered "antistrike" law that in its present form may actually do more to provoke strikes than to halt them. In the field of taxes Congress' record has been somewhat, but not much, better. It has failed to impose a tax bill calculated to close the "inflationary gap." In finally adopting, against administration opposition, a pay-as-you-go plan for income taxes, it levied a tax that was inexcusably complicated. Finally, in the field of international relations, the Senate has so far failed to provide that assurance of cooperation which will be necessary to give permanent meaning to our military victory when it has been achieved.

These failures on the part of Congress are partly failures of personnel. But they are no less the result of failure of organization. Congress lacks internal leadership. It is still pulled aimlessly hither and thither by a hundred standing and special committees, each insulated from the other and each sovereign in its own domain. Congress will never have a unified program, it will never take prompt and coherent action until it has a coherent organization, until it places above its present committees some central committee of its own selection whose leadership it is ready to accept.

Oil Is Scarce

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. HATCH. Mr. President, on the 1st day of September, Hon. Harold L. Ickes, Secretary of the Interior and Petroleum Administrator for War, made an able address dealing with the present gasoline situation. The address is important, and for that reason I ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I come before you tonight with one of the most serious, one of the most urgent, one of the most important messages that I have given to you since this war began. I come before you to ask you—to plead with you in the utmost earnestness—to help us to avoid running out of gasoline. I come before you tonight to try to make it just as clear as I possibly can that we are faced with just that probability, if we continue any longer in the direction that we are traveling now. We are faced with just that probability, not only in the Eastern States, but in the entire Nation.

This statement will not be believed tonight on the Pacific coast and in the Rocky Mountains area, except by the oil men who know in their hearts that it is true. The stock position in those regions is comfortable now, but if the people there could know of the military demands that lie ahead, when the war in the Pacific really gets under way, they would know that there is anything but comfort ahead for them, so far as sufficiency of gasoline is concerned.

My statement will not be generally believed tonight in the Middle West or the Southwest, either, because the people there have been deceived into believing that they dwell in a land of oil plenty. But these sections, too, are living on borrowed time, so far as gasoline is concerned, as the physical facts will prove in the not very distant future.

My statement will not be accepted tonight—incredible though it may seem—even by some people in the East. But, to the motorists of the East, I want to give this unequivocal warning:

If there is any appreciable increase in gasoline consumption in the Eastern States above the present rate, we will be out of gasoline in a matter of days.

Now, I realize that these are strong statements; that they are alarming. They probably call for clarification in view of the revocation today of the ban on nonessential driving—the so-called pleasure-driving ban. But there should be no confusion to those who read that statement carefully. It has been emphasized that the revocation of the ban did not mean that the gasoline supply situation had improved. It meant simply a change in administrative policy. The O. P. A. has emphasized that it did not like the pleasure-driving ban. The public had made it plain that it resented this system. I did not like it, nor did I invent it. The ban was invoked to meet a very critical situation at a time when filling stations were out of gasoline and when our entire east coast transportation system was threatened with disruption. It was a crisis measure, designed to meet a crisis, and it did meet it. But it was recognized by all concerned that the enforcement technique was not practicable nor desirable for a long-range operation, and so it has been abandoned.

The point that I want to make—the point that must be made—is that, while there is no law to prevent pleasure driving, neither is there at this time, any gasoline to permit it. My purpose here is to show you why there isn't more gasoline than there is and what you can do about it if you want to be able to continue using your car for even the most needful driving.

I can let it be known that we had figured upon September 1 as the date on which we could provide for a reasonably substantial increase in the gasoline available for east coast civilian use. But, today is September 1. And why has no such increase for the east coast materialized? Is the Petroleum Administration plugging up the spigot to keep the public from having gasoline which is there to be had? Some people have suggested that, but it is so absurd that it isn't worthy of an answer. We are supplying and always have supplied all of the oil to the east coast that we could. Each month, we certify to the O. D. T. the amount of gasoline that will be available for civilian use. The amount so certified is not just a figure that we decide upon arbitrarily as all that we think that the public ought to have. It represents all that we can count safely upon supplying, in the light of available transportation and in the light of war requirements.

And in spite of the fact that local shortages have developed as they inevitably will if the over-all inventories are tight, we have supplied to the Eastern States what we said that we would supply to that region.

Remember that all of our pipe lines, tank cars, barges, and tank trucks cannot be used to haul automotive gasoline for civilian consumption. They have to be used, also, to haul aviation gasoline in an ever-mounting volume, toluene for TNT, butadiene for synthetic rubber, heavy oil for the Navy, for the rapidly growing merchant marine, and for our war industries—yes, and furnace oil to keep America warm next winter. We have therefore refused to shift from our policy of using whatever transportation is necessary to increase the supply of furnace oil. We simply must not and will not provide for nonessential motoring at the risk of public health.

When we certified on June 26 that we could supply 342,000 barrels of automotive gasoline daily for civilian motor vehicles during the months of July, August, and September, we meant that this was all that we could supply in the face of these other obligations.

Out of this had to come the requirements for nonhighway use. The balance is what we are able to supply for civilian use—both commercial and private vehicles. The determination of how much shall be allotted to commercial vehicles and how much to passenger cars is made by the O. D. T. After O. D. T. has taken out what it decides should be allocated to commercial vehicles, the remainder is what is available for passenger automobiles.

Our calculations indicated that, if everything progressed according to plan, we would be able, by today, to certify an additional amount—perhaps about 50,000 barrels per day—for civilian consumption.

But, although we have supplied 342,000 barrels per day, consumption has not come within that figure. It has been exceeding that amount consistently for weeks, and is now out-pacing it by 30,000 to 35,000 barrels per day. This has caused a drain to that extent upon our already depleted inventories.

To this you may say: "But I have used only what my coupons entitled me to use; how then have I overconsumed?" The answer to this is: More coupons have been issued than we have gasoline with which to redeem them. Whatever restrictions upon motorcar use may be removed right now, this physical fact remains a physical fact, and unless the public will, ban or no ban, exercise greater restraint in the use of gasoline for the time being we shall inevitably run out of gasoline, that is, if we continue to supply the full military requirements—and who would want us to do otherwise?

Rationing is the responsibility of the Office of Price Administration. Restricting my remarks to my own field I will simply state the supply facts. Since there are more coupons out than can be redeemed by the 342,000 barrels per day that we are able to supply, it follows that although you have coupons you should not use them at this time for other than really necessitous driving. I ask this urgently so that no war worker will be kept from his job, so that no farmer will be prevented from running his tractor, and so that there shall be no break-down in any activity essential to the prosecution of the war or to the maintenance of our civilian economy.

Now perhaps 35,000 barrels per day does not sound like a particularly large amount of gasoline, although it is 1,470,000 gallons. But consider that over a month it amounts to more than a million barrels, or 42,000,000 gallons, which is a lot of gasoline. This overdraft on gasoline—plus the very large amount of supply that was cut off by the damage to Gulf coast refineries in the August hurricane—has meant that instead of being able to build up our inventories we have been forced to draw further upon them. It has meant that instead of being able to announce—as we had hoped—that more liberal gasoline allotments could now be furnished for the East, we are going to have to struggle to maintain allotments at even their present level.

Of course, there is another reason why we were not able today to make more gasoline available in the East. To do this calls for a reduced consumption in other areas. Our recent certification that 620,000 barrels of gasoline daily would be available in the Middle West and Southwest represented a reduction of about 15 percent in consumption. For several days after the curtailment order was issued, reports to us indicated that sales had been reduced slightly, and that still greater reductions are now being achieved.

About 2 weeks ago we called upon middle western refineries to increase immediately their eastward shipments by 50,000 barrels per day and upon southwestern refineries to increase their shipments by 25,000 barrels per day. These additional shipments are being made, but only at the expense of an additional drain upon inventories which already were falling off at an alarming rate. And why has it been necessary to draw upon inventories? The answer to that question is the answer to those in the West who ask: "What reason—if any—is there for cutting gasoline allowances here?"

Well, there is not just one reason. There are several.

First, the amounts of oil needed for war are perfectly enormous—and growing.

Second, in the face of this huge war demand, crude oil productive capacity is falling off seriously throughout the important midwestern oil-producing States, and is susceptible of a substantial increase only in west Texas. On the basis of known military requirements—let alone whatever unexpected demands may develop—we will not be able by next year to produce enough oil in the United States to meet the needs of the military, of war industry, of agriculture, and for essential civilian purposes unless we cut down on consumption now. That is not my opinion. It is a fact, recognized by the practical oil men who have formally endorsed the gasoline curtailment in the Middle West and Southwest.

But not only do we face a shortage of crude oil, we are now getting 5 fewer gallons of automotive gasoline out of each 42-gallon barrel of crude oil than we did before the war. The reason is that more and more of that part of each barrel of crude oil that used to go into automotive gasoline is now going into the petroleum war products that I have mentioned—aviation gasoline and lubricants, toluene, butadiene and fuel oils. And this shrunken output has to be shared with the armed forces. Of all of the gasoline of all kinds produced east of the Rocky Mountains for the last half of this year, the military requirement will be more than 30½ percent; and, by next year, more than 37½ percent. Here is a figure which has never before been made public: The armed forces are now using in round numbers 600,000 barrels of all kinds of gasoline every day. There is where the gasoline is going. That is approximately the same amount of gasoline that was used by the entire seventeen Eastern States in the unrestricted days of peacetime. It is as much as all of the oil of all kinds produced in Russia. And, it has to come from the same source that our civilian oil comes from. So, if someone tells you that there is plenty of gasoline, and that there is no reason for curtailment, ask him to explain how—if there is plenty of gasoline—it happened that stocks of automotive gasoline east of the Rocky Mountains declined 130,000 barrels per day—or 5,460,000 gallons each 24 hours—between April and August.

Yet, to me, the idea of spreading this limited supply as equitably as possible throughout all sections cannot be questioned. It is purely a case of misunderstanding when people in the West ask: "Why should we have our necessary driving cut down so that the East can go pleasure driving?"

That answer is: First, no necessary use of gasoline is going to be restricted in the West so far as we can foresee today. Farmers are already assured, by order of the Petroleum Administration, the same treatment as the Army and Navy as to the gasoline that they need for their essential operations. There will be enough gasoline, so far as we can foresee today, for all essential driving.

Second, you in the West are not giving up gasoline to permit the East to go pleasure driving. You are giving it up because you believe in the American principle of fair play and equality under the law. You know that, up to now, civilians on the east coast have had to supply a disproportionate share of the military demand. Now, with the transportation that we have provided, you are able to share equitably that war burden. And so, to the people of the West I say: Why in the world would we curtail your use of gasoline if it were not necessary?

To the people of the East, I say: Why in the world would we not supply you with more gasoline if it were possible? We may be crazy, as some people are that I know, but we are not so crazy that we would invite people to throw brickbats at us if it were not necessary.

To both the East and the West, I say please believe me when I tell you that the reason for both of your troubles is that oil has gone to war. Oh, I know that there are those who will tell you that this is just a pretext to cover up a "bungling bureaucracy." But, just consider a few pointed facts:

It takes 12,500 gallons of gasoline to train one pilot.

The tanks of an armored division use more than 10,000 gallons in traveling 100 miles.

A thousand Flying Fortresses will use 2,500,000 or more gallons in a single 6-hour mission.

So, there isn't as much left any more for you and for me. We can't burn gasoline over Berlin, and Rome, and New Guinea—and still have all that we want to consume here at home. And we cannot consume what we do not have.

The MacArthur Lock

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, July 11, 1943, was the date of the achievement of another milestone in the history of Sault Ste. Marie, Mich., with its famous Soo Locks. On July 11, 1943, the new MacArthur lock was officially opened and dedicated. At the luncheon preceding the dedication ceremony, I delivered the following remarks to the 250 guests assembled:

Mr. Chairman, distinguished guests, friends of that great maritime industry of the inland seas who are striving so valiantly to "keep the soldier's faith" to carry through this jugular vein of the United Nations' war effort their vitally needed lifeblood of iron ore, coal, limestone, and other raw materials of the war effort, and you of the United States Army Engineer Corps and the entire personnel of the Great Lakes Dredge & Dock Co., and their several subcontractors who have labored so industriously these past 15 months to make this historic day possible. This day marks another milestone in the enviable history of Sault Ste. Marie and her famous locks. To single out any one, or any group of individuals, for congratulations today would be to do an injustice to all. This magnificent, this most miraculous job that has been accomplished in such a fantastically short time against such tremendous handicaps, even in a day of miracles, has been done because of cooperation—cooperation on the part of everyone since its very inception.

When this most destructive of all wars was forced upon our Nation, those who were charged with the problem of the delivery of our raw materials to the nerve centers of the Nation's "arsenal of democracy" realized that this new lock, that we are about to dedicate today, was a paramount necessity. Legislation of authorization and legislation for the necessary funds was imperative—prompt action was demanded. At times, the Congress of the United States moves with discouraging inaction and sometimes overcautious deliberation. That inertia was a threatening menace in this instance but cooperation found a way out. Cooperation between your several elected representatives in the Capitol—of which I had the good fortune to be one—was speedily had, and we received extremely cordial cooperation from

the gentlemen of the press, the voice of this Nation. The necessary legislation was enacted, the Engineer Corps, as ever forewarned and thus forearmed, was ready with its plans, contracts were let, the job was on the way. But it took cooperation all the way through to the very end to make this day possible at this early date.

Your new friends here in Sault Ste. Marie, one of the greatest maritime construction firms this country will ever know, and which you have previously honored today—the Great Lakes Dredge & Dock Co., could not have done their admirable job had it not been for their cooperation with the Army engineers, with all their subcontractors; and above all with you wonderful citizens of Sault Ste. Marie. Then there were priority troubles, there were housing difficulties, there were seemingly endless "growing pains" as this gigantic war-necessitated program got under way. But cooperation won out again.

Once it was realized in official Washington that you cannot fight a war without guns, tanks, aircraft, and the ships needed to get them into the hands of the men who have to face the enemy and that you cannot have any of these until you get the steel with which to build them, and that you cannot get the steel until you have the iron ore, coal, and limestone which go into that steel delivered into the maws of the blast furnaces, then we got cooperation out of bureaucratic Washington. Democracy muddles through in the Capital, but you were not muddling through up here. You were pouring concrete in weather so far below zero that we might wish our Maker might have saved just a few of those zephyrs for this very day and occasion. Anyway, somehow, someway, you got your supplies and equipment up here and you got your job done. The hero of Bataan, General MacArthur, for whom this new lock is now officially named, has sworn to "uphold the soldier's faith." You who have built this lock "kept the soldier's faith."

Back in 1914 another new lock was built in Sault Ste. Marie; it was officially opened in September of 1919 and cost about $2,000,000. Those who were in attendance at that time, by official resolution, requested that it be named after a very distinguished citizen of Sault Ste. Marie, L. C. Sabin, then civilian superintendent of the locks—that official designation has now been made by an act of Congress. That lock is 1,800 feet long, 80 feet wide, and 23.1 feet deep. I believe it is bigger than anything we have in Panama or elsewhere in the world.

Today we are proudly dedicating the MacArthur lock. It was started in May of last year, 1942. It was built in 14 months. It has cost approximately $14,000,000, but it is worth every cent if it will help bring this war to the earliest possible conclusion. This MacArthur lock is 800 feet long, 80 feet wide, and 30 feet deep. It will permit a vastly increased flow of iron ore to our Nation's war effort. I am proud to be here today and to be able to join you all in participating in this memorable event.

Especially am I proud of the fact that shortly we, here, will all have the privilege of riding through this new MacArthur lock on a beautiful steamer that carries the name of a pioneer, of whom I have the honor to be the son. My dad was just about the finest man I have ever heard of and certainly the finest dad any son ever had. If I can ever just attain about one-tenth of his greatness—nothing more would ever matter. And you have here in the Soo one man, also a pioneer, of whose greatness and of whose outstanding abilities and friendship I could never tire of hearing my father praise. They saw eye to eye in predicting the greatness of the future maritime commerce on the Great Lakes and through these locks. My dad was a friend of our friend—and your Number One Citizen, Governor Chase S. Osborn.

I need not elaborate here on the vessel that proudly carries the name of my father, because you have before you a description of the steamer and a picture of him. She is a self-unloader, she was until recently the largest and fastest steamer on the Great Lakes. She is 638 feet 9 inches long, 65-foot beam, and 33 feet deep. Her largest cargo of limestone was 18,284 net tons. Last year in the 8 months she carried almost 1,400,000 tons a distance of over 65,000 miles (almost three times around the world) and delivered it on the docks of our arsenal of democracy. She too, and her captain, Forrest F. Pearse, and his noble crew, have kept the soldier's faith. On board her today on this memorable trip are two men whom I hope you may have the opportunity to meet. One is the top man of one of our most brilliant arms of the Nation's armed forces, Vice Admiral Russell R. Waesche, Commandant of the United States Coast Guard. The second is one of my dad's old friends, one of his trusted associates, and now his successor as president of the limestone quarry in my home town of Rogers City, and of the transportation company which bears my father's name—the Bradley Transportation Co.—Mr. Irvin L. Clymer. He represents one of the finest crews of workers I know of—my lifelong friends in Rogers City.

Again I want to assure you that I am glad to be with you today on this most memorable occasion. May the MacArthur lock, may we all, keep the soldier's faith, now and forever more. I greet you, I congratulate you all who by your mutual cooperation have made this day a reality at this early date—let none say you have not kept the soldier's faith. And to all you valiant members of the several arms of our armed forces charged with the security and protection of these locks, our sincere appreciation for what you have already done and what we know you will continue to do. Let's all carry on!

The Truth About Our Oil Supply

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. LARCADE. Mr. Speaker, the Representatives from the oil-producing States have been endeavoring to obtain the consideration of an increase in the price of oil from the various agencies who control this very important product, and notwithstanding all of our efforts, we have not been able to secure any action.

In order to bring to the attention of those charged with the responsibility of passing on the increase requested, and for the information of Congress, I wish to include an article appearing in Collier's magazine, of date September 11, 1943, by Frank B. Taylor, entitled "The Truth About Our Oil Supply" in my remarks in the RECORD:

THE TRUTH ABOUT OUR OIL SUPPLY

(By Frank B. Taylor)

While the vast resources of America are being brought to bear upon our enemies, the most basic of all these resources is showing definite signs of weakening. The oil industry is growing short of oil. The bald facts are that we are using our petroleum reserves far more rapidly than we are finding new reserves.

If you continually take from a barrel without replenishing—sooner or later that barrel will be empty. The same holds true for our oil reserves. If it were possible for us to draw from these reserves as we might need them, yet fail to find new fields, we would totally exhaust our oil by 1955—a mere 12 years.

Rationing has little to do with it. Even the weight of the war is a small influence. It is a critical situation within the industry itself, and it means that an industrial revolution is daily gaining momentum.

In the House, California Congressman CLARENCE F. LEA said:

"The normal drainage of these known reserves would require about 40 years to reach exhaustion. The waste of oil, due to maximum production under forced measures, would reach 20 to 50 percent in some of our most productive fields. A careful review of the present situation indicates that we will reach the decline in the productive capacity of American oil fields in 1 year."

This doesn't mean that the oil industry is going to the dogs. Nor should you dash to your broker and sell that oil stock you have acquired. It does mean that the petroleum industry is entering a new phase—a phase that will inevitably affect the lives of every one of us. It means that we should be given a frank appraisal of the situation—and this appraisal should be made now.

The fact that we have a total reserve, including oil still underground, of 20,000,000,000 barrels should be reassuring. We do not have to look forward to the early depletion of our reserves, for we will continue to find new fields, even though the rate of finding may be far slower than in other years. Our current situation does not mean that our war effort will drag, due to lack of oils or gasolines.

One out of every four of our daily production of 4,100,000 barrels is earmarked for the military. The industry sees its way clear to supply this life blood of mechanized warfare. But there is no room for revision of our war demand much further upward. The vast fleets of warplanes and air transports proposed for the future are completely out of the question if only for the simple reason that we do not have the oil.

It is hard for the uninitiated to realize what a tremendous volume of oil the Nation demands each year. If you drive 2,000 miles during the year you use 135 gallons, and still this is just a little over three barrels. But here is the catch—multiply this by our 30,000,000 cars and trucks, then add the fuel oils, the lubricants, the high-octane aviation fuels, tractor fuels, industrial fuels, kerosene, waxes, and the myriad of petroleum byproducts—by this time the total is terrific. In fact, in 1941, production in the United States reached an all-time high of 1,402,228,000 barrels to supply these demands. And this year, under the impetus of greater demands, we will set a higher production peak.

These demands would be all right if we were finding new fields at a rate equal to or exceeding our withdrawals. Instead of this, for the past 4 years we have continually lost ground by our inability to keep pace with production. In 1942, the new oil located failed to equal the oil produced by more than half a billion barrels.

Of course, our reserve of 20,000,000,000 barrels provides us with a comfortable drawing account. Unfortunately, the figure has been misinterpreted. The truth of the matter is that oil exists in porous rock formations much as water is contained in a filled sponge. The exploratory work of finding these formations is called wildcatting. The waters that are also contained in these formations have been migrating slowly about for millions of

years as the continents writhed and convulsed to their present forms. By this action, the oils, being lighter than water, were flushed about until caught in natural traps where they accumulated. These traps are known to the petroleum geologist by such names as domes, anticlines, fault zones, pools, nosings, stratographic traps, etc., according to type. It is in the hope of locating such a pool that the wildcat well is drilled.

When the field is first drilled, the oil is usually under gas or water pressure and squirts out of the formation as the water would flow from the sponge if pressed. Soon, however, the well no longer flows. Then it must be pumped. But by this method only a limited volume can be produced daily. This depends not only upon how much it is physically possible to lift, but also upon the rate of flow of the crude as it seeps into the hole from the oil-bearing formation. In most cases, the ultimate recovery from the well or field is reduced if wells are produced too rapidly.

NEW FIELDS A NECESSITY

This oil reserve, vast though it is, can only be produced a little at a time. This means that we can actually be short of oil in a period of months. It means that we absolutely cannot delay vitally needed oil exploratory work. We must have new fields now.

In 1859 Colonel Drake drilled the oil well that launched the petroleum industry. When he found production, he was credited with discovering a field. Also, and this is a point that must be kept in mind, when Drake started his well, there were only a fixed number of potential oil fields in the entire United States; and when he completed his well as a producer, he had decreased that number by one. Every successful wildcat well after that further reduced the number of undiscovered fields. And every unsuccessful wildcat reduced the potential by one.

The industry has no idea how many fields there were to start with, but it is definite that the number has not increased. Oil is not formed in the lifetime of man. Oil is irreplaceable. Once produced and used it is utterly gone—and another barrel does not spring up as one stalk of corn replaces another.

For some years following Drake's discovery, oil wildcatting was entirely and joyfully haphazard. The oil men punched holes down for any reason at all—dreams, the forked twig of a peach tree, an omen, anything. Then it was recognized that certain conditions of surface rocks usually indicated a subsurface accumulation of oil—and the famous anticlinal theory of geology came into existence. A vast search was immediately under way for these anticlines or domes, and such fields as Spindletop, El Dorado, Glenn Pool, Teapot Dome and others were discovered. But by no means all of these favorable locations were actually found to contain oil. Many were drilled and found to be entirely dry.

Petroleum geologists combed the Nation's surface and naturally found the most apparent structures first. Then the search became difficult. Exploratory tools were required to aid in the search for new fields. The "cream of the crop" was gone. The seismograph, making use of reflected sound waves, helped the geologist study deep-seated formations. With this aid he found many fields that lacked any surface indication. Also, the petroleum geologist adapted other tools to assist in the search. The gravity meter and the magnetometer, the core drill, air mapping—all helped to find new fields.

Each new tool or geologic aid was put to use the instant its worth was proved. And where the previous instruments had failed to detect oil, the new tool might find a new prospect. Each successive development enjoyed an initial success.

Soon, however, the use of the tool became routine—not because the instrument was becoming less effective, but because it had already found most of the favorable conditions possible for it to detect.

The search went deeper. Drake's well was only 69 feet deep. Today's deepest well is Continental Oil Co.'s KCL–4 in California, drilled to a depth of 15,004 feet. As the search continued for these new fields, and the test wells were drilled deeper and deeper, and exploratory equipment grew in complexity, the cost of finding new wells soared. But this didn't particularly matter as long as the search was successful. That is how the industry built up the reserve we are now drawing upon.

And here we come to a new set of facts. The rate of finding new reserves has reversed itself. Instead of finding more and more, we are finding less and less. Not only last year did we fail to locate ample new reserves, but we have actually been finding less and less new oil since 1937. What does this mean?

It means that the various exploratory tools of the industry have already served their maximum usefulness. It means new or greatly improved exploratory tools must be devised, so that the remaining oil structures can be located. In all the industry there is not a single exploratory tool that is capable of detecting oil directly; every method is designed to detect the condition favorable to the accumulation of oil.

If we allow our Nation's petroleum reserve to diminish during the present critical period, we must expect serious results in our post-war period. The industry is entering an era of near stabilization in which a never-ceasing effort must be made to retain our reserves at as high a figure as possible. We are entering a period in which we will be constantly attempting to close an ever-widening breach between greater demands on the one hand and diminishing reserves on the other.

This does not mean that no important fields remain to be located. Not at all. It means that the discovery of new fields, large and small, will become more and more difficult. The array of prolific discoveries is definitely behind us. Judging by the experience of the past 6 years, the average pool discovery will continue to decrease in size. This is best illustrated by showing the relationship between the number of new pools discovered since 1937 and the volumes of crude added to the Nation's oil barrel by the finding of these new fields:

	New pools found	Estimated reserves of new pools
1937	221	928, 742, 000
1938	256	810, 493, 000
1939	254	340, 667, 000
1940	304	286, 338, 000
1941	341	429, 974, 000
1942	348	260, 051, 000

Geologists are none too optimistic about new discoveries. To quote the Honorable WESLEY E. DISNEY, of Oklahoma, "Oil cannot be discovered at will." It takes planning, research, surveys, and money. It takes more than merely the price of the average wildcat well—which is $50,000, but which may be anywhere from $1,000 to $500,000. It takes exploration expense to find a geologically favorable site on which to locate a test well.

NO PAY-OFF IN PROSPECTING

Why hasn't this exploratory effort been made? For a number of reasons. In the first place, there has been an economic uncertainty created that has retarded this type of investment. Then there has been an actual shortage of critical materials—some of which are required in oil exploration, and not enough of these materials have been marked for the oil industry. With so many men entering the services, a paralyzing manpower situation has developed. And this is heightened by war industries that pay wages higher than those the Government allows the oil firms to pay. Combine this with the fact that it is becoming increasingly more difficult to find new fields and you have a good part of the answer.

The rest of the answer lies in the price of oil. While all operating and exploratory costs of the industry have steadily risen, an average increase of about 2 cents a barrel in the price of crude oil has been available; and that only in some few areas where it was granted as an adjustment.

To carry on our war, the Petroleum Administration for War wants 4,500 wildcat wells to be drilled during 1943. Actually, the figure will be closer to 3,300—about 75 percent of the desired total. In 1942 the industry drilled 3,166 wildcat wells against 4,000 asked by the Government.

A price increase would greatly stimulate the exploratory effort, and there are two other beneficial results that would immediately obtain. The first would allow the producing well of today to be operated further toward total exhaustion. By this means the greatest ultimate recovery would be obtained before the inevitable abandonment of the well. The other immediate result would be the development of many semidepleted oil areas as secondary recovery projects, by which methods additional oil can be obtained at greater expense.

Meanwhile, the big companies are increasing their reserves in the most logical manner. Not by exploration. That is too expensive with the present price of crude. They are purchasing as many independent small producers and producing properties as they can. And, due to maladjustment in the excessive burden of taxation, the small operators are finding it desirable to sell. W. S. Hallanan, president of Plymouth Oil Co., and a member of the Petroleum Industry War Council, in addressing a convention of oil men at Bradford, Pa., last June, stated that 2 years ago small operators controlled 50 percent of America's reserve. Today the same operators control 25 percent of these reserves. It is good business for the big companies, but is it a healthy situation? This trend would come to a natural end with a price adjustment sufficient to make it desirable for the majors of the industry to find their own reserves instead of buying out the little man.

Oil's political set-up in Washington is one of these integrated, complex, top-heavy affairs, supported by politicians and directed by practicing economists. Transportation, production, price—all are irrevocably interrelated except in Washington, and here each division has its own bureau. Heading the Petroleum Administration for War is Secretary of the Interior Harold L. Ickes. Ickes was a little too much for the oil men to take when he was appointed controller of the oil industry by the President. The industry, individually and collectively, fired both barrels at Ickes time and time again.

Then at an American Petroleum Institute convention in California in November 1941, Ickes spoke. He made the kind of talk oil men understand. He spoke straight. He called a spade a spade. There was no clouding over of facts. He asked for the support of the oil men—and he got it. The industry reversed itself overnight. To this day the men of the industry are still with him, although some still keep their fingers crossed.

Ickes can't grant a price increase for oil. Such power is not vested in the Petroleum Administrator; instead it is over in Price

Administrator Brown's O. P. A. So P. A. W. asked O. P. A. to raise the price of crude a minimum of 35 cents a barrel. O. P. A. Administrator Brown, on May 4, issued a long statement rejecting the recommendation, and, in the same decision, indirectly admitted the necessity of a price raise by offering Government financial aid for some conditions.

GOVERNMENT CONTROL IS TABOO

The offer of aid was actually a subsidy. And the oil industry wants nothing whatever to do with this. The oil man is skeptical of subsidy in any form. Government control is abhorrent to him.

The Government is itself seriously to blame for public apathy on the question of oil. It delayed correcting the impression that east coast rationing was necessary because of a shortage of oil. It wasn't long before it became known the shortage was actually due to a lack of transportation between the producing areas and the East. Next, the people were led to believe that the military requirements necessitated rationing. Then the fact came out that it was necessary to ration mileage to conserve rubber. And now, while we are aware that military requirements are great, we are told again that an actual petroleum shortage impends. Is there any wonder that the public is baffled?

But why is the question of price so vital? It is vital because it is the quickest and surest way to find new and badly needed oil to support our sagging reserves. This is important because as a Nation we are totally unprepared for a shortage of petroleum in any degree. It is a shock to know that rationing may have to be continued on the basis of actual shortage, not on the basis of military priority.

Then, too, there is another profile of the impending shortage that needs to be recognized. Not only has the molecule of oil been reduced and changed to provide the best aviation fuels in the world, but the same molecule has been stretched into rubber that is even better than the unobtainable latex. It has been combined and changed to provide an endless series of new and useful compounds, and the list is growing daily. Moth balls, plastic stocks, anesthetics, toluene, bug spray, perfume, antifreeze compounds—all and many more, some that are war secrets—are being derived from petroleum and its partner, natural gas, by the new science of petrochemistry.

The industry has chosen today to expand into these new fields. The choice in time is inopportune, but is merely a chance step in the uninterruptible march of progress. The multitude of new products will mean a richer, more pleasantly satisfying life in the future.

Technique developed for the manufacture of 100-octane aviation fuels will be utilized to make new and more powerful automotive gasolines that will deliver more miles per gallon. This will be a saving; also, it might be that tomorrow's car won't depend exclusively on this superfuel. It could be constructed with two fuel tanks, one to contain the high-octane gasoline, the other to contain a cheaper grade of fuel, a substitute, or some type of blend that could be used in ordinary driving after the motor becomes warm.

If the oil business is to continue, "heavy" industry of the east-coast area should be fed more and more by imported crude—now, and in increased quantities later, as transportation is available. As reserves further diminish, additional imports to other areas will be necessary. This will not find favor in one branch of the industry, but it is the only solution.

The prediction that we may become oil-dry at an early date cannot be justified. Research will be directed toward making new fuels available to industry and the public. A new source of power is needed, and it might possibly be found in atomic power when experiments are renewed after the war. If such a source of cheap power is found, then the petroleum refiner will be frantically reversing himself in an effort to provide lubricants for industry's wheels rather than fuels to turn the wheels.

Primary methods of producing oil must be increased in efficiency, and the new methods of secondary recovery from depleted wells must be applied. In this respect the various oil-producing States should provide some legal vehicle so that properties adaptable to secondary recovery methods can be combined in a unit operation.

DIRECT CONTROL BY CONGRESS

The industry itself must strive for a better understanding with the public, so that every time some political opportunist wags his finger, Mr. John Public won't be so anxious to jump down the oil man's throat. A price increase, not a subsidy, is necessary. The industry must remain as independent of bureau control as possible. Such control as may be required must come directly from Congress in the form of laws.

In the matter of substitutes we are extremely fortunate. The most important reserve we enjoy is the inventive ingenuity of the American to solve any problem. With this ability we can confidently expect synthetic fuels from a number of base stocks, including agricultural materials. Coal, of which we have a known supply sufficient to last 3,000 years, can be turned into fuels and lubricants by proper processing. Lignite represents another potential source of liquid fuels.

So far in the history of the petroleum industry, we have produced a total of 27,000,000,000 barrels of oil from United States fields. This volume is only a little more than one-eighth of the 200,000,000,000 barrels estimated to exist in oil shales of the Nation, and this is sufficient to last us 50 years at our present rate of consumption. In western Canada, a single shale bed is believed to contain at least 27,000,000,000 barrels. But this oil cannot be recovered at the present price of $1.25 per barrel. Instead, the difficulty of obtaining the oil from this source would increase its value to $6 or $7 per barrel.

When it is necessary to turn to new sources for our petroleum, we will encounter costs per barrel that right now seem prohibitive. Substitute fuels will be available at less cost, but they will be less satisfactory by providng less mileage in our cars and less power in our industries. We must keep these eventualities as far removed into the future as possible by anticipating them now.

The History of the Soo Locks

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, not only did July 11, 1943, mark the opening of the new MacArthur lock at Sault Ste. Marie, Mich., but also on that date the last previously constructed lock, opened in 1919, was officially dedicated as the Sabin lock by an act of this Congress. Heretofore, the lock had always been known locally as the Sabin lock and on July 11, 1943, it was officially so named.

At the luncheon immediately preceding the dedication ceremony, Mr. L. C. Sabin, vice president of the Lake Carriers Association, and formerly district engineer at the Soo in charge of the operation of those locks, uttered the following cogent remarks on the history of the famous Soo locks:

In a group of this kind, gathered to pay tribute to the progress made in the facilities of transportation on the most important waterway of the world, there is a temptation to follow the growth of commerce from its early beginnings. I shall refrain from burdening you with too many figures.

It is heartening to note, however, the degree of cooperation which has existed from the beginning between the governmental authorities in charge of the lock area and the private interests using the facilities.

Equally important are the aids to navigation, formerly under the Lighthouse Service, and now a part of the United States Coast Guard. The same fine cooperation has been given the Lake interests by this department, and I am happy to note that some of its high representatives are with us today.

The lock which is now to be officially opened is not the new first lock, but rather the eighth lock that has been built to enable vessels to pass to and from Lake Superior and the lower Lakes. The first was a lock for canoes, built on the Canadian side in 1797–98 by the North West Fur Co. This lock, only 38 feet long, accommodated bateaux which were raised only 9 feet. To overcome the remainder of the fall, canoes were towed by oxen operating along a tow path. The lock was destroyed by military action in 1814. The timber floor and sills were discovered later, and the walls and gates have been reproduced in facsimile.

STATE LOCK

The need of a lock and canal for commercial vessels to reach Lake Superior was foreseen long before the authorization of the facility by the State of Michigan in 1837. The question whether it should be a State or National project arose, and difficulties connected with securing right-of-way, as well as other legal entanglements, delayed final authorization until 1852.

A trial shipment of ore from the Marquette region in 1852 proved successful and helpful to forward final action. Construction was begun in 1853 and the lock was opened in 1855, the steamer *Illinois* being the first to pass. The lock accommodated some 12,000,000 tons of freight while in use from 1855 to 1881, mainly under State supervision. It was destroyed in 1888 to make way for further improvements.

THE WEITZEL LOCK

In the meantime, however, the registered tonnage passing the State canal having reached half a million tons, the need of additional facilities became evident and authorities in charge of the State canal urged the construction of a larger lock as early as 1867. Again action was delayed by legal difficulties connected with securing right-of-way, and while the construction was authorized in 1870 and some work done, the first stone of the lock was not laid until 1876. This lock, named the Weitzel, since Col. Godfrey Weitzel was in charge during construction, was opened in 1881 and continued in active service

until 1914. It was used to a limited extent in 1918 during the last war. The freight passing this lock in its 34 years of use amounted to 135,000,000 tons.

THE POE LOCK

Prior to the construction of the Poe lock the canal traffic in 1886 had reached a new high of 4½ million tons in 7,400 passages. Vessels could not load to full draft and the delays in lockage were mounting. The Lake Carriers' Association, formed in 1885, joined the officers of the Corps of Engineers, Generals Weitzel and Poe, in urging the need of a new lock. This was authorized by Congress in 1886. Construction was begun in 1889, the old State lock being torn out to furnish a site. This lock was completed in 1896 and named the Poe lock, Gen. O. M. Poe having died the year preceding its completion as the result of an accident received while inspecting the work. This lock has passed 574,000,000 tons of freight and is still useful for up-bound light traffic.

THE DAVIS LOCK

The commerce continued to grow, and in the 10 years succeeding the opening of the Poe lock it trebled in volume, causing an average delay in passing the canal of more than 2 hours. The capacity of the newer ships also was limited by lack of depth.

To meet these conditions the engineers submitted to Congress three plans for a new lock. The first plan would have utilized the site of the Weitzel lock where the MacArthur lock now stands. The second plan contemplated building to the north of the Poe lock—three locks being served by the same canal. The third plan, which was recommended and fortunately accepted, called for a new canal with one lock on the south side, leaving room for an additional lock on the north.

This new canal with a double length lock, the longest in the world, was authorized in 1907 and the first boat, the Alva C. Dinkey, passed through in 1914. As Col. C. E. L. B. Davis was still living the lock was called the third lock. On the death of Colonel Davis, however, my recommendation that it be given the official name of the "Davis lock" was approved by the engineer department. Some 918 million tons of freight have passed this lock in 29 years.

THE SABIN LOCK

By 1912 the traffic had increased to 72,000,000 tons and the average delay to vessels again reached 2 hours. Accordingly another lock was authorized in that year, although the Davis lock was not yet complete. Had action been delayed, this fourth lock might have been made deeper, but at that time there was no warrant for changing the dimensions, and thus it was made a duplicate of the third, or Davis lock. Construction was started in 1913 and the lock and canal were completed in 1919, the steamer *Wm. Livingstone* being the first to pass. During the construction of this lock the engineer officers in charge of the district were Colonels Patrick, Burgess, Altstaetter, and Markham, while the speaker served as district engineer for a short time. The freight passing this lock alone during the past 24 years amounted to 956 million tons—equal to the traffic of the Suez Canal during its entire life of 56 years.

THE MAC ARTHUR LOCK

Vessels recently built are capable of loading to 24-foot draft and this, combined with the existing traffic congestion, brought a demand for greater facilities which today we see fulfilled. The need of this lock, urged by the Lake Carriers' Association, was fully realized by Colonel Barrows, then district engineer, and it received also the recommendation of the chief of engineers. Its authorization was first contained in the Rivers and Harbors bill which did not pass the Congress. Congressman BRADLEY, always alive to the needs of navigation, was most helpful in securing favorable consideration and final action, while Senator Brown added the item to another bill, which resulted in authorization of the project in March 1942. Beginning actual construction immediately, this lock has been completed in record time and the engineers and contractors concerned are to be commended for so quickly bringing into service this much needed facility.

Considering the system as a whole, traffic through the locks, including the Canadian Canal, reached on June 1 of this year a total of 3,000,000,000 tons. This is practically double the commerce passing both the Suez and Panama Canals during their entire existence.

In the routine of peacetime the importance of this waterway may lack appreciation, but the present emergency has resulted in a fuller realization of its strategic value. In 1938 Gen. Max Tyler, assistant to the Chief of Engineers and a former division engineer, foresaw the part to be played in any future war when he said: "As long as the iron mines on Lake Superior and the coal mines last, and as long as wars are still a possibility, the transportation system built around water carriage on the Great Lakes will continue to be one of the greatest elements of military and naval strength, better appreciated, perhaps, by the possible enemies of the United States." (Transactions, American Society of Civil Engineers, vol. 105, p. 167.)

A further appraisal of the value of lake transportation, and the motives guiding the several agencies concerned, General Tyler expressed as follows:

"The existing system of industry and transportation which has been built up around water carriage on the Great Lakes in the last century is the result of the cooperative efforts of the Federal Government, the railroad companies, industries, municipalities, and vessel owners and operators during that entire period. In each decade, the facilities provided for navigation and at the terminals have been reasonably adequate for the number and class of vessels in the lake trade and for the tonnage moved. They have never been overbuilt, nor has money been spent extravagantly far ahead of requirements. As one examines the record, one must be impressed with the fact that the present results have been obtained by the application of good engineering practice and sound business judgment, and by planning for the future only as far as definite benefits could be foreseen."

From the organization of the Lake Carriers' Association in 1885 it has been active in recommending needed improvements in the channels and harbors including the construction of the locks. In the article already quoted General Tyler said:

"The recommendations made by the association for improvements for the benefit of shipping on the Lakes have consistently been constructive and conservative."

On the other hand, the association wishes to acknowledge the uniform courtesy and consideration with which its recommendations have been received by the Corps of Engineers. It has been shown that with the completion of each new facility the vessels have been in service to use it. This is true in the case of the lock which is to be opened today, 21 vessels having been built in the past 2 years which are unable to load to full capacity and pass the older locks. The association wishes to express its keen appreciation of the spirit of cooperation evidenced by the Engineering Department during the past 58 years.

Progress of the War

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the progress of the war delivered by the President of the United States July 28, 1943, and broadcast over various Nation-wide radio hook-ups.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Over a year and a half ago I said to the Congress: "The militarists in Berlin, Rome, and Tokyo started this war, but the massed, angered forces of common humanity will finish it."

That prophecy is in the process of being fulfilled. The massed, angered forces of common humanity are on the march. They are going forward—on the Russian front, in the vast Pacific area, and into Europe—converging upon their ultimate objectives, Berlin and Tokyo.

The first crack in the Axis has come. The criminal, corrupt Fascist regime in Italy is going to pieces.

The pirate philosophy of the Fascists and Nazis cannot stand adversity. The military superiority of the United Nations—on sea, and land, and in the air—has been applied in the right place and at the right time.

Hitler refused to send sufficient help to save Mussolini. In fact, Hitler's troops in Sicily stole the Italians' motor equipment, leaving Italian soldiers so stranded that they had no choice but to surrender. Once again the Germans betrayed their Italian allies, as they had done time and time again on the Russian front and in the long retreat from Egypt, through Libya and Tripoli, to the final surrender in Tunisia.

Mussolini came to the reluctant conclusion that the "jig was up"; he could see the shadow of the long arm of justice.

But he and his Fascist gang will be brought to book, and punished for their crimes against humanity. No criminal will be allowed to escape by the expedient of resignation.

Our terms to Italy are still the same as our terms to Germany and Japan—unconditional surrender.

We will have no truck with fascism in any way, shape, or manner. We will permit no vestige of fascism to remain.

Eventually Italy will reconstitute herself. It will be the people of Italy who will do that, choosing their own government in accordance with the basic democratic principles of liberty and equality. In the meantime, the United Nations will not follow the pattern set by Mussolini and Hitler and the Japanese for the treatment of occupied countries—the pattern of pillage and starvation.

We are already helping the Italian people in Sicily. With their cordial cooperation, we are establishing and maintaining security and order—we are dissolving the organizations which have kept them under Fascist tyranny—we are providing them with the necessities of life until the time comes when they can fully provide for themselves.

Indeed, the people in Sicily today are rejoicing in the fact that for the first time in years they are permitted to enjoy the fruits

of their own labors—they can eat what they themselves grow, instead of having it stolen from them by the Fascists and the Nazis.

In every country conquered by the Nazis, the Fascists, or the Japanese militarists, the people have been reduced to the status of slaves or chattels.

It is our determination to restore these conquered peoples to the dignity of human beings, masters of their own fate, entitled to freedom of speech, freedom of religion, freedom from want, freedom from fear.

We have started to make good on that promise.

I am sorry if I step on the toes of those Americans who, playing party politics at home, call that kind of foreign policy "crazy altruism" and "starry-eyed dreaming."

Meanwhile, the war in Sicily and Italy goes on It must go on, and will go on, until the Italian people realize the futility of continuing to fight in a lost cause—a cause to which the people of Italy never gave their wholehearted approval and support.

It is a little over a year since we planned the north African campaign. It is 6 months since we planned the Sicilian campaign. I confess that I am of an impatient disposition, but I think that I understand, and that most people understand, the amount of time necessary to prepare for any major military or naval operation. We cannot just pick up the telephone and order a new campaign to start the next week.

For example, behind the invasion forces of north Africa were thousands of ships and planes guarding the long, perilous sea lanes, carrying the men, the equipment, and the supplies to the point of attack. And behind all these were the railroad lines and highways that carried the men and the munitions to the ports of embarkation—there were the factories and the mines and the farms that turned out the materials; there were the training camps where the men learned how to perform the strange and difficult and dangerous tasks which were to meet them on the beaches and in the deserts and the mountains.

All this had to be repeated in the attack on Sicily. Here the factor of air attack was added—for we could use north Africa as the base for softening up the landing places and lines of defense in Sicily and the lines of supply in Italy.

It is interesting for us to realize that every Flying Fortress that bombed harbor installations at Naples from its base in north Africa required 1,110 gallons of gasoline for each single mission, and that this is the equal of about 375 A ration tickets—enough gas to drive your car five times across this continent. You will better understand your part in the war—and what gasoline rationing means—if you multiply this by the gasoline needs of thousands of planes and hundreds of thousands of jeeps, trucks and tanks now serving overseas.

I think that the personal convenience of the indivadual or the individual family back home here in the United States will appear somewhat less important when I tell you that the initial assault force on Sicily involved 3,000 ships which carried 160,000 men—Americans, British, Canadians and French—together with 14,000 vehicles, 600 tanks and 1,800 guns. This initial force was followed every day and every night by thousands of reinforcements.

The meticulous care with which the operation in Sicily was planned has paid dividends. For our casualties in men, ships and matériel have been low—in fact, far below our estimate.

All of us are proud of the superb skill and courage of the officers and men who have conducted and are conducting this operation. The toughest resistance developed on the front of the British Eighth Army, which included the Canadians. But that is no new experience for that magnificent fighting force which has made the Germans pay a heavy price for each hour of delay in the final victory. The American Seventh Army, after a stormy landing on the exposed beaches of southern Sicily, swept with record speed across the island into Palermo. For many of our troops this was their first battle experience but they have carried themselves like veterans.

And we must give credit for the coordination of the diverse forces in the field, and for the planning of the whole campaign, to the wise and skillful leadership of General Eisenhower. Admiral Cunningham, General Alexander and Air Marshal Tedder have been towers of strength in handling the complex details of naval, ground, and air activities.

You have heard some people say that the British and the Americans can never get along well together—you have heard some people say that the Army and Navy and Air Forces can never get along well together—that real cooperation between them is impossible. Tunisia and Sicily have given the lie, once and for all, to these narrow-minded prejudices.

The dauntless fighting spirit of the British people in this war has been expressed in the historic words and deeds of Winston Churchill—and the world knows how the American people feel about him.

Ahead of us are much bigger fights. We and our allies will go into them as we went into Sicily—together. And we shall carry on together.

Today our production of ships is almost unbelievable. This year we are producing over 19,000,000 tons of merchant shipping and next year our production will be over 21,000,000 tons. And in addition to our shipments across the Atlantic we must realize that in this war we are operating in the Aleutians, in the distant parts of the Southwest Pacific, in India, and off the shores of South America.

For several months we have been losing fewer ships by sinkings, and we have been destroying more and more U-boats. We hope this will continue. But we cannot be sure. We must not lower our guard for one single instant.

One tangible result of our great increase in merchant shipping—which will be good news to civilians at home—is that tonight we are able to terminate the rationing of coffee. We also expect that within a short time we shall get greatly increased allowances of sugar.

Those few Americans who grouse and complain about the inconveniences of life here in the United States should learn some lessons from the civilian populations of our allies—Britain, China, Russia—and of all the lands occupied by our common enemies.

The heaviest and most decisive fighting today is going on in Russia. I am glad that the British and we have been able to contribute somewhat to the striking power of the Russian armies.

In 1941-42 the Russians were able to retire without breaking, to move many of their war plants from western Russia far into the interior, to stand together with complete unanimity in the defense of their homeland.

The success of the Russian armies has shown that it is dangerous to make prophecies about them—a fact forcibly brought home to that mystic master of strategic intuition, Herr Hitler.

The short-lived German offensive, launched early this month, was a desperate attempt to bolster the morale of the German people. The Russians were not fooled by this. They went ahead with their own plans for attack—plans which coordinate with the whole United Nations' offensive strategy.

The world has never seen greater devotion, determination, and self-sacrifice than have been displayed by the Russian people and their armies, under the leadership of Marshal Joseph Stalin.

With a nation which in saving itself is thereby helping to save all the world from the Nazi menace, this country should always be glad to be a good neighbor and a sincere friend in the world of the future.

In the Pacific we are pushing the Japs around from the Aleutians to New Guinea. There, too, we have taken the initiative—and we are not going to let go of it.

It becomes clearer and clearer that the attrition, the whittling down process against the Japanese is working. The Japs have lost more planes and more ships than they have been able to replace.

The continuous and energetic prosecution of the war of attrition will drive the Japs back from their over-extended line running from Burma and Siam and the Straits Settlements through the Netherlands Indies to eastern New Guinea and the Solomons. We have good reason to believe that their shipping and their air power cannot support such outposts.

Our naval, land, and air strength in the Pacific is constantly growing. If the Japanese are basing their future plans for the Pacific on a long period in which they will be permitted to consolidate and exploit their conquered resources, they had better start revising their plans now. I give that to them merely as a helpful suggestion.

We are delivering planes and vital war supplies for the heroic armies of Generalissimo Chiang Kai-shek, and we must do more at all costs.

Our air supply line from India to China across enemy territory continues despite attempted Japanese interference. We have seized the initiative from the Japanese in the air over Burma and now enjoy superiority. We are bombing Japanese communications, supply dumps, and bases in China, Indo-China, and Burma.

But, we are still far from our main objectives in the war against Japan. Let us remember how far we were, a year ago, from any of our objectives in the European theater. We are pushing forward to occupation of positions which in time will enable us to attack the Japanese islands themselves from the north, from the south, from the east, and from the west.

You have heard it said that while we are succeeding greatly on the fighting front, we are failing miserably on the home front. This is another of those immaturities—a false slogan easy to state but untrue in the essential facts.

For, the longer this war goes on the clearer it becomes that no one can draw a blue pencil down the middle of a page and call one side "the fighting front" and the other side "the home front." The two of them are inexorably tied together.

Every combat division, every naval task force, every squadron of fighting planes is dependent for its equipment and ammunition and fuel and food, as indeed it is for its manpower, on the American people in civilian clothes in the offices and in the factories and on the farms at home.

The same kind of careful planning that gained victory in north Africa and Sicily is required if we are to make victory an enduring reality and do our share in building the kind of peaceful world which will justify the sacrifices made in this war.

The United Nations are substanially agreed on the general objectives for the post-war world. They are also agreed that this is not the time to engage in an international discussion of all the terms of peace and all the details of the future. We must not relax our pressure on the enemy by taking time out

to define every boundary and settle every political controversy in every part of the world. The all-important thing now is to get on with the war—and to win it.

While concentrating on military victory, we are not neglecting the planning of the things to come, the freedoms which we know will make for more decency and greater justice throughout the world.

Among many other things we are, today, laying plans for the return to civilian life of our gallant men and women in the armed services. They must not be demobilized into an environment of inflation and unemployment, to a place on a bread line or on a corner selling apples. We must, this time, have plans ready—instead of waiting to do a hasty, inefficient, and ill-considered job at the last moment.

I have assured our men in the armed forces that the American people would not let them down when the war is won.

I hope that the Congress will help in carrying out this assurance, for obviously the executive branch of the Government cannot do it alone. May the Congress do its duty in this regard. The American people will insist on fulfilling this American obligation to the men and women in the armed forces who are winning this war for us.

Of course, the returning soldier and sailor and marine are a part of the problem of demobilizing the rest of the millions of Americans who have been working and living in a war economy since 1941. That larger objective of reconverting wartime America to a peacetime basis is one for which your Government is laying plans to be submitted to the Congress for action.

But the members of the armed forces have been compelled to make greater economic sacrifice and every other kind of sacrifice than the rest of us, and are entitled to definite action to help take care of their special problems.

The least to which they are entitled, it seems to me, is something like this:

1. Mustering-out pay to every member of the armed forces and merchant marine when he or she is honorably discharged, large enough in each case to cover a reasonable period of time between his discharge and the finding of a new job.

2. In case no job is found after diligent search, then unemployment insurance if the individual registers with the United States Employment Service.

3. An opportunity for members of the armed services to get further education or trade training at the cost of their Government.

4. Allowance of credit to all members of the armed forces, under unemployment compensation and Federal old-age and survivors insurance, for their period of service. For these purposes they should be treated as if they had continued their employment in private industry.

5. Improved and liberalized provisions for hospitalization, rehabilitation, and medical care of disabled members of the armed forces and merchant marine.

6. Sufficient pensions for disabled members of the armed forces.

Your Government is drawing up other serious, constructive plans for certain immediate forward moves. They concern food, manpower, and other domestic problems, but they tie in with our armed forces. Within a few weeks I shall speak with you again in regard to definite actions to be taken by the executive branch of the Government and specific recommendations for new legislation by the Congress.

All our calculations for the future, however, must be based on clear understanding of the problems involved. And that can be gained only by straight thinking—not guesswork or political manipulation.

I confess that I myself am sometimes bewildered by conflicting statements that I see in the press. One day I read an authoritative statement that we shall win the war this year, 1943—and the next day comes another statement equally authoritative that the war will still be going on in 1949.

Of course both extremes—of optimism and pessimism—are wrong.

The length of the war will depend upon the uninterrupted continuance of all-out effort on the fighting fronts and here at home. The effort is all one.

The American soldier does not like the necessity of waging war. And yet, if he lays off for one single instant he may lose his own life and sacrifice the lives of his comrades.

By the same token, a worker here at home may not like the driving, wartime conditions under which he has to work or live. And yet, if he gets complacent or indifferent and slacks on his job he, too, may sacrifice the lives of American soldiers and contribute to the loss of an important battle.

The next time anyone says to you that this war is "in the bag" and "it's all over but the shouting," you should ask him these questions:

"Are you working full time on your job?"

"Are you growing all the food you can?"

"Are you buying your limit of War bonds?"

"Are you loyally, cheerfully cooperating with your Government in preventing inflation and profiteering and in making rationing work with fairness to all?"

"Because—if your answer is 'no'—then the war is going to last a lot longer than you think."

The plans we made for the knocking out of Mussolini and his gang have largely succeeded. But we still have to knock out Hitler and his gang and Tojo and his gang. No one of us pretends that this will be an easy matter.

We still have to defeat Hitler and Tojo on their own home grounds. But this will require a far greater concentration of our national energy and our ingenuity and our skill. It is not too much to say that we must pour into this war the entire strength and intelligence and will power of the United States. We are a great Nation—a rich Nation—but we are not so great or so rich that we can afford to waste our substance or the lives of our men by relaxing along the way.

We shall not settle for less than total victory. That is the determination of every American on the fighting fronts. That must be, and will be, the determination of every American here at home.

Liberty at Home—Resolutions of the Republican Post War Advisory Council in Domestic Policy

---

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions entitled "Liberty at Home," adopted at Mackinac Island, Mich., by the Republican Post-War Advisory Council in Domestic Policy, September 7, 1943.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Immediately at the end of the war we shall face the vital problem of reconstruction at home. A military victory abroad without preservation in America of the fundamental principles on which our way of life depends will be no victory. It will be a defeat. The way we meet the problem of reconstruction will determine whether the American way of life shall survive.

We will prepare an affirmative program designed to preserve to our people all the freedoms for which we fight throughout the world, based on individual liberty, the independence of State and local government, and the independence of Congress and the courts.

That program must as promptly as possible return men to work in peace industry with special attention to those who have made sacrifices by serving in the armed forces, take Government out of competition with private industry, and terminate rationing, price fixing, and all other emergency powers. It must maintain full employment through private enterprise, and full production to furnish the goods and services so needed by our people. In so doing we must seek to make sure that the unemployment and insecurity of the years preceding the war do not return, and that hardship and poverty shall be prevented by a supplementary but comprehensive program of social security on sound principles. We must eliminate all unnecessary regulation of the individual and of business, restore and protect small business which has been so recklessly destroyed, and assure incentive and equal opportunity for the youth of America.

The present program of the New Deal Administration, with the enlargement thereof set forth in the reports of the National Resources Planning Board, would wreck the country because the only remedy it proposes for any problem is unlimited Government spending of borrowed money. It would socialize all business, agriculture, and the professions. It would extend the power of Government until ultimately no man or woman could act, write, speak, or work without approval. It would substitute for American liberty the regimented existence of a subject people.

Our reconstruction, to insure real happiness, cannot be based alone on the improvement of standards of living, but it must be based upon the character of the American people, their religious faith, industry, morality, educated intelligence, and ingrained love of justice. Only thus will we remain a nation of free men who are masters of our own souls.

The Republican Party is devoted to the Federal system of government by which basic rights and duties are reserved to the States, free of dictation and subject to the control of their people. These rights and duties the New Deal has arrogated to itself.

It has now multiplied the number of Federal civilian employees five times. Three million of them now regulate the lives of our people. The number of bureaus has so multiplied that every detail of American life is now regulated by bureaucratic decree.

These are the instruments of fascism. They are the inevitable result of the policies of the New Deal. They must be brought to an end.

The Republican Party insists upon equality of opportunity for all Americans, regardless of race, color, or creed, in the economic, educational, political, and military life of the Nation.

The production of food is vital to our armed forces, to the life of our own people, and to the life of the people of our allies.

The administration's policies on manpower and farm machinery and inexpert price regulation have hampered full production. Its bungling regulations, issued through multifarious and overlapping agencies, have interfered with farmers, processors, wholesalers, and retailers until the normal channels of trade have been completely disrupted. Many small operators have been forced out of business.

An immediate program of increased production and improved distribution must be adopted to be administered by a single agency clothed with full power over food in all of its aspects during the war emergency. Otherwise we shall not only be without the means of relieving the starving people of Europe and Asia but there will be the most serious shortage and hardships in the United States itself.

For the post-war period, our agricultural program must seek to assure prices in the market place comparable to the prices of other commodities. The production of successful crops shall be continued and encouraged and not eliminated by governmental action. The great field of new, improved, and suitable crops must be explored, and the greater industrial use of agricultural products should be vigorously encouraged. Our soil resources need to be conserved and sound reclamation projects should be developed.

The individual initiative of the American farmer must be unshackled and in all governmental action there should be a minimum control from Washington and a maximum freedom of operation by the American farmer.

This council affirms its belief in the strength, the character, and the rights of the American workingman; his pride in himself; his aim to get for himself a bank account, an insurance policy, a home of his own with a self-reliant American family in it; his right to organize and bargain collectively through agents of his own free choice.

We denounce the political effort to reduce labor in the United States to the European level of a class-conscious vote-shackled proletariat. We reject the doctrine that the American workman's mind must be made up in Washington and his personal life turned over to the management of Washington's political coddlers. The basic position of American labor in the American economic system must be guaranteed by fair and equitable laws. The destiny of American labor is not Fascist. It must remain American.

It is our solemn duty, as a people to take those sound measures, as Abraham Lincoln once pointed out—to bind up the Nation's wounds, to care for him who has borne the battle, his widow, and his orphan.

The supreme obligation of our country is to immediately pay our debt of honor to those who are fighting our crusade for peace and freedom. Our post-war program must and does include fullest provisions for the rehabilitation and employment of the men and women of the armed forces.

Temporary help must, of course, be given, but that is not enough. The returning veterans must and shall have the right to launch projects, till the soil, work in the arts, in business, or professions, free to forge ahead. They are entitled to jobs, good honest jobs, jobs with which they can start and go forward, send their children through school, own their homes; jobs which will feed and clothe them in comfort.

Veterans must not come home to be treated as wards of a State or Nation, but must find their Nation a land of greater opportunity under a free American system.

The deepest yearning of our people is for victory and union of our families in peace. This is at the very heart of our whole life. If we build a better America with the highest standards of living and with deep spiritual values, we shall have met their challenge and shall have approached their devotion.

Resolutions Adopted by General Federation of Women's Clubs

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I include a copy of the resolutions adopted at board of directors' meeting of the General Federation of Women's Clubs, June 28–July 2, 1943, at Swampscott, Mass. The resolutions are as follows:

INTERNATIONAL COOPERATION FOR PEACE AND POST-WAR PLANNING

Whereas two world wars in a single generation have brought upon humanity immeasurable death and destruction and have demonstrated the urgent necessity of international collaboration for the maintenance of peace and justice among the nations; and

Whereas the United States, after attempting to remain apart from each of these wars, has, in defense of its own security and freedom, been drawn into them at heavy cost in human lives and material wealth: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs, assembled at Swampscott, Mass., June 29, 1943, hereby expresses its conviction that international machinery must be created for the establishment of a just peace and the prevention of future aggression, and that the United States in its own self-interest must participate therein.

Presented by war service department and standing committee chairmen of the General Federation of Women's Clubs.

TEACHING PROFESSION AND LIBERAL ARTS COLLEGES

Whereas the teachers in many public schools are leaving the school systems to join the armed services, the Federal Government, and private industry; and

Whereas curtailment of the teaching staff is causing overcrowding of classrooms, elimination of subjects from the curriculum, and the employment of teachers without adequate professional training; and

Whereas the education of future teachers is being disrupted by the discontinuance of many liberal arts colleges: Therefore, be it

Resolved, That the board of directors of the General Federation of Women's Clubs, assembled in Swampscott, Mass., June 30, 1943, reaffirm its stand relative to the maintenance of public education as an essential function of democratic government; and that the educational authorities throughout the country be urged to maintain salaries sufficient to obtain and retain competent teachers, uphold high professional and personal standards for teachers, recognize the teaching profession as essential to the winning of the war and the liberal arts colleges as essential to the winning of the peace as well as the war; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, the Commissioner of the United States Office of Education, and all members of the Senate and House of Representatives.

Presented by Mrs. Hiram C. Houghton, Jr., chairman, education department.

NATIONAL YOUTH ADMINISTRATION

Whereas the need for the National Youth Administration is no longer acute, and it necessitates an unnecessary expenditure of funds now needed for war efforts; and,

Whereas certain other Government agencies are now providing financial aid for deserving students in high schools and colleges: Therefore, be it

Resolved, That the board of directors of the General Federation of Women's Clubs, in meeting assembled in Swampscott, Mass., June 30, 1943, approves the liquidation of the N. Y. A. as soon as possible.

Presented by Mrs. Horace B. Ritchie, chairman, public welfare department; Mrs. Hiram C. Houghton, Jr., chairman, education department; Mrs. Harvey W. Wiley, chairman, legislation department.

BLACK MARKETS

Whereas the health and welfare of the people of the United States are threatened by the break-down in the national attempt to secure for all our people their just share of the available consumer goods; and

Whereas black markets are now an alarming evidence of this break-down; and

Whereas these black markets constitute also a menace to the legitimate business of this Nation: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs in meeting assembled, in Swampscott, Mass., July 1, 1943, condemns the disloyal practice on the part of housewives in seeking advantage by patronizing such black markets; and be it further

Resolved, That all persons and agencies possessing powers of enforcement be urged to use all diligence possible in investigation and prosecution of infractions of these laws by consumers and dealers.

Presented by Mrs. Horace B. Ritchie, chairman, public welfare department; Mrs. Hiram C. Houghton, Jr., chairman, education department; Mrs. Gustav Ketterer, chairman, war service department; Mrs. R. I. C. Prout, chairman, nutrition committee, war service department; Mrs. Patrick Henry Adams, chairman, consumer problems committee, war service department; Mrs. F. Earle Magee, chairman, conservation of war products committee, war service department.

PURE FOOD, DRUGS, AND COSMETICS ACT

Whereas the Pure Food, Drugs, and Cosmetics Act, passed in 1906 and amended in 1938, has proved of inestimable value to the American people in safeguarding their health by protecting them against adulteration and misbranding; and

Whereas from time to time efforts are made to evade or violate these principles: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs, which helped enact this legislation, goes on record in meeting assembled in Swampscott, Mass., July 1, 1943, as endorsing its principles and upholding its enforcement from attack in every way possible.

Presented by Mrs. Harvey W. Wiley, chairman, legislation department.

JUVENILE DELINQUENCY

Whereas the problem of the rapidly mounting rate of juvenile delinquency is confronting every community in the United States; and

Whereas this condition is a responsibility of the forces of the home, the school, the church, and the community: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs, in meeting assembled in Swampscott, Mass., July 1, 1943, urges the formation of committees within the individual clubs, districts, and States of the Federation, which shall work toward the coordination of effort of all organizations and agencies of the community interested in the welfare of children and youth, to combat juvenile delinquency

through the establishment of such community services as a survey shall prove to be necessary in the local communities.

Presented by Mrs. Horace B. Ritchie, chairman, public welfare department; Mrs. Hiram C. Houghton, Jr., chairman, education department; Mrs. Edwin I. Poston, chairman, American home department; Mrs. Gustav Ketterer, chairman, war service department.

STRIKES AND RIOTS

Whereas this Nation and its allies in the present world struggle have been shocked and dismayed by the strikes and riots which have occurred in this country; and

Whereas serious delays in production of war materials have resulted which threaten the success of the war effort; and

Whereas organized labor has outlawed strikes during the war emergency: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs, in meeting assembled in Swampscott, Mass., July 1, 1943, condemns selfishness of purpose and failure to cooperate in the war effort, in accord with this agreement of organized labor, as unpatriotic and regards inflammatory agitations as sabotage; be it further

Resolved, That it urges its member clubs to foster a public opinion which will not tolerate such attitudes and practices on the part of any person or groups of persons, but will demand that prompt, consistent, and impartial execution of the punishments now prescribed by law be meted out to those proved guilty; and be it further

Resolved, That copies of this resolution be given to the President of the United States, the Secretary of Labor, the Members of Congress, the Federal Bureau of Investigation, the National War Labor Board, the American Federation of Labor, Congress of Industrial Organizations, and United Mine Workers of America.

Presented by Mrs. Horace B. Ritchie, chairman, public welfare department; Mrs. Gustav Ketterer, chairman, war service department; Mrs. Hiram C. Houghton, Jr., chairman, education department.

FEDERAL COMMUNICATIONS COMMISSION

Whereas the decision of the United States Supreme Court of May 10, confers upon the Federal Communications Commission broad and expansive powers, including the right to control business policy and program content of radio stations; and

Whereas the very existence of such power and the constant threat of its exercise constitutes a form of censorship which may interfere with the freedom of speech over the radio and marks a distinct step toward Government control of this great medium of communication: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs, in meeting assembled in Swampscott, Mass., July 1, 1943, ask that Congress thoroughly review the legislation governing the regulation of radio, and specifically limit the power of the Commission to regulate the physical aspects of communication by radio; and that specific provisions be written into the law, to the end that no Government agency shall be clothed with any power whatsoever, over the program content of this greatest of all systems of mass communication.

Presented by Mrs. J. Warren Burgess, chairman, Fine Arts Department.

RADIO TRANSCRIPTIONS

Whereas James Caesar Petrillo, president of the American Federation of Musicians, since last August 1, has banned the recording of music for both home and radio; and

Whereas, in accordance with our national wartime labor policy, the manufacturers of radio transcriptions referred their dispute with Mr. Petrillo to the United States Conciliation Service: Be it therefore

Resolved, That the board of directors of the General Federation of Women's Clubs, in meeting assembled in Swampscott, Mass., July 1, 1943, hereby urges the Director of the United States Conciliation Service, to certify this dispute to the National War Labor Board for appropriate disposition if conciliation fails to bring settlement within a reasonable time; and be it further

Resolved, That the board of directors of the General Federation of Women's Clubs urges the National War Labor Board to give prompt consideration to this prolonged strike, if and when it is certified to the Board.

Presented by Mrs. J. Warren Burgess, chairman, Fine Arts Department.

CONSERVATION OF NATURAL RESOURCES

Whereas natural resources are indispensable during times of war and peace; and

Whereas emphasis upon judicious use and fullest development of renewable and nonrenewable natural resources will assume greater importance in new and widened horizons in the maintenance of a just and durable peace; and

Whereas there is danger of many nonrenewable natural resources being depleted: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs, in meeting assembled in Swampscott, Mass., July 1, 1943, reaffirms its convictions that a comprehensive program for the conservation of our natural resources is necessary through the study of the evaluation of the status of our natural resources of soil, water, forests, wildlife, minerals, metals, gases, fuels, helium, and other renewable and nonrenewable basic raw materials; through work for remedial action that will keep our renewable resources in continuous production, and promotion of measures to safeguard the prolonging of the life of nonrenewable natural resources; and through continued efforts to promote conservation education of adults and school children.

Presented by Mrs. T. M. Francis, chairman, Conservation of Natural Resources Committee.

WOMEN'S AUXILIARY FERRYING SQUADRON

Whereas the Women's Army Corps, the Reserves in the United States Navy, Coast Guard, and Marine Corps are official in the United States service; and

Whereas women are serving in the Women's Auxiliary Ferrying Squadron, which at the present time has no official status; and

Whereas their contribution to the war effort is of inestimable value: Therefore be it

Resolved, That the board of directors of the General Federation of Women's Clubs, in meeting assembled in Swampscott, Mass., July 2, 1943, requests the Congress of the United States to enact legislation which would establish the Women's Auxiliary Ferrying Squadron on the same status as the other organized women's armed forces.

Presented by Mrs. Gustav Ketterer, chairman, War Service Department.

Summary of Problems, Republican Post-War Advisory Council for Future Study

---

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the RECORD a summary of problems approved September 7, 1943, at Mackinac Island, Mich., by the Republican Post-War Advisory Council for future study.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

ADVISORY COUNCIL FOR FUTURE STUDY

The council has made a preliminary survey of the problems which at this time most vitally affect the present and future welfare of the country. Some of these problems grow out of the great issues created by our participation in a World War. Some of them will arise from the readjustment to a peacetime economy. Some are the normal problems which it is the duty of the Federal Government to meet. Some arise from mistaken policies of government in the past 10 years.

The council realizes that for some of these problems with which the next Federal administration must grapple there is no easy solution, no short-cut panacea. The council undertakes its work realizing that it may not be able to find a perfect solution of all the problems the country must face in the coming years, but it will make every effort to find the most just and workable solution of these problems.

The council pledges itself to study these problems and to arrive at a judgment on them, with one single objective. That objective is the welfare of the country as a whole. This council rejects the philosophy that there is a necessary and inevitable class conflict in America. It believes that the soldier, the farmer, the mechanic, the businessman, the saver, and the investor are all partners in a joint enterprise. The council pledges itself to favor no element in our Republic at the expense of other elements.

Among the problems which the council will consider are the following:

1. PROBLEMS OF FOREIGN POLICY

With the coming of peace we must make decisions which will affect the future of the American Nation. There must be plans for just and proper action at the conference of nations at the peace table. There must be plans for American collaboration in the restoration of order and normal economic life in ruined countries. We must make plans for this Nation's participation with other nations in a program to achieve permanent peace.

2. PROBLEMS OF POST-WAR INDUSTRY AND EMPLOYMENT

It is necessary to devise ways and means by which the Federal Government will encourage the quick conversion of war industry to a peacetime basis. A plan for the orderly demobilization of our armed forces must be worked out, to the end that it shall not create unemployment, hardship, and low wages. In connection with these two programs it is essential to consider the means of restoring the spirit of enterprise and investment, long since discouraged by Government hostility, at the same time maintaining a proper and reasonable regulation of competition and employee relations. The problem of controlling monopoly without terrorizing legitimate business should be settled. The extermination of small business, now proceeding under present Government policies, should be halted.

3. PROBLEMS OF SOCIAL WELFARE

The present Federal system of security against unemployment and the hazards of old age is in need of examination and revision. The proper safeguarding of the vast funds now collected from workers and employers is a matter to be considered. Programs to extend security to larger groups and to other needs must be examined. The efficiency and justice of various methods of relief of the unemployed must be analyzed. The dangers

of federalization of relief and security should be avoided.

4. PROBLEMS OF FEDERAL ADMINISTRATION

The Nation must bring to a halt the ceaseless expansion of Federal bureaus which feed upon the taxpayer, govern by Executive decree outside the law, hamper private business, and invade private life. We must examine the mass of Federal corporations now using the people's money to promote miscellaneous projects of Government planners. We must consider the growing invasion of States' rights by Federal action and define the constitutional limitations upon such invasion. The excessive and dangerous rate of expenditures by the Federal executive branch must be reduced.

5. PROBLEMS OF FINANCE AND CURRENCY

It is essential that the Nation find a solution of the problem of endless Government spending, deficit financing, and unbalanced budgets, long since adopted as a peacetime program by the present administration. A provision must be made for the vast weight of Federal debt now resting on the people. The Federal system of taxation, now a chaos of emergency devices to raise revenue, must be simplified and improved. Our monetary system, demoralized by rash experiments, must be restored to order and simplicity.

6. PROBLEMS OF LABOR

A way must be found to establish clearly the rights and just aims of labor under the law, to the end that the grievous conflicts of recent years may be avoided and that harmony and cooperation will result, not only between labor and management but also within the ranks of workers themselves.

7. PROBLEMS OF AGRICULTURE

The health and solvency of our national agriculture must be assured. The present system of interference with agriculture by Federal authority is undermining the independence and the initiative of our individual farmers. The heavy load of bureaucratic control must be removed from the business of farming. This problem must be solved.

8. INTERNATIONAL ECONOMIC PROBLEMS

The end of the war will find many countries with exhausted resources, paralyzed industry, disordered shipping, inflated currencies, and vanished foreign trade. In its own interests and in the interests of world peace the United States must cooperate in all proper programs for the revival of international trade and finance and the establishment of stable exchanges. We must develop a wise tariff and reciprocity policy for the Nation. We must make provision for the use of the ship facilities created by the war. We must establish a policy on international aviation.

In pursuance of its program of consideration of these problems, the council has set up eight policy committees, with a brief list of the subjects allocated to each. These and other subjects will be explored and studied during the months to come. They are as follows:

POST-WAR ADVISORY COUNCIL COMMITTEES

1. FOREIGN POLICY AND INTERNATIONAL RELATIONS

Program and procedure in the making of peace.

Problems of aid and cooperation for distressed countries.

Collaboration with other nations in establishing permanent peace.

2. POST-WAR ENTERPRISE, INDUSTRY, AND EMPLOYMENT

Provision for demobilization of armed forces.

Conversion of war industries to peace industries.

Encouragement of investment and of employment by industry.

Preservation of small business.

Problems of unfair competition and monopoly.

Domestic commerce and transportation.

Public works, highways, and reclamation.

3. SOCIAL WELFARE AND SECURITY

Old-age security and unemployment aids.

Extension of social security to additional groups and additional needs.

The problem of the forms of relief.

Federal or State and local administration of social security and relief.

Public and private housing.

4. FINANCE, TAXATION, AND MONEY

The problems of an unbalanced budget.

The payment of Government debt.

A sound system of Federal taxation.

A sound currency system.

5. REFORM OF GOVERNMENT ADMINISTRATION

The problem of Federal bureaucracy.

Economy in administration.

Limitation of Executive power.

Limitation of powers of administrative boards.

Federal corporations.

Federal powers, States' powers, and local self-government.

6. LABOR

Sound and equitable labor legislation.

Solution of problems of labor and industry.

7. AGRICULTURE

A long-range program for the American farmer.

Agricultural problems of production, price, and distribution.

Decentralization of Federal control.

New crops and new uses for farm crops.

8. INTERNATIONAL ECONOMIC PROBLEMS

International trade.

Post-war tariff and reciprocity policy.

Stabilization of international exchanges.

Post-war shipping problems.

International air transport.

Third War Loan Drive

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the RECORD an address by the President of the United States on September 8, 1943, in connection with the opening of the Third War Loan Drive.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Once upon a time, a few years ago, there was a city in our Middle West which was threatened by a destructive flood in the river. The waters had risen to the top of the banks. Every man, woman, and child in that city was called upon to fill sand bags in order to defend their homes against the rising waters. For many days and nights, destruction and death stared them in the face.

As a result of the grim, determined community effort, that city still stands. Those people kept the levees above the peak of the flood. All of them joined together in the desperate job which had to be done—businessmen, workers, farmers, doctors, preachers—people of all races.

To me, that town is a living symbol of what community cooperation can accomplish.

Today, in the same kind of community effort, the United Nations and their people have kept the levees of civilization high enough to prevent the floods of aggression and barbarism and wholesale murder from engulfing us all. The flood has been raging for 4 years. At last, we are beginning to gain on it; but the waters have not yet receded enough for us to relax our sweating work with the sand bags. In this War bond campaign we are filling bags and placing them against the flood—bags which are essential if we are to stand off the ugly torrent which is trying to sweep us all away.

Today, an armistice with Italy was concluded.

This was a great victory for the United Nations—but it was also a great victory for the Italian people. After years of war and suffering and degradation, the Italian people are at last coming to the day of liberation from their real enemies, the Nazis.

But let us not delude ourselves that this armistice means the end of the war in the Mediterranean. We must drive the Germans out of Italy as we have driven them out of Tunisia and Sicily; we must drive them out of France and all other captive countries; and we must strike them on their own soil from all directions.

Our ultimate objectives in this war continue to be Berlin and Tokyo.

I ask you to bear these objectives constantly in mind—and do not forget that we still have a long way to go before attaining them.

The great news you have heard today from General Eisenhower does not give you license to settle back in your rocking chairs and say, "Well, that does it. We've got 'em on the run. Now we can start the celebration."

The time for celebration is not yet. And I have a suspicion that when this war does end, we shall not be in a very celebrating frame of mind. I think that our main emotion will be one of grim determination that this shall not happen again.

During the past weeks, Mr. Churchill and I have been in constant conference with the leaders of our combined fighting forces. We have been in constant communication with our fighting allies, Russian and Chinese, who are prosecuting the war with relentless determination and with conspicuous success on far distant fronts. And he and I are together here at this crucial moment.

We have seen the satisfactory fulfillment of plans that were made in Casablanca last January and here in Washington last May. And we have made new, extensive plans for the future. But throughout these conferences we have never lost sight of the fact that this war will become bigger and tougher, rather than easier during the long months that are to come.

This war does not and must not stop for one single instant. Our fighting men know that. Those of them who are moving forward through jungles against lurking Japs—those who are in landing barges moving through the dawn up to strange enemy coasts—those who are diving their bombers down on the target at roof-top level—every one of these men knows that this war is a full-time job and that it will continue to be until total victory is won.

And, by the same token, every responsible leader in all the United Nations knows that the fighting goes on 24 hours a day, 7 days a week, and that any day lost may have to be paid for in terms of months added to the duration of the war.

Every campaign, every single operation that we plan and carry through must be figured in terms of staggering material costs. We cannot afford to be niggardly with any of our resources, for we shall need all of them to do the job that we have undertaken.

Your fellow Americans have given a magnificent account of themselves—on the battlefields and on the oceans and in the skies all over the world.

Now it is up to you to prove to them that you are contributing your share and more than your share. It is not sufficient simply to put money into War bonds which we would normally save. We must put money into War bonds which we would not normally save. Only then have we done everything that good conscience demands. It is up to you—the Americans in the American homes—the very homes which our sons and daughters are working and fighting and dying to preserve.

I know I speak for every man and woman in America when I say that we Americans will not be satisfied to send our troops into the fire of the enemy with equipment inferior in any way. Nor will we be satisfied to send our troops with equipment only equal to that of the enemy. We are determined to provide our troops with overpowering superiority of quality and quantity in any and every category of arms and armaments that they may conceivably need.

And where does our dominating power come from? It can come only from you. The money you lend and the money you give in taxes buys that death-dealing, life-saving power we need for victory. This is an expensive war—expensive in money; you can help keep it at a minimum cost in lives.

The American people will never stop to reckon the cost of redeeming civilization. They know there can never be any economic justification for failing to save freedom.

We can be sure that our enemies will watch this drive with the keenest interest. They know that success in this undertaking will shorten the war. They know that the more money the American people lend to their Government, the more powerful and relentless will be the American forces in the field. They know that only a united and determined America could possibly produce on a voluntary basis so large a sum of money as $15,000,000,000.

The overwhelming success of the Second War Loan Drive last April showed that the people of this democracy stood firm behind their troops.

The Third War Loan, which we are starting tonight, will also succeed—because the American people will not permit it to fail.

I cannot tell you how much to invest in War bonds during this Third War Loan Drive. No one can tell you. It is for you to decide under the guidance of your own conscience.

I will say this, however. Because the Nation's needs are greater than ever before, our sacrifices, too, must be greater than they have ever been before.

Nobody knows when total victory will come, but we do know that the harder we fight now, the more might and power we direct at the enemy now, the shorter the war will be and the smaller the sum total of sacrifice.

Success of the Third War Loan will be the symbol that America does not propose to rest on its arms—that we know the tough, bitter job ahead, and will not stop until we have finished it.

Now it is your turn.

Every dollar that you invest in the Third War Loan is your personal message of defiance to our common enemies—to the ruthless militarists of Germany and Japan—your personal message of faith and good cheer to our allies and all the men at the front.

What We Fight For

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able address entitled "What We Fight For," delivered last Saturday in Chicago by our distinguished Vice President.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT WE FIGHT FOR

Those of you who must read the McCormick press know the inevitable conflict is here. Now—not tomorrow. We shall soon know whether the common man shall have democracy first or whether under the smooth phrase America first, the common man shall be robbed. Beautiful advertisements and slick editorials say "Let our soldiers come home to America as it used to be." What they are really saying is, "Let us go back to normalcy, depressions, cartels, and a war every 25 years."

In World War No. 1 we fought to make the world safe for democracy. We failed. Hitler rose, and the Second World War came on because we were not sufficiently concerned with the plight of the common man the world over. We did not realize that economic democracy must be combined with political democracy or political democracy would die. Hitler exploited our failure to establish an economic democracy by starting World War No. 2. If we are to prevent a second Hitler and World War No. 3, we must be more daring than we were 25 years ago. We must fight not merely to make the world safe for democracy but to give democracy first place in the world. Some people say America first. Under that slogan we can have only war because under it envious, hungry peoples, the have-not nations with per capita resources less than one-fifth our own, will inevitably rise up to tear us down. The battle cry America first means that sooner or later we shall find ourselves alone, encircled by and fighting against a hostile combination. But the slogan democracy first, intelligently followed up and vigorously applied can lead to peace. As a matter of fact, it is only by applying the principles of democracy first that we can have any chance of lasting peace.

The slogan "democracy first" means the supremacy of freedom in both the economic and the political world. Freedom means respect for the dignity of the individual. No man should be free to take another man's freedom away from him. God gave every one of us certain rights. He gave all of us a world rich in soil and minerals. And to many of us He gave such scientific understanding that we know it is now possible to build health, comfort, and happiness for everyone. If we plan aright, there can be freedom from hunger and freedom from the fear of a poverty-stricken old age. The farmer can be free of his fear of impossibly low prices for what he sells and outrageously high prices for what he buys. The businessman can be free from the fear of those monopolies and international cartels which use unfair practices in buying from him, selling to him, or competing with him.

In the world of modern technology, the possibilities of abundant production are so great that it is only a question of time until we can bring the blessing of freedom from want to everyone. Two hundred years ago freedom of discussion and freedom of religion meant more to people than freedom from want. Those were the days when men on the farm and in the workshop were only about one-tenth as efficient as they are today. There was little talk about freedom from want in those days, because nearly everyone thought scarcity was the will of God. Therefore, attention was centered on political freedom, on freedom of expression and freedom of religion, on the right to be secure in one's own home. With the old-line Tories having things their own way in England and France, it was necessary to have a people's revolution to launch the idea of political freedom. We in the United States told the world what we were fighting for in the Declaration of Independence. Our first action after adopting the Constitution was to improve that Constitution by adding to it the Bill of Rights so as to make it certain that political democracy would always be the fundamental law of the United States. We shall never give up the freedom embodied in the Declaration of Independence and the Bill of Rights. But that freedom is not enough. Each age demands a new freedom. The time has come for a new declaration of freedom which adds to and makes secure, in an age of airplanes, radio and abundance, the freedoms for which our fathers fought. Our new declaration must go on to cover freedoms we haven't got now but which we must have.

Three of the President's famous "four freedoms" deal with freedoms which we in the United States have long enjoyed. The fourth freedom which must be the essence of the new declaration of freedom is freedom from want, which I would spell out as follows:

1. Freedom from worry about a job.
2. Freedom from worry about a dependent and poverty-pinched old age.
3. Freedom from unnecessary worry about sickness and hunger.
4. Freedom from strife between workers and businessmen, between farmers and businessmen, and between workers and farmers.
5. Freedom from strife between the races
6. Freedom from fear of bankruptcy caused by overproduction of necessary materials.
7. Freedom for venture capital and for inventors of new ideas to expand production of needed goods without fear of repressive cartels, excessive taxation, or excessive Government regulation.

Above everything we are fighting for peace. But peace will not last long if it doesn't bring to the common man everywhere these seven freedoms. Neither will it last long if it is made before the Allied armies reach Berlin and Tokyo. We sympathize with pacifists and those who are anxious to get their boys home, but we have only contempt for those American Fascists who by their conditional peace talk strengthen the resistance of the enemy. The Middle West is not isolationist. Chicago is not mean and selfish and narrow. Here, remote from the oceans but in the heart of the war effort, we earnestly seek the road to lasting peace, not by isolationism but by cooperation with other nations.

The first step toward getting the seven new freedoms is to pass through the Senate of the United States some such resolution as No. 114, which provides for the United States taking the initiative in calling meetings of the United Nations. This resolution looks toward a court or board to listen to international disputes, a military force to prevent military aggression, and the gradual addition of such other machinery as may be necessary. I am for the resolution as far as it goes, but it doesn't go far enough. There should be provision for joint action on the problem of unemployment and overproduction due to international causes. There must

be power to deal with those international cartels which are strangling production, competing unfairly, or using methods which lead to war.

During the past 2 months Senators and Congressmen speaking on behalf of Resolution 114 have received a marvelous reception wherever they have gone. Next Tuesday Congress again takes up its duties. Ninety-six Senators and our President will determine what we are going to do about peace. Their action will largely depend on what they think you and millions like you are willing to do to get peace.

There is no time to be lost. Now is the time to strike while the war irons are hot. The war is costing us 10 times what it should because the democracies were not prepared. The peace also will cost us 10 times what it should if we do not begin preparing now. We can arrive at understandings now which we can't get next year. The memory of the airplanes, tanks, food, and men from the United States is so recent and means so much to England, Russia, and China that they can't help being grateful. In like manner we are impressed today by the skill of the British airmen, the tremendous drive of the Russian armies, and the patience of the Chinese after 6 years of fighting a treacherous foe. Today we all face reality and are grateful for the help of friends. But tomorrow millions of us may forget and curse Europe and Asia as the cause of our woes. All nations tomorrow will too easily slump back into the selfishness which makes peace merely an interlude to war.

On a world-wide scale today we face the same problem as the Thirteen North American Colonies faced in the closing years of the Revolutionary War. Out of the anarchy of conflicting opinion, the aspirations of the common man built the Constitution and the Bill of Rights so that freemen might have a chance to go ahead on their own merit without fear or favor. Then when the dead hand of monopoly, backed by monarchy, was removed, free enterprise expanded into the Middle West. The tremendous growth of American industry was a tribute to the principle of free opportunity which for the first time in the world's history was applied in a big way here in the United States.

Isolationism is the screen behind which special privilege seeks to entrench its control. When I say this, I am not talking about people who honestly believe the United States could isolate itself from the problems of the rest of the world. Certain of these people whom I have known personally have devoted their lives to the elimination of special privilege. Senator Norris, who fought more vigorously against special privilege than any man of his generation, was at one time an isolationist. But men of Senator Norris' insight and motivation sooner or later realize that not only are isolationism and special privilege theoretically the same thing but that the men who back isolationism in the economic world have a very keen interest in special privilege. Isolationism and special privilege spoke with equal force to produce the peace of Munich. Wherever isolationism is being pushed most vigorously, there in the background can usually be found, furnishing money and power, monopolistic cartels. These cartels are customarily seeking tariffs, quotas, subsidies, or other governmental favors which are the breeding ground of isolationism.

Chicago has been the home of many a stirring fight against monopolistic privilege. Here Theodore Roosevelt was nominated on the Bull Moose ticket in 1912. Here the La Follette name, whether it be father or son, has a special significance. Here Franklin Roosevelt was nominated in 1932 and again in 1940. Here in this hall tonight are men and women in whose veins flows the blood of 20 European nations. The fight against special privilege is not confined to one party, race, or region. Senator BALL, who is with me on this program here tonight, and who as far as I am able to discover has the same ideas on international monopoly as I, is a Republican. The difference between us is that he thinks the forces of monopoly are more likely to dominate the Democratic Party and I am sure that the same evil forces are in much greater danger of dominating the Republican Party. Wherever these forces are found, our job is to fight them. Those groups which rule over economic empires have usurped the sovereignty of the people in international relations. We talk about a foreign policy based on reciprocal trade treaties and on open covenants openly arrived at with the advice of the Senate responsible to the people. This is good as far as it goes but the facts have not squared with the principle.

In reality, much of our economic relationship with the rest of the world has been governed by a small group seeking to parcel out the resources and markets of the world so as to control production, prices, distribution, and the very life blood of world industry. These cliques have their own international government by which they arrive at private quotas. Their emissaries are found in the foreign offices of many of the important nations of the world. They create their own system of tariffs and determine who will be given permission to produce, to buy, and to sell. When I attack these monopolists, these creators of secret supergovernment, I am not attacking business. I am speaking for business because the overwhelming majority of businessmen, as well as practically all consumers, are forced to pay tribute to these international freebooters. They talk about freer trade, but by dividing up the world markets, restricting production, stifling investment, playing one nation against another, they have unwittingly fostered world depression and maintained economic feudalism. By eliminating competition, they have replaced true capitalism with the dead hand of monopoly. Pope Pius XI, 13 years ago, spoke truly about these men when he said: "This concentration of power has led to a threefold struggle for domination. First, there is the struggle for dictatorship in the economic sphere itself; then, the fierce battle to acquire control of the state, so that its resources and authority may be abused in the economic struggles; finally, the clash between states themselves."

Take rubber for example. Long before Pearl Harbor many of us in government had done our best to build up a rubber stock pile, to encourage the growing of natural rubber in this hemisphere and to get synthetic rubber production started. As Secretary of Agriculture I personally took the initiative in some of this work, including the trading of 600,000 bales of cotton for 90,000 tons of rubber In the summer of 1940 I urged on Ed Stettinius the desirability of his looking into and pushing the production of butyl rubber. Later as a member of W. P. B. I continued to push for prompt butyl rubber expansion. I took this interest in butyl because of the information I had obtained when Secretary of Agriculture from the coinventor of butyl rubber who, in 1940, was working for the United States Department of Agriculture.

What I didn't know and what 130,000,000 Americans did not know was that the private rulers of world industry had their own private approach to synthetic rubber. Synthetic rubber was the subject of a private treaty between a great American oil company and I. G. Farben, the German chemical colossus. These two great concerns made a deal. The Germans were given a world monopoly on synthetic rubber. The Americans were given a monopoly on synthetic gasoline. This monopoly was good over the entire world, with the exception of Germany. The Germans knew what they were after. They would not yield their own development in their own country to foreign interests.

This secret agreement between an American monopoly and a German cartel was submitted to no public authority in this country. It was far more important than most treaties but it was never acted upon by the United States Senate. The peoples and the governments of the world had unwittingly let the cartels and the monopolies form a supergovernment by means of which they could monopolize and divide whole fields of science and carve up the markets of the world at their own sweet pleasure. The people must get back their power to deal with this supergovernment. This supergovernment has misused the people of the United States not only with regard to rubber but in a host of other critical industries as well. Today, I shall deal only with rubber, particularly with buna rubber.

Buna rubber is the German rubber which the American oil company got control of when it made its trade with I. G. Farben.

As a result of its deal, the American oil company had to choose between loyalty to the United States and its commercial obligation to its German partner. Because of its commitments to the German partner the oil company did three things:

1. It misled the Government as to the restrictive character of the patent situation.

2. It assured Government officials that every effort would be made to bring about a large production of synthetic rubber for tires and then offered licenses which were deliberately oppressive in order to prevent the production of tires from this rubber. It sued one company and threatened to sue a second for daring to produce buna rubber.

3. For 5 years the production of butyl rubber was held back, although the American company had invented butyl and knew that it possessed greater possibilities than buna. Full information and regular reports about butyl were given to the German cartel partner, but at the same time the American company tried to mislead the representative of the United States Navy who was sent specifically to learn about butyl.

In brief the civilian life and the war effort of the United States have been made more difficult because of private international rubber deals. Divided loyalty of this sort has been repeated many times. An American concern actually refused to advertise in anti-Nazi newspapers in South America because it felt obligated to comply with its commitments to a German partner. Another American cartel member felt obligated to send confidential information to Germany which the War Department of the United States had specifically requested it not to divulge. Still another agreed to assist the Germans in concealing true ownership of German property in the United States so that the Alien Property Custodian would not seize it, and so that it could be returned to the Germans after the end of the war.

Let us not be deceived into thinking that attacks on cartels are attacks on American business. On the contrary, cartels are the greatest menace to the American business principles of free private enterprise and equal opportunity. Ask the American businessman who has felt the weight of monopoly, patent control, and cartel oppression.

This whole matter takes on great practical importance as we consider the terms under which monopolists will obtain United States Government constructed war plants. These plants can be used to produce postwar abundance for the common man. The problem is whether the small businessmen are going to be elbowed to one side—whether free

enterprise is to be smothered by monopolistic controls worked out by big businessmen holding Government ring-side seats. Planning to give small business its full, practicable postwar share of war-plant facilities and equal access to raw materials must begin at once. Otherwise there can be neither free enterprise nor full employment in the peace to come.

And now let us focus on the immediate objectives of the common man:

1. Hitler, Mussolini, and what they stand for must be wiped out as soon as possible.

2. The time to dictate peace terms is when our armies are in Berlin and Tokyo.

3. The international monopolists should be conspicuous by their absence at the peace table.

4. The air space above this earth must be used to serve the needs of trade and travel for the common man. A proper degree of competition will insure the best service at the lowest cost. Government subsidies, if any, must be used to promote the common man's interest in trade and peace and not to preserve monopolies or to promote destructive international rivalries. If the airplane is to be an instrument of peace rather than an endless threat of war, there must be international cooperation.

5. International organization can build permanent peace only by serving continually the needs of the common man everywhere for jobs, opportunity, health, and security.

6. Isolationism, whether it be by stifled patents, cartel understandings, high tariffs, or any other method of restrictive greed, must continually be fought.

7. Arrangements made by international cartels should be publicly recorded. The Departments of State and Justice and the Patent Office must be continually alert to the possibility of secret agreements in addition to the written ones which should be on file.

8. Free enterprise demands freer travel between the nations and less passport, visa, and custom foolishness. We need more free moving, enterprising businessmen and fewer secret agents and monopolists.

9. Backward peoples everywhere must be educated by example for full production. Free enterprise thoughtfully planned will result in power projects on the Danube, irrigation works in India, flood control in China, and as a result of it all, the common man in every country will prosper, jobs will be created in Chicago and Detroit, and there will be a better market for the Iowa farmer right here at home. Such self-liquidating projects will not be gifts of the United States, but we can furnish engineering services and finance sales of machinery.

Senate Resolution 114 is a step toward a people's peace. A people's peace is the gateway on the path to the century of the common man. In the century of the common man rule No. 1 is the full use of all natural resources on a sustained basis. Rule No. 2 is full use of all technologies. Rule No. 3 is to use these resources and technologies so that everyone working in hope can come every night to a peaceful rest in the expectation of another day of hopeful work tomorrow.

The common man will not let the governments, corporations, and cartels of the world rest until these three rules are fulfilled. America cannot do this job by herself because in such case her standard of living, so far above the rest of the world, would bring on envy and finally war. America's only safety and guaranty of high living standards is in world-wide full use of natural resources and a world-wide rise in living standards as rapid as her own.

There is certain to be revolution until the seven freedoms are obtained and the three rules are fulfilled. The only question is the speed of the revolution and whether it will be peaceful or violent. The returning soldiers and war workers will not tolerate bread lines, closed factories, and bursting grain elevators after the style of 1930–32. Leadership will arise. If it be of the thoughtless or demagogic Nazi type, there are troubled days ahead. Monopolies which finance demagogs to cut the throat of progress and to despoil labor are playing with the fire which will burn down their own houses. And so I ask all the potential leaders of agriculture, business, and labor to take counsel with themselves and with the politicians. Time will not wait. The breath of the future is on us as it has never been before. We cannot escape. The day about which the prophets and seers of many nations have dreamed for 3,000 years is rapidly approaching. May wisdom and understanding guide our President and the 96 Senators as they try to make the dream of universal peace a reality.

Address of Hon. Scott W. Lucas, of Illinois, at Annual Convention of the American Legion, Department of Illinois

---

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by me at the annual convention of the American Legion, Department of Illinois, held at Chicago, Ill., on August 28, 1943.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. Commander, fellow Legionnaires, and friends, your presence in this convention hall does me a very great honor. Grateful am I to your distinguished leader for his kind and tolerant introductory remarks.

Without thought of such graciousness upon the part of Commander Phelan, I am obliged at the outset of these remarks to pay tribute to the service this loyal Legionnaire has rendered to God and country during one of the Nation's most trying periods. Commander Phelan has kept the faith. He has respected and adhered to the mandates of the State and National Conventions. He has rigidly observed the political restriction clause of our Legion constitution. I regret to find some high officials in the national organization who seem to have forgotten that we have such a political restriction clause. Commander Phelan has diligently and faithfully applied himself to the many problems that constantly arise wherein our comrades are involved. I am glad to call him—my friend.

May I also say a word in behalf of the old true and tried warrior, our State adjutant, William Mundt. He and his staff are, after all, the men and women who sawed the wood and kindled the fire—for years they have been giving their best to a humanitarian, patriotic, and worthy cause. The fine reputation that our department enjoys throughout the Nation is due, in great measure, to the untiring efforts of Bill Mundt, Bob Hafey, Lester Benston, and Lyle Snavey, and many others who handle the administrative work of our great organization.

Since we last counciled together, another year has been borne away on the wings of bombers, the decks of battleships, the treads of tanks—its moments ticked off to the thundering cadence of roaring guns, marching feet, and dying men in battle. Since our last convention we are all happy in the thought that we and our allies have definitely gone from the defensive to the offensive on every front throughout the warring world. In my address at Peoria 1 year ago I predicted that in 1 year's time we would have supremacy of the air on every front. Today, my comrades, that is an accomplished fact, and our potential power of production of these weapons of death and destruction is still unknown.

The ingenuity, the bravery of our American boys completely exploded the Hitler and Mussolini myth that we were a decadent democracy and too proud to fight. During the last year we have definitely routed the Nazi U-boat menace in the Atlantic, while our submarines in the Pacific continue to destroy the Japanese ships at a rate which is giving old Tojo and his barbarian leaders many sleepless and restless nights.

Our naval, air, and military success in the Pacific, from Attu to Australia, during the last year, is a lasting tribute to our fighting leaders and their fearless men, when we consider how thinly our men and equipment were spread throughout the world. What we have done in the Pacific with what we have, against a savage nation that prepared for this war the last 15 years, is little short of miraculous. Yet, what we have done is only a curtain raiser to the great events to come. Someday this treacherous band of outlaws will really feel the sting, the wrath, and power of a people who wanted to live in peace with their neighbors of the world, but not at the price offered by the Axis criminals. When that hour arrives, Japan as a military and naval power in the Pacific will be destroyed. They will receive the same kind of military and naval treatment that we administered to Italy and Germany in north Africa, the Mediterranean, and Sicily. It was a glad day for the Allied forces when Mussolini took the count. Today Hitler is desperate and groggy as the hour of invasion approaches.

When this holocaust of hell will be over no man can foretell. While victory is certain, I admonish you, my fellow Legionnaires, the people of Illinois, and the Nation, that this victory is not just around the corner. The road to Berlin and Tokyo will be long and bloody, but in the end we shall triumph. Our cause is righteous and just. It shall not be denied.

When that hour approaches fighting men will return from victory at arms, some rejoicing in their strength, some broken, some enriched in spirit, and some, perhaps, with madness lurking in their eyes.

Will these gallant Americans return with the same outlook on the future world as we had 25 years ago? Will they, in 25 years from now, experience the same disillusionment and disappointment about a permanent and lasting peace as we have experienced?

You will remember that we came home thrilled with the pride of high achievement. We believed that we had established forever the American ideal that a human being is a creature of dignity and worth. We fancied our sacrifices had planted this ideal where it would spread and safeguard democracy everywhere. We felt that we had bought, even at a great price, peace and happiness, a larger freedom, and a better way of life, for ourselves and unborn generations.

But the time came when we found, in some bewildering fashion, we had been deluded and betrayed. We soon found that democracy was wavering—its cherished institutions questioned at home and abroad. New orders and various kinds of movements

violently opposing democracy, were gaining foothold in every part of the world. Soon fear spread and hate skulked everywhere. The seeds of future evil were being broadcast. World leaders were apparently powerless to uproot them. The people of the democracy just couldn't believe that it could happen either here, or there. So today we are reaping a grim harvest.

My comrades, this cannot happen again. It will not happen if you and I, and every loyal American, including the returning warriors of World War No. 2, give unselfishly the best that is in us to prevent a repetition of war. We must either abolish war, or perish by it. We must chart a safe course to lasting peace through the post-war mine fields of self-interest, apathy, specious panaceas, confused thinking, and hollow promises. We must not only make adequate plans for peace, but provide the means for their fulfillment.

Absurdly, the word "planning" in some quarters, is received with open suspicion. Purposely perhaps, it has been lent an odious connotation. Yet we have never lived without plans. We never will. We are winning this war with plans. Obviously, our paramount plan is the winning of the war, but no opportunity should be overlooked in planning and discussing the peace that is to come.

For those who sneer at planners as impractical visionaries, I want to quote Ralph Bradford, general manager of the United States Chamber of Commerce, who recently wrote:

"The present is concretely and explicitly the result of the past. By the same token, events of tomorrow and the next day are today being determined. Society is a continuous flow--every act of today has its significance for the future," adding, "If we want a better post-war life, we can have it—first by recognizing the continuum of human affairs; and, second, by making plans now to provide conditions essential to a better future."

My friends, before we can draft our blueprint for peace we must agree definitely what we are fighting for. We all say we are fighting the war so that we may have peace. The answer is true, but it is an oversimplification. We have not made clear what peace implies to us.

What vision does the word "peace" conjure for our fighting men sunk in reptile-insect-disease-infested jungle slime or crouched shivering in the cleft of a rocky crag? In my opinion, peace means to these fighting men, not only preserving the America they know and love but the creation of a new and better America for the present and future generations.

It also means to them a peace that will not plunge us again into a pool of our own blood. In the planning and discussion of peace at the present moment, we can do no better than to accept as a working premise paragraphs 4 and 5 of the Atlantic Charter, which say:

"They (the signatories) will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access on equal terms, to the trade of raw materials of the world which are needed for economic prosperity;

"They desire to bring about the fullest collaboration between all nations in the economic field, with the object of securing for all improved labor standards, economic advancement, and social security."

Here is something new and refreshing for the present and post-war world to consider. It is a declaration of world-wide significance. It recognizes that after victory we cannot merely return to our post-war status. The great minds responsible for the Atlantic Charter were firmly cognizant of some of the basic reasons for the tragic failure of this world to live in peace.

Certainly, too closely related situations growing out of the First World War throw strong light on why we failed before. The Allied Powers, in the face of common danger, eagerly submerged individual economic interests in close economic collaboration calculated to speed defeat of the enemy. When this common objective was achieved, they refused to continue this collaboration designed to insure supplies and transportation facilities for all concerned at reasonable rates.

Was abandonment of this collaboration justified when its immediate objective was achieved? At the time, many of our lawmakers and those engaged in commerce believed it was, and their belief prevailed. There is far less support for such an opinion now.

Henry B. Brodie and Karl W. Kapp, private economists, in a work sponsored by the National Planning Association, offer the opinion that "by refusing to make the economic adjustments and concessions which a policy of internal cooperation would have implied, the great democracies which emerged victorious from the war of 1914–18 not only failed to build a stable world order, but undermined the very security of their national existence."

The second condition is familiar to all. In some of the forsaken Allied Powers, and some of the strait-jacketed enemy countries, food riots swept along the streets. People grasped desperately at straws. They were easily led into radical political and social experiments by opportunists who shamelessly played upon their people's desperation and indecision to further their own consuming lust for power. There demagogs offered to feed the hungry, heal their countries' wounds, mend their broken economies, and build bulwarks against their own fear. As their panaceas failed, these economic witch doctors edged their countries toward the war which would obscure their failure. They became converts to the Nazi-Japanese-Fascist philosophy of despotic tyranny.

I have searched a good many dissertations on this subject lately, and I have been unable to find a single authority who does not profess to find in the rise of these conditions, the reason why we bleed today.

Whether we have any interest from an altruistic standpoint in the dietary difficulties of our allies and enemies after the war, we may for a time, have to feed them, unless of course, we prefer sometime to fight them again. That seems pretty plain, although when such action has been suggested for security and humanitarian principles, the proponents have been called "impractical dreamers" and are accused of wanting to "give the United States away."

Of course, this is a political sophistry that is used once again to fool the American people, as was done after World War No. 1. A sophistry that brought us into the middle of the present global conflict with all of its cruel and heinous ramifications.

Bankers are rarely "impractical dreamers." They scarcely ever, as far as my experience extends, favor giving anything away, much less the United States of America. Yet Charles E. Spencer, Jr., president of the First National Bank of Boston, has said, "The stricken nations should be helped to get back on their feet", and the Federation of British Industries, with at least no widespread reputation for "crazy altruism," insist that immediately after the war "it will be necessary to send foodstuffs, equipment and stocks of raw materials into distressed areas."

Obviously, this generosity will last only until the stricken starving nations can obtain a new lease on life. If we can support lend-lease in time of war, we can continue to give aid and comfort to starving and anemic nations for a time after the war. And remember, America will not be alone in this humanitarian effort.

While we are giving this immediate relief to the needy nations, we must also have enough soldiers stationed in all of these countries to do all necessary police work. Countries conquered by ruthless and Godless dictators will return to the normal way of decent living in short order. Fascist Italy, Japan and Nazi Germany will be our permanent source of trouble. But they, too, will understand that the American people mean business at this time. No marching to the Rhine and withdrawing. Our Army, in conjunction with our allies, will march to Berlin, Rome, and Tokyo. Part of that army will be there when the peace is made. Into this peace should be written the solemn verdict that every munition factory and every shop that aids in the making of war shall be dismantled and destroyed. Every gun, tank, and military plane shall be removed. A simple embargo on certain strategic and critical materials that go into the making of tanks, bombers, and fighter planes can bring these warring nations to an understanding that we mean business about a permanent peace this time.

My comrades, common sense dictates this course; financial security impels it. The taxation necessary to carry out this program will not cost per year what one fortnight alone of the current war is costing the American taxpayer.

Let no one tell you that this kind of a hard and fast program will weaken or destroy American sovereignty. We will come out of this war as the leader of nations; whether we retain that leadership, strengthen our sovereignty, maintain our inalienable rights, protect our economic rights throughout the world, depends solely upon the type of peace that is written. I do not underestimate the many obstacles that lie ahead in this, or any other program of peace that is to come after the war.

It may be a terrible reality to even talk about some kind of a world unity, but my friends, science has abolished space. Nations have been unwittingly linked together through our technical progress. Before this war is finished, we may see bombers making nonstop flights around the world.

It is said by some that one who advocates this course hopes to seize upon the post-war situation at home to remodel our whole political system, in keeping with some foreign or rarefied theory.

My fellow Americans, I know not what others may think, but to me, to lose our present social or political or economic system would be to lose the war, no matter whose army lay crushed upon the field. Free enterprise led to our independence. It is the mechanism upon which we long have depended for our larger freedom. But strangely, there is much confusion on the subject of free enterprise. This is quite unfortunate, for private enterprise has one of the chief roles to play in assuring permanent peace. It should not be hampered by any misunderstanding of its proper function.

At a single time, we all have seen 10,000,000 persons idle in this country, hungry and in despair. Is this part of the enterprise system? No; and by the same token, an attempt to rescue those starving multitudes cannot be regarded as an attempt to overthrow it. We all have known of markets rigged and production stifled and millions of men held at subsistence levels by reason of substandard wages. Are these conditions part and parcel of the enterprise system? No; and neither is any attempt to remedy these conditions any part of a move to wreck this system.

I wouldn't suspect Dr. Emerson P. Schmidt, economist for the committee on economic policy of the United States Chamber of Com-

merce, of harboring any prejudices against capitalism. So, I shall borrow a few of his words:

"From the viewpoint of the general public, the function of the enterprise system has been to gather the factors of production: Land, labor, capital, and to organize them into productive units," says Dr. Schmidt.

Profits honestly gained, and widely used, are not only legitimate, but the source of great benefit to society. But are profits alone, sacrosanct without regard for the fact that they energize a system which accomplished something more? Are they specified as the First Commandment? In short, is Smith's profit in itself something that Jones should be willing to die for?

The free enterprise system is obviously interwoven with jobs, goods, and service. It works at its best when men are employed at a decent living wage. As Dr. Schmidt has said, "Jobs and job continuity must be provided by the enterprise system if this system is to survive," adding that "the American people do not want to see their Government turn employer—they are not socialistic. But if they become convinced that private business cannot do the job, they will turn to the Government, and if they do—can we preserve liberty and freedom?"

Eric Johnston, the ex-marine captain who is president of the United States Chamber of Commerce, wrote in February's Reader's Digest, "The President recently abolished the W P. A. Why did he ever establish it? Because business was not giving full employment. If business fails again to give full employment there will be another W. P. A. There will be so under any President." He adds this prediction, "No American President will ever again permit American citizens to be unemployed. They will be employed by the Government."

Our troops will preserve democracy against overthrow by force, we must protect it at home by creating post-war jobs for about 30,000,000 persons, mostly in private enterprise. This is no little task. Private enterprise can succeed in furnishing jobs for 30,000,000, only to the extent the Government succeeds in establishing favorable conditions for business expansion at home and abroad.

Many conditions will exist favorable to the needed expansion. New commodities are being developed. New productive processes are being developed. New materials are being used. The number of skilled workers is being increased. War savings are growing into new potential capital. A deferred demand for goods is piling up. As a result of the war, our plant capacity is the largest in history. But along with these plants, we have one of the biggest problems which must be solved by the Government.

It owns a fourteen-billion stake in the war plants. What is it going to do with them? Lose them, and lose the capacity we need, or keep them open? If it keeps them open, will it actually operate them, or sell them to private industry. Questions on this subject alone are interminable.

Among all the plans for post-war activities, the serviceman probably will have the deepest interest in favorable and continuous reemployment for all. No matter how favorable his owr assimilation by the social order after the war, he will find himself in the same competition which affects everyone else if and when another depression falls upon us.

However, the serviceman's most immediate and most obvious concern at the conclusion of the war will be his own demobilization and reemployment, hospitalization, or education. These problems will be some of the many that await the return of Congress in a few weeks.

We, in America, are depending upon the men in uniform to accomplish almost unparalleled feats. Under the leadership of the Eisenhowers, the Nimitzes, the MacArthurs, and the Doolittles of today, they are adding bright chapters to the history of men who were led by the Washingtons, the John Paul Joneses, the Lees, the Grants, the Pershings, and the MacArthurs of yesterday. In turn, they are depending upon us for the accomplishment of a gigantic feat, too—the cashing in on their sacrifices by the establishment of a permanent peace. Are we going to let them down?

If we are content to depend upon wisdom instead of prejudice we must select plans to reach our objective, neither because they are practical or idealistic, but because they will best accomplish our purposes. If we refuse to be led astray by specious promises, and rely upon the leadership of those with courage to do the hard things which are inexorably necessary in shaping lasting peace, we'll get full value for our blood and tears this time.

Ours is a big job. Almost too big for ordinary conception. But it is a job that can and must be done. With the proper organization, the will to work together, we can accomplish it, providing ourselves and the world with an expanding economy and constantly rising living standards.

Above all else, we must hold a firm faith. Faith is a specific for fear. If we can be free of fear of the future, we can solve its problems.

Record of the Seventy-eighth Congress

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject Record of the Seventy-eighth Congress, delivered by me before the Alabama Bar Association at Birmingham, Ala., Saturday, July 10, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, it is pleasant indeed to come back to Alabama after 3 years and meet again the friends who were so kind to us when Mrs. Taft and I were here in 1940. When JOHN BANKHEAD extended the invitation of the Alabama Bar Association, I was delighted to seize the chance of getting away from the hectic confusion of Washington to enjoy the unequaled hospitality of the South. It is all the more pleasant now that Congress has succeeded in winding up its affairs and departing for the first recess of any length in the last 4 years.

This has been by far the most interesting, and in some ways the most dramatic, session since I was elected to the Senate. The actions of this Congress mark the end of an era, and contain a suggestion of the progress which we may make in future years. It is a long time since I have felt so encouraged about the future of our governmental system.

Today I intend to review the various actions which have been taken, and set forth the principles which I believe have guided the Congress in taking them; then suggest a future program based on those principles.

CONGRESS SUPPORTS THE WAR

In the first place, the differences between Congress and the President have related almost entirely to domestic matters. There is no difference of opinion in Congress or among the people with regard to our goal in the war, and no hesitation in giving to the armed forces the unlimited support and sacrifice which they require. You do not read much about the actions of Congress regarding the war itself, because there is no controversy, and peaceful cooperation does not make news. Everyone in Washington agrees today that there can be no goal except the complete and unconditional surrender of Germany, Italy, and Japan. Of course, there are a good many self-appointed military experts in Congress and throughout the country who differ as to the best method by which victory may be obtained, but Congress as a whole is disposed in general to leave the decisions in military matters to our military and naval leaders:

This Congress has appropriated for the Army and Navy and Maritime Commission in 1944 the huge sum of $100,000,000,000. If anything, I believe they have erred on the side of generosity. Much Army and Navy money is wastefully spent. Most of the vast horde of Federal civilian employees are employed by the Army and Navy. But if an Army or Navy officer appears before Congress and asks for money for war purposes, it is impossible to be parsimonious, and difficult to determine exactly the sum which is really necessary.

For the same reason, while Congress abolished some part of the Domestic Branch of the O. W. I., it did not touch the Foreign Branch of Mr. Elmer Davis' organization. That Branch appears to be full of crackpots and incompetents and Communists, but the committee felt that propaganda abroad might be of substantial assistance to our armed forces, that money must be supplied and responsibility for improvement vested in the Executive. Congress, I believe, has also been more than generous with the domestic war agencies, like the War Manpower Commission and the Office of Price Administration. It also approved the reciprocal trade treaty power without any modification whatever, largely because it was felt that any other action might discourage our allies in the war.

A great deal of significance has been attached to the passing of the Smith-Connally bill over the President's veto. But the bill cannot be explained as the adoption of a labor policy. It was a war measure. Nothing has been done about many important problems of labor policy involved in the National Labor Relations Act, the Hobbs Anti-racketeering bill, and other proposals. The Smith-Connally bill was passed because Congress felt that in time of war it could not permit any man or any group in the United States to defy the Government; that the President's action in vetoing the bill, if sustained, would encourage strikes and slowdowns, and prove a serious detriment to the morale of our people in the United States and the boys in the armed forces.

Congress has been generous in appropriating money for war housing and the community facilities which go with it. Wasteful as this expenditure is in many cases, because the housing is of the most temporary character, it was felt necessary that there should be no hindrance to the development of necessary industrial plants through any shortage of labor and the means of living within reach of those plants.

When presented with a demand for money for so-called war purposes, Congress has a difficult job, because there are many people in the Government and many agencies only too anxious to use the war as an excuse for the expansion of unnecessary activities. There are too many people who love to regulate for the sake of regulating. For instance, while price control is undoubtedly

necessary with this tremendous Government spending, the Price Administration itself is full of men who prefer the power to regulate and crack down to any system of voluntary appeal such as we had in the World War. We have to grant many powers; we have to submit ourselves to certain forms of Fascist control. While those emergency powers are in effect, it is almost impossible to prevent their abuse. Congress cannot be blamed for theoretical, stupid, unjust and inefficient methods of price control, any more than it can be blamed for the military and naval incompetence of Pearl Harbor.

NEW DEAL DOMESTIC METHODS REPUDIATED

Most of the controversial matters, however, relate to domestic policy both during the war and after the war. We are fighting a war to free the world from the domination of brute force and permit all peoples to develop their own freedoms. Surely we should be equally interested in retaining those freedoms in this country. During the war they must be modified, but they should be modified as little as possible. At the earliest possible moment they must be fully restored.

For 10 years we have been guided by the New Deal philosophy. It has opened up many lines of progress, some of them permanent and beneficial to the country. But it has recklessly disregarded the most fundamental principles established in the American Constitution, which have guided this country so well for 150 years. This Congress has been determined that these principles be re-established, and that further progress be within the framework of the principles of American democracy.

The founders of this Government were concerned not only with establishing a republic, but in seeing that it remained a republic. They knew from history that every past republic, in Greece, in Rome, in Europe had gradually granted more and more power to one man or group of men until it found itself a tyranny, an empire, or a kingdom. In order that the American Republic might be perpetual, they relied on three main principles. They granted to the Federal Government only the powers relating strictly to national affairs. They divided even those powers among the President, Congress, and the courts. And finally they provided that those powers, no matter how exercised, should not prevail against the inalienable rights of the individual citizen or of the smallest minority. Only if those principles can be maintained, can we avoid in this day of totalitarianism a totalitarian state. There is no use fighting for democracy in Europe if we lose it here at home.

All three of these principles have been ignored in recent years. Local self-government is the first of them, and the independence of the States is the shield of local self-government. If we permit the States to be destroyed, the Federal Government will run our cities and our counties and our schools. The Federal Government may be elected by the people, but as a practical matter it is so far away from the folks at home that they have no real voice in its operation. The machine is so big and rumbles on so relentlessly that the voice of the individual citizen cannot be heard. At home he can go to his own city council or school board. He can write letters to the paper. He can run for office himself. He can be heard. In Washington he is lost in the vast corridors of marble office buildings, and is passed from one bureau to another until he gives up the hopeless search in indignant but useless sputtering.

The Federal bureau is subject to every kind of pressure group. It listens to strange philosophies which the people would reject. It attempts to impose regulations fitted perhaps to one section of the country, but completely objectionable to others. Finally, the whole centralized government yields to the pressure of minorities, and democratic government no longer exists. Sometimes I feel that we have reached the limit of size in this country for any successful democracy. Certainly our only guard against that, or a greater size, is the protection and strengthening of local self-government.

The most obvious feature of the New Deal has been the tremendous growth of Federal agencies, operating in most cases directly on the citizen, and deliberately bypassing and depreciating his State and local governments. But Congress is determined to reverse that attempt to seize power in Washington. Last year we abolished the Civilian Conservation Corps, a direct Federal institution, partly relief, partly education, partly public works. This year it has brought to an end the W. P. A., and I hope that never again will the Federal Government operate directly a relief agency. In this last month, after a bitter fight we abolished N. Y. A. Congress has just as much interest in youth as it ever had, and just as much interest in relief and education; but it is determined that if the Federal Government is to assist in these fields, it must assist through the State organizations, and not by direct Federal operation. The primary obligation is State and local.

There is no longer the slightest vestige of the original N. Y. A. purpose of assisting in the education of youth. Its officials seized upon the war emergency to try to set up a national vocational training institution, not at all confined to youth, ostensibly to train workers for the war industries. It never trained more than 10 percent of the total number of men in training, and did so at an exorbitant cost. Our school officials felt that the N. Y. A. was trying to set up a complete Federal vocational education system, operating directly, and to operate directly after the war. We already have a widely spread vocational education system, operated well by many States with Federal financial assistance.

Congress cut off that part of the O. W. I. which maintained offices throughout the United States, and scattered leaflets and propaganda ostensibly to assist the war, but actually to assist a fourth term. If we are going to maintain free speech in this country, we do not need Federal propaganda. The newspapermen at the Capitol are fully able to transmit to the people everything the Government does or has to say.

Congress limited the appropriations for farm security and relief. In this field the States are without an organization. But also I believe that any activity in the nature of relief should be ultimately through some State activity to be promoted and developed by financial aid from the Federal Government.

I had an active part in securing the passage of a law providing for the vocational rehabilitation of civilians who can be equipped to work in the war industries. After a long battle, we won out on the State control. We turned down the Federal Security Agency proposal that medical aid toward rehabilitation be furnished directly by the Federal Government. We increased the Federal financial assistance because of the war emergency today.

The Senate passed a bill for the maintenance of day nurseries and extended school service for the children of working mothers in industrial areas, again providing that it be done through the States. But in this field the old W. P. A. organization, without adequate authority from Congress, has pushed in again a direct Federal program. I hope the House in the fall may pass the child-care bill and eliminate this vestige of the W. P. A.

I admit that there are many difficult problems in this matter of Federal aid and State or local administration. It is not easy to provide Federal financial assistance without giving Federal control. I believe that if Congress lays down the rules with which the State must comply, and does not leave the making of these rules to some Federal bureau, we can secure independent administration by the States. There are some States which should be helped more than other States, and it is not easy to find a formula.

CONGRESS ASSERTS ITS INDEPENDENCE

The second bulwark of American government is the division of Federal powers between the Executive, Congress, and the courts. It is no disrespect to the Supreme Court to say that, with seven members out of nine appointed by the President, its views and those of the President coincide with great regularity. The Court itself is dominated by the theory of administrative law. It has repeatedly approved administrative boards which make their own laws, administer the laws which they make, and then hear the cases which they themselves bring for the violation of their own laws, and has construed Congressional language to give the broadest power of final decision. This merging of the executive, legislative and judicial in a single group of men is dangerous and reactionary. As a result, we have seen in cases like the National Labor Relations Board and many others a complete elimination of any sense of justice and fairness. Men are coming to shrug their shoulders at injustice with helpless indifference when our fathers would be burning with indignation. The recent broadcasting decision interprets a law of Congress to give the Federal Communications Commission completely arbitrary power over broadcasting stations and networks. Mr. Justice Frankfurter's opinion says that the act does not restrict the Commission merely to the supervision of the radio traffic over the air. He says: "It puts upon the Commission the burden of determining the composition of that traffic". Certainly the men in Congress who wrote the law say they had no such intention. It is an indication of the tendency of the President and his followers to seize arbitrary power over many branches of business, and to concentrate all power in the Executive and in executive boards.

Up to this year a majority of Congress was inclined to follow the orders of the President. The result has been to concentrate power to an extent dangerous to the future of democratic government in this country. The most encouraging thing about this Congress is its assertion of independence. Cooperating with the President on every war question, it has differed with him on almost every domestic policy. It rejected the nomination of Edward Flynn for Minister to Australia and of Governor Allred to the circuit court of appeals because in both cases it felt that these were political appointments. Wherever possible it is recalling the powers delegated to the President by subservient Congresses. It repealed this year his arbitrary power to devalue the dollar. It rejected his $25,000 limit on salaries, largely because this limit was imposed without legal authority, in defiance of a declared policy of Congress. It has repeatedly declared its view that any general subsidy policy to support price control is unsound, inflationary, and a cowardly escape from the consequences of mistakes in price and wage control and tax policy. Certainly this Congress is no rubberstamp Congress.

CONGRESS BELIEVES IN BILL OF RIGHTS

The third great principle of the independence of the individual cannot be pressed in wartime as it could be in peacetime, but Congress has indicated clearly its belief that the individual must be left free to work out his own life, choose his own occupation, and freely speak his mind. The so-called Gestapo bill, which is drawn so broadly as to make

it possible to prosecute almost anyone differing with the administration, has been quietly suppressed in committee, though strongly urged by the Attorney General. Efforts of the administration to insist on discriminatory tax legislation, such as the Treasury withholding plan and the $25,000 salary limit, were repudiated in the adoption of the Ruml plan.

CONGRESS NOT THE BODY TO FORMULATE AN AFFIRMATIVE PROGRAM

A good many of these actions of Congress have been negative in character. Congress has acted largely as a jury, every individual voting his own convictions. But while the administration does not control Congress, neither do the Republicans or any other group It is natural, therefore, that Congress has not done so well in developing an affirmative policy. At best it is hard for any group of 531 men to agree on any comprehensive program. This year when all affirmative effort and energy must be devoted to the war it is even more unjust to look to Congress for a complete policy of domestic government.

Necessarily Congress has control largely of taxation and fiscal policy. It has received little help from the administration. It has shown its belief in sound money and in fair and conservative taxation, but it has been much too slow in developing new taxes to relieve the tremendous danger of post-war debt. It is vitally important that a tax bill be passed in the fall both to reduce the debt and to resist the tremendous pressure for inflation which the Office of Price Administration finds it so difficult to handle.

A POST-WAR PROGRAM

From the definite actions of Congress, even with the lack of affirmative program, it is possible for us, however, to develop the outlines of a post-war plan. It is the duty of the Republicans, it is the duty of the anti-administration Democrats, to bring forward both outside of Congress and inside of Congress a sound plan of dealing with the post-war difficulties in the United States. For that purpose, the Senate has created the George Post-War Planning Committee, six Democrats and four Republicans, which is undertaking a complete study. That committee I am certain will present a very different and sounder plan than that of the National Resources Planning Board. Congress abolished the National Resources Planning Board, over the violent opposition of the President, not because it disapproved the policy of planning, but because it did not propose to have its plans made by a group of theorists whose only remedy for every problem is vast Government spending. The program of the Board was plausibly presented and it had a global charm, but it would lead directly to the abolition of local self-government; to the control of all industry by administrative boards having executive, legislative, and judicial powers; to a socialistic economy. It leaves nothing to the initiative or the ability of the average independent American. Congress proposes that it do its own planning.

The first essential of a post-war plan is sound finance. We will go out of this war with a public debt approaching $300,000,000,000. It is not impossible to pay the interest on that debt if we maintain a reasonable prosperity and do not constantly increase the debt. Why do we have inflation today? Simply because we have been forced by the war into a deficit policy. The same policy in peacetime, when we certainly cannot successfully impose the arbitrary controls on prices and wages we are now attempting, would soon depreciate our money as it was depreciated in Germany. All savings would be destroyed. All life insurance values would be destroyed. All incentive to any man to begin again the accumulation of property and capital would vanish. The Government would be forced into every activity and every industry.

We must have a sound fiscal theory so that conditions exist in which free enterprise can go ahead, large and small industries and particularly small, and new industry encouraged to start. Our purpose must be the maintenance of full employment through private enterprise, and I believe it can be done. A great deal more is known now with regard to inflation, devaluation, and depressions. If wise men administer the fiscal affairs of government under present law, I believe the business cycle, with its recurrent depressions, can be largely eliminated. With impractical men in charge, inspired by unsound fiscal panaceas, no kind of legislation can prevent disaster.

Undoubtedly we must work out carefully a plan for the gradual return to industry of the millions in the armed forces. We must determine the best manner in which the huge war plants may be returned to private operation, for if the Government takes over and operates these industries, as proposed by the National Resources Planning Board, no private businessman can enter that field. In short, I believe we can return to a system of private enterprise, let the businessmen run their businesses and the farmers run their farms, without the Government attempting to dictate to every individual businessman or farmer.

If the individual is to enjoy full opportunity, there must be a much freer capital market. The Securities and Exchange Commission should confine itself to the job of preventing fraud and misrepresentation and manipulation in the sale of securities. The tax laws must be revised to remove the discrimination today against money invested in new business. The capital gains tax ought to be repealed, and the double taxation on common stockholders, who take the risk on which private enterprise depends, at least be no heavier than that on bondholders and other investors.

With regard to the field of social welfare, in which the New Deal has made its greatest advances, we can go forward constantly in our effort to improve the condition of the lower income groups, but by methods which do not endanger the permanence of democratic government. I believe in the principle of insuring to everyone, unless he refuses to work, a minimum standard of living; but it must be a standard which can be supported at a reasonable cost, without setting up a vast Federal bureaucracy, without destroying local self-government, and without removing the incentive to work, which is the very keystone to individual success and national prosperity. We can extend and improve the old-age pension and unemployment compensation laws, but there is no reason why the latter should be completely nationalized as the Board purposes. Unemployment, after all, is a local problem in the first instance. An organized locality can largely solve its own problems, and solve them more satisfactorily than the Federal Government, though it may need Federal assistance in severe depressions. The State employment systems should be reestablished. If unemployment gets beyond bounds again, it should be dealt with by a State relief organization handling both direct and work relief. I am absolutely opposed to another Federal Work Projects Administration. Of course, there must be Federal aid because the ability of the States to finance a real crisis is extremely limited.

I believe also there should be some extension of Federal aid to health and medical care and hospital service, but without socializing medicine or turning the job over to the Federal Government. But it is the primary responsibility of the States and local governments to see that their citizens are supplied with hospital services. Eighty to ninety percent of the people are already so supplied. If the gaps are to be filled, they can be filled by an adequate State plan, certainly if the Federal Government will give some encouragement and assistance.

We should plan now for the rapid development of housing after the war, through private enterprise as far as possible, but in the case of the lower-income groups a further expansion of the public housing program. The size of the Government subsidy per family dwelling can and should be reduced, so that the cost will not prevent the construction within a reasonable time of all the public housing which may be justified as part of the general plan.

In short, I believe that Congress is just as much interested as ever in the improvement of the condition of the people of the United States, but it insists upon the maintenance of the basic principles of American democracy. Services to the individual citizen must be handled through the sovereign States and their local subdivisions. The people in every State must determine the methods of administration to be followed. They must not be subjected to the orders of a bureaucrat in Washington. They must be required to put up some of their own money as an evidence of good faith and interest in their task. Federal control of the general nature of the State programs to receive Federal aid, so far as it is imposed at all, must be by laws and not by the fiat of bureaucrats attempting to make laws under delegated power.

Furthermore, the program must be worked out as economically as possible in order that it may not destroy the opportunity and the individual rights of those citizens who do not ask for Government assistance. In the long run there is no way to support those who do not work, or assist those unable to support themselves, except out of the pockets of the people who are working and the people who have the ability to support themselves and their families. We cannot get something for nothing. If we raise the standard of living of the lower-income groups by Government contribution, we reduce to some extent the standard of living of the upper-income groups. If one-fifth of the population is to be helped, only the other four-fifths can help them; and among those four-fifths we find all of the leaders and most of the able and the diligent among the workers. We cannot destroy the incentive they have by burdensome taxes and restrictions, or we will destroy the very progress on which America is based. It is not true that leaf-raking creates wealth, as Mr. Yantis, a member of the National Resources Planning Board, has testified, or that a hand-out, however praiseworthy, stimulates prosperity. Men work and produce wealth, and build up capital for machinery and cheap production, because they can obtain a better standard of living for themselves, a better education for their children, and a better provision for their family after death. The right to the products of a man's own labor is guaranteed by the Bill of Rights, and if we destroy that opportunity, we destroy the third great bulwark of our system.

For the same reason it is important that we never dispense relief in such a way that the man on relief is better off than the conscientious workman in the income scale next above. Our system of old-age pensions must insure the same pension to the man who has worked hard and built his own home as to the man who has been a ne'er-do-well all his life.

There is no great difference in the ultimate ideals of the social planners and of the hard-headed American Congress. Their difference is a difference in methods. The social plan-

ners in effect are willing to turn the whole country over to some benevolent dictator if he promises to carry out their beautiful blueprints. Congress has doubts about the practicability of the blueprints, and knows that any dictatorship, no matter how benevolent, is the end of the great American experiment in democracy. Congress believes that two and two make four, and does not believe that deficits are a blessing in disguise. It believes that every improvement in social conditions can be worked out through the sovereign states more soundly and more permanently than through any Washington bureau. It believes that the problems of regulation, when essential, can be solved by carefully-defined laws made by Congress and interpreted by the courts; that it is not necessary to vest arbitrary and un-American powers in any Washington soviet. It believes that progress can be made and employment maintained through the encouragement of private enterprise, adequate education, and protection against unfair competition. It believes that the American people themselves can develop their own ideas, form their own organizations for improvement, and cooperate in assisting their fellowmen, without specifications from Washington and crackdowns from permanent Offices of Price Administration.

Sale of War Bonds

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. HATCH. Mr. President, on the 26th of August the distinguished chairman of the Committee on Foreign Relations [Mr. CONNALLY] delivered a very able and interesting address over the radio, in connection with the War-bond campaign. He dealt with subjects of paramount importance to every citizen of this country. I ask unanimous consent that a copy of that address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Congressman JOHNSON, and fellow Texans, allow me to express my gratitude to Congressman JOHNSON for his generous and graceful presentation to this distinguished audience.

We have met in a great cause. We are assembled to give impulse to the war effort and to the sale of War bonds with which to prosecute the war to a crushing surrender of our cruel and savage enemies.

We have been thrilled by the presence of war heroes who have distinguished themselves on far-flung battlefields. We have been impressed by the display of our armed forces typifying the Nation's might. We here dedicate our spirits, our unity, and the resources of the home front to our gallant men on the foreign front. We shall send them the weapons and munitions with which they shall wring victory from relentless and stubborn foes.

War is as old as civilization. It reaches back into primitive times—to the stone age—to the era when brute force alone was the rule of men. The annals of the centuries record campaigns and conquests among warring races and peoples. It is a terrible and cruel instrument of arbitrament. It is a harsh and bloody argument in a forum of ferocity and flame. It is tragic for great nations to slaughter their youth on bloody fields of battle. But the ambitions of rulers become so inflamed, racial and national jealousies become so aggravated and bitter, the hunger for dominion becomes so devouring that no system has yet been devised that is effective in arresting the outbursts of passionate fury that war entails. In civilization's march through the centuries, many problems have been met and measurably solved. The Anglo-Saxon, through a thousand years of struggle, has achieved a free government and constitutional rule. However, the lust of conquest, the thirst for military glory, the desire for plunder, have never yet been curbed and placed under the restraint of law, logic, and equity.

We did not enter World War No. 1 for any hope of aggrandizement or any ambition for conquest. The people of the United States frantically endeavored to keep aloof from that titantic conflict. However, we were dragged into that war. Upon foreign battlefields thousands of the finest of our youth poured out their blood. We were triumphant. With our banners covered all over with victory, with every battle flag touched with a new luster, our armies returned with not one foot of territory added to our dominions, with not one dollar of tribute extorted from the vanquished, and with not one subject of a foreign state incorporated by conquest into our system.

When World War No. 1 ended in victory, we hoped thereafter to live in peace with the powers of the earth. We had hoped that our heroes had not died in vain. Our great leader and Commander in Chief, Woodrow Wilson, with an exalted dream of peace and a noble conception of freedom from the misery of war, undertook to lead the world into the pathways of peace. We had hoped that the constructive initiative and the intelligent energies of the modern world would be devoted to the creation of useful things for the enjoyment of the peoples of the earth. We had hoped that the genius of scientists would no longer be devoted to the manufacture of arms and murderous weapons of warfare. The United States, during the score of years following World War No. 1, made generous exertions toward peace and disarmament and arbitration. These hopes and dreams came crashing about us in ruins in 1939. The dastardly designs of megalomaniacal conquerers and the flame of the cannon's mouth shriveled them into ashes.

Tonight, our Nation is involved in a war that belts the globe. For 10 years, Hitler was secretly arming and marching and drilling a mighty army. He planned the conquest of Europe. He hoped to master the Mediterranean and the lands which it washed. With his fantastic ambition to surpass Napoleon, he planned to subjugate Russia and extend his realm into Asia. He was to combine Napoleon and Alexander the Great and Caesar and Genghis Khan into the world's greatest military masters. His ultimate ambition was to leap across the South Atlantic from Africa and challenge the independence of South America and the Monroe Doctrine.

Six thousand miles westward the crafty and treacherous Japanese for 20 years had been preparing for the hour they could strike the United States. For 5 long bloody years Japan had harried with torch and sword the territories of unoffending China. Savage and destructive war had been waged against that peaceful people. The world will long remember the dastardly and treacherous attack upon Pearl Harbor. Our soldiers and sailors were murdered without a hint of warning. While their diplomatic emissaries were standing at the door of the White House pretending to be messengers of peace, they drove the dagger of the assassin into our armed forces. With oriental beguilement, they sought to becalm and then betray us while she planned with fiendish deviltry the barbaric attack on Pearl Harbor. We promptly declared war on Japan. Germany and Italy quickly declared war upon us.

We were not adequately prepared for war. Many of our people opposed large appropriations for navies and armies. I have always supported appropriations for a commanding navy. A navy cannot be constructed quickly. I have always felt that the Nation's safety depended upon our mastery of the Pacific and Atlantic Oceans. However, the Congress of the United States feverishly and with unbending determination, directed a program of military preparation and production of war supplies. Our strength in the Pacific had been crippled at Pearl Harbor. It required time to assemble ships and supplies and men. The immense distances raised tremendous difficulties of transport of men and supplies and implements of warfare. Those difficulties are now being overcome. We are on the march in the Pacific on the sea and on the land, under the sea and amidst the clouds.

Tidings from every battle front are cheering. The gallant Russians, treacherously assailed, have heroically resisted the invader. They are now hurling him back. Our brave army, fighting with our allies, triumphed in North Africa and swept through Sicily. Mussolini was driven from power. Italy has not surrendered. If the new Italian Government and the Italian king tie their fortunes to Hitler and the Axis, we shall relentlessly force them to a humiliating and unconditional surrender. We shall not be deceived by any false pretensions that Rome is an open city. Unless military installations are removed from Rome, unless every semblance of military activity is abandoned Rome cannot be exempt from the terrors and miseries which she poured out on the innocent and defenseless. Our armies will not consciously attack shrines and holy places. The enemy, however, will not be allowed to use them as a cloak or shield to protect their infamy and to wage an unholy war.

There is a hard and costly struggle before us. Victory will entail the expenditure of tremendous treasure and many precious lives. Too great an optimism must not relax us. We shall establish a second front. Where it shall be will be determined by military leaders. All-out total war is our task. We must make this war final. We must so disable our cruel and savage enemies that they can never lift a sword against us or drop a bomb upon us while we sleep. They must be disarmed. They must be rendered impotent to plunge the world into a sea of blood.

The United States is expending colossal sums. We are pouring out treasure in greater volume than has been witnessed in all the march of time. We are sending our brave men into distant parts of the earth to fight and shed their blood and die in alien lands.

We are bearing burdens and hardships at home. We shall bear them cheerfully. We shall bear them willingly. What are our comforts, what are our conveniences, compared to the sufferings and heart-breaking sacrifices of our gallant men? We shall not grumble. We shall not complain. We shall not quarrel at any measure to promote victory.

Why do we do all of these things? Why do we fight? It is because we want peace and not war. We make war to destroy war.

The supreme object of war—any war—is the establishment of peace with terms dictated by the victors. We do not fight for conquest or loot but for world peace; for the security of law-abiding, peaceful nations. When a peace settlement is made, that settle-

ment should reflect the wishes of the nations who have triumphed. That settlement, if distinguished by equity and justice, should be maintained and preserved.

So long as the nations imposing the peace shall be ready and willing to maintain that peace by the last argument of military force, it will live. The United Nations must, when our enemies are mastered, establish an international agency to determine disputes over boundaries, over all of the quarrels that lead to international war and to arrest aggression and criminal conquest.

Such an agency, unless invested with power to enforce its decisions, cannot survive. It must have authority to call upon member nations for troops and navies, when necessary, to enforce its decrees and impose upon aggressors and violators of the law of nations punishment for their crimes.

The League of Nations was a noble experiment. It failed because it lacked the machinery to enforce its judgments. Its moral prestige was weakened by the failure of the United States to become a member. Powerful as it appeared to be, international jealousies and private understandings between particular members so enfeebled it that when Hitler reentered the Rhineland it lacked the courage to resist him. When Mussolini threw his army into Ethiopia, the League was impotent to stay his sword.

Those who oppose our membership in such an international body may argue that membership of the United States would entail an impairment of our national sovereignty. Every treaty to which we are a party somewhat restricts our freedom of action. Sovereignty, however, is the power to do that which we may wish. If peace is worth fighting for—if it is worth the lives of countless thousands of our bravest men—if it is worth the pouring out of stupendous treasure in time of war, it ought to be worth, in time of peace, the exercise of our sovereign power to prevent international outlaws and bandits from plunging the world into a sea of blood to gorge their greed or to ravish their peaceful neighbors to satisfy their hunger for land and spoils and loot.

Secret treaties have been the fruitful source of war. They have decimated free and happy lands. An international body to enforce world peace would, in large measure, eradicate these centers of infection. The peaceful peoples of the earth refuse to bow to the rule of might by those who dream of war, prepare for war, and make war. Civilization, which has been attained through centuries of struggle, cultures which have been slowly and painfully developed through countless generations cannot accept the rule of the sword or the regnancy of the jungle in this climactic period of world advancement.

The United States cannot alone provide a pattern of international peace machinery and impose it upon the will of its allies. The United Nations must be consulted and issues involved in the war must be considered.

The Senate of the United States will at an early date consider a resolution expressing the desire of the United States to join in the establishment of a world peace agency to curb international bandits and robbers and to preserve the peace of the world. Such an agency does not necessarily imply that world conditions will be frozen. It does not follow that the status quo in every particular will be preserved. The constitution of such a body could provide the necessary elasticity to meet the needs of the future. It will not be an easy task. Difficulties will be encountered. Obstacles will face us. But we need not despair. We have faced the great national and international problems before. American genius and leadership and statesmanship will not be deterred by hardships and struggles. They are rather a challenge to the highest and noblest traits of national character. It will not be perfect—what human agency reaches such a goal—the Constitution of the United States has been amended and may be amended again. The British constitution and the structure of other powers have yielded to change. They have responded to the need of changing times. The sublime objective of world peace is worth the effort. The experiment commands our highest hopes and best aspirations.

The United States is so powerful, with such a tremendous striking power upon the sea and upon the land, that it is invincible against any single power on the globe.

It is equally powerful in world councils. We gave freedom to the Philippines. We withdrew our Army from Cuba and granted it independence. The world knows that we cherish no scheme of conquest and no ambition for military rule. The hour has struck for America to instill those principles into world policy.

From our commanding point of vantage we must declare to the world that our influence and our might will be dedicated to the maintenance of world peace and the suppression of military aggression whenever it may lift its venomous head. The United States must be a member of the peace agency. Without that membership it will fail. Russia must be a party. With dominions stretching from the Baltic to the Pacific, from the snows of the Arctic to the warm waters of the middle east, with one hundred and sixty millions of the people Russia cannot be ignored. Assailed by the treachery of a savage her brave armies, loving their soil as a worshiper loves his shrine, have fought with high courage for 2 years against the despoiler of their ancient land. Her gallant troops checked and held the aggressor. She is now fiercely driving the invaders before the triumphant march of her legions. She has suffered colossal losses in material and has lavishly poured out the blood of millions. She has stood in the breach while we have been preparing and arming; Russia has gallantly fought the battle of civilization. She has earned a place at the peace table. She must be a member of the peace organization. I do not fear that Russia will make a separate peace. She trusted Hitler once and was perfidiously betrayed. How can she trust him again? A Hitlerized Germany with its eyes turned toward the East is a constant threat to the security of Russia. Premier Stalin knows that the fate of his country is safer with the friendship of the United States, Great Britain and China than it will be in the python-like grip of Hitler and Hirohito.

Great Britain must be a member. Great old China must have a seat. For 5 bitter years she has bled and burned as the victim of barbaric butchery. She must sit in judgment on future crimes.

Other members of the United Nations must have a place at the council table.

This war must end in the abject surrender of the monsters who began it. We did not begin the war but we propose to end it. Hitler and Mussolini and Hirohito must be stripped of their hellish power for evil. Their mad ambitions must be chained and their bloody crimes must be punished. Tamerlane builded a monument of human skulls of his victims. These arch criminals through their infamy have marked the battlefields of the globe with innocent and inoffending skulls of peaceful peoples. The victors must find retribution commensurate with their guilt. Our armed forces must, with relentless power, punish the nations that have followed them into this crime of the century. Their cities must be harried; their lands must be laid waste; their navies must be sunk; their armies must be defeated. These terrible measures must be taken, not for the love of war, but for the love of peace.

The Allies are on the march. Tonight we can hear shouts of triumph in the distant Pacific. In the ancient land where Hannibal and Caesar campaigned, our banners are advancing. The Russians with steel and courage are turning the enemy to flight. Let us tonight send out on the waves of the ether of the spirit a message of unity and support to our gallant heroes on every fighting front. Let us launch upon the radio of the intellect and the emotions a message of gratitude for their high courage, for their gallant spirit and their sublime love of country. America stands upon the battlefield with drawn sword. It will not know its sheath until untarnished victory is ours.

God grant that we may then lead the nations to an enduring peace.

The Will To Win

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and interesting address entitled "The Will To Win," broadcast on the radio on August 16, 1943, by the Honorable James F. Byrnes, Director, Office of War Mobilization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For three years or more we have been mobilizing to defend ourselves. Now we are beginning to strike down our enemies, who sought to terrorize the world.

The tide of battle has turned in our favor because we have succeeded in mobilizing for war. In total war our fighting men do not win on the battle front unless back home their fathers and mothers, brothers and sisters for months past have worked as a team building up the supplies and the weapons with which battles are won.

Since we have begun to win some real and decisive battles on the fighting front, there has, unfortunately, been a tendency to slow down our production pace and to start quarreling among ourselves. This may be just a relaxation of the tension that gripped us when there was grave danger that we might lose this war before we could mobilize our resources for the fight.

But we must not forget that it was the united effort of our people on the home front that has brought our fighting men where they are in Africa and in Sicily, in the Solomons and the Aleutians, and has made possible their devastating aerial bombardment of Germany's war industries. And it will be only through our continued united effort on the home front that our fighting men will be able without undue delay and unnecessary bloodshed, to overcome the Axis Powers both in Europe and Asia.

Brilliant have been the achievements of the American, British, and Canadian forces in Africa and Sicily. But we have met and defeated less than 7 percent of the combat divisions which the enemy has in the European area. The strategic results of these victories

are of major importance, since they have given us the initiative, but the initiative is of no value unless followed vigorously with great forces.

Our heroic Russian Allies have been fighting against approximately 40 percent of the enemy's European combat divisions. So the enemy has been using less than half his combat divisions in actual battle, while the Allies have been using nearly three-quarters of all their combat troops which are in the general European area.

If Italy is knocked completely out of the war and her army surrendered, the enemy will still have more combat divisions in Europe than will the Allies, and will have as many divisions as the Allies will have even after the American mobilization is complete with its full strength of over 90 divisions. Only in the air will we have numerical superiority.

Even with Italy out of the war, Germany will be as strong for a defensive war as she ever was for an offensive war. This, of course, involves shortening the Russian front, evacuating much Russian territory, and adopting an entirely defensive plan of campaign.

Severe as have been the losses inflicted on the Germans by the Russians, they are still much less than those suffered by the Russians to date. In the war of attrition, the Germans still have a huge net balance in their favor in military and naval losses suffered, strategic advantages gained, territory and peoples conquered, and even in equipment destroyed, as to date the allies have lost more by U-boat sinkings than the Germans have lost through the magnificent bombing operations of the American and British Air Forces, although the current operations here are in our favor.

What we have gained is that priceless edge on the enemy—the initiative—and Allied morale and matériel and resources are increasing, while those of the enemy are decreasing. But our enemies in Europe and Asia have not yet been struck a fatal blow, and we cannot relax for one moment in the vigorous prosecution of the offensive.

In the far-eastern theater, Japan occupies one-fourth of the territory of China proper; dominates one-half of its population and controls its developed resources. In addition, she has taken over from neighboring countries and islands many valuable resources—including 90 percent of the world's crude rubber.

There is nothing to justify the hope of unconditional surrender by the Axis Powers in the near future. It is by no means clear that we are today as near winning the war as the Axis was in the summer of 1940. No full-scale offensive against Japan has yet commenced. The heroes of Bataan are still prisoners of the Japs. No Allied army has crossed the borders of Germany. Before that is done thousands of American soldiers will make the supreme sacrifice. The roads to Berlin and Tokyo are still long, hard, and bloody.

Our overconfidence is based in a great measure upon the belief that the Italians no longer possess the will to fight. That cannot be said of either the Germans or the Japanese. And as the Nazis and Japs read of our reduced production and our absenteeism, they may think that the American people no longer have the will to make war. We must realize that the war will be won by those who win the last battle. And the last battle has not been fought.

We have every reason for confidence in an ultimate overwhelming victory over both Germany and Japan, but I am authorized by the President to say that in his judgment as of today the major battles lie ahead of us, not behind us.

The prize fighter who lands a blow weakening his opponent does not immediately stop fighting in order to consider how much money he is going to win and how he will spend it. When he returns to his corner he doesn't quarrel with his seconds, and his seconds do not start quarreling among themselves. On the contrary, the fighter, after being refreshed by his seconds, puts everything he has into the effort to deliver a knock-out blow to his opponent. In fighting the Axis we must follow the same course, whether we are fighting on the battle front or working on the home front.

It is frequently said that conditions at home are worse than they were a year ago. If this merely means that, as we have become better mobilized, we are feeling the stresses and strains of total war, which we did not feel a year ago, no one could deny it. But if it means that we have slipped badly backward on the home front, I think we should refresh our memories.

We should recall that not so many months ago people were disputing the need of all-out conversion and the stoppage of the production of passenger cars, electric refrigerators and radios just as today they are disputing the need of drastic limitations on the use of gasoline.

It is not so very long ago that people were debating the need of building so many new steel, aluminum, and magnesium plants just as today they are debating the need of more men for our armed forces

It is only a few months ago that many people, some in high positions, told us we were losing the war and that our whole production program was in confusion.

Yet out of this period of mobilizing for total war we have achieved a war-production program which has caused one strutting dictator to fall almost before the real fighting began. Out of this period of travail we have built and equipped a war machine which has brought fear to the heart of every tyrant and hope to the breast of every lover of liberty.

When we first started mobilizing for war we had, generally speaking, as much as we required for our home needs. But with production reaching unprecedented goals and with millions of our men being drawn into the armed forces, we no longer have goods and services for civilian use in sufficient quantities to satisfy the normal demands of our people.

We do not now have poverty amidst plenty as we had in 1932, but we do have a scarcity of goods amidst a surplus of spending money.

If we did not feel the hardships of war on the home front, it would be a certain sign that we had not yet mobilized ourselves for total war. Shortages of goods are in a very real sense evidence not of blundering, but of all-out mobilization for war.

It inconveniences us when we cannot use our automobiles for pleasure and for greater mileage. But after all there are greater sacrifices. Today our casualties number 90,454.

We complain of the number of physicians who were permitted to enter the armed services because of the inconvenience thereby caused the civilian population. But there is comfort in the knowledge that whereas in the last war, of our wounded 7.1 percent died, while in this war, of our wounded, only 3.7 percent have died.

At the peak of the last World War little more than a quarter of our national output went for war purposes. Now a full half of our national output is being taken to fight the war.

During the last war our allies were able to furnish half of the supplies required for every soldier we sent abroad, and that half which our allies furnished included over 90 percent of the artillery and the heavy ammunition used by our men. In this war we have borne the full burden of equipping our own men. American industry has furnished a vast quantity of equipment purchased outright by our allies.

In addition we have furnished them matériel which totals in dollar volume the amount needed for 10,000,000 troops, besides huge quantities of aircraft.

Thus, we have sen. by lend-lease, 45 percent of our tanks, 46 percent of our locomotives, 40 percent of our railroad cars, 23 percent of our combat cars and carriers, and almost one-fifth of our unprecedented airplane production.

But I do not wish to convey the idea that, because we have done so much, we cannot and should not do more.

What then can we, or should we, do about the shortages which are producing increasing strains in our civilian economy?

We certainly are not going to take from our fighting men or from the fighting men of our allies the things which they must have. As to the shortages of goods which are not essential, we must simply make up our minds that we want none of them for the duration. As to the shortages of necessities we must do what we can to increase the supply without hurting the war effort. We must see that the available supply is equitably distributed in accordance with need and not in accordance with the size of our pocketbooks.

The programming of our all-out mobilization for war was not a simple task. We had to prepare, on the basis of estimates, war-production programs large enough to give us superiority in fighting strength against our known enemies. We could not know all the fields in which we would have to operate. The programs were so vast and complicated that no one, businessman or professor, civilian official or military officer, Democrat or Republican, could look into the future and tell exactly how these programs, when they swung into full production, would fit into the changing requirements of our war plans.

The programs have now developed to the point where they can be subjected to a really critical screening to determine whether in the light of known war conditions, some of them may not be reduced and others extended to the advantage of our over-all war plans, including necessary civilian supply.

At the request of the Office of War Mobilization the principal procurement agencies have set up within their own agencies, committees composed of persons not responsible for the drawing up of the existing programs, to make a critical review of those programs.

The Office of War Mobilization has appointed a special representative to meet with and aid each of these committees. Under this procedure each agency feels a real sense of responsibility for the revision of its own programs. Much progress has been made. As a result, we hope that, without lessening the war effort, some essential supplies for civilians will be increased.

But with the most efficient use of our manpower and materials there will still be acute shortages of civilian necessities. That is why we, like every other country engaged in total war, must accept rationing and price and wage control as the only effective means by which the necessities of life may be equitably distributed at prices within the reach of the average family.

There is no form of wartime rationing and price control which does not involve a degree of regimentation which we would not tolerate in normal times. But this regimentation of our civilian life is as necessary in a period of total war as military discipline is on the battlefield.

Without rationing and price control there would be a food famine in thousands of American homes. Those with the most

money and most influence at the corner grocery store would get more than they are entitled to have in wartime and would get it at the expense of their neighbors with less money or less influence.

To those who demand higher wages it is fair to recall that during the last war, from April 1917 to November 1918, a period of 19 months, the cost of living rose 29.5 percent. In the first 19 months of our active participation in this war, from December 1941 to July 1943, the cost of living increased only 12 percent. During approximately the same period the weekly wages of factory workers as a whole went up 34.7 percent. This does not mean hourly wages. It means the money a man takes home each week.

To those who demand higher prices for farm products, it is fair to recall that the net income of the farmers as a whole in 1942 was 50.7 percent higher than it was in 1941. It is estimated that net farm income in 1943 will be 24.8 percent higher than it was in 1942 when it was higher than ever before in history.

To those who want higher prices for their manufactured products it is fair to recall that the net profits of corporations after taxes in 1942 were 4.2 percent higher than they were in 1941, and 83.2 percent higher than they were in the prewar year 1939. It is estimated that corporation profits after taxes in 1943 are running 12.2 percent above 1942.

We should remember that our boys are fighting, not to increase the income of any one of us, but to safeguard the liberties of all of us.

We cannot abandon the hold-the-line order on the price front without abandoning it on the wage front. And if we abandon it on both fronts, the twenty millions or more of our people receiving low wages, small salaries and small fixed incomes which have not been increased materially since the war started will be ground below the level of fair subsistence.

Apart from those who before the war were unemployed or were receiving substandard pay, no man or woman who is as well off as he was before the war started, has a right to complain that he is not fairly treated unless he has first done his part to see that those who are less fortunate than he are justly treated.

He should think first of the soldier's wife, the soldier's mother, the preacher, the teacher, the small tradesman, the State, county, and city employees, the old folk living on small pensions whose purchasing power has gone down as the cost of living has gone up. There is no room in total war for the politics of pressure groups.

The first interest of every good citizen should be to see that there is no further rise in the cost of living. If, in some cases, increased production costs make further price adjustments unavoidable in order to obtain necessary war production, then we must, by more rigid price control, or subsidy, of other items, see that there is no rise in the cost of living.

It does not make sense to say that we can use subsidies to prevent numerous specific food prices from rising but that we cannot use subsidies to reduce a limited number of key items in the family food basket to offset rises permitted in other food items.

Congress by the act of October 2, 1942, declared that prices and wages should be stabilized so far as practicable at the level of September 15, 1942.

The cost of living rose 6 percent between September 1942 and May 1943. The rise was halted in June and the figures for July indicate a drop of nearly 1 percent. The June and July figures do not fully reflect the reduction in the cost of living which has been brought about by the recent Government action reducing ceiling prices on meat and butter by 10 percent, on fresh fish by 20 percent, and on cabbage and lettuce by 50 and 25 percent, respectively. If these reductions were fully reflected they would show that the cost of living today is only 4½ percent above the September 1942 level.

At a recent meeting of the War Mobilization Committee the President requested the Director of Economic Stabilization to work out, in cooperation with the Food Administrator, the Price Administrator, and the Reconstruction Finance Corporation, a food price program with a view to stabilizing the cost of living as nearly as practicable at the level fixed by Congress. Definite progress is being made. There will be a substantial reduction in the cost of actual necessities—not of fancied wants.

But wages as well as prices must be held. The fight against inflation can be won if we have the will to win it. It cannot be won if the will for higher wages and higher prices is stronger than the will to keep down the cost of living.

Constructive criticism is helpful but it is not helpful to disparage our national effort. It has repeatedly been charged by persons of recognized prominence that we have a food shortage, and that it is due to our failure to reclaim 47,000,000 acres which were lost from food production between 1932 and 1939. I admit their sincerity but not their figures nor their conclusions.

This figure of 47,000,000 acres is misleading. It apparently refers only to the 17 principal agricultural crops. During the period of 1932 to 1939 the acreage of other crops increased by 9,000,000. Since 1939 we have increased the acreage of 52 agricultural crops by 16,000,000 acres so that the total harvested acreage in 1942 was only 22,000,000 less than in 1932.

The important thing, however, is not the acres in production but the food produced. We eat food. We do not eat acres.

With 22,000,000 less acres in production and with less manpower in 1942 than in 1932, the American farmer produced 36 percent more food.

We have done this through efficient soil conservation programs, by increasing our yield per acre of corn from 26.5 bushels to 35.5 bushels; of cotton from 173½ pounds to 275 pounds and of wheat from 13.1 bushels to 19.8 bushels, all under the intelligent agricultural legislation developed during the last 10 years, and supported by members of both political parties.

Instead of the war resulting in less food for the civilian population, our people are eating more food now than they did before Pearl Harbor. Neither the farmer nor the Government can be blamed if the civilian population, because of their increased purchasing power, and our war requirements, cannot be supplied with all the kinds of food they want and as much of every kind as they would like to buy.

There are many persons in and out of Government who know exactly how food production can be increased above the record-breaking yield of 1942. They have the advantage of the Food Administrator because they have no responsibility. He has. He finds it a difficult problem but he has developed a comprehensive food program which is now ready for submission to the President and to the Congress when it convenes.

We need more coal. This is due to increased requirements for civilian needs and for military purposes. At the same time our production of coal has decreased.

Because of the threatened coal shortage, several days ago the President requested me to ask Secretary Ickes to consider the advisability of increasing the working hours in the mines. Secretary Ickes, in accordance with the law, applied to the War Labor Board for authority to change from a 7-hour day to an 8-hour day, so as to permit a 48-hour week. Today the Board issued an order permitting an 8-hour day in conjunction with a 48-hour week at mines designated by Secretary Ickes. The order has been formally approved by the President.

Work as hard as we may, we will not preserve a stable economy if we do not have the courage to control the surplus of spending money which is flooding our markets. While a sizable minority of our people have less purchasing power than before the war, rising prices and rising wages have given the majority of our people a vastly greater purchasing power than they have ever before enjoyed and at a time when we have not the manpower to produce the goods which they would like to buy.

Allowing for the present higher taxes and for normal savings, our people have nearly twenty billion more to spend a year for goods and services than there are goods and services available for them to buy. It is hard to control prices, enforce rationing, and to stamp out black markets when people have too much surplus spending money.

For our own protection we must drain off by taxation or freeze by enforced savings that excess purchasing power. If we do not, we will probably try to outbid one another to get the goods and services we want. If that happens we will not get more but we will pay more, and we will find that the money we have put into insurance policies and into savings accounts is worth less, and the dollars we have earned will buy less.

We have spent too much time arguing how much of our past taxes should be forgiven in order to get on a pay-as-you-go basis, instead of getting down to the grim business of imposing the higher taxes which total war requires. We cannot ask our soldiers to do our fighting and also to pay our taxes when they return from the battlefields. War taxation should not become a pawn in a political game. It is a stern duty to be met by every citizen in accordance with his capacity to pay.

In every war there are noisy minorities engaged in intrigues and cabals to belittle the war effort of the Nation, both on the home and fighting fronts. During the Revolution even in the Continental Congress there were those who were constantly finding fault with General Washington and his conduct of the war. In the War between the States there were those even in the Congress who were continually muttering against what they considered the blundering and ineptitude of President Lincoln. It was said that they had lost the confidence of their countrymen. But these little groups of little men never understood the patriotic zeal of the common men and women who gave their full devotion to their great war leaders.

In the last war there were those who attacked President Wilson as a war leader and as a peacemaker. But now we realize that, had his health not failed him and had the people supported his wise leadership, this war, in all probability, would never have occurred.

Destructive critics are not confined to any political party. Nor has any political party a monopoly of those who now, in their zeal for party success, divert the minds of the people from the war effort. In the fall of 1944 there will be a national election. Then there must be political discussion. Until then, the less the better. The people of America are not concerned about party advantage or personal ambition. They believe in equality of sacrifice. They have faith in the free world for which freedom-loving people everywhere are fighting and dying. They have the will to win.

Building for the Future

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Building for the Future," delivered by me at the Kiwanis State Convention at Milwaukee, Wis., August 2, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Kiwanians, I am happy to be with you this evening. With very little effort I could turn the clock back to 1933 when it was my privilege to be governor of this great district—Wisconsin and upper Michigan. Being governor provided one of the great experiences of my life. It was during the period when men were cracking up—when men who had only material values among their assets found it hard to survive. I went up and down this State and met with many groups. It was my job to hold the line, to help keep Kiwanis intact. I gave of myself and, giving, I received a thousandfold in return.

I could spend hours telling of my experiences. My job was to preach the philosophy of Kiwanis—not the letter, but the spirit; and from the many contacts that I made, came some of the rarest friendships of my life. I learned much. I learned that no one can be unhappy while engaged in helpful action for others. I removed the blinders from my own eyes, and when I had done that I was privileged to find many pearls of great price. That is what Kiwanis has done for me.

In Kiwanis we learn that man does not live by bread alone, and that the saving power in civilization is not in material elements, but in the spiritual and idealistic. There are no frozen assets of the mind. The soul of man never goes into bankruptcy. Browning says that "Life has meaning, and to find its meaning is my meat and drink."

Since those strenuous, happy days when I served this district as your governor, much water has gone over the dam. In those 10 years each of us has literally witnessed a world revolution.

In 1933, the year that Hitler came into power, Roosevelt became President, Joshua Johns became international president, and I became your governor, great changes began. I need not tell you about the changes in our economic philosophy and the impact upon our way of thinking that has occurred in this country. I need not speak to you of that world movement which began under Hitler and which resulted in the Second World War. Today I want to speak to you about the broad view which we, as Kiwanians and citizens of this great country, must take. We have to brush aside the mist that confuses us. I remember in Washington last spring—I was walking in the evening in a dense fog, and I could just see a glimmer of light. It was a lamp light, which gave me direction. I followed that light. But the fog persisted. Then a breeze came up and blew the fog away so I could more clearly see my way.

Several months ago I flew from Chicago to Duluth to be present at the Quints' christening of the ships at Superior. We flew above the clouds. Below us it was raining pitchforks, but above us the sun was shining. We had risen above the obstruction and it was clear sailing.

These two instances illustrate the steps we must take in order to get that mental poise and perspective that is necessary to see through the conflicting issues, the maze of circumstances—so that we can chart our course as individuals and as citizens of the Republic.

The job that lies ahead, of rebuilding society upon the basis of lasting peace, is a task calling for the leadership of men and women who are close to the divine source of life. It is becoming increasingly apparent that the chaotic condition that the world is in is due to influences that reach far back into the history of mankind—due to evils and wrongs and sins of the people.

In Washington and elsewhere, we hear much about peace plans, resolutions. Many of our so-called leaders are indulging in wishful thinking for some magic formula. This line of thinking follows out much of the thought that we have indulged in here in America in the last 10 years. It is the old miasma of planning, planning, planning—by folks who do not know how to do it.

Now, don't get me wrong; I do not discount planning of the right kind. But if I were called upon to build an automobile engine—I, who know nothing about an automobile engine—I would be a poor man to draw plans, but I would get men who knew how. Never forget "the how" if you are to accomplish anything.

In the world of practical affairs there is a place for the practical man and a place for the idealist. A happy combination of the two generally brings the best results. There is a place for the dreamer, but we want to be sure that the dreamer is in his place in a world like the one in which we are living.

Our real problem in international affairs is the same as on the domestic front, how to attain the unity that alone makes peace possible. We know that unity between husband and wife, unity between labor and management, unity between State and Nation is not a matter of legislation; it is a matter of learning how to live and work together.

In world affairs it is our job to make democracy work, to prove that it is a safe thing for the world, to make it practical, idealistic, freedom producing.

There is much talk about a new world order, a parliament of nations. We know until the spirit of cooperation dwells among men, not material gain but the welfare of the people will be the purpose of the nations; until that time arrives, mere governmental forms will not do the job.

In the Civil War there were many Democrats who opposed the war, and they were called Copperheads. There are no Copperheads in America today. Why? Because America was attacked; the Axis intervened in our affairs. Prior to Pearl Harbor, according to the Gallup poll, from 65 to 90 percent of America was against intervention; but when the Axis made the fatal mistake of attacking us, the issue of intervention or nonintervention went out the window, and we became one people, dedicated to smashing the Axis and building a better world.

Each of us who meet today has a common interest. Each of us has dedicated our efforts toward a constructive program of living characterized by the motto "We build." We have found that in serving others we serve ourselves. We have found that in building for others we are building for ourselves.

At no time in the history of this organization has there ever been as great a challenge as there is today.

War is essentially a business of destruction and annihilation, but when it is directed against evil forces it is a constructive work.

And so, today, decent, God-fearing citizens of the United Nations have banded together to wipe out the pestilence-ridden centers of totalitarianism.

That is a constructive job. It will eliminate the plague centers and will enable us to rebuild a mangled, bleeding, suffering humanity. It will enable us to rebuild a war-shattered economy. It will enable us to restore a decent standard of international morality. It will enable us to reenshrine in the hearts of mankind the great abiding values without which mankind cannot progress.

Out of this era of war, out of this period of conflict, out of this eruption of lawlessness from powerful international gangsters, there is an opportunity for this organization and for all people who believe in building, to do a job such as has never been done before in the history of mankind.

That job of building must begin with the individual, must carry through to the family units, to civic groups, to municipalities, to States, to the Nation, and to international programs of building for a decent world order.

This will not be an easy job. The job of building will not be done by slogans. It won't be done by propaganda, and, frankly, it won't be done by speech making.

And let me emphasize, also, that it will not be done by legislation.

If this war has brought home one lesson to us, it is the lesson that there is no legislative legerdemain which can substitute for honest work and effort.

We have learned the first hard, fundamental lesson of life when we learn there is no magic carpet, streamlined route to success, peace, and prosperity.

We have learned you cannot legislate the creation of tanks and guns and planes and munitions.

We have learned that men actually have to build the tanks and the planes and the guns and the munitions. We have learned you cannot create a paper army. Men actually have to do the fighting.

We have learned you cannot finance a war with printing presses. We have learned that somebody has to pay the bills, somebody has to pay the taxes, somebody has to buy the bonds. We have learned that even the greatest professors cannot devise legislation which will put food on the American table. We have learned the simple and elementary lesson that food has to be raised by the farmer with the assistance of Almighty God.

We have learned that even an all-powerful Interstate Commerce Commission, or an Office of Defense Transportation, cannot wave a magic wand to create a fabulous transportation machine overnight. The engines and the boats and trucks have to be built and they have to be driven.

In short, my friends, we have learned one great lesson—no amount of theorizing, no amount of speculation, no amount of master planning can substitute for the sweat and the toil which actually do the job.

We of this organization must face one salient fact. At the close of this war we will face the most tremendous building job in history. It will be a job of character building. It will be a job of financial rebuilding. It will be a spiritual rebuilding job, and it will be a physical rebuilding job. We will rebuild homes and shattered lives and shattered economies. At the outset, then, let us recognize that these things will never be rebuilt by any panacea or formula which will serve as a substitute for work.

Let me make it clear that I am not disparaging any type of post-war planning. I am a fervent believer in post-war planning, but I insist that our plans shall embrace the fundamental American doctrine that we are to proceed within the framework of our Constitution and according to that pattern which has made us the greatest Nation on earth.

Let me make it clear also that I am not asking that we beat our way back to any kind of a wilderness. I am merely insisting that we build on the solid bedrock fundamentals.

Now, what do we mean by that? Well, let us take its meaning with respect to our economy.

I am frank to say that if our post-war economy is to be built on a continuously expanding centralized control, we will not be building on fundamentals. I believe that an increasingly centralized control and an increasingly stringent regimentation is alien to our American pattern.

I believe in security, but I do not believe that that security must be purchased at the price of individual initiative and progress.

I don't believe that we can successfully rebuild in the post-war period if that rebuilding is to be keyed to the creation of a new deluge of Federal agencies, created either by law or by Executive order. I believe in planning our economy, but I can find very little in the kind of "planned economy" which we have had in the last decade to recommend it for the future.

In the last years we have seen an almost fantastic trend toward controls, but I am not going to discuss these controls today, certainly not in political terms.

I do want to briefly mention them in their social aspects. Each of these controls appears to me to inevitably lead toward an increasing regimentation and an increasing erosion of individual initiative, an increasing dependence on government, an increasing appalling public debt, and in general a double-time retreat from the form of government which we know as a republic. I do not want to see American initiative, private enterprise, private property left standing at the wayside. I do not want to see business—particularly small business—drained dry of any reserves so that in the post-war period it will have to come hat in hand to Government. Individuals and business alike cannot build under that type of program. At best they can only barter their independence for a dole.

Government must be in the picture in the post-war period. There will be Government controls. There will be Government assistance. There will be Government planning. And there should be. But it must be planning and assistance within the framework of our republican form of government and within the framework of our kind of life.

Abraham Lincoln said "I have faith in the common people."

The common people of America are winning this war, and their greatness rises to the heights, above the bickering and the discontent, and some of the shortcomings in Washington.

The common people will do the building in the future.

The doctrine of building is a dynamic doctrine. It is a doctrine which repudiates the philosophy of planned scarcity. It is the doctrine which repudiates the idea of a static economy.

I believe that within one decade after the close of this war at least 60 percent of our total production will be in terms of new products and new methods which were unknown commercially at the close of the war.

We will face an era when farm products may be used as raw material in industry. We will face the most incredible research period the world has ever known. We will face these things if they are not throttled at birth by Government red tape. We will face these things if we cling to the Bill of Rights, if we reenshrine constitutional government, if we salvage freedom of opportunity, if we preserve free enterprise.

Gentlemen of Kiwanis, never forget to justify our existence. We must measure up to our motto: We build.

Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Our Foreign Policy in the Framework of Our National Interests," by Hon. Cordell Hull, Secretary of State, September 12, 1943, which was broadcast over the network of the National Broadcasting Co.

Mr. BARKLEY. Mr. President, in connection with the request just made by the Senator from Texas, I ask that there be printed an editorial from the Washington Daily News of yesterday entitled "The Hull Post-War Policy," and an editorial from the New York Times of yesterday entitled "American Peace Aims."

There being no objection, the address and the editorials were ordered to be printed in the RECORD, as follows:

OUR FOREIGN POLICY IN THE FRAMEWORK OF OUR NATIONAL INTERESTS

(Address of the Honorable Cordell Hull, Secretary of State)

I

In July of last year, in an address over these networks, I outlined, as definitely as was possible at that time, the chief problems and conditions confronting us in the field of foreign relations and sought to indicate some of the policies necessary for meeting these problems. I pointed out that in the present conflict each of the United Nations is fighting for the preservation of its freedom, its homes, its very existence; and that only through united effort to defeat our enemies can freedom, or the opportunity for freedom, be preserved, for all countries and all peoples. I spoke of the need to chart for the future a course based on enduring spiritual values which would bring our Nation and all nations greater hope for enduring peace and greater measure of human welfare. To this end, I urged intensive study, hard thinking, broad vision, and leadership by all those, within each nation, who provide spiritual, moral, and intellectual guidance.

At that time, the military picture was still dark. The United Nations were still fighting a desperate war of defense against better prepared foes. We had suffered a succession of grim defeats.

Since then, the military picture has greatly changed.

We are now winning heartening victories in the air, at sea, and on land. Our counterblows are steadily increasing in power and effectiveness. They are stepping stones to our final triumph over the forces of conquest and savagery.

Attainment of complete victory, although now certain, is still a formidable task. Our lesser enemies are fast losing heart and strength. Italy has already surrendered. But our principal enemies, Germany and Japan, though shaken, still possess great resources and enormous strength. They still control vast portions of Europe and of Asia. To defeat them completely, the United Nations need to make, on the battle front and at home, efforts even greater than those thus far made.

In making these more intensified efforts, it is more important than ever for all concerned to have a clear understanding of what is at stake, now and in the future.

During recent months, public discussion and debate on a high plane have revealed the profound concern of our people with the issues of the country's foreign relations. These issues need to be seen in their full perspective. Unless our people so see them, and unless our people are willing to translate their understanding of them into action, the well-being of the Nation—and even its very life—may be gravely menaced.

The foreign policy of any country must be expressive of that country's fundamental national interests. No country can keep faith with itself unless that is so.

In determining our foreign policy we must first see clearly what our true national interests are. We must also bear in mind that other countries, with which we deal in the conduct of foreign relations, have their national interests, which, of course, determine their policies.

Obviously there are, even between friendly nations, differences as regards their respective aims and purposes and as regards the means of attaining them. But there are also immense areas of common interest. By cooperating within those areas, the nations not only can advance more effectively the aims and purposes which they have in common, but can also find increased opportunity to reconcile, by peaceful means and to mutual advantage, such differences as may exist among them.

II

At the present time, the paramount aim of our foreign policy, and the paramount aim of the foreign policy of each of the other United Nations, is to defeat our enemies as quickly as possible. Here we have a vast area of common interest and a broad basis of cooperative action in the service of that interest.

Every weapon of our military and economic activity and every instrumentality of our diplomacy have been and are directed toward the strengthening of the combined war effort. All these necessarily go together.

The land, air, and sea forces of the United States are fighting, with surpassing skill and heroism, in the Mediterranean, over the Nazi-held fortress of Europe, in the far reaches of the Pacific and of Asia. In each of the theaters of war they are operating shoulder to shoulder, in a spirit of superb comradeship, with the gallant forces of one or more of our allies.

The resolute will and devoted effort of our people have brought about the greatest miracle of production and delivery in all history. Our war supplies are flowing outward in a constant and ever-increasing stream, not alone to those areas in which our own forces are engaged, but to every point on the globe at which the armed forces of the United Nations are fighting.

We are in continuous consultation with our allies on various phases of military, economic, and political activity—as required by the exigencies of a constantly changing situation.

Our cooperation with our allies has long since reached the state where contingents of the forces of various allies are serving, side by side, under unified command. We have developed this type of cooperation with invincible British, with intrepid and resolute Canada, Australia, New Zealand, and South Africa, with valiant and determined China, and with the forces of other allies. It is being rapidly extended as the military operations progress.

To the Soviet Union, whose heroic armies and civilian population have earned everlasting renown through their magnificent feats of courage and sacrifice, we have been glad to render all possible aid. It is our

desire and our settled policy that collaboration and cooperation between our two countries shall steadily increase during and following the war.

With the re-emerging military power of France we have been and are developing a heartening degree of coordinated effort. We look forward to the day when reborn France will again take her rightful place in the family of free nations.

With governments which the Axis Powers have driven from their invaded and brutally oppressed but unconquerable countries we have the most friendly relations. These relations reflect our profound and active sympathy for the suffering of their peoples and our determination that the victory of the United Nations shall restore their nations to freedom.

With all but one of the nations of the Western Hemisphere we have today the closest ties of solidarity and association—the fruit of 10 years of unremitting labor on the part of all of these nations to build in this hemisphere a fraternity of good neighbors. Each of our American associates is making a magnificent contribution to the war effort. Here we have, in peace and in war, a highly successful example of cooperation between sovereign nations.

The victories of the United Nations have been the direct result, not of separate and uncoordinated military, economic, and diplomatic action, but of close coordination of all three types of action, both within each of the nations and among all of them. It is well to recall some outstanding examples.

Our protracted diplomatic effort to achieve a fair and peaceful solution of difficulties in the Far East afforded our military authorities and those of other countries now in the ranks of the United Nations many months of precious time for strengthening defenses against the combined Axis threats in the Atlantic and in the Pacific, in case Japan should reject a peaceful settlement as she eventually did.

The drawing together of the American republics to assure their common defense made it possible to establish a line of communications through the Caribbean, Brazil, and the South Atlantic. That line proved to be of invaluable importance alike in transporting equipment to the British forces at El Alamein, in supplying our own expedition to north Africa; and, at a desperate hour, in putting our war planes into the air over the Pacific islands and in China.

Diplomatic foresight and patient and vigorous activity by the agencies of our foreign policy played an indispensable part in preparing the way by which the huge strategic north African area was brought without heavy losses into the sphere of the United Nations and the French Fleet was kept out of German hands. Had Vichy felt it feasible to ignore our diplomatic pressure directed toward preventing the surrender of the north and west African areas to the Nazis and the delivery of the French Fleet to Hitler as Laval had planned, or had Spain entered the war on the side of the Axis as Hitler had hoped, control of the Mediterranean would have early fallen into the hands of our enemies. Instead, the Allied forces converged, with a skill and precision unequalled in military annals, upon this gateway through which we are now invading the European Continent.

The Mediterranean operations weakened the German air force available on the Soviet front, just as the Russian resistance, by holding the German armies on the eastern battle line, prevented Hitler from parrying our thrust toward his southern flank. Meanwhile, our constant military pressure against Japan had its inevitable effect in deterring Japan from aggression against the Soviet Union.

Our diplomatic agreements with fearless Danish officials on free soil and with the Government of Iceland made it possible to guard the great North Atlantic passage as a precious route for our supplies and troops and as defense against attack from the north.

The perseverance of China, the first victim of the movement of aggression, in resistance to Japan has been aided in no small measure by the faith of her leaders in us, based on their knowledge of our history and policy and on their observation, as time went on, of our efforts to achieve a fair and peaceful settlement in the Far East, our economic support, and, more recently, our military assistance. China's resistance has held enmeshed on her front substantial Japanese forces which might otherwise have been loosed against us and other of the United Nations in the Pacific; and China is playing an important part in the United Nations' program for the winning of the war and achievement of a stable peace.

The agencies of our foreign policy are at all times at work as instruments of national defense. Since the attack upon us, they have been intensively at work in assisting our armed forces to achieve the victories which are now fast increasing in numbers and significance.

Beyond final victory, our fundamental national interests are—as they always have been—the assuring of our national security and the fostering of the economic and social well-being of our people. To maintain these interests, our foreign policy must necessarily deal with current conditions and must plan for the future in the light of the concepts and beliefs which we, as a Nation, accept for ourselves as the guiding lines of our international behavior.

Throughout our national history our basic policy in dealing with foreign nations has rested upon certain beliefs which are widely and deeply rooted in the minds of our people. Outstanding among these are:

1. All peoples who, with "a decent respect to the opinions of mankind," have qualified themselves to assume and to discharge the responsibilities of liberty are entitled to its enjoyment.

2. Each sovereign nation, large or small, is in law and under law the equal of every other nation.

3. All nations, large and small, which respect the rights of others, are entitled to freedom from outside interference in their internal affairs.

4. Willingness to settle international disputes by peaceful means, acceptance of international law, and observance of its principles are the bases of order among nations and of mankind's continuing search of enduring peace.

5. Nondiscrimination in economic opportunity and treatment is essential to the maintenance and promotion of sound international relations.

6. Cooperation between nations in the spirit of good neighbors, founded on the principles of liberty, equality, justice, morality, and law, is the most effective method of safeguarding and promoting the political, the economic, the social, and the cultural well-being of our Nation and of all nations.

These beliefs are among the most important tenets of our national faith. They are capable of universal application as rules of national and international conduct. In their application by other nations and in willingness and preparedness on the part of all peacefully inclined nations to join together to make them effective lies the greatest hope of security, happiness, and progress for this country and for all countries.

Vigorous participation in efforts to establish a system of international relations based on these rules of conduct, and thus to create conditions in which war may be effectively banished, is and must be a fundamental feature of our foreign policy—second only to our present over-riding preoccupation with the winning of complete military victory. Here, too, our Nation and other peacefully inclined nations have a vast and crucial area of common interest.

In the Atlantic Charter and in the declaration by United Nations, the nations now associated in this war for self-preservation have clearly expressed their recognition of the existence of this area of common interest. Our task and that of our associates is to utilize this common interest to create an effective system of international cooperation for the maintenance of peace.

As I read our history and the temper of our people today, our Nation intends to do its part, jointly with the other peace-seeking nations, in helping the war-torn world to heal its wounds. I am sure also that our Nation and each of the nations associated today in the greatest cooperative enterprise in history—the winning of this war—intends to do its part, after the victory of the United Nations, in meeting the immense needs of the post-war period. Those needs will embrace the task of taking practical steps to create conditions in which there will be security for every nation; in which each nation will have enhanced opportunities to develop and progress in ways of its own choosing; in which there will be, for each nation, improved facilities to attain, by its own effort and in cooperation with others, an increasing measure of political stability and of economic, social, and cultural welfare.

If our Nation and like-minded nations fail in this task, the way will be open for a new rise of international anarchy, for new and even more destructive wars, for an unprecedented material and spiritual impoverishment of mankind. Many times in the course of history nations have drifted into catastrophe through failure, until too late, to recognize the dangers which confronted them and to take the measures necessary to ward off those dangers. Post-war cooperation to maintain the peace is for each peace seeking nation scarcely less essential for its self-preservation than is the present coperative effort to win the war.

IV

If there is anything on which all right-thinking people are agreed, it is the proposition that the monstrous specter of a world war shall not again show its head. The people of this and other lands voice this demand insistently. There is danger in complacency and wishful thinking. The nations that stand for peace and security must now make up their minds and act together—or there will be neither peace nor security.

It is abundantly clear that a system of organized international cooperation for the maintenance of peace must be based upon the willingness of the cooperating nations to use force, if necessary, to keep the peace. There must be certainty that adequate and appropriate means are available and will be used for this purpose. Readiness to use force, if necessary, for the maintenance of peace is indispensable if effective substitutes for war are to be found.

Differences between nations which lead toward armed conflict may be those of a nonlegal character, commonly referred to as political, and those capable of being resolved by applying rules of law, commonly referred to as justiciable. Another cause of armed conflict is aggression by nations whose only motive is conquest and self-aggrandizement. We must, therefore, provide for differences of a political character, for those of a legal nature, and for cases where there is plain and unadulterated aggression.

Political differences which present a threat to the peace of the world should be submitted to agencies which would use the remedies of discussion, negotiation, conciliation, and good offices.

Disputes of a legal character which present a threat to the peace of the world should be adjudicated by an international court of

justice whose decisions would be based upon application of principles of law.

But to assure peace there must also be means for restraining aggressors and nations that seek to resort to force for the accomplishment of purposes of their own. The peacefully inclined nations must, in the interest of general peace and security, be willing to accept responsibility for this task in accordance with their respective capacities.

The success of an organized system of international cooperation with the maintenance of peace as its paramount objective depends, to an important degree, upon what happens within as well as among nations. We know that political controversies and economic strife among nations are fruitful causes of hostility and conflict. But we also know that economic stagnation and distress, cultural backwardness, and social unrest within nations, wherever they exist, undermine all efforts for stable peace.

The primary responsibility for dealing with these conditions rests on each and every nation concerned. But each nation will be greatly helped in this task by the establishment of sound trade and other economic relations with other nations, based on a comprehensive system of mutually beneficial international cooperation not alone in these respects but also in furthering educational advancement and in promoting observance of basic human rights.

There rests upon the independent nations a responsibility in relation to dependent peoples who aspire to liberty. It should be the duty of nations having political ties with such peoples, of mandatories, of trustees, or of other agencies, as the case may be, to help the aspiring peoples to develop materially and educationally, to prepare themselves for the duties and responsibilities of self-government, and to attain liberty. An excellent example of what can be achieved is afforded in the record of our relationship with the Philippines.

Organized international cooperation can be successful only to the extent to which the nations of the world are willing to accept certain fundamental propositions.

First, each nation should maintain a stable government. Each nation should be free to decide for itself the forms and details of its governmental organization—so long as it conducts its affairs in such a way as not to menace the peace and security of other nations.

Second, each nation should conduct its economic affairs in such a way as to promote the most effective utilization of its human and material resources and the greatest practicable measure of economic welfare and social security for all of its citizens. Each nation should be free to decide for itself the forms of its internal economic and social organization—but it should conduct its affairs in such a way as to respect the rights of others and to play its necessary part in a system of sound international economic relations.

Third, each nation should be willing to submit differences arising between it and other nations to processes of peaceful settlement, and should be prepared to carry out other obligations that may devolve upon it in an effective system of organized peace.

All of this calls for the creation of a system of international relations based on rules of morality, law and justice as distinguished from the anarchy of unbridled and disordant nationalisms, economic and political. The outstanding characteristic of such a system is liberty under law for nations as well as individuals. Its method is peaceful cooperation.

The form and functions of the international agencies of the future, the extent to which the existing court of international justice may or may not need to be remodeled, the scope and character of the means for making international action effective in the maintenance of peace, the nature of international economic institutions and arrangements that may be desirable and feasible—all these are among the problems which are receiving attention and which will need to be determined by agreement among governments, subject of course, to approval by their respective peoples. They are being studied intensively by this Government and by other governments. They are gradually being made subjects of consultation between and among governments. They are being studied and discussed by the people of this country and the peoples of other countries. In the final analysis, it is the will of the peoples of the world that decides the all-embracing issues of peace and of human welfare.

V

The outbreak of war made it clear that problems of crucial importance in the field of foreign relations would confront this country as well as other countries upon the termination of hostilities. It became the obvious duty of the Department of State to give special attention to the study of conditions and developments relating to such problems. As the war spread over the earth, the scope of these studies was extended and work upon them was steadily increased, insofar as was compatible with the fullest possible prosecution of the war.

By direction of the President and with his active interest in the work, the Department of State undertook, through special groups organized for the purpose, to examine the various matters affecting the conclusion of the war, the making of the peace, and preparation for dealing with post-war problems. In doing this work, we have had collaboration of representatives of other interested agencies of the Government and of many national leaders, without regard to their political affiliation, and the assistance of a specially constituted and highly qualified research staff. We have been aided greatly by public discussion of the problems involved on the part of responsible private individuals and groups, and by the numerous suggestions and expressions of opinion which we have received from all parts of the country. In proceeding with this work we envisage the fullest cooperation between the executive and the legislative branches of the Government.

We have now reached a stage at which it becomes possible to discuss in greater detail some of the basic problems outlined in this address and in my previous statements. I hope to be able to undertake this from time to time in the early future.

The supreme importance of these problems should lift them far above the realm of partisan considerations or party politics. It is gratifying that both in the Congress and elsewhere great numbers of thoughtful men have so approached them. A heavy responsibility rests upon all of us to consider these all-important post-war problems and to contribute to their solution in a wholly nonpartisan spirit.

[From the Washington Daily News of September 13, 1943]

THE HULL POST-WAR POLICY

Secretary Hull's declaration of American policy is a great state document. It approaches the problems of international peace and justice from the basis of American national interests. It states America's commitment to international cooperation to win the war and to win the peace. It has the clarity of an honest and forthright mind, whose courageous vision of a better world has the maturity of long practical experience.

His countrymen can well afford to listen to one whose foresight and judgment have been proved by events. He warned the President of the probability of a Japanese attack almost a year before Pearl Harbor. He warned Russia 6 months in advance that Hitler planned to attack her.

The Roosevelt-Hull policy—and of course the President and Secretary of State shared its development—could not prevent the war or our involvement through the aggression of the enemy. But that policy did gain us invaluable time for better military preparedness. It did make the record on which this Nation could fight honorably and well in battle, and in victory stand for an enlightened and enduring peace.

Before and during the war that policy forged a closer collaboration with Britain and our other allies. In the Far East it brought new confidence to our lonely friend, China, who has absorbed so much of Japan's military strength so long, so heroically, and at such great sacrifice. In this hemisphere it produced the fast partnership with Canada, and by the good-neighbor attitude brought all Latin America except Argentina to our side. This diplomacy resulted in bases in the Atlantic, Caribbean, and South America, which enabled us to fight around the world and to supply our allies.

The policies toward Vichy France kept the French fleet and northwest Africa out of Hitler's hands. Our Darlan and Spanish policies helped us and our allies with a minimum of loss in time and blood to occupy northwest Africa, free the Mediterranean, and invade Europe through a defeated Italy. Results have demonstrated the wisdom of those policies beyond the power of a small minority of smearers to distort or defame them.

Also on the record, the policy has been one of friendship for Russia, with whom Secretary Hull now appeals for even closer collaboration "during and following the war."

After complete victory, which, will require "efforts even greater than those thus far made," Secretary Hull wants a peace to assure our national interests, which he defines as "national security and the fostering of the economic and social well-being of our people." Our future policy is part of "our basic policy * * * throughout our national history," which has been the recognition of—

The right of all peoples to liberty who are qualified to discharge its responsibilities; equality of all nations under law; non-interference in internal affairs of other nations; observance of international law and peaceful settlement of disputes; non-discrimination in economic opportunity and treatment among nations; cooperation among nations on principles of liberty, equality, justice, morality and law, for economic and social welfare of all.

Believing that these "tenets of our national faith" are "capable of universal application" in which all peacefully inclined nations have a common interest, he states:

"Our task and that of our associates is to utilize this common interest to create an effective system of international cooperation for the maintenance of peace. * * * Those (immediate post-war) needs will embrace the task of taking practical steps to create conditions in which there will be security for every nation; in which each nation will have enhanced opportunities to develop and progress in ways of its own choosing."

The "system of organized international cooperation," he says, must provide adequate means for conciliation of political disputes threatening the peace, and for adjudication of legal disputes by an international court. "Readiness to use force, if necessary, for the maintenance of peace is indispensable if effective substitutes for war are to be found."

To prevent the economic distress and cultural backwardness which also cause wars,

he appeals for sound trade and economic relations, educational advancement, and observance of human rights. To nations having trusteeship for dependent peoples, he cites our Philippine record as "an excellent example."

Finally he pledges "fullest cooperation" with Congress in working out in a non-partisan spirit the details of this policy, subject to popular approval.

Here is no isolationism; no superstate; no blank-check alliance. Here is a sane policy of cooperation by the sovereign United States with other nations for peace.

[From the New York Times of September 13, 1943]

AMERICAN PEACE AIMS

Upon Secretary Hull the country has always been able to depend for a consistent statement of the highest liberal principles in the field of international relations. His radio address last night was another important contribution to the discussion of the bases of a just post-war settlement and a lasting peace. If there are few surprises in Mr. Hull's speeches it is because, as a responsible official, he can be counted upon to say what he ought to say, and because he has embraced a well-thought-out set of principles so sound that he does not find it necessary constantly to exchange them for another set.

Mr. Hull's principles are those of a clear-sighted international liberalism. The foreign policy of any country, he concedes and insists, must be expressive of that country's fundamental national interests; but in determining our foreign policy, he adds, we must first see clearly what our true national interests are. Even between friendly nations there are differences as regards their respective aims and purposes, but there are also immense areas of common interest. Post-war cooperation to maintain the peace, for example, is for each peace-seeking nation "scarcely less essential for its self-preservation than is the present cooperative effort to win the war."

What form should this post-war cooperation take? Mr. Hull draws an instructive distinction between three kinds of differences between nations: (1) Political, (2) those capable of being resolved by applying rules of law, and (3) those arising from "unadulterated aggression." The first can be submitted to the agencies for discussion and conciliation. The second should be adjudicated by an international court of justice. The third can be curbed only by a "willingness of the cooperating nations to use force, if necessary, to keep the peace." Organized international cooperation, Mr. Hull continues, can be successful only to the extent to which the nations of the world are willing to accept certain fundamental propositions. The first of these propositions is that each nation should maintain a stable government, and "should be free to decide for itself the forms and details of its governmental organization—so long as it conducts its affairs in such a way as not to menace the peace and security of other nations."

Here we have the outlines of a statesmanlike approach to the many problems of post-war organization and world peace. It is clear, however, that much more detailed thinking will be necessary. The difficulty in the past of maintaining peace through international cooperation is that it has been impossible to get 50 nations to decide in time (or to decide at all) that their peace was being menaced by some particular aggressor and that they must act in concert. At each crisis the nations were pulled in different directions. Some tried to exploit the crisis for their own imagined interest. Even the peace-loving nations hoped that the crisis would be solved without their intervention. They hopefully relied on the resistance, for example, of the immediate victims of aggression. On the other hand, a small "nuclear alliance" runs the risk of arousing the suspicions and antagonism of the nations not included.

Again, we must decide what we mean when we say that a nation should be free "to decide for itself" the form of its governmental organization. When any individual or clique seizes control of a nation's government by force, has the nation "decided for itself" the form of government that is subsequently set up? Clearly, a nation can properly be said to make such decisions for itself only when its form of government is basically democratic—that is, when the people can choose or change their leaders by peaceful means. Wherever they are not free to do this the existing government is not only a menace to the country itself but, as we have learned by experience, to its neighbors.

But regardless of what reservations are made, Secretary Hull has made an admirable beginning. He promises in the early future to discuss the tremendous problems of post-war organization in greater detail. Meanwhile he has set forth a goal of economic and political collaboration that must inspire confidence in our aims and a new hope for the world.

Demobilization and Surplus War Property Bill

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. PATMAN. Mr. Speaker, during recent weeks the question of exactly what provisions will be made to smooth the path for our returning servicemen has been before the public eye.

The President offered us a six-point program in this connection several weeks ago. With his suggestions I am in complete accord and feel that they should be speedily adopted in some adequate manner by this Congress.

I am introducing today a bill which I have prepared on this subject which incorporates within it all of the President's proposals to which I have added other provisions which I feel are essential and will serve to implement the principal purposes which the President so evidently has in mind.

RE-ENTER PRIVATE INDUSTRY

It is my belief that the President advocates a well-balanced program to not only tide over the returning soldier and sailor in a financial way upon his honorable discharge from the armed forces, but also to provide the ways and means for him to re-enter private industry either as an employee or as his own employer.

To accomplish this program, in which I am sure we are all in full agreement, I have included in my bill provisions for the following:

First. A provision for a 3-month furlough with full pay and allotments to dependents, whether or not the veteran is at the moment privately employed.

Second. A provision for unemployment insurance for a period of not to exceed 26 weeks after the expiration of said furlough. If at the end of that period he is still unemployed he will enjoy unemployment compensation within the framework of the system within the State in which he resides.

Third. A provision for vocational training with free courses in any field. Training allowances will be granted by the Administrator of Veterans' Affairs in such amounts as are deemed advisable by him. This is an extension of the present law which now limits such training and allowances to veterans having service disabilities.

Fourth. A provision for credit for veterans on their old age and survivors insurance benefits under title II of the Social Security Act in the amount of $1,700 per year for the time they were in military service. This covers women in military service as well as men.

Fifth. A provision for special aid and counsel to be furnished veterans by the Administrator of Veterans' Affairs.

Sixth. A provision that every employer who gives employment to 100 or more employees will be required to employ disabled veterans to the extent of 1 percent of total personnel.

EXPERIENCES OF VETERANS AFTER WORLD WAR NO. 1 MUST NOT BE REPEATED

The foregoing provisions are primarily designed to assure the veterans that there shall not be a repetition of the shameful conditions which prevailed at the expiration of the last war when we had the distressing sight of honorably discharged men standing on street corners selling apples for their daily bread. This time the Government must and shall furnish the tools and means by which those who have fought and bled for us may, with dignity and peace of mind, take rightful advantage of the Government's assistance in finding their rightful niches in their respective communities. Furlough pay for 3 months; unemployment insurance for 6 additional months if necessary; vocational training at the expense of the Government; these coupled with a just allowance for credit on old-age and survivors' insurance benefits and the special services of the Veterans' Administration in an advisory capacity are surely not too much for a grateful Government to offer in the way of temporary assistance to its returning heroes and fighting men.

TOOLS AND MEANS TO ENTER BUSINESS

In addition to this, however, I propose that we regard these men and women as something more than just potential employees to be returned to jobs working for other people than themselves.

I propose that we take cognizance of the fact that many of these men and women are fully capable of becoming their own employers if given the tools and means to enter into business in their own right.

For that reason I have added three more provisions to my bill which I feel are of equal and, in the long run, pos-

sibly of greater importance than the foregoing provisions.

ENORMOUS STOCK PILE OF MATERIALS, PLANTS, AND SUPPLIES

I propose that we face squarely right at this time the sobering fact that the Federal Government now owns and will have at the expiration of this war a vast store of materials, supplies, tools, airplanes, automobiles, and plant facilities. This Government-owned stock pile is even now causing great concern in certain industrial and distributive trade circles to people who fear that this equipment and means of manufacture will be utilized to inadvertently damage existing firms and businesses through post-war competition of these facilities. It is feared that these properties and equipment may be dumped on the market at the close of the war and sold at bargain prices to large firms possessing the cash resources to purchase same and that they will be thus utilized to bring quick profits to the new owners but business disaster to the established firms now in business who are unable to bid for and acquire these surplus plants and equipment.

To forestall such a possibility and to further provide a means through which the returning serviceman or the small and deserving businessman can find employment by becoming his own employer I have added the three additional provisions, previously mentioned. These provisions are:

First. All Government-owned property declared to be surplus by the head of an agency or by the President shall be delivered to an official who shall be known as the Custodian of Surplus War Property. This official shall take charge of and manage all of the above-described plants, tools, surplus material, and other equipment which is thus delivered to him.

The Board of Directors of the Smaller War Plants Corporation, an organization maintaining field offices in every principal city in the Nation shall then study the uses to which this property could best be put with a view to establishing small business enterprises by veterans and to strengthening the existing small business enterprises in the various communities of the United States.

Pursuant to the recommendations of the directors of the Smaller War Plants Corporation it shall then be the duty of the Custodian of Surplus War Property to dispose of this property and equipment on easy-payment terms, if necessary, to those veterans, groups of veterans, or existing small business enterprises in accordance with these recommendations. These recommendations would be made with a view to building more local enterprises and would be intended to decentralize activities which are of a local character, thus creating more employment.

MAY PURCHASE FARMS ON EASY TERMS

Second. A special appropriation of not to exceed $100,000,000 a year prior to the termination of hostilities and $1,000,000,000 a year for the 5 years after the termination of said hostilities shall be voted to be used exclusively to enable qualified veterans to purchase farms under the terms of the Bankhead-Jones Farm Tenant Act.

Third. All War bonds purchased by servicemen and others shall be increased 10 percent in maturity and redemption value when used to apply on the purchase of farm lands, surplus property, and other equipment under the terms of this act.

I have included small businessmen in the scope of these last provisions of the act because I feel that we are all agreed that the years following the war are going to be increasingly difficult for small firms in the light of conversion problems, tax burdens, and other factors and because I believe that in the years following the war, more than even today, small business is going to require the guidance and cooperation of the Government in solving many of its problems.

The principal purpose of the bill, however, is to provide a cushion, a guiding hand, and the tools for the speedy rehabilitation and employment of the returning soldiers and sailors and to do this without stint and with pride in the doing.

I am inserting herewith a copy of the bill:

H. R. 3200

A bill to provide certain benefits for members of the armed forces upon their discharge or release from active duty, to provide for the use and disposition of surplus war property in the interests of small business enterprises of veterans and others, and for other purposes

Be it enacted, etc., That this act may be cited as the "Demobilization and Surplus War Property Act."

CONTINUATION OF SERVICE PAY

SEC. 2. Every member of the land or naval forces of the United States who serves therein prior to the termination of hostilities in the present war, as proclaimed by the President, shall, prior to his discharge therefrom or release from active duty therein, after the termination of hostilities in the present war, if such discharge or release is to be under honorable conditions, be granted, upon his request, a furlough of 3 months' duration, at the conclusion of which he shall be discharged or be released from active duty. For the period of such furlough he shall receive pay and allowances at the same rate as that to which he was entitled immediately prior to the beginning of such period, except that he shall not for such period be entitled to pay at a rate in excess of $100 per month. The Servicemen's Dependents Allowance Act of 1942 shall remain in effect during the period of the furlough.

UNEMPLOYMENT COMPENSATION FOR VETERANS

SEC. 3. (a) Section 303 (a) of the Social Security Act, as amended, is amended by striking out the period at the end thereof and inserting in lieu thereof a semicolon and the following: "and

"(10) Effective July 1, 1944, payment of unemployment compensation to individuals who (A) serve in the land or naval forces of the United States at any time during the period beginning December 7, 1941, and ending with the date on which hostilities in the present war are terminated, as proclaimed by the President, (B) are separated from such service under honorable conditions or released from active duty, and (C) register with the United States Employment Service and the State employment service. Such unemployment compensation shall be paid for a period of not less than 26 weeks beginning on the first day after the expiration of the furlough provided for by section 2 of the Demobilization and Surplus War Property Act, unless any such individual secures employment prior to the expiration of such period."

(b) Section 1603 (a) of the Internal Revenue Code is amended by striking out the period at the end thereof and inserting in lieu thereof a semicolon and the following:

"(7) Effective July 1, 1944, payment of unemployment compensation to individuals who (A) serve in the land or naval forces of the United States at any time during the period beginning December 7, 1941, and ending with the date on which hostilities in the present war are terminated, as proclaimed by the President, (B) are separated from such service under honorable conditions or released from active duty, and (C) register with the United States Employment Service and the State employment service. Such unemployment compensation shall be paid for a period of not less than 26 weeks beginning on the first day after the expiration of the fulough provided for by section 2 of the Demobilization and Surplus War Property Act, unless any such individual secures employment prior to the expiration of such period."

REHABILITATION AND TRAINING

SEC. 4. Part VII of Veterans Regulation No. 1 (a), as amended, is amended to read as follows:

"1. Any person who served in the active military or naval service at any time after December 6, 1941, and prior to the termination of the present war, who is honorably discharged therefrom, and who has a disability incurred in or aggravated by such service for which pension is payable under laws administered by the Veterans' Administration, or would be but for receipt of retirement pay, and is in need of vocational rehabilitation to overcome the handicap of such disability, shall be entitled to such vocational rehabilitation as may be prescribed by the Administrator of Veterans' Affairs to fit him for employment consistent with the degree of disablement; and any such person, whether or not having such a disability, shall be entitled to such vocational training as may be prescribed by the Administrator: *Provided*, That no course of training in excess of a period of 4 years shall be approved nor shall any training under this part be afforded beyond 6 years after the termination of the present war.

"2. The Administrator shall have the power and duty to prescribe and provide suitable training to persons entitled thereto under paragraph 1, and for such purposes may employ such additional personnel and experts as are deemed necessary, and may utilize and extend existing Veterans' Administration facilities and utilize those of any other governmental agency as well as those maintained by joint Federal and State contribution; and, in addition, he may, by agreement or contract with public or private institutions or establishments, provide for such additional training facilities as may be suitable and necessary to accomplish the purposes of this part. The Administrator is also authorized to prescribe and pay or provide for the payment of training allowances to such persons receiving training who are not entitled to pensions.

"3. While pursuing training prescribed herein, and for 2 months after his or her employability is determined, each veteran, if entitled to pension and if so entitled in an amount less than the amount payable in accordance with the compensation rates

for total and temporary disability, including additional amounts for wife, husband, child, or children, and dependent parents, provided by section 202, World War Veterans' Act, 1924, as amended (U. S. C., 1940 ed., title 38, sec. 475), shall be paid increased pension which when added to the amount of pension to which he is otherwise entitled will aggregate an amount equal to such rates: *Provided*, That when the course of vocational rehabilitation or training furnished to any person as herein provided consists of training on the job by an employer, such employer shall be required to submit monthly to the Administrator a statement under oath showing any wage, compensation, or other income paid by him to such person during the month, directly or indirectly, and based upon such sworn statements, the Administrator is authorized to reduce the pension or training allowance of such person to an amount considered equitable and just, but not below the amount of pension or retirement pay to which he would be entitled for service-connected disability if not following a course of vocational rehabilitation.

"4. Where any person while following a course of vocational rehabilitation or a course of training as provided for in this part suffers an injury or an aggravation of any injury, as a result of the pursuit of such course of vocational rehabilitation, and not the result of his or her own willful misconduct, and such injury or aggravation results in disability to or additional disability to or death of such person, the benefits under laws applicable to veterans of the present war shall be awarded in the same manner and extent as if such disability, aggravation, or death were service-connected within the meaning of such laws; except that no benefits under this paragraph shall be awarded unless application be made therefor within 2 years after such injury or aggravation was suffered, or such death occurred.

"5. The Administrator shall have the power and duty to cooperate with and employ the facilities of other governmental and State employment agencies for the purpose of placing in gainful employment persons trained under the provisions of this part.

"6. The Administrator is hereby authorized to make such rules and regulations as may be deemed necessary in order to promote good conduct and cooperation on the part of persons who are following courses of vocational rehabilitation or courses of training provided by this part. Penalties for the breach of such rules and regulations may, with the approval of the Administrator, extend to a forfeiture by the offender for a period of 3 months of such portion of the training allowance as the Administrator may prescribe, or if receiving the pension herein provided or such portion of the pension as will leave him not less than the amount of the monthly pension or retirement pay to which such person is entitled for service-connected disability, and such penalties may also extend to permanent discontinuance of all further benefits of this part.

"7. The Administrator is hereby authorized to make such rules and regulations as may be deemed necessary for the granting of leaves of absence to those following courses of vocational rehabilitation or courses of training provided by this part where in his opinion such leaves do not materially interfere with the pursuit of such courses. Such leaves of absence shall not in the case of any person be granted in excess of 30 days in any consecutive 12 months except in exceptional circumstances as determined by the Administrator: *Provided*, That during leave of absence under this paragraph such person shall be considered to be pursuing his course of vocational rehabilitation or training under this part.

"8. There is hereby authorized to be appriated, out of any money in the Treasury of the United States not otherwise appropriated, available immediately and until expended, the sum of $500,000 to be utilized by the Veterans' Administration under such rules and regulations as the Administrator may prescribe, as a revolving fund for the purpose of making advancements not exceeding $100 in any case, to persons commencing or undertaking courses of vocational rehabilitation or courses of training under this part, and advancement to bear no interest and to be reimbursed in such installments as may be determined by the Administrator by proper deductions from any future payments of training allowance, pension, or retirement pay.

"9. The Administrator shall have the power to provide courses of instruction for personnel and may detail employees to attend the same and may detail any such personnel to attend courses conducted by other than Veterans' Administration agencies, including private organizations, and such employees in addition to their salaries shall be entitled to the payment of expenses incident to such detail, including transportation and tuition, as the Administrator by rules and regulations shall provide; and also in his discretion, to make, or, as by agreement with other agency or institution, cause to be made studies, investigations, and reports inquiring into the rehabilitation of disabled persons and the relative abilities, aptitudes, and capacities of the several groups of the variously handicapped and as to how their potentialities can best be developed and their services best utilized in gainful and suitable employment, including the rehabilitation programs of foreign nations engaged in the present war. For this purpose he shall have the power to cooperate with such public and private agencies as he may deem advisable and to call in consultants who shall receive as compensation for their services a reasonable per diem, which the Administrator shall by rules and regulations provide, for each day actually spent in the work provided for herein and shall in addition be reimbursed for their necessary traveling and other expenses. For the purposes of this part, the Administrator may accept uncompensated services upon such agreement as he may deem feasible."

SERVICE CREDIT FOR OLD-AGE AND SURVIVORS INSURANCE BENEFITS

SEC. 5. Title II of the Social Security Act, as amended, is amended by adding at the end thereof a new section as follows:

"Military Service

"SEC. 210. (a) Any individual who has attained the age of 65 and who served in the active military or naval service at any time after December 6, 1941, and prior to the termination of the present war as declared by Presidential proclamation or concurrent resolution of the Congress, and was honorably discharged therefrom, shall be deemed for the purposes of this title, to have been paid on and for each day in the period of his active military or naval service occurring after September 30, 1940, and prior to the one hundred and eightieth day after such termination, wages at the annual rate of $1,700, except that if such individual began such service after September 30, 1939, and was paid in the four quarters immediately preceding the quarter in which he began such service, total wages in excess of $1,700, such annual rate shall be the amount equal to such total wages: *Provided*, That the amount of wages deemed to have been paid in any calendar year under this section shall not in any case exceed such amount as would make his total wages in such year (including any wages, as defined in section 209, paid him in such year) more than $3,000.

"(b) If any pension, disability compensation, or other gratuitous benefit is payable, on a periodic basis, to any individual under any provision of law other than this title in respect of any military or naval service referred to in subsection (a) of this section, the provisions of such subsection (a) shall not be taken into account, in computing the average monthly wage, as defined in section 209, of the individual who performed such military service, for the purpose of determining the amount of any benefit payable under this title to the individual to whom such pension, disability compensation, or other gratuitous benefit is payable.

"(c) As used in this section (1) the term 'military or naval service' means service in the land or naval forces of the United States, including the Coast Guard, the Women's Army Corps, the Women's Reserve of the Naval Reserve, the Women's Reserve of the Coast Guard Reserve, and the Marine Corps Women's Reserve; and (2) the term 'quarter' shall have the meaning assigned to such term in subsection (g) of section 209.

"(d) There are hereby authorized to be appropriated to the Trust Fund, out of any money in the Treasury not otherwise appropriated, such amounts as may be necessary to meet the additional costs of payments under this title, and of administration, arising by reason of the provisions of this section."

SPECIAL AID REGARDING REHABILITATION, READJUSTMENT, AND REEMPLOYMENT OF MEMBERS OF ARMED FORCES

SEC. 6. In order to provide special aid and counsel regarding the readjustment, rehabilitation, and reemployment of individuals who served in the land or naval forces of the United States after December 6, 1941, and prior to the termination of hostilities in the present war, as proclaimed by the President, and who are discharged therefrom or released from active duty therein under honorable conditions, there are authorized to be appropriated, for expenditure by the Administrator of Veterans' Affairs, such sums as may be necessary.

EMPLOYMENT OF DISABLED VETERANS

SEC. 7. Every employer who regularly has in his employ 100 or more employees shall employ for each 100, or major fraction thereof, employees so employed at least one individual who (1) served in the land or naval forces of the United States after December 6, 1941, and prior to the termination of hostilities in the present war, as proclaimed by the President, and (2) has a disability incurred in or aggravated by such service for which pension is payable under laws administered by the Veterans' Administration, or would be but for the receipt of retirement pay.

PURCHASES OF FARMS BY MEMBERS OF ARMED FORCES

SEC. 8. Section 6 of the Bankhead-Jones Farm Tenant Act is amended by inserting "(a)" after "Sec. 6." and by adding at the end thereof the following:

"(b) To carry out the provisions of this title with respect to individuals who served in the land or naval forces of the United States after December 6, 1941, and prior to the termination of hostilities in the present war, as proclaimed by the President, and who were discharged therefrom or released from active duty therein under honorable conditions, there is authorized to be appropriated not to exceed $100,000,000 for each fiscal year beginning prior to the termination of such hostilities, as so proclaimed, and for the fiscal year beginning first after such termination and the 4 succeeding fiscal years not to exceed $1,000,000,000 for each such year. Such sums shall be available for expenditure without regard to section 4."

SURPLUS WAR PROPERTY

SEC. 9. (a) There shall be appointed by the President by and with the advice and consent of the Senate a Custodian of Surplus War Property (in this section called the Custodian). The Custodian shall receive compensation at the rate of $10,000 per annum.

The term of his office shall be 4 years. The Custodian is authorized to employ and fix the compensation of such officers and employees as may be necessary in carrying out his functions under this section.

(b) Whenever the President or the head of any agency determines that any property of the United States used or held in connection with the prosecution of the war is surplus to the needs of such agency in carrying out its functions and duties, such property shall thereupon be transferred to the Custodian. Upon such transfer the board of directors of the Smaller War Plants Corporation is directed to make a survey of the uses to which such property may be put by small business enterprises in the various communities in the several States, and shall formulate recommendations to the Custodian with respect to such uses, and the time, manner, and place of disposition of such property. Such recommendations shall be made with a view to facilitating and encouraging the establishment in the various communities in the several States by members of the armed forces of the United States upon their discharge or release from active duty, as well as by others, of small business enterprises, and with a view to strengthening existing small business enterprises.

(c) It shall be the duty of the Custodian, pending the recommendations of the board of directors of the Smaller War Plants Corporation with respect to any property transferred to him under subsection (b), to use, manage, and operate such property, and upon receiving such recommendations to lease, sell, or otherwise dispose of such property in accordance with such recommendations. He is authorized, in selling any such property, to extend credit to the purchaser. The rate of interest in connection with any credit so extended shall not exceed 3½ percent per annum.

(d) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section.

USE OF WAR BONDS TO PURCHASE FARMS AND SURPLUS WAR PROPERTY

SEC. 10. In the case of War Savings bonds purchased at least 3 months prior to the termination of hostilities in the present war, as proclaimed by the President, and held (either individually or jointly with his spouse) by any individual, the maturity value and redemption value shall be increased by 10 percent thereof if such bonds or the proceeds thereof are used by such individual in payment in whole or in part for the purchase of property from the Custodian of Surplus War Property or, if such individual served in the land or naval forces of the United States after December 6, 1941, and prior to the termination of such hostilities, as so proclaimed and was discharged therefrom or released from active duty therein under honorable conditions, in part payment for the purchase of any farm under title I of the Bankhead-Jones Farm Tenant Act.

An American Looks at Italy

EXTENSION OF REMARKS

OF

HON. LOUIS J. CAPOZZOLI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. CAPOZZOLI. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial which appeared in the New York Journal-American, of the issue of August 14, 1943, entitled "Viva l'Italia Libera," and written by Harry H. Schlacht.

This editorial is without doubt one of the finest that I have read on the contributions of Italy to the progress of the world.

It is, obviously, the product of a liberal, fair-minded American who can see no inconsistency between our duty as Americans to our own country and the hope for the survival of an ancient glory.

The editorial follows:

VIVA L'ITALIA LIBERA

(By Harry H. Schlacht)

The famous motto of the State of Virginia "Sic Semper Tyrannis" has ever been the fate of tyrants who have challenged liberty-loving people.

Mussolini is no more.

Liberty is the voice of God.

Four and a half centuries have elapsed since the stout heart of an Italian sailor—Christopher Columbus—with high determination and a great faith had plowed the unfurrowed waves to claim for progress and for civilization a new world.

Down the corridors of time have descended the great leaders of Italian antiquity to bestow untold benefits upon mankind.

Italy has given America her theme of freedom.

In her paintings, in her letters and art, in the great expressions of her being runs her Renascence—"Risorgimento"—like a golden thread to bind her great gifts of genius to the world.

Her martyrs, scholars, and heroes have searched and hewed new paths to the liberation of man's spirit.

Let us draw the curtain of history and contemplate the glory of the race from which they sprang.

The spirit of freedom, the passion for democracy, love of beauty, art and music, and all the fine impulses of the human spirit flowered and blossomed with rich fertility on the soil of Italy.

There flash upon the canvas of our memory the immortal names of Dante, Galileo, Leonardo da Vinci, Michelangelo, Tasso, and Ariosto.

Hear Garibaldi, the great soldier and liberator, cry out to the oppressors of his day:

"He who still has faith in Italy—let him follow me."

Hear Mazzini, Cavour, and Leopardi sound the battle cry of freedom.

Such a heritage does not die with the closing of universities or the burning of books.

You may destroy the records, exile teachers, but you cannot divert the destiny of a nation that has produced Carducci, Verdi, Marconi, Puccini, Caruso, and a Toscannini.

The good people of Italy have ever remained steadfast in their convictions and ideals, even when the yoke of oppression rested heavily upon them.

They know that the American people are their traditional friends.

Never before in their history have Italy and the United States been at war.

They know that we have not waged a war of aggression on the Italian people, but a war against the pompous, strutting demagogues who led them astray.

We come as liberators and not as conquerors.

With fortitude and fidelity, the Italian patriots have waited for this moment—for them it is the "ante lucem"—or that moment before the daybreak that brings the effulgence of the sun.

Today men are dying so that man may live.

We are determined upon an order of which the Bible is the Atlantic Charter—the brotherhood of man and the fatherhood of God.

Its aim is not tyranny, but justice, not only among men, but among all nations.

Italy will live again!

The luster of her ancient glory will never be dimmed.

Marching along with the United Nations, she will enjoy a new birth of freedom—liberated from exploitation by cruel aggressors who seek to crush out the light of liberty throughout the world.

And when that happy day shall come, when freedom is won both in the war and in the peace, the Goddess of Liberty will forever stand with her meaning enhanced a thousandfold.

She will be the symbol not of the nation, but of the world.

Viva l'Italia Libera!

Long live free Italy.

Unconditioned Nationalism

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "Unconditioned Nationalism," delivered by me at the eastern conference of the Republican Post-War Policy Association, held at the Commodore Hotel, New York City, July 19, 1943.

There being no objection, the address was ordered to be printed in the Record, as follows:

Unconditioned nationalism is a cause of war. In the language of other times it was called "unconditioned sovereignty." It is that characteristic of government and national consciousness which seeks aggrandizement of self, regardless of cost to others. It is blind to the necessity of confining use of rights and property to the limitation of what will not injure the rights and property of others. Its demands comprehend essential, strategic or critical materials, needed by all nations but natural resources of only a few of them. These demands require communication and commerce, surmounting all obstacles, outriding every storm and penetrating every barrier.

Unconditioned nationalism is final authority, a thing greater than law. It ultimately expresses itself in predatory acts of Hitlers and Tojos. In democracies it leads to abuse of freedom, ultimately developing license.

Unconditioned nationalism presupposes war. With the leading treaty powers of the earth possesed of this devil, world war was inevitable in 1914.

Now we realize that we missed the great moment prepared through centuries of man's evolution when humanity could envisage its past and future with sympathy and understanding.

During the First World War the Allies had the vision of a better world and the opportunity to lay the foundations for it. They tried but they failed.

To us the tragic fact is that the United States as a Government, turned its face toward unconditioned nationalism and away from responsibility to its neighbors and to its own people for the maintenance of peace. In fact we emphasized unconditioned nationalism in many ways. We refused to cooperate in a league of Nations or a world

court. We built up embargoes through excessive tariffs, we tried to isolate ourselves by a neutrality act.

Now the golden opportunity has again been offered.

The United Nations are bound in a brotherhood of arms, fighting for their very existence. Common danger and common interests impose conditions on nationalism among them.

During this period of vision, seen through the eyes of comradeship, all perceive that when each great nation is a law unto itself, is aggressive, unyielding, regarding national isolationism as duty and nationalism as supreme good, collisions are bound to occur. Irresistible truth challenges us, namely, that disregard of the vital interests of other nations, in providing for the near and remote welfare of any nation, is irreconciable with enduring peace.

Therefore experience, as well as reason, points to a new principle upon which to found the edifice of peace and freedom. I am persuaded that that principle is the Golden Rule. It is practical among the nations of the world as it is among citizens of a village.

Montesquieu, in his Spirit of the Laws, undertook to differentiate between the laws of God and the laws of man by assigning the former to relations between persons and the latter to the relations between government and persons. A more modern people, the Vermonters, in founding their Republic, recognized the practicality of the laws of God in their first general assembly by passing a sweeping resolution adopting the laws as set forth in the Connecticut Law book and in defect thereof the word of God as set forth in the Holy Bible.

The absence of collisions on the sidewalks of our villages is the consequence of the operation of the divine law more than it is that of statutory prohibition. Self-discipline prevents causes of disagreement. The use of one's own with due regard for that of his neighbor creates the maximum amount of liberty and peace attainable.

This attitude denies the doctrine of unconditioned nationalism. It leads to the advance position of willingness of the nations to yield enough of sovereignty to make possible the program here outlined and open the future to change and further development of this program for the attainment of more opportunity, more incentive, more prosperity, more growth of the spirit, and more happiness of all mankind.

I would strengthen your arm and increase your activity as a Republican Party organization. Your program comprehending a strong Nation-wide organization and involving a doorbell-ringing State, congressional, district, county, and precinct leadership, will supplement powerfully the April 1942 resolution of the national committee which you have endorsed. Your organization is within the Republican Party. Another, also formed in Chicago, is soliciting membership and conducting a program founded on what they call Republican national revival and claiming the Republican Party as the nationalist party in American politics. Such movements are a menace to peace. However, they expose the fact that isolationism still lurks here and there. They emphasize the necessity for your activity.

In our two-party system we believe that fidelity to the party and service and sacrifice for it are acts of patriotism. The motive of a great party in our system is the indispensable and proximate cause of attitudes and courses of action of government. The party in power is responsible for the policy of government. The minority party also has obligations, comprehending, among other things, the testing of every proposal, constructive criticism of every act. In time of war its responsibility increases because war requires the mobilization of every human and material resource of the Nation. The minority must aid the majority in unifying and harmonizing our people. It must help to lead in the prosecution of the war to that victory which is the achievement of a peace that will prevail.

You have announced that you are not supporting any person for any office but that your objective is winning the war in the whole sense. Your determination that the Republican Party shall be committed on principle and in its choice of candidates to a new foreign policy, is sound and will help to bring together Republicans who disagree at present on candidates.

This new policy as envisaged by you disavows a negotiated peace or armistice. It seeks a conclusive victory which disables the enemy by disarmament, which establishes security by the maintenance of supreme military power among the United Nations, and which lays the spiritual and legal foundation for world government to maintain peace and order through the administration of justice.

You have endorsed in principle the Ball, Burton, Hatch, Hill Senate resolution. By this act you have contributed already to the creation of a strong foreign policy. I assume that you will employ all such contributions of thought in your campaign. The purpose to defeat the revival of unconditioned nationalism and to unify the great majority of the members of the Republican Party in post-war collaboration, would be served better by avoiding attempts to settle details which are controversial. You and all others who favor the objective of the Ball, Burton, Hatch, Hill Senate resolution will gain strength through discussion of the same general principle which pervades many such resolutions.

I believe this "grand old party" is making progress toward that degree of harmony which is necessary to win the war and the peace. A recent evidence of this is Senate Concurrent Resolution 16, introduced by Senator VANDENBURG for himself and Senator WHITE. This resolution does not go into detail regarding world organization, a tribunal or tribunals for the determination of controversies between two or more nations, the type of armed force involved in making peace and order prevail, but it is a step away from unconditioned nationalism and in favor of participation by the United States in post-war security, peace, and justice in a free world.

In the appointment by Mr. Spangler, chairman of the G. O. P. National Committee, of Senators, Congressmen, Governors, and others in office of a policy advisory council is another indication of Republican progress.

Your vigorous promotion of the plan you have announced will aid to bring together factions upon a platform which will appeal to the common sense, inspire the courage, move the conscience, and incite the effective service of a great majority of Americans.

We assume that all Republicans will adhere firmly to constitutionalism and safeguard American vital interests. No one else will place American interests first. Every issue must be tested for this. We must make clear the intimate relationship between our foreign and our domestic policies. As we favor mobilization of all of our people now, to active participation in war, we also aim to provide for orderly demobilization, and we prepare for the reception of our returning soldiers into a life of opportunity and service calculated to uplift the standard of living of the American people.

When we come to write the party platform in convention, there ought not to be great differences or disagreement regarding our policy touching agriculture, mining, manufacturing, labor relations, social security, education, commerce, and merchandising. But I need to point to only a few subjects to indicate that our decision upon foreign policy will affect our internal and domestic affairs seriously, and that we require preparation in advance on these points, thus:

Immigration.

Tariff.

Communications by radio, cable, telegraph, mail, press, telephone, teletype, television, and courier.

Commerce by air, involving crossing and landing rights on our continent, on the islands of the seas and on the continents of our neighboring nations. Here is a vast unexplored idea which is not only global but it is essenttally American.

Reciprocity in trade.

Exchange, relative stabilization of purchasing power of the monies of the great trading countries.

Lend lease, and above all,

The common defense.

Many of us feel that one of the most disloyal things the Republican Party could do would be to shirk its responsibility in the formation of a foreign policy. On the other hand we feel that the Republican Party is challenged, by marvelous opportunity, to hold aloft a torch of leadership into that new world in which the sanctions for peace contemplate a large element of self-discipline based on the Golden Rule, but in which the certainty of security from attack is maintained by armed force. Again and again we must assert, if the goal is to be attained, that relative freedom and permanent peace shall be implemented by a world organization to which the United States of America will contribute.

Our first objective is security. All others follow. Therefore agreement among peoples and nations upon means of prevention of trespass and crime by governments is sought.

Judgment must be formed by the people who elect and support governors, concerning the possible sanctions and the problems hampering or facilitating application of them. Tests by debate and discussion on the platform, in press and over radio, of the near and remote consequences on the sovereignty of the United States are necessary. The functions of the Republic Postwar Policy Association include service indispensable to these studies and the formulation of our foreign policy.

Security as contemplated by the United Nations means protection from aggression by an armed enemy.

We will exclude "peace without victory." That was tried by President Wilson and proved a cause of insecurity. "Peace without victory" was as much of a sophistry as "He kept us out of war."

Consequently, what ought to go without saying, we have to say, viz: the foundation of security is prosecution of the war to conclusive victory.

I place second in order, disarmament and disorganization of the armed forces of the Axis;

Third, disqualification of Germany, Italy, and Japan to construct facilities for the manufacture of implements of war;

Fourth, administration of firm retributive justice by punishment of the leaders in crime and brutality;

Fifth, occupation of the land of the Axis with forces to carry out the program of security;

Sixth, provision and maintenance of armed forces at home, united with corresponding forces in each of the United Nations, to maintain peace and order.

Shall this force be an integrated world police army?

Shall the obligation respecting the sanction for security be only a promise?

Such questions illustrate details upon which the decision need not be made at once. The main goal is general cooperation of such vigor as to make certain that the opportunity now presented will not be missed, but will be transmuted into permanent guarantees of security.

It is my opinion that victory should connote a more perfect union, though not uniformity, of the United Nations. Our immediate image should have a simple form and contain the element of adaptability and growth to future needs. In due time regional organizations, suitable to the history and characteristics of the people, the resources, material and spiritual, could be, and probably would be, developed within the world organization. We could start with collaboration between China, Russia, Great Britain and the United States in the organization of a world council to codify the fundamental rules of international conduct, a judicial tribunal for the determination of controversies between two or more nations, and a military power great encugh to prevent disturbance of the peace. Each member of that union would serve best its vital interests through all-for-one-and-one for-all action. We lift our sights to a new horizon, over which is dawning the light of national self-discipline, but realism requires the enactment of laws which shall be well known and behind which there is maintained adequate force to compel obedience.

Everywhere we see evidence of an awakened Nation. It is persuaded that democracy is not safe in the United States if it is exposed to overthrow by totalitarianism anywhere on earth.

This Nation through tears, beholds a vision of dependence upon each other of all the democracies. It perceives that "the values involved in this war are universal and eternal." Its foreign policy must be settled when it commences negotiations with its partners. This is necessary to the leadership expected of the greatest democracy on earth. The aspirations of the Nation are attainable if a sufficient number of our citizens agree on major principles of the war and of the achievement of peace.

To promote such agreement the Republican Post-war Policy Association has contributed and will serve. May its purpose be fully achieved.

Peace or Politics

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. TAFT. Mr. President, I ask unanimous consent to have inserted in the RECORD an address by me entitled "Peace or Politics," delivered before the American Bar Association at Chicago, Ill., August 26, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the American Bar Association, fellow citizens of America, the declared purpose of the Fulbright resolution, and of many other similar resolutions proposed to Congress, is to commit Congress to cooperate in creating some permanent international organization to prevent the recurrence of the tragedy of world war. I don't suppose there is anyone in the United States who is not prepared to do anything and everything possible to assure peace for ourselves and for our children and for our grandchildren. The question is whether that purpose is forwarded by having Congress pass resolutions relating to proposals which are not yet before it in any concrete form. One Congress cannot bind any Congress hereafter elected. The debate on the resolution may lead to a public and official discussion of the relations between ourselves and our allies which will tend to separate rather than unite us. In fact, both Mr. Roosevelt and Mr. Churchill have expressed concern that no such debate shall occur.

Any resolution must at this time be of the most general and indefinite nature. The Fulbright resolution, for instance, may mean nothing or it may mean everything. It is broad enough to cover, one, an international world state; two, a league of sovereign nations; three, a British-Russian-American alliance as proposed by Walter Lippmann. About the only policy which it definitely excludes is one which reserves freedom of action to the United States in the future. The policies falling within the resolution are as inconsistent with each other as each is with freedom of action. Furthermore, the emphasis on international machinery with power, suggests that whatever this machinery is it is to be a panacea for peace in our time. Nothing is said about all the other steps which must be taken, and for the most part taken first, if the international machinery with power is to have the slightest chance of success.

A PEACE PROGRAM MORE IMPORTANT THAN RESOLUTIONS

I propose to discuss today the important steps which must be taken to insure peace by protecting our people against attack or threat of attack. We pursued a policy leading to war because our people were convinced that the German-Japanese aggression would sooner or later lead to an attack on the United States itself. We are not engaged in any crusade for democracy, or for the four freedoms, or the preservation of the British Empire. We seek a world in which the American people can work out the destiny of the Republic, and solve the problems of human liberty and happiness, without physical attack on the distortion of our multiple freedoms by war.

The insurance of peace and safety in the future is not an easy task. It can't be obtained by passing Congressional resolutions. Since the dawn of history men have been trying to solve the problem. Every peace treaty has stated as its objective perpetual peace between the contracting parties. We had the Pax Romana, the Great Design of Henry of Navarre, the Holy Alliance, the Concert of Europe, the Hague Conventions, the League of Nations of 1919, to mention only a few. It isn't the desire to establish machinery which is lacking. It is a practical plan, which will work, and won't do more harm than good. Whether Congress should yet debate the problem is open to question, but the private citizens of this country should certainly engage continuously in a thoughtful analysis and discussion of the plans that are proposed. How can we in the future insure peace for the United States and its people?

First. We must pursue the war to a complete and overwhelming victory with punishment and disarmament of the Axis nations. That alone should insure peace for many years to come, and it is two-thirds of the problem. There will be no aggressors for years to come who will dare to threaten the world after they see the punishment for aggression which modern war will inflict on Germany, Italy, and Japan. The first task of the F. B. I. was to kill or capture the gangsters who defied society. The question how crime and criminals may be prevented is still engaging the attention of the sociologists.

Second. We must provide an Army, Navy, and Air Force for our defense sufficiently strong to remove from the mind of any nation the idea that it can successfully attack us. Of course such a force could not prevent air raids or other attacks, but there is nothing to suggest that modern technology has removed the ability of North America to defend itself against any nation or combination of nations. Look at the successful defense of Great Britain in a much more vulnerable position. It is said that democracies will not keep up their armed forces. But it is no argument against a course of action that one has not the sense or courage to pursue it. International machinery is not going to run itself either, and democracies will find it harder to continue the necessary ungrudging and unqualified support for it, than they will to maintain their own forces.

Third. After the initial period of relief and reconstruction we must keep out of the internal affairs of other nations, and we must learn to treat with tolerance conditions and ideologies which we may not understand or sympathize with. I seem to see a tendency, especially among our New Deal friends, to make plans for the world as they made plans for us poor Americans. We can't crusade throughout the world for the four freedoms, or force milk on people who don't like milk without making ourselves thoroughly hated. We can't force on the Russians freedom of speech and freedom of religion if Mr. Stalin doesn't approve of them as he doesn't. We can't force independence on India except as the British see fit to arrange it. We can be helpful throughout the world. But we can't be a meddlesome Matty, or try to boss the boots off the world if we expect to avoid war in the future. No nation should insist on interfering with the internal affairs of other nations unless it is prepared to submit to the same interference itself.

Fourth. The three programs I have outlined are steps of purely national policy. But I do not intend to suggest that they are sufficient. We have sometimes followed them and they have not kept us out of war. Because any war today is likely to spread over the world. I believe we should attempt again to prevent the occurrence of any war in the world by international action. Before coming, however, to the question of an elaborate international organization with power to outlaw war in the future there are other direct steps to be taken. In the period after the cessation of hostilities we have a unique opportunity to remove some of the most fertile causes of war. For several years the world will necessarily be dominated by the military forces of Great Britain, Russia, and America. The Axis nations and the occupied nations will have to accept in the first instance the basic world pattern decreed by the Allies. The Versailles Treaty failed largely because it wholly neglected economic conditions, and created countries with no visible means of support. The Allies must try to draw boundaries so that no country is forced to remain poverty-stricken. They can insist that customs unions shall be established in the beginning, even if it is unwise to interfere later with internal tariff arrangements. They can assure a supply of necessary raw materials, and they can make some arrangements to handle the exports which may be necessary to pay for those raw materials. The Atlantic Charter says that the peace should "afford assurance that all the

men in all the lands may live out their lives in freedom from * * * want." This seems to me a hopeless and therefore unfortunate aspiration for any peace, if applied to individuals. But freedom from want as an ideal for nations seems possible to assure, and it would reduce one of the most dangerous causes of war. The cause cannot be entirely removed because no matter what arrangements are made for a nation, failure to conduct its own affairs with efficiency or to restrain the growth of poulation, may cause poverty, hardships, and discontent. How can we possibly provide freedom of want to China's 400,000,000, or India's 300,000,000, or Japan's 70,000,000, when there are twice as many people as the country can support on a decent standard of living. We have not even solved the similar problem of little Puerto Rico's 2,000,000, with five times the density of population of Cuba, though we have poured out hundreds of millions of American dollars. But in Europe, where wars usually start, a greatly improved economic basis for peace should be possible of accomplishment.

Fifth. The desire for national freedom is one of the deepest of human emotions, and its suppression has been the source of many wars. When not carried to excess, nationalism is the basis of individual freedom and patriotism and other qualities which make life worth living. Therefore in making the peace settlement we must provide for the self-determination of nations, and we must do it with more skill and less theory than was used at Versailles. That is not an easy job under any circumstances, but it can be made particularly difficult in eastern Europe unless the Russians join sincerely in the effort to avoid future nationalist uprisings in that area. Involved also is some revision of the colonial system to promise more self-government in the future, and to establish some form of autonomous dependent status for countries and islands too small to stand on their own feet. The Atlantic Charter states clearly that no territorial changes shall be made that do not accord with the freely expressed wishes of the peoples concerned, and that sovereign rights and self-government shall be restored to those who have been forcibly deprived of them. In other words it requires that national freedom must be the basis for any enduring peace.

Sixth. It is generally conceded that democratic governments are less likely to be aggressive than autocracies. In the reconstitution of governments, therefore, in enemy and occupied countries, the Allies should in the first instance insist upon constitutions providing for elections by majority. But there are dictatorships with which we cannot interfere, as in Russia, China, Brazil; and the Atlantic Charter correctly recognizes "the right of all peoples to choose the form of government under which they will live," so that the finest type of democratic constitution may later degenerate into a Fascist or a Communist dictatorship. Yet the victory of the democracies should make democracies more popular, and in the immediate post-war period a boost can be given them. Any effort to impose democracy on the entire world, however, would be impossible and far more likely to cause war than prevent it.

Seventh. The Allies should provide for the revision of the world code of international law, extending it to provide the rules and ideals which shall govern the relations of sovereign nations in times of crisis and with relation to vital national interests. We are proposing to abolish the German doctrine that "might makes right," and there should be an affirmative statement of the principles on which the nations of the world may live together in peace. It may be extremely difficult, as I shall indicate later, to work out the machinery by which this law or any treaty shall be enforced, but if the law of peace is clear and definite it is much easier to enlist in its support the moral forces of the world. I believe there should be a World Court to interpret the law as recommended by your Bar Association Committee and to decide all cases based upon such law which may be submitted to it. There may be many ideals in this world which can never be attained or even promoted by force. We ought to distinguish more clearly than we do those ends which can only be obtained by voluntary appeal and the education of public opinion, and those which are within the proper scope of official power. For instance, the New Deal bureaucrats would have accomplished far more in the United States in food and price control if they had used the voluntary appeal and education methods of the World War period than they have by regulating everything and threatening crack-downs and prison sentences. And the same thing is going to be true in the continued maintenance of peace. Force may be necessary in the background, but it won't succeed unless there exists in the greater part of the world a public opinion educated to peace and to the principles of law on which it is founded.

I have reviewed at some length the steps which must be taken before we even come to consider the question of the use of power to enforce peace. I have done so to show that too much emphasis is being placed on this question of power and the passage of resolutions which treat our participation in the use of force as the panacea on which all depends. The peace of the American people will depend much more on the skill and good faith by which these seven policies are pursued in the period immediately after the war. Only if these foundations are firm can we go on to erect on them the international machinery with power for which Mr. FULBRIGHT asks, and I doubt if by the 1944 election or perhaps for several years after the armistice, any definite plan will be presented for an international organization to enforce peace.

ALTERNATIVE PLANS TO INSURE PEACE

Nevertheless, it is a good time to discuss and distinguish the various plans between which the United States must ultimately choose as a matter of its foreign policy. Mr. FULBRIGHT'S plan is apparently intended to rule out isolationism without stating just what he would substitute for it. If by isolationism he means the position of those who believe we should retire to America after the war and take no interest in any association of nations or the actions or trouble of other nations, I don't know anybody who favors it. But there is a respectable body of opinion, perhaps a majority, which believes in all the steps I have suggested, but does not think the United States should commit itself in advance to take any action outside of its territory. They would have us remain free to interfere or not interfere according as we consider the occasion of sufficiently vital interest to this country. This position, and not isolationism, has been the traditional policy of the United States for 150 years. While I would myself favor a change in this policy under certain conditions, I doubt if it should be formally excluded from consideration at this time, or until we agree on some other practical policy.

There are three other principal policies which might be adopted under the Fulbright formula of international machinery with power. They are completely distinct and contradictory. First, we have the Federal Union plan proposed by Henry Streit and former Governor Stassen, calling for the incorporation of this country into an international state. That seems to me the implication of the Ball resolution proposing an international police force greater than any national force. Second, we have the policy proposed by Walter Lippmann in his book, U. S. Foreign Policy, based primarily on a defensive, and perhaps offensive, alliance with the British Empire and if possible with Russia. The former interventionist forces in the East appear to be swinging to this Lippmann alliance policy. Third, an association of sovereign nations to include the United Nations and ultimately all others, covenanting together to use their forces to prevent aggression. This seems to me the plan to which Mr. Churchill and Mr. Roosevelt have leaned, in the Atlantic Charter and in their public utterances. The differences between these three policies is greater than the difference between either of them, and the traditional American policy of maintaining a free hand.

FEDERAL UNION

The theory of an international state bearing the same relation to nations and their citizens as our Federal Government bears to the States and their citizens appears to me to be fantastic, dangerous and impractical. It is proposed that it have a supreme legislature, executive, and court. It would maintain an all-powerful military force able to dominate all nations. It would control all trade, all seaports and all airports within the various nations. Such a state, in my opinion, would fall to pieces in 10 years. The whole idea is based on the union of the 13 colonies in 1787. But those colonies were made up of men of similar origin, similar methods of thought, similar ideals, with similar forms of government. They lived approximately the same kind of life, with similar standards of living. Even in that case one single difference resulted in a violent civil war 75 years later which almost destroyed the Union. Here we would be attempting to unite peoples who do not understand even how their new fellow citizens begin to think; we would join democracies with dictatorships, Moslem states with Christian states, the Brahman with the Rotarian, men who talk only Japanese with men who talk only English. We would attempt to unite the most highly civilized with the aborgines, the workman who earns $20 a day with the coolie who earns 20 cents a day. The difficulties of holding together such a Tower of Babel under one direct government would be insuperable.

Furthermore, if it could remain in existence at all, it would not remain democratic—if a state including dictatorships like Russia, China, Brazil, and Greece could ever have been democratic. True democracy depends on local self-government, effective access of the people to their central government, and the protection of inalienable individual right. Sometimes I question whether the United States has not reached the limit of size under which the people of a nation can have a real voice in its government. Certainly a world government at Geneva or Panama would listen more closely to the voice of cranks and pressure groups than to the voice of rural Illinois, for instance. It is significant that the British Empire because of its size has moved toward decentralization of government, and has today no over-all legislative body, no over-all executive, and no over-all police force. If Canada and Australia and New Zealand and South Africa and Eire are regarded as too diverse to be consolidated into one government, what about China, Japan, Russia, and Ethiopia?

Third, I don't believe our allies, England and Russia, would agree for a moment to submit themselves to an international state and have their seaports and airports run by an international bureaucrat. Remember that this would involve scrapping all armament for an international police force, controlled by some international executive selected by a body the control of which would rest in a combination of member nations impossible to predict. If you can see Winston Churchill liquidating the British fleet, or

Joe Stalin dismissing the Russian army, or either of them turning over their forces to President Whoozis of Worlditania, you are more clairvoyant than I.

Finally anyone who suggests such a plan is proposing to tear up the American Constitution, which has made this Nation the greatest power in the world and set an example of successful popular rule to the entire world. We are asked to scrap a tried plan which up to this time has successfully maintained our liberty and afforded to this country the protection against invasion and interference which is the alleged purpose of all these international plans. It doesn't seem to me consistent with American patriotism, and most of our people are still patriots. If Congress is going to pass any resolution at all it certainly should exclude the possibility of an international supergovernment. I may say that the resolution of Senators VANDENBERG and WHITE does exactly that by emphasizing the fact that any proposed international arrangement shall be made between sovereign nations.

BRITISH-RUSSIAN-AMERICAN SUPER-ALLIANCE

A plan completely antagonistic to the Stassen plan is proposed by Walter Lippmann in his recent book U. S. Foreign Policy, Shield of the Republic. He urges that we form an alliance with England, Russia, and perhaps China. Presumably this will bind the parties to go to the defense of each other if either is attacked and perhaps to join in certain offensive action. The alliance is to be so strong that we cannot be successfully attacked. It is an expression of the proposition advanced by me earlier that we should have an adequate army, navy, and air force for our own defense, as one of the means of discouraging and preventing an attack, but it is maintained that no such force can be adequate for that purpose without an alliance at least with England. This position seems to overlook the fact that alliances have their own weaknesses, and are as likely to fall apart at crucial moments as any defensive plans based on a nation's own armed forces. The whole theory is based on the assumption that there will be powerful enemy forces seeking to attack us, and that there will be no general international machinery with power to prevent the growth of armament and renewed military aggression. Since by hypothesis this alliance is to be stronger than any possible opposition, it will have at least a benevolent control over the entire world. While it is suggested that this alliance may grow into an international association, that appears to be an after thought. The alliance is to come first and is to remain in effect so that it is hard to see how it can develop into something fundamentally different.

The book is brilliantly written and it will have a profound effect on American public opinion. It will obtain much support because undoubtedly in the few years after the war Europe will be dominated by the British, American, and Russian Armies, and perhaps by some formal trusteeship by those nations during the period of reconstruction. It is often easier to continue such existing powers than to surrender them. The idea may appeal also to the nationalistic sentiment of those Americans who picture America dominating the alliance and the world. It may appeal to the do-gooders who regard it as the manifest destiny of America to confer the benefits of the New Deal on every Hottentot. The fact that it is inconsistent with all the ideals so eloquently stated by Woodrow Wilson and Franklin Roosevelt does not seem to be noticed by the followers of those statesmen. It proceeds on the assumption that wars cannot be prevented by the education of the human race to a rule of law and order or by any international arrangement, but only by the armed forces of America, England, and Russia.

Fundamentally this is imperialism. It derides the idea that we can defend the United States, or America, without sea bases and air bases in Europe, Africa, and Asia. It is said that we cannot be safe unless our forces are equal to the job of meeting all our commitments, that is of defending America, Greenland, Iceland, Alaska, the Philippines, and perhaps Australia and England against any possible combination. For that purpose we must control all the sea lanes and all the air lanes over the Atlantic and the Pacific. Obviously if this is sound policy for us, it is sound policy for every other nation. England must control all the oceans. Holland must control the routes to the Indies. Russia must have bases on all sides of the Baltic and control the north Pacific because Bering Strait cannot be reached except by sea or air. If we must have bases in Africa to defend South America why doesn't France or any other African power have to have bases in South America to defend Africa from us? Since many nations are dependent on imported food for their very existence, they must each dominate the sea lanes over which that food must travel. The theory can only lead to vast national armaments in all parts of the world; every nation or at any rate every alliance of nations must be able to control the seas, which means, control the world. It has long been recognized that militarism, the very existence of huge armaments potentially aggressive is a cause of war. They are a tinder box which any spark may ignite. Those who control them unconsciously desire to see them in action. They create a profession of militarists. The plan is at variance with paragraph 8 of the Atlantic Charter which provides for the disarmament of the Axis Nations, and "all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments."

Mr. Lippmann bases his plea for an English defensive alliance on the claim that from 1823 to 1900 we depended on an understanding with England which gave us the British Fleet to enforce the Monroe Doctrine, and that from 1900 to 1940 our foreign policy was bankrupt because our Army and Navy were not large enough to enforce the Monroe Doctrine and defend the Philippines. As for the earlier period there was a long succession of eminent American Secretaries of State from John Quincy Adams to Seward and Olney and Hay who certainly would be very much surprised to learn that there was any alliance of any kind with England, express or implied, to enforce the Monroe Doctrine. It was always doubtful whether a little Nation like the United States could enforce the policy. But we could make a lot of trouble for anyone who violated it; and we relied on the fact that European nations could find other areas in the world more attractive for colonization or exploitation, and were usually involved in quarrels between themselves. As a matter of fact the number of different races in Europe is so great, the racial feelings so strong, the physical conditions so diverse, that no nation since Rome has ever been able to conquer all of Europe or dominate any great part of it for long. England and Russia are just as much a part of Europe as France and Germany. Neither has even been conquered. A policy affecting South America or the Far East therefore was carried out, and can still be carried out, with the certain assumption that it will not meet a combined European opposition.

As for the period after 1900 our foreign policy was undoubtedly based on a mistaken assumption that one nation would not wantonly attack another. But we had a Navy from 1900 to 1914 adequate to defend ourselves against any nation except England whose peaceful intentions we assumed; except for our position in the Philippines which we always intended to be temporary. After the World War we maintained the same position. The disarmament treaties so divided naval strength that again we had adequate protection against any combination of countries which did not include England. Again the Philippines were regarded as indefensible and were to be made independent shortly.

It was only after the expiration of the naval treaties that our foreign policy became bankrupt. Then we permitted Japan, to increase its Navy while we neglected to modernize our own sufficiently. Then we failed like France and England to keep up with the procession in military aviation, and let Hitler assume control of the air. But Hitler only came into power in 1932, and before that airplanes were forbidden to Germany and its Army limited to 100,000 men. If we had developed a sufficient land-based air force it seems now that we could even have defended the Philippines.

Nor was there anything isolationist about our foreign policy in the twenties after the first refusal to join the League of Nations. The disarmament treaties, the Eight Power Pact in the Pacific, the Kellogg treaties were all efforts to work with other nations. We were willing to go further than the British in the imposition of sanctions against Japan and Italy. In the Dawes and Young plans we attempted to help in solving the economic trouble brought on Europe by the Versailles Treaty. One of President Hoover's last acts was to secure the postponement of reparations and the freezing of the German short-term credits. Our foreign policy was never bankrupt. In his eagerness to support a preconceived thesis, Mr. Lippmann seems to me to have distorted historical fact.

The policy which he advocates would have promoted war in the past and would promote war in the future. I have pointed out how it would promote militarism, one of the causes of war. But it has other dangerous results. A military alliance presupposes an enemy threatening war. A military alliance is always an alliance against someone. It arouses the antagonism of the world and leads to the formation promptly of a counteralliance. Once the whole world is lined up in two opposing camps another world war is only a question of time. To avoid that condition is the very purpose of all the ideals and plans for any kind of world federation for peace.

A defensive military alliance based on a control of all the sea lanes and air lanes of the world is bound to produce imperialism. Our fingers will be in every pie. Our military forces will work with our commercial forces to obtain as much of world trade as we can lay our hands on. We will occupy all the strong strategic points in the world and try to maintain a force so preponderant that none shall dare attack us. How long can nations restrain themselves from using such force with just a little of the aggressiveness of Germany and Japan? Look at the history of the British Empire, how a trading post in India extended itself into a rule over 300,000,000 people, how the Boer War led to the domination of the Transvaal, how the desire for Chinese trade led to the colonization of Hong Kong. Potential power over other nations, however benevolent its purpose, leads inevitably to imperialism.

Any policy based primarily on alliances is an abandonment of the ideals on which the American Republic is founded. It substitutes force for a rule of law in the making of which law all those participate who are to be governed. It establishes government without the consent of the governed. It is, of course,

inconsistent with the Atlantic Charter, formally approved by 32 United Nations. The first clause of that document says, "The countries seek no aggrandizement, territorial or other." Yet here certainly is a substantial aggrandizement of power plus the seizure of any bases which may be thought necessary. The desire to secure the alliance with Russia has led Mr. Lippman to sacrifice the third clause of the Atlantic Charter promising the restoration of self-government to those nations who have been forcibly deprived of it, for he assumes that Russia will take over the Baltic states, and in his eagerness for the Russian alliance he seems prepared to go a long way in conceding Russian domination over Poland and all the other border states. He is proposing to substitute for the appeasement of Germany, any appeasement of Russia necessary to secure an alliance. He proposes to substitute for American isolationism, the isolationism of Britain, America, Russia, and perhaps China from the rest of the world.

Finally my own opinion is that we are not fitted to a role of imperialism and would fail in any attempt at world domination. We do not have the interest or the temperament to make a success. We are so strongly democratic that we don't approve of ruthlessness even when necessary for success. We permit our colonial problems to be determined by domestic policies. We don't really want to boss other peoples, and so we don't do it well. If we did succeed in becoming imperialists abroad it would be likely to change our whole attitude at home. We are in enough danger from totalitarianism now, without abandoning the ideal of a rule of democratic law in foreign relations.

There may be some question whether the Fulbright resolution covers the Lippman plan, but on the whole I believe it does. A British-American-Russian alliance is probably international machinery, and it certainly has the power. I should prefer a resolution not sufficiently broad to cover this plan of imperialism.

ORGANIZATIONS OF SOVEREIGN NATIONS

The plan for an enforced peace which accords most closely with the ideals of the American Republic, and of the Atlantic Charter, is that for an Association of Nations to include the United Nations and the neutrals and, after a period of probation, the Axis Nations. It would be supported by covenants between sovereign nations agreeing to determine their disputes by the law of nations and judicial decision or by arbitration. It would further be supported by covenants to join in the use of force against any nation determined to be an aggressor by the decision of some international tribunal. Frankly, this is an obligation which the American people may be loath to undertake, but I believe they will undertake it, because they know that if war is not prevented at the start under modern conditions, it is more than likely to spread throughout the world. Certainly this plan is to be preferred to an international state or a British-American-Russian offensive-defensive alliance.

But there are certainly conditions to be insisted on. First, force should not be called for against any nation because of any international domestic policy, except rearmament in excess of a quota imposed or agreed to. Interference in domestic policies, even such vital matters as tariffs or the treatment of minorities, would be more likely to make war than prevent it. The test is: Is the subject one on which the people of the United States would be willing to have other nations interfere with our internal action? If not, we should not attempt to impose such interference on others. Second, the covenant must be preceded by an economic arrangement fair to all nations, and by political arrangements providing for proper self-determination. The covenant, of course, must provide for the revision of boundaries and obligations, but essentially we will be asked to guarantee the status quo. We cannot make that guarantee unless the status quo is fair to all peoples and gives them a chance to live, and therefore affords a reasonable hope that peace can be maintained. Third, I believe that any obligation to use force in Europe should only be secondary, not to be effective until the peace-loving nations of Europe have exhausted their own resources. This is in accord with Mr. Churchill's suggestion of a council of Europe under the association of nations. We cannot help solve the problems of Europe unless the great majority of the European nations first agree on what that solution should be.

I quite agree that it may be impossible to work out an association of nations, but that is no reason for not trying. Russia may insist on conditions in eastern Europe or in eastern Asia in conflict with our insistence on self-determination of peoples, but I hope not. England may insist on an empire which our people do not care to support, but I do not think so. The question of relative representation in tribunals to pass on questions involving the use of force is always difficult to adjust. But if Mr. Fulbright's resolutions were confined to machinery of the character I have described I should be glad to support it.

CONCLUSION

I don't believe that the time has come to consider what our alternative course should be if the effort to establish an association of nations based on law and orderly justice, with enforcement provisions, should fail. Let us not assume that it will fail. But if it failed we would then be confronted with a choice between the Lippmann plan of a defensive alliance with England and Russia designed to dominate the world, or an independent policy with no obligations assumed in advance. I do not hesitate to say that I should prefer the continuation of our traditional policy, with the hope that the time might soon come when an international agreement might be reached.

In the meantime we could proceed with the seven points I first suggested including provision for our own defense, and actively interest ourselves in assisting those nations who desire our help to become self-supporting economically. We could judge of the seriousness of any crisis which may arise in the world and weigh the need of interference by our armed forces. England and ourselves could assume that neither would atack the other, and be free to cooperate in any emergency. That policy has not brought upon us either catastrophe or invasion in the past and is not likely to do so in the future.

I have tried to suggest the infinite complications which we face in foreign policy, and the great difference of principles involved in the alternatives presented. I have tried to indicate that we show a complete lack of grasp of the fundamentals of peace policy, if we debate only the question of force.

I suggest that instead of passing vague resolutions about machinery with force we ought to discuss the basic principles by which we can hope to assure a peace in the world, which will enable America to work out her destiny at home. The time has not come when the President, or Congress, or the people can make a final decision, because we do not know the conditions which will exist at the end of the war. Until that time comes I do not believe we should, if we could, tie our hands against the adoption of any policy which the American people after due consideration may then desire to adopt.

Senate Resolution 114, Its Nature and Its Mission

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. BURTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on Senate Resolution 114, its nature, and its mission, delivered by me at Carnegie Hall, New York City, September 12, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My task is to explain the terms of Senate Resolution 114, its status, the need for the action it proposes and what we should do to secure that action.

The entire resolution, of 209 words, is as follows:

Resolved, That the Senate advises that the United States take the initiative in calling meetings of representatives of the United Nations for the purpose of forming an organization of the United Nations with specific and limited authority—

1. To assist in coordinating and fully utilizing the military and economic resources of all member nations in the prosecution of the war against the Axis.

2. To establish temporary administrations for Axis-controlled areas of the world as these are occupied by United Nations forces, until such time as permanent governments can be established.

3. To administer relief and assistance in economic rehabilitation in territories of member nations needing such aid and in Axis territory occupied by United Nations forces.

4. To establish procedures and machinery for peaceful settlement of disputes and disagreements between nations.

5. To provide for the assembly and maintenance of a United Nations military force and to suppress by immediate use of such force any future attempt at military aggression by any nation.

That the Senate further advises that any establishment of such United Nations organization provide machinery for its modification, for the delegation of additional specific and limited functions to such organization, and for admission of other nations to membership, and that member nations should commit themselves to seek no territorial aggrandizement.

This resolution sometimes is called the B2H2 resolution. This is because it was introduced by Senator BALL of Minnesota and myself, Senator BURTON of Ohio, both of whose names begin with "B," and by Senator HATCH of New Mexico and Senator HILL of Alabama, both of whose names begin with "H". We call it "the resolution to win the peace." It is merely a Senate resolution as distinguished from a concurrent or joint resolution of the Senate and House of Representatives. It, therefore, does not require either the concurrence of the House or the signature of the President. It is not subject to veto. It can be adopted by a majority of the Senators present and when so adopted it will express the advice of the Senate and it will not purport to do more. It cannot bind our Government to a treaty. It does not give anyone a "blank check" to fill in and bind our Government to any-

thing. A treaty can bind our Government only when made by the President with the advice and consent of the Senate and provided two-thirds of the Senators present concur.

STATUS OF RESOLUTION

This resolution was introduced March 16, 1943. It is pending before a subcommittee of the Senate Committee on Foreign Relations. If it is favorably reported by the committee and adopted by the Senate, it will advise the President that in the opinion of the Senate it would be in the public interest for the United States to take the initiative in calling meetings of representatives of the United Nations with a view to securing from such meetings a recommendation of a treaty, and perhaps of other agreements, providing for the formation of an organization of the United Nations with specific and limited power relating to the prosecution of the war and to the maintenance of a lasting peace. Because such a treaty would require the concurrence of two-thirds of the Senators then present, it would be encouraging, although not essential, if this resolution itself received the concurrence of two-thirds of the Senators present at the time of its adoption.

ABOVE PARTISANSHIP

This resolution was introduced by the two Republican and two Democratic Senators whom I have named, so as to lift the issues it presents above partisanship. There is no room on those issues to consider anything but the best interests of the people of the United States of America as a whole. Partisanship on those issues will endanger seriously the ability of the Senate to secure any action because a two-thirds vote is needed for the ratification of any treaty, yet neither party has two-thirds of the Senate, and neither party is likely to have two-thirds of the Senate at any time when it will consider those issues.

THE TWO-THIRDS RULE

Under our Constitution, some international understandings can be reached by executive agreement without any express authorization of the Congress. Others can be authorized by a majority vote of both Houses of Congress. It seems clear, however, that an agreement that concludes the greatest of all wars, establishes peace throughout the world, and provides for the maintenance of that peace, will rise to the highest dignity of international agreements. As such it would come within that third class of agreements which the Constitution recognizes as treaties. These can be made only by the President, with the advice and consent of the Senate, and provided two-thirds of the Senators present concur. It is toward securing such a majority that our efforts are directed.

The unusual requirements of this two-thirds rule cannot be too strongly emphasized. It is contrary to the usual rule of popular government that places its faith in the sound judgment of a bare majority. The two-thirds rule calls for a majority of two to one. It means that even though a substantial majority of the sovereign people of the United States favor the treaty, and a substantial majority of their Senators favor the treaty; yet, if the roll call shows that over one-third of the Senators present have voted "No" on the question of concurrence in the treaty, then the minority wins, and the majority loses. In such a case the Nation would be deprived of the benefits of a treaty that a majority of its people and a majority of its Senators favor.

A two-thirds rule thus means a one-third control. This makes it difficult to take any action. If the two-thirds rule had applied in the ratifying bodies of the Thirteen Original and Sovereign States we might never have had the United States of America, because the Constitution of the United States was ratified by less than a two-thirds majority in the ratifying bodies of six of those States.

A VICTORY WORTHY OF ITS PRICE

It is for us, however, to observe this constitutional provision and to make sure that the best interests of the people as a whole are served, rather than defeated, by it. This makes it necessary for members of both parties to do the work required to develop such wide-spread understanding of and support of a sound treaty of peace and of sound means for maintaining the peace that the treaty will command more than a 2 to 1 majority in the Senate. When the issue is made clear and the need is understood, I believe that far more than two-thirds of the people and of the Senate will support such a treaty as will make it as sure as possible that our victory shall be worth the immeasurable price paid for it. The only kind of victory that can be worth that price is one that will establish for generations to come a just, a lasting and a living peace that will open to America and to the world a far more practical opportunity than ever before has been opened to establish and maintain "Peace on earth and good will toward men." If a just and lasting peace is not secured our victory will be empty and we shall not have kept faith with those who died for it. Certainly much more than two-thirds of the Senate want peace to endure. We must translate that desire into constructive action.

THE ACTION PROPOSED

Senate Resolution 114 leads the way in a common sense and straight-forward manner towards such a peace. It advises the calling of meetings. This means more than one meeting. It advises meetings of representatives of the United Nations. This means representatives of all the United Nations. This includes both large and small United Nations. On some issues the meetings may well include fewer than all the United Nations because all of them will not be affected, but in considering the final issues of organization and the maintenance of the peace against aggression all should take part.

It advises that the meetings be called for the purpose of forming an organization of the United Nations with specific and limited authority. Any organization recommended by these meetings of representatives will be subject to the constitutional approval of the several nations, including our own, before it becomes binding upon those respective nations.

While the resolution does not expressly say so, it sponsors hope that the President, when acting upon the advice of the Senate in calling meetings of the representatives of the United Nations, will include among the representatives of the United States of America appropriate members of the United States Senate and especially of the Senate Committee on Foreign Relations.

While the resolution does not expressly say so, I hope that the President will initiate meetings not only to discuss the general organization of the United Nations, but also other meetings to pass promptly upon such other matters of international concern as international aviation and international exchange.

The first three of the specific and limited authorities listed in the resolution are obvious subjects for consideration in any early organization of the United Nations. Progress has been made on them since the introduction of the resolution. They include military and economic cooperation in the prosecution of the war and the temporary administration, relief, and rehabilitation of occupied territories.

The fourth authority suggested is the authority to establish procedures and machinery for peaceful settlement of disputes and disagreements between nations. This implies a court for the determination of justiciable questions and some form of council or conference for the orderly consideration of questions of international policy.

The fifth authority is vitally important. It provides for the assembly and maintenance of a United Nations military force for the suppression by immediate use of such force of any future attempt at military aggression by any nation.

This suggests the need for unity among the United Nations from a military standpoint, in peace as well as in war. It recognizes the need for military stability throughout the world as well as within each sovereign state. In winning the war the United Nations will have demonstrated the effectiveness of their united action. On the day of victory the united military forces of the United Nations will have defeated the greatest attack ever made upon civilization. It will be equally clear, on that day, that as long as the forces of the United Nations are thus united, there will be military stability and that whenever those forces cease to be thus united there will arise a corresponding military uncertainty.

This clause suggests that having won the military championship of the world that the United Nations keep their championship team together. Failure to do so will compel each nation to arm itself against an uncertainty unnecessarily created by the United Nations themselves. The cost, the manpower and the materials needed to maintain these armaments to offset this uncertainty will handicap and perhaps prevent the re-establishment of internal economic stability in every great nation including our own.

Each of the United Nations owes an obligation to its own people and to its allies to find a way to substitute military certainty for military uncertainty. Only in this way can future military expenditures be reduced to the lowest terms consistent with world-wide stability.

AVIATION

Aviation makes this plan practical today where 20 years ago it was impractical. The essential value of an United Nations air force to the world today can be compared with the essential value of a modern fire department to a city. Nearly any fire can be stopped with the use of a bucket of water or single fire extinguisher if the fire equipment reaches the fire while the fire is small. Today, a United Nations air force can reach any international danger point in less than 60 hours. The military stability of the world thus for the first time is brought within the practical control of the law-enforcing machinery of the peace-loving nations of the world.

Finally, the Senate in this resolution advises that provision be made among the United Nations for amendments to their initial organization, for the addition of new functions, for the admission of new members and for the requirement that member nations commit themselves to seek no territorial aggrandizement. These provisions seek to meet changing conditions; they are safeguards against future wars.

ACTION NEEDED

The most helpful action that citizens can take to support this program is to speak or write to their Senators, their Representatives, and especially to members of the Senate Committee on Foreign Relations in favor of the objectives of Senate Resolution 114 "to win the peace."

It is not important that this resolution be adopted under its present number, in its present form, or under its present sponsorship. Its substance and objectives, however, are important. It is vital that there be widespread support of continued unity of

military action among all the United Nations. It is vital that the foreign policy of the United States be a clear and practical policy to prevent the tragic repetition of two world wars in one generation. It is vital that the peace and stability of America be lifted above partisanship, personalities, and prejudices. It is vital that America become a land filled with opportunities for our children and our children's children. Finally, it is vital that when the young men who win this war come home to America that they find here the America of which they think, of which they dream, and for which they fight.

Safeguarding of Civil Rights

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting article from the pen of Mr. David Lawrence, editor of that excellent news weekly, the United States News. The article is entitled "New Congress Must Guard Civil Rights."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW CONGRESS MUST GUARD CIVIL RIGHTS

(By David Lawrence)

To what extent has the United States gone totalitarian? Visitors from Britain, some of whom have come here in an official capacity, express their amazement privately, over the degree of restriction that has been imposed upon civilians and the unlimited authority that has been given to the military as compared with the withdrawal of civil rights.

This is a subject which is beginning to trouble persons who fear the long-range effect of war policies and the dangerous trends which they represent. Vice President WALLACE spends a good deal of time and energy worrying about the application of the four freedoms to peoples abroad but he and other radicals would find plenty of food for thought in the gradual curtailment of civil rights during wartime.

The chief instrumentality of Government responsible for the deterioration of democracy during the present war is Congress—both the Republican and Democratic parties. Neither the President nor his executives can be blamed for desiring a free hand in wartime. Nor can the military be criticized for seeking to exercise as much power as possible without hindrance from the civilian side.

Congress, however, is the representative branch of the Government. And if Congress is indifferent or neglectful or simply too preoccupied in minor matters to see the gradual breakdown of the principles of constitutional government, the people alone can remedy the matter at the polls at the next congressional election by supporting candidates in the primaries and before the conventions of either party who will adhere to the Four Freedoms inside the United States.

ABUSE OF POWER

The paramount principle of Government in a democracy which is being violated and abused is that which assures a citizen the protection of the Constitution against unequal application of the laws or the confiscation of his property without due process of law.

Rent control, price control, allocation of war materials are all handled by governmental agencies which in large part are abandoning the principle of equal protection of the laws. These agencies are permitting discriminations as between citizens and are refusing to promulgate standards of regulation so that citizens may know just what are the yardsticks by which Government agencies apply a given action as between persons in the same line of business.

Normally, that is in peacetime, court review while not always utilized operates to act as a psychological preventive of arbitrary action by governmental agencies. But Congress has withdrawn from the Federal courts of the United States, located in the more than 100 judicial districts from coast to coast, jurisdiction over the acts of executive agencies in connection with several important pieces of legislation.

The simple remedy of civil injunction has been practically eliminated and the citizen can test the constitutionality of a law in most cases only by risking criminal prosecution for his attorneys will find it difficult for him to get a district court review otherwise. Last week Judge Charles S. Briggle in the United States District Court, sitting at Peoria, Ill., joined with two other judges in a unanimous opinion refusing a restraining order because he said Congress had so stipulated. He said in his remarks from the bench:

"This is a culmination of a long series of acts, depriving the courts of jurisdiction, vesting decisions instead in the various boards throughout the country. The O. P. A. act provides that no court, Federal or State, shall have power to consider the validity of any regulation of the O. P. A. or any price schedule and this court has no power to restrain the O. P. A.

"The act also covers declaratory judgments. The district court is subject to Congress. Congress can withdraw or give the court jurisdiction. In this case, it has withdrawn jurisdiction. To my mind the trend is bad. It is not in conformity with the traditions of America."

Thus the citizen, in many instances, can no longer go to his district court but must go all the way to Washington to the Emergency Court of Appeals from which he may or may not get a review by the Supreme Court. This makes the judicial process cumbersome and highly restricted but doubtless the framers of the law knew that witnesses and data could not be conveniently brought to the National Capital from all parts of the country for a trial court proceeding. It virtually assures finality of decision by governmental bureaucrats scattered throughout the country who, knowing they are not likely to be restrained by the courts, do about as they please.

Congress should either prescribe legislative standards or require the publication of administrative standards so that capricious and arbitrary decisions may no longer be made in secret or without an explanation in any public record.

Congress on its own return this week will have before it no greater responsibility than to redeem the pledge which is being so widely publicized these days, namely, that we are fighting this war to preserve the "four freedoms" under one of which certainly comes the motto engraved on the Supreme Court building—"Equal Justice Under Law."

Attitude of the People of Oregon on Public Policies

EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. HOLMAN. Mr. President, during the brief recess of the Congress this summer we all have had the advantage of observations and personal contacts with our own people at home. I can report that the citizens of Oregon, with pioneer American background and American ideals, are mad.

Regardless of past political party affiliations, they demand a return to sanity and honesty in the administration of the Federal Government and that the Federal Constitution be reinstated as the fundamental law of our country and the safeguard of American liberties.

Indicative of this popular demand, I present a letter addressed to me by a constituent who is a member of the once constitutional Democratic Party, and I request unanimous consent to have it published in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HON. RUFUS C. HOLMAN
United States Senator,
Portland, Oreg.

DEAR SENATOR: We Democrats have sold our birthright. So eager to get into power and remain there, our leaders have swapped their principles and traditions for votes. The jobs are so plentiful and the spending of public money so prodigious in the present administration that the theorists, crackpots, "isms," and sponges have swarmed around the New Deal until the Democrats are outnumbered and squelched. The President and his followers (or leaders?) ignored the platforms adopted by the last three Democratic conventions, and the next one will be as meaningless. If any real Democrat raises his voice in the next convention, it will either be not heard or be hooted down.

To call the New Deal the Democratic Party is a rank misnomer. There is no Democratic Party. Its place has been usurped by a crowd whose principles bear no resemblance to those for which the Democratic Party has always stood.

We are dismayed and indignant at the advantage taken of the war to increase Federal power. We abhorred the idea of the third term, and a fourth is inevitable unless the country rises against it.

We are angry at the profligate waste of our wealth. We fear that the crowd which has showered our money on crazy ideas and debauched so many of our people into Government dependents will do the same thing on a still grander scale with other countries after the war is over. We want to feed the starving even though it is their own fault they starve. But some of these bankrupt post-war countries may decide it would be nice to become permanent boarders at Uncle Sam's table, and there are men in Washington who might think it a beautiful and splendid thing.

What can we Democrats do about the mess we are in? Only one thing; we can beg the Republicans to nominate a man.

A plain, straightforward American with courage. A man whose "yes" means "yes" and whose "no" means "no."

One who will be honored by the office and not consider that he honors it.

We are fed up with slick and evasive oratory. Give us a man who will talk to us as though we are partners in the business.

One who says "we" more often than "I."

One who will abolish and discharge every bureau, commission, committee, authority, or what have you, not specifically established by Congress and reduce to the efficient minimum the personnel of those remaining.

We are tired of being herded and bullied by Washington. We want a man pledged to let us run our own towns, counties, and States.

We need a man who has worked and earned money, who knows that a tax dollar was worked for and earned by somebody.

A man who can cooperate with Stalin without condoning his crimes or adopting his political ideas. Who can help the countries of the world through their troubles without sacrificing the liberty and free enterprise of our own people.

A man whose family is too proud to "cash in" on Dad's job. Whose wife is content to be the White House hostess, live there and make her husband comfortable and happy.

If you Republicans will nominate such a man, millions of us old fashioned Democrats will vote for him.

Very sincerely,

E. C. GRANT,
Clackamas, Oreg.

Keeping Livestock Healthy

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by me on the Farm and Home Hour, July 31, 1943:

No country having a sound livestock industry has ever suffered famine. Here in the United States our cattle, hogs, and sheep, now numbering about a quarter billion, provide a great reservoir of sustenance that we can draw on as need arises. They are a great balance wheel in the food situation. Man is not privileged to peer far into the future, but my judgment leads me to advise that the Nation plans its affairs in a manner that will mean minimum disturbance of this efficient, well-balanced, living mechanism that has served us so well in the past.

Now that an adequate supply of meat means so much to the successful conduct of the war and in strengthening the home front, I have welcomed the opportunity to discuss briefly certain points that concern producers and consumers alike. I want especially to go below the surface aspects of the situation and explore with you some fields of thought and action that seldom meet the eye.

The quantity of meat this country is able to produce and the price of every pound are influenced by the soundness of our foreign livestock policy. In simple terms, this policy concerns the health of our animals, their ability to reproduce freely, and the quantity and quality of their products. Although taking meat as a convenient example, my remarks include dairy and poultry products as well, and of course wool, leather—in fact everything we get from domestic animals.

For a moment let us turn back the pages of history to the year 1863—80 years ago. That year the nations of the world organized an International Veterinary Congress. It was a scientific body—essentially a league of nations designed for fighting animal diseases. Before that time it was hazardous for any country to accumulate livestock in large numbers, that is, enough to serve as a dependable balance wheel for the total food supply. Animal plagues almost invariably appeared to destroy the surplus. And not only did the meat supply suffer, but disease attacked the work stock, thereby interfering with the planting, tillage, and harvesting of crops. To be sure, there had been earlier veterinary studies, some dating back to the dawn of history. But many of the old beliefs were little more than folklore. That first veterinary congress and those that followed it have brought together and organized the world's best knowledge on keeping livestock healthy. One point on which participants soon reached common accord was the value of international quarantines.

Any nation free of a dangerous disease is fully warranted, for its own protection, in excluding possible means by which infection may enter and spread. This policy, having a sound, scientific basis, now protects the food animals of the United States—meaning your meat and milk supply—from animal plagues existing in foreign lands. It is a safeguard, for instance, against the virus of foot-and mouth disease that otherwise might be introduced from any of 50 countries and jurisdictions.

I want to emphasize that a quarantine of that kind neither carries nor implies any trace of unneighborly or unfriendly feeling. There have been proposals, from time to time, that the United States relax or modify its quarantine in various ways—for instance, to quarantine only part of a country, to try to kill the virus of foot-and-mouth disease by freezing the meat, or to station inspectors abroad and give them discretionary authority to certify meat, which appears to be safe, for shipment to the United States.

Research scientists and veterinarians of the Department of Agriculture, which administers the quarantine, have made a thorough study of such proposals. Especially have they sought to determine, on the basis of research abroad, what may be done safely and what would entail too much risk. They conclude that canned and other well-processed meats may be safely admitted, and this is being done. But any weakening of the quarantine on fresh or frozen meat would be too hazardous to warrant the risk. As a veterinarian, I have been through two outbreaks of foot-and-mouth disease. The malignant form of this malady is terrible. Few persons without first-hand knowledge of its destructive, virulent nature comprehend the heavy toll it takes among herds and flocks and the pitiable condition in which it leaves its victims. Our country cannot afford to flirt with expedients that leave our vast reservoir of healthy animals wide open to invasion by a devastating virus of that kind. And besides foot-and-mouth disease, there are still other foreign plagues—rinderpest, surra, and others—all of which are now excluded by protective quarantines for which we should be thankful. I ask your support of my efforts to sustain this sound and safe policy.

Meanwhile from those nations of the world that have maintained high standards of animal health, the United States has been receiving both food animals and breeding stock. Our open-door policy of admitting purebred animals duty free has, in my judgment, been a master stroke of good livestock husbandry plus wise statesmanship. As I said on a previous occasion to my colleagues in Congress, we are now literally holding in trust for the rest of the world the best bloodlines now existent for the reestablishment of disease-free herds and flocks in other countries when the war is over. We hold a great responsibility in safeguarding this valuable seed stock.

Now let us see how well we are conducting our internal affairs with livestock—not so much the familiar operations of farm and ranch, as the kind of foundation they have. In other words, how fully can we depend on continued large production of meat food products, especially in times of emergency? My answer is one of assurance. I have examined the foundations and find them substantial. The structure of our livestock industry—meaning our domestic animals and facilities for raising them—rests on a large group of strong organizations, among which there are strong interlocking ties. Arrangements for this privilege of addressing you were made by the Indiana Veterinary Medical Association. In every State there is a similar body. These State organizations in turn are affiliated with a national one, the American Veterinary Medical Association.

Then there are other types of State and National livestock organizations. Some deal with the recording of pedigrees and breed improvement; others seek improved economic conditions; others are primarily scientific; and still others, with a flair for showmanship, sponsor fairs and expositions. A few have specialized fields, as, for example, the betterment of shipping facilities and humane treatment of animals. Each organized group is well established with a definite job to do and a record for doing it. And to give further permanence and stability to the structure each State has its agricultural college and experiment station, likewise veterinary and livestock boards. Practically all these bodies have close official relations with the Bureau of Animal Industry of the United States Department of Agriculture at Washington. Several other Federal bureaus and agencies likewise deal with livestock matters. That, in brief, is a general sketch of the foundation on which the superstructure of livestock raising rests. It is a good foundation, cemented by close and effective cooperation.

As a sidelight on the stability and economic strength of the Nation's livestock industry, it is noteworthy that the Bureau of Animal Industry is the oldest bureau of the Department of Agriculture and the only one which still keeps its original name. Moreover, during the 59 years of its existence, the Bureau of Animal Industry has had only three Chiefs—Salmon, Melvin, and Mohler—a most unusual circumstance in the conduct of public affairs. The stability is all the more striking, in view of the turbulent nature of some of the Bureau's activities. Several national campaigns against animal diseases were considerably in advance of public opinion in certain areas, with the result of lawsuits, violence, and even bloodshed sometimes marking the progressive application of veterinary science. In more recent years, I am glad to say, public opinion has been highly receptive to veterinary and other scientific aids.

In a sense, the Congress of the United States, lending an attentive ear to legislative needs of agriculture and stock raising, has served as consulting architect for the upbuilding of these resources. There has been need for a great deal of research—to find improved systems of breeding, to develop more useful types of animals, to test new feeds, to reduce losses, to save labor, and to enhance quality. There has been need likewise for control services such as Federal meat inspection and supervision of stockyards.

Acting in the public interest, Congress has supplied needs of the kind outlined. Livestock production responded accordingly. In some cases the benefits have been measurable with a high degree of precision. Through dairy herd improvement fostered by research and extension work, production of milk and butterfat per cow has taken a distinct upward trend. The same is true of egg yields in poultry flocks. Modern types of animals mature much earlier than those raised at the turn of the century. Good steers now are ready for market within 2 years instead of 3 or 4. Improved livestock also yield a greater quantity of finished product for the feed utilized.

In scientific research there has been more devotion to achievement than fanfare of the results. Entanglements of old traditions and smoke screens of skepticism have sometimes impeded application of the new knowledge, but in spite of obstacles, progress has been continuous. Take, for instance, the painstaking research on worm parasites of hogs and the development of the now familiar swine sanitation system. The recommendation of the scientists to scrub and disinfect farrowing houses, to wash the sow before the birth of her pigs, and to take her out of a muddy hog lot and put her in clean pasture—all these things at first seemed, to practical folks, like putting pigs in the parlor. But now this sanitary system of raising pigs is the rule rather than the exception. And it is responsible, to a large extent, for the ability of farmers to raise so many pigs with so few losses.

A definite help to the progress this Nation has made in curbing the disease enemies of livestock has been its constructive information policy. Research workers and veterinarians share their knowledge readily with other professional groups, with livestock owners, and the public. New findings appear not merely in professional journals. Any citizen can learn of them from Government and State bulletins, newspapers, the farm press, and radio broadcasts.

Within recent years much of the material has been tuned to a dominant note or theme—"Keeping livestock healthy." It's a good theme for helping us keep in step with the tempo of wartime food production. It's the title of the 1942 Yearbook of Agriculture, a volume so helpful that Congress is printing a second edition this year. My veterinary associates have chosen the same theme for radio talks of this series, in which I have the honor and privilege to be your first speaker. It's a theme that means more roasts in the oven; more chickens in the pot. Let me illustrate. Back in 1908, when I was serving as meat and dairy inspector in Fort Wayne, the original campaign against bovine tuberculosis in Indiana began in that city, under the leadership of Dr. H. O. Bruggeman, director of health. More than 1,500 head of cattle supplying milk to the city were found to be reactors, were condemned and slaughtered. Nine years later, when the national campaign against bovine tuberculosis began, about 50,000 cattle a year failed to pass Federal meat inspection. Instead of qualifying for human food, those animals went for fertilizer, grease, or tankage. By contrast, the number failing to pass inspection in recent years has been less than 2,500—in other words, an annual saving of about 47,500 cattle, equivalent to some 24,000,000 pounds of dressed beef. Thus we see how veterinary foresight a quarter of a century ago, plus good organization and courageous effort, are now paying food dividends in a hungry world. Bovine tuberculosis is just one of several disease enemies now practically conquered. Southern cattle ticks are another, sheep scab is another, and pullorum disease is another. Progress against still other important maladies is a matter of public record.

True, the attainment of the greater yields that animal health makes possible has encountered some wartime difficulties, involving scarcities of feed and labor in particular. But the output of livestock products is still going on efficiently and helping to set new records of production. And when we fail to find, in our local shops, the meats we would like to have, let us regard the inconvenience as temporary; for that meat is probably in some field kitchen in a distant battle zone. All in all, it is gratifying to know that our millions of animals are productive allies on our side.

At times the confusion that comes from trial-and-error methods of solving human problems is perplexing. I trust, therefore, that I have conveyed to you some of my confidence in the manner in which a great and complex enterprise—the livestock industry—conducts its affairs in direct, orderly fashion, guided by the findings of science. I envision this industry as a bulwark of strength for the future and a beacon for getting worthwhile things done in ways that best serve human needs.

Military Records of the Farrow and Rice Families of Fountain Inn, S. C.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith an article appearing in the Fountain Inn Tribune under date of August 19, 1943, regarding the Farrow family.

It will be observed that from this family have come seven stalwart sons to serve our country during these serious times of war.

Having had the privilege of spending 2 months in our district visiting among our people, I am very gratified to learn of the splendid cooperation on the part of everyone in the successful prosecution of the war.

In pointing out the unusual contribution of the Farrow family, I would not, of course, overlook the fact that there are others who probably are making as great a contribution in that, although they may not have seven sons to give, they probably are giving all of their sons and in some instances their daughters in the prosecution of the war.

It is certainly a proud distinction that I claim in calling the unusual Farrow family to the attention of our colleagues in Congress and to the people of the country generally.

I would call special attention also to the contribution of five sons by Mr. and Mrs. J. K. Rice, of Fountain Inn, S. C., as mentioned in the attached article:

ABOUT TOWN

(By M. N.)

Most every family in the United States has a member in the armed forces, but Fountain Inn has a record we believe, where seven members, all brothers, are serving under the Stars and Stripes. Six of these boys are in the Army and the other is in the Navy. These boys are the sons of Mr. and Mrs. Broadus Farrow, who live on Gulliver Street. Mr. and Mrs. Farrow are the parents of 12 children, 10 boys and 2 girls. Two of the children, both boys, are dead, and 1 of these, who died about a year ago, served a stretch in the Navy during peacetime. Another son, who is a farmer, is registered, as is the father. The boys in service are Lt. Loys Farrow, age 37, has been in the service 17 years, and is now on foreign soil; Corp. Loyd Farrow, 35, is stationed at Morgan Field, Ky., and has been in service 2 years. Second Lt. Joe Farrow, 30, has been in service 8 years, and is at Fort Bliss, Tex.; Lt. Jack Farrow, 24, of Fort Huachuca, Ariz., has been in service 3 years; Pvt. William Farrow, 21, of Fort McClellan, Ala., has been in service just a few months. Third Class Petty Officer Bruce Farrow, 20, has been in service 1 year and is now on sea duty; Harry Farrow, 18, has been accepted into the service at Fort Bragg, N. C., but is at home for a 21-day leave. He will report for duty August 30. Mr. Farrow, father of these boys, is in General Hospital, Greenville, at present, suffering from a severe case of malaria fever.

Fountain Inn has another family who is well represented in the service. Mr. and Mrs. J. K. Rice, who live 2 miles northwest of town, have five sons in service. Mr. and Mrs. Rice received word last Thursday from the War Department that one of their sons, Pvt. (1st cl.) Henry W. Rice, was captured by the enemy on July 12, in the north African area.

Second Oregon Volunteer Infantry Post-War Aims

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. ANGELL. Mr. Speaker, on August 15 last the Second Oregon Volunteers Reunion Association met in Laurelhurst Park in Portland, Oreg., in my district. This is an annual event, commemorating the fall of Manila, P. I., on August 13, 1898, and an event which is attended by many veterans and friends of the Second Oregon Volunteers. At their meeting this year the association adopted resolutions regarding post-war plans and aims and I ask unanimous consent to include a copy of the resolution with my remarks, as follows:

Whereas it seems appropriate at this time to discuss post-war aims; and

Whereas war veterans should be heard when a post-war settlement is effected: Therefore be it

Resolved by the veterans of the Second Oregon Volunteer Infantry of the Spanish War and Philippine Insurrection, at their annual reunion, held in Laurelhurst Park, Portland, Oreg., August 15, 1943, commemorating the capture of Manila, P. I., on August 13, 1898, That in their opinion the Allied Nations should firmly insist upon the following:

(a) Complete evacuation by Germany, Japan, and Italy of all occupied foreign territory now under their control.

(b) All German, Japanese, and Italian war factories, including plants for the manufacture of war planes, submarines, warships, cannons, small arms, machine guns, and ammunition, be totally destroyed together with all completed war equipment of every kind to be destroyed.

(c) Allied garrisons to be maintained in all large German, Japanese, and Italian cities

for many years, to enforce the terms of the peace treaty.

(d) German, Japanese, and Italian schools to be placed under control of the Allied Nations for many years.

(e) The German, Japanese, and Italian general staffs to be abolished and prevented from reorganizing.

(f) Germany to be divided into separate states, including Prussia, Saxony, Bavaria, Hanover, Wurttemberg, and others, and prevented from combining again into one nation, these separate states to be organized under superivison of the Allied Nations.

(g) The German, Japanese, and Italian press and radio to be under control and supervision of the Allied Nations for many years.

(h) German, Japanese, and Italian assemblies of all kinds to be strictly controlled by the Allied Nations for many years.

(i) Freedom of religion in Germany, Japan, and Italy to be established and maintained. Rights of the Masonic fraternity and the Christian Science Church to be reestablished; and be it further

Resolved, That the responsible heads of the Governments of Germany, Japan, and Italy, and a certain number of their most important leaders, be tried by military commissions of the Allied Nations and duly punished; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Vice President, members of the Cabinet, the Oregon delegation, the Oregonian, Journal, Oregon Legionnaire, and T. Wendell Willkie.

PERCY WILLIS,
President.
RICHARD DEICH,
Secretary.

Tribute to Poland

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a proclamation issued by Hon. Fletcher Bowron, mayor of Los Angeles, Calif., setting aside period of one week as a tribute to Poland:

To the People of Los Angeles, Greetings:

Whereas the American people have a fervent respect and admiration for the people of Poland for their heroic defense of their homeland when attacked on September 1, 1939; and

Whereas throughout the past 4 years the valiant Polish people have continued to offer both passive and active resistance to the invaders who occupy their country; and

Whereas our people earnestly hope that the forces of oppression will soon be driven from the soil of Poland and that the Polish nation will live again in a world of peace and democratic freedom.

Now, therefore, as mayor of Los Angeles I do hereby proclaim, and set aside, the period of August 29 to September 4, 1943, as a week of tribute to Poland, and I urge that during that week citizens of Los Angeles join with churches and patriotic organizations in honoring the dauntless spirit and courage of the Polish people.

FLETCHER BOWRON,
Mayor.

JULY 28, 1943.

Uncle Sam's Waves

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem:

UNCLE SAM'S WAVES

There is many a WAVE
On this side of the sea,
In the home of the brave
And the land of the free,
That's now doing her bit
Both a-near and a-far,
Who's not going to quit
Till we win the World War.

With a beauty and grace
That no one need defend,
She is taking the place
Of a brother or friend,
That he may fight our foes
In the battles afar,
And so hasten the close
Of mad tyranny's war.

These young beautiful WAVES
Are as loyal at heart,
As the dutiful braves
That are doing their part
In the worst of all wars
That have threatened the world
Since the Stripes and the Stars
Were first bravely unfurled.

When the World War is won,
And when peace is declared,
It ought, soon as begun,
To be equally shared
'Twixt the dutiful braves
That fought, over the foam,
And the beautiful WAVES
That fought for them at home.

No one yet can tell what
Reconstruction will be,
Tho' we haven't forgot
When the slaves were set free,
What the Southerners lost
In the secession fall,
And the tears that it cost
At the end of it all.

Methinks, many a brave,
That's escaped with his life,
Will come home to his WAVE,
And will make her his wife,
And throughout the long years
That are likely to come,
Free from sorrow and tears,
They will sing "Home, Sweet Home."

—*Horace C. Carlisle.*

Address of Hon. Joseph J. Mansfield

EXTENSION OF REMARKS

OF

HON. RICHARD M. KLEBERG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. KLEBERG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable JOSEPH J. MANSFIELD before the Intracoastal Canal Association meeting held at the Rice Hotel, Houston, Tex., August 26, 1943:

Mr. President, Mr. Miller, my colleagues in Congress, DICK KLEBERG and Cousin Nat, Colonel Saville, and ladies and gentlemen, I am glad to be here with you on this occasion, though up to 2 or 3 days ago I didn't know whether it would be possible or not. I have had no opportunity to prepare any address for the occasion, but will talk to you along the lines with which I believe I am more or less familiar.

I was very much interested in the splendid address of Mr. Miller and the talks of my good friends, DICK KLEBERG and Cousin Nat. Cousin Nat has obtained one honor that I don't believe has ever been bestowed upon any other American. I saw the Queen of England bow to him devotedly. I don't think she has ever bowed to any of the rest of us. When I had the honor of leading the Congress in the reception in the rotunda of the Capitol, when Nat came up in line, he addressed the King as Cousin George and the Queen as Cousin Elizabeth, and you ought to have seen her bow to him. But anybody who knows Nat Patton would feel more inclined to call him "Brother" than "Cousin" if he hadn't already said that he was only a cousin.

Now the importance of river and harbor work in the war is greater, of course, than it is for commerce in peacetime. For more than 25 years I have been on committees trying to work out a waterway program, 90 percent of which perhaps was unbeknown to the people of Texas. I have introduced and piloted through Congress bills containing projects for the improvement of practically every harbor and port in the United States, every river in the United States that is under improvement, and, of course, every canal and channel that is bearing commerce now. Not only that, but also the ports of Hawaii, Midway, and islands out there in the Pacific, Dutch Harbor, and a number of projects up and down Alaska, now so extremely important in this war. That was done as a measure of national defense more than one of commerce, because the commerce of those places is not very great. Of course the commerce of Hawaii is large, principally of sugar, pineapples, and things like that. In addition, there are the waterway improvements in Puerto Rico. I visited personally all the harbors in Puerto Rico. And in the Island of St. Thomas of the Virgin group, we have a harbor of strategic importance.

If some enemy ever attempts to take the Panama Canal, the importance of this will be shown. They haven't been so awfully important in the present war as these improvements out in the western part of the country or in the north Pacific. If you want something interesting on the subject of the use of our waterways in wartime, I will refer you to the United States News of May of this year. This, as you doubtless know, is a magazine edited by David Lawrence, one of the most versatile writers in the United States or anywhere else. In this May number he has a very interesting article showing a map of the inland waterways and the great service they are now performing in this war. I have another one here in the magazine Marine Progress of June of this year by Joseph B. Eastman, now head of the war transportation of the United States and for many, many years the leader of the Interstate Commerce Commission, a Commission dealing almost entirely with railroads, and his life work has been devoted to building up the great railway system of this country, and he has done an excellent job.

Now neither Mr. Eastman nor David Lawrence have ever torn the shirts off their back in behalf of waterway transportation, but Mr. Eastman has become a great promoter of it, especially since this war, and he has done as much as most any other man in the

United States in trying to forward the movement of commerce over our inland waterways and through our ports. Regardless of his lifelong training in the interests of the railways, he is broad enough and big enough and able enough to see the need of the waterways also. The same way with David Lawrence. David Lawrence has been associated with interests which have never been extremely friendly to waterways. The fact that these two articles come from these men whose life work has largely been along lines of association with people who are unfriendly to waterways to my mind is one of the greatest arguments in favor of them. I wish it were possible to include some of those articles in my talk, but then I will not take the time for that.

Now the waterway program has been virtually brought to a stop during the war. Some time last year—I don't remember when; some time last fall perhaps—I was called into a conference in the Speaker's office and when I got over there they had assembled the Democratic and Republican leaders of the Congress, Senator George, chairman of the Finance Committee of the Senate, Donald Nelson, and the Assistant Secretary of War and of the Navy, and Mr. Nelson stated that they were trying to confer with members of Congress as to what expenditures they would probably want to make during the war, so that he would know how to prepare his plans. I told him very frankly that so far as river and harbor work was concerned, that I wouldn't ask for a cent, except that which would promote the interest of the war, until the war was over. I thought that was a debt that we owed to our Nation and to the taxpayers of this country. They are taxed now down to bedrock and of course we don't want to put any unnecessary burdens upon them at this time. Consequently there has been no legislation except a few isolated projects; for instance, the Intracoastal Canal enlargement and its extension across Florida. I piloted through a special bill for that and a special bill was enacted for building an additional lock up there at the Soo to get our iron ore down in greater quantities. Nearly one hundred million tons passed through there last year and about as much or perhaps more this year, although we have no official reports of it as yet. Those were in the interest of the war.

The extension of the channel across Florida was promoted by all of the little oil interests of this country, primarily the independents, so called. The big oil companies were friendly to it at that time. However, their interests have been changed to a certain extent by the installation of the large pipe lines which Mr. Ickes is extending across the country, one 24-inch pipe for conveying crude oil and then he is going to put in a 20-inch pipe for gasoline, and that will largely take care of the interests of the big oil companies and they will perhaps not feel the interest in the Intracoastal Canal that they might otherwise have felt.

Still they are large operators, both on the Intracoastal Canal and on the Mississippi River. The Standard Oil Co., next to the Federal Barge Line is one of the largest operators on the Mississippi River now. We endeavored to get the channel built across Florida and we did what we don't ordinarily do. Instead of letting it wait for the ordinary course of procedure in appropriations and allocations by the Chief of Engineers, we endeavored to get a special appropriation of $44,000,000, which was the estimated cost. Well, we had a tremendous fight over it. In the first place, we had a tremendous fight to get the channel adopted. I reported the bill as chairman of the committee. My committee was divided almost 50–50 on it, to begin with, but with a majority in favor of it, and then when we called it up under the advice of the Speaker and endeavored to get it through under a suspension of the rules without going through the regular course of getting a rule, why we ran into trouble. Under suspension of the rules, they only provide for 20 minutes of debate to the side, 20 in favor of the bill and 20 in opposition to it, and it requires a two-thirds vote. Well, we had so many able lawyers in Congress fighting me that they whipsawed me to death and beat me on that. After all, there is no time to explain anything in 20 minutes. About the time you got halfway through one explanation, these fellows would be shooting questions at you from here, there, and yonder, and the debate was closed and there was a vote on it. The Members just didn't understand it.

Then I waited for the Committee on Rules to give it consideration. That course of procedure provided for 4 hours of debate, 2 in favor of it and 2 against it. We fought it out for 4 long hours on the floor of the House, and then under the 5-minute rule for some time additionally, but before we got through there were enough intelligent men in the Congress, strange to say, to see the importance of it and we adopted it by a majority of 81 votes, which is an unusually large majority.

But there the fight had only commenced, and when we came to get the appropriation, well it was a week or two before the subcommittee of the House on appropriations, a committee composed of 9 members. We had hearings and extended hearings on it. Finally the subcommittee decided in favor of it by a majority of 2. They reported it to the full committee of 45, none of whom had heard the evidence, except those 9 of course, and the full committee decided against it by a majority of 2. So there we were headed off again.

We let it lay for a while, and after the bill got over to the Senate, we undertook to do the same thing over there, with practically the same result. The subcommittee that had heard the evidence decided in favor of it and the full committee, which had not heard the evidence, decided against it, and killed us off again.

However, I failed to mention that when the bill adopting the project was up, where we finally carried it by an 81 majority in the House, and it got to the Senate, there was a tie vote, and the Vice President cast the deciding vote in favor of it; perhaps the most sensible thing, by the way, he ever did do in his life.

So you see how it has been a fight. It has been a fight from the word go. All waterways projects now, especially inland waterways, are a fight in Congress and out of Congress too. If I had had to go through with what Clarence Holland and Roy Miller have gone through, I would be gray headed. They have fought the battles of this Intracoastal Canal for more than a third of a century, and they brought me up in it from my infancy.

The first thing I did when I went to Congress was to try to get that old 5- by 40-foot channel increased to larger dimensions. We had in mind then a 9- by 100-foot channel, which would correspond with the depth in the Mississippi River, and we fought and fought and fought for years over that, and finally we got it. Then we fought for extension of it down to the Mexican border, and we had great trouble over that for years and years and finally got that worked out.

Now with reference to this canal across Florida, they are telling me now in various places: "Why we don't need that. We have the Intracoastal Canal from here to Florida and another one from there up to the East, up to Trenton, N. J., and there is no use putting that across there." But many Members of Congress, who opposed the channel that has been adopted, pretended to favor another channel 300 miles south of there through Lake Okeechobee and the Everglades, one which they knew would never be used, for it involves a haul 460 miles longer than the one that has been adopted by Congress and one that would perhaps cost $150,000,000, because you have to make a channel across Florida, down the west coast and up the east coast. Well on the east coast we have an 8-foot project down to Miami, as well as I recall, but it is only 100 feet wide, and then across Lake Okeechobee we have what was originally adopted as a drainage channel by a private concern down there, a district organized under the laws of the State of Florida. We finally adopted that channel as a navigation channel. It is only 80 feet wide and 6 feet deep. It has locks on it. Lake Okeechobee is 17 feet above sea level, and it takes two locks on each side of it, four locks in all. The waterway is fed from this lake. The largest lock on it is only 40 by 250 feet. The largest oil barges, and only a few of them have been turned out in the last month or two, are 45 feet wide and 260 feet long, 5 feet wider than those locks and 10 feet longer. Yet some Members of Congress tell us the locks are ample for any oil movement. How you can get a fleet of three barges through a lock that is entirely too small for one of them is something the engineers have not worked out yet to my satisfaction.

Now the Intracoastal Canal has done an enormous amount of business in the last 2 years. Why Mr. Eastman says here it has increased 200 percent over last year and last year was a 200-percent increase over what it was before, as well as I remember his figures in this article.

If it is proper not to have the channel across Florida, it is proper not to have it from here to the Mississippi River, and if the channel across Florida is to remain filled with dirt, why not fill the other up and save all this expense? It can only serve partially a national purpose without being connected through. If we had had that channel at the time I first tried to get it 6 years ago, it is very doubtful if we would have had any gasoline rationing. It would have been able to supply the East, with a small amount of rationing up there, and by furnishing additional equipment, it is capable, as the Chief of Engineers says, of furnishing the East with all the oil and gasoline they can possibly use. Their normal consumption was 1,600,000 barrels a day before the war. Now this large pipe line, they say, will eventually transport 300,000 barrels of crude oil. Now mind you that oil doesn't go to the consumers through that pipe line. It is going to the refineries in Philadelphia or near Philadelphia. Then after it is refined and converted into products or gasoline—I call it gasoline, because most people can understand that when they don't know what "products" means sometimes—after it is refined and converted into gasoline, for distribution up and down the Atlantic coast it comes back to barges anyhow and to the small tankers that are operating there. Now I spend a heap of my time in Washington, and every drop of gasoline that is consumed there comes in by water, unless it has changed since I was there last. I have talked to consumers and distributors and everybody else about the matter. They bring those very large barges in there. They will bring 15,000 barrels in a barge. It has got to go to the barges anyhow after it is taken to the Philadelphia refining district. Then one branch of the line from Phoenixville goes across to Bayonne, the New York refining district, and of course the Intracoastal Canal can't reach that area by water, as there is another missing link up there.

Now if Mr. Ickes had done what I tried to get him to do 2 years ago after it was known that they were going to build the pipe line or that he was promoting it and trying to get the permit for it from the War Production Board and Donald Nelson, I suggested to him, and my letters were put in the CONGRESSIONAL RECORD 2 years ago, that he put his pipe line across Florida. The building of this 2,000-mile pipe line across the coun-

try was going to consume 355,000 tons of steel, which Donald Nelson told Mr. Ickes he couldn't spare from the war effort; that it was too badly needed. Donald Nelson told him: "Unless you want to stop the building of ships, and tanks and guns and airplanes, why you have got to cut this thing out." But Mr. Ickes' pressure finally bore down on him, and they cut 110,000 tons out of it and made the pipe lighter and finally got him to consent to it and he granted the permit. Now I suggested to Mr. Ickes that he put his pipe line across Florida and that in a very short time enough equipment could be provided, in addition to what we had already, by which the gasoline could go to Carrabelle or to some other point in western Florida, then pipe it across to Jacksonville, and then up the Intracoastal Canal on the Atlantic coast. It would have taken about one-fifth the amount of steel for that pipe line that it took for the big one across the country. They could have had it in operation in 90 days easily. That is an undisputed fact. Well, this other one has taken more than a year and it is not reaching the consumers yet, in fact. In fact it is sort of in the try-out stage now. They have had two or three breaks in it already. Instead of pumping 300,000 barrels through it they have only been pumping about 100,000. They claim, however, that in a short time it will be producing the 300,000 barrels. I have my opinion of that. I don't know. I have got nothing to back it up, except I talked with some engineers. They think that they are approaching the subject sort of easily to try out their pipes to see whether they will stand the pressure. They have got to install a great many more pumping stations to put 300,000 barrels through it in 24 hours, and that will require tremendous pressure and it is a question as to whether that pipe can stand the pressure. The pipe is much thinner than the engineers originally recommended.

Now, Mr. Ickes wouldn't do what I suggested. He wouldn't listen to it.

Then I suggested that, instead of building the pipe line from Texas north, that he build it from a point on the upper Ohio River across to the Potomac, less than 200 miles perhaps, and then they could have brought the gasoline up there through the Ohio and Mississippi Rivers and put the thing in operation to furnish the East at least 9 months earlier than they could by his method. He wouldn't do that. He first built the pipe line up to a point in Illinois and then they had to wait and get further permits from Donald Nelson before they could extend it on east, and they just finished it to the East a few months ago.

I also took the matter up with Mr. Pelly, president of the American Association of Railroads, suggesting two railroads that could haul 300,000 barrels a day across Florida. Now that wasn't my own work. The engineers worked this out for me, and one of them was a railroad engineer, too, and they said that that could easily be done. Well, Mr. Pelly replied to me very politely and said that the movement of oil and gasoline to the East, if the oil companies would turn the tank cars over to them, would constitute no problem to the railroads. He has found out differently at this time; very much so.

Now, with reference to this great movement by rail, I want to show you what it is costing the Government. According to the testimony before the congressional committees there, the cost by rail is estimated at $1.05 to $1.10 a barrel more than the transportation by pipe line even, and the Government is actually paying out of the Treasury that much money going to the railroads for the purpose of making up the difference in this cost. They didn't want to saddle the whole burden on the consumers of the East. However, before this arrangement was made they did raise the price of gasoline in the East about 2 cents a gallon. I don't remember the exact figures. That raise is still applicable there. I am not sure about that, but they look upon it as a condition brought about by the war for which the people of the East were not responsible any more than anybody else and that the burden should not be borne by them alone. I take no controversy with that. I thought that was fair and reasonable, and in view of the fact that the Government would not pay the $44,000,000 to build the channel across Florida, but would rather pay $800,000 a day to the railroads, why let them go ahead. I can't stop them and I don't think there is anybody in this house can stop them. They have it going their way. Now, it was almost impossible to get any figures. Really the thing was, in a way, under the R. F. C., though the R. F. C. was not directly in control of it. There are two or three corporations, subsidiaries of the R. F. C., which had charge of this matter; the Defense Plant Corporation, and then, under it, the Defense Supplies Corporation. The oil companies are paying the railroads the regular rate, which averages about $1.05 a barrel, according to the testimony, more than the rates by other modes of transportation would be, by water or by pipe line, and then the Defense Supplies Corporation is refunding to these oil corporations that much out of the United States Treasury, and to give you an estimate of how much it is amounting to, let me make this statement: The shipments by rail have been increased from time to time. It was first thought that they couldn't exceed about 700,000 barrels a day, but here is a clipping from the Houston Chronicle, an Associated Press dispatch, of July 1 of this year, stating that for the week ending July 1 the rail shipments were 999,684 barrels a day for that week.

Now you take $1.05 a barrel on every barrel of that and see what it is costing the United States Government. It runs to $1,049,668 a day. Keep that up for a year, 365 days, and you have got about $400,000,000 that they are actually paying back to the oil companies on account of these freight rates paid to the railroads, when that Florida channel was only estimated at $44,000,000. Sometimes people can be penny wise and pound foolish. The railroads are not to blame. Their charges are not unreasonable, but this does not alter the fact that the Petroleum Administrator for War is putting the Government to an enormous unnecessary expense and probably for a very long period of time.

Now, how long is this going to keep up?

With reference to the two pipe lines, one is only claimed to be able to transport 300,000 barrels a day, and the other one 235,000. There are 535,000 barrels a day, 300,000 of crude oil going to the refineries up there in the East and 235,000 barrels of gasoline. That gasoline pipe line is not built yet, but they are going to build it. They have got the permits. That will only amount to 535,000 barrels a day to the East, when their normal needs are 1,600,000 barrels, and, in addition, what they want to give to the Navy to send to Africa and to Sicily and to the war fronts. Just how much that would amount to nobody knows. We can't get any figures on those things, of course. They are war secrets. But the pipe lines will only transport about a third of the normal needs. It will be less than a third. In other words, it would take six of those pipe lines to do the job, and that would virtually end the war, because that would take all the steel we make to do that.

Now, that is not all that is involved in this matter.

We come now to the question of cotton. Texas, as you all know, has been a great producer of cotton. Normally before the depression that came upon us a few years ago we produced in some years approximately 5,000,000 bales of cotton a year. We have produced as much as a third of the cotton crop of the United States. About 92 percent of that cotton, or over 90 percent I would say, went into the export trade. Very little of it went to the eastern mills. That which did go to the eastern mills all went by ship; none by rail. Now, I have here another clipping of August 2, of quite recent date, showing that Houston at the end of the cotton season had shipped 1,114,850 bales to eastern mills, every bale of which went by rail. Now your rate expert here with the Houston Chamber of Commerce, Mr. Holliman, who by the way, is a most competent man, tells us that that cotton which went from Houston to southern mills ranged from 56 to 62 cents per 100 pounds; that which went to New England mills ranged around 88 cents a hundred pounds. Now a bale of cotton, as you all know, weighs 500 pounds. That is how much a bale? Four dollars and forty cents in the case of the New England mills, while according to the water rates, as furnished by him, the rate would have been less than a third of that amount. Now, either the cotton men of Houston or the cotton farmers of Texas have lost that money by reason of not having this channel. It is a burden that they have been required to bear. I don't know whether the loss goes entirely to the farmers who produce the cotton or whether it is a loss that is borne by your Houston businessmen who had that cotton in charge and shipped it. But whoever bore the loss, it was a loss to Texas. Now you take a million bales of cotton running up that way at a rate of about $2.25 a bale on the average difference in transportation costs, and how much would that amount to? On a million bales that is two and a quarter million dollars right there on cotton alone. So you see, the cotton industry is interested.

Not only cotton. Texas is quite a producer of sulfur, as you all know. Texas and Louisiana produce 90 percent of the sulfur of the United States, and I am reliably informed that 80 percent of it is used in war industries and by the Federal Government. The transportation charges are paid by the United States Government, either directly or indirectly, because it all goes into war material. One ton of this Texas sulfur will make 4 tons of sulfuric acid of the type that is ordinarily used in industries, what is known as 50° Baumé. Now that sulfur formerly was transported by all sorts of transportation, much of it by rail, much of it by barge up the Mississippi River, much of it by the Intracoastal Canal, and much of it by ocean ships. Of course, of that which went to the Atlantic seacoast, perhaps all went by ocean ship, because that method of transportation is cheaper than any other. Now Texas is producing 3,500,000 tons of sulfur a year, about a million and a half tons more than it was producing in normal times, on account of the war emergency. I am informed that a million and a half tons is consumed in the north Atlantic seaport region, right where it could be reached by the Intracoastal Canal with that channel across Florida. The average transportation cost of that before the war was about $2.15 a ton. Mr. Miller, are you familiar with that?

Mr. MILLER. Around $2 to $2.50 per ton.

Mr. MANSFIELD. Around $2 a ton. That has been raised now to around $12. Is that right?

Mr. MILLER. Approximately $8.50, I understand.

Mr. MANSFIELD. About $8.50. And David Lawrence tells us here how that sulfur has been shipped. It has been going from here to the Mississippi River either by barge or by rail. There it has been loaded onto those large Mississippi River barges, taken up the Mississippi, up the Illinois River to the Des

Plaines River and through the sanitary canal at Chicago and from there to Lake Calumet and then transferred to Lake steamers at that point and carried 1,500 miles by lake steamer to Oswego. There it was transferred to barges on the Erie Canal, sent down the Erie Canal to the Mohawk and Hudson Rivers, down the Hudson River to New York, and then some of it, quite a lot of it, after it got to New York had actually to come by rail southwest again to the great industrial districts of Baltimore, Philadelphia, and Wilmington where the largest consumption of sulfur and sulfuric acid takes place in the East. Wilmington alone is one of the largest, because that is where the DuPont interests are located. You can see it went around thousands of miles, transferring three or four different times from one type of conveyor to another, in order to get to Baltimore. On sulfur alone the Government has lost a good many million dollars.

Now there is no room for any misunderstanding about these things. No man can dispute these facts I am telling you and nobody will try to dispute them. They are just absolutely facts.

Now then, you have heard of gasoline rationing, I presume. If you have been up against it as much as I have, you have had about as much experience with it as you want. I was in the East when rationing was first applied there and it ran on for nearly a year. It was done solely because they couldn't get gasoline there by transportation. There was no shortage of gasoline; there was no known shortage of rubber, and the question of rubber never entered into the proposition at all. The East complained bitterly that they were being rationed while the West was not. You know misery always loves company. Well, they wanted to get some excuse for rationing us down here in Texas and they finally got a board appointed by the President, headed by Mr. Barney Baruch of New York, who is a very versatile gentleman in matters of that kind, by the way, and he undertook to try to drum up some plausible excuse for rationing Texas and the Southwest, and in order to do so, why he trumped up the idea of doing it to conserve rubber. Nobody ever heard of rubber in the program up to that time. Well, they applied it on that theory. Now then, they are reducing the value of our coupons down here and increasing the value of them up East, and I guess it is all being done on the theory of conserving rubber. I don't know what it is now. That contention is absolutely bunk. I don't care who it is that defends it. It is nothing but pure bunk. There never was any reason for it, except to satisfy millions of people in the East who are disgruntled. To show you that there is no truth in that contention, as I say, here is a letter from Prentiss Brown. You all know who he is. It is dated August 13. He says: "The only reason why the East has not been treated as the Middle West is that until now we have not been able to move enough gasoline to the East." That is the truth. It was a question of shortage of transportation, and no other reason. But they wouldn't put it upon that ground. They put it upon the ground of conserving rubber, which was a false issue from the very beginning.

Now I want to excuse myself for going into all these things, but I have worked on them so strenuously for quite a while. Perhaps it might be interesting to know what our post-war program is going to be. Have you seen this statement that I made up, Mr. Miller?

Mr. MILLER. Yes.

Mr. MANSFIELD. Is it all right?

Mr. MILLER. Certainly.

Mr. MANSFIELD. Mr. Miller and Mr. Holland wanted me to do something about furnishing copies of it, but I had no opportunity of doing it. In fact I was confined to my bed for about a week and a half, having a pretty high fever 2 weeks ago, and I just got up 3 or 4 days ago. But here is something I wanted to say in regard to the post-war program for the Intracoastal Canal.

The President has recommended that a backlog of meritorious projects be provided for post-war consideration, when it is estimated that many millions of men now engaged in the war industries will be thrown out of employment. The Democratic leader, Mr. MCCORMACK, has advised me that he desires to confer with me in regard to the matter as early as possible after Congress reconvenes next month.

Such a bill, of course, will be national in scope, and embrace many provisions only remotely related to the waterway which this association is promoting. There are, however, quite a number of projects closely connected with the Intracoastal Waterway, some of them already approved by Congress, and all of them having the necessary engineeri 3 approval. Nothing will be left undone to have all these ready for consideration as soon as the construction period can be inaugurated.

The widening and deepening of the existing canal from Carrabelle, Fla., to Corpus Christi is well advanced, and will be pushed to completion with funds already made available. The channel across Florida has already been authorized by Congress, and under the law will be eligible for funds to be allocated by the Chief of Engineers.

Funds will then be sought for the following works, already approved by Congress:

Extension of the enlarged channel from Corpus Christi to Port Isabel, including the branch channel on the Arroyo to Harlingen;

Extend the Colorado River channel from the mouth to the 18" mile post;

Extend the San Bernard River section to the Jefferson Lake sulfur mine;

Complete the Colorado River flood-control project as provided by law.

All of these projects have already been authorized by Congress, but expenditures have been withheld on account of the war.

The following projects connected with the Intracoastal Waterway have been surveyed and approved by the engineers, but no general bill having been enacted within the past 5 years, have not yet received congressional approval. They will be embraced in the coming bill, and every effort will be made to have them in readiness for the post-war construction program. They were included in the omnibus bill of the last Congress, but owing to the exigencies of the war, no effort was made to have them considered:

The list includes several projects on the Sabine-Neches system and one on the Neches-Angelina Rivers;

The Trinity River to have the present channel to Liberty made uniform in dimensions with the Intracoastal Waterway;

To provide a 10-foot channel around Brady Island in the Houston Ship Channel, and to extend the 34-foot channel to the turning basin;

To provide a 7-foot channel in Clear Lake and Clear Creek to the League City bridge;

To provide channel in Chocolate Bayou to Liverpool and in Bastrop Bayou to Missouri Pacific Railway;

Extend the channel from Port Lavaca up the Lavaca-Navidad to Red Bluff and for flood control works through Jackson and Lavaca Counties;

Extend the intracoastal waterway up the Guadalupe to Victoria and for flood control dam on upper section;

To provide channel near Port O'Connor into Barroom Bay.

Now, if we reenact laws similar to those we had a few years ago this Barroom Bay channel bids fair to become the most popular channel in the whole waterways system.

Certain channel enlargements at Port Isabel and Brownsville.

Now, in regard to the bayous here in Brazoria and Galveston and Harris Counties, I would like to make this statement: They are small. The expenditure on any one is far less than a hundred thousand dollars, but I want to give you an illustration of what one of them has done. I see my good friend, Mr. Pabst, back there in the audience. He was interested in the last general river and harbor bill that became law which we put through. That bill provided for Dickinson Bayou up to the town of Dickinson, increasing the depth and width of the channel so that barges could bring mud shell up there. Now, the purpose of that mud shell was to pave some highways and the streets in the town of Dickinson and League City and other nearby points, and upon that ground it was thoroughly justified by the engineers, and Congress adopted it and agreed to it. Since then Camp Wallace was established, and the shell that paved the highways in Camp Wallace, except those which are concrete, all came up this channel to Dickinson, which is only 7 miles from Camp Wallace, and the saving to the War Department alone was nearly a hundred thousand dollars in one year in paving the highways of Camp Wallace. And it only cost $35,000 to do the work. So who can say that that is not a good investment. The same would be the case with these other bayous down there that are now under construction.

Now, I want to thank you all for your attention. I am sorry that I had no prepared address for you on this occasion, but I am always willing to meet the people and try to give them an account of my stewardship the best I can, and I just simply thank you one and all.

Today's Youth

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 14, 1943

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a remarkable address delivered by Miss Betty Long, a young lady of the State of Iowa, which is challenging and interesting, as representing the viewpoint of youth at the present time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been asked to summarize for you the events of the afternoon as they relate to youth today. You have seen, through the medium of pageantry, a story which is a fight for freedom, and which began with the Mayflower and was carried westward to Iowa and to Hardin County by the sturdy pioneer Americans. It is a story which was found valuable enough to be fought for in World War No. 1, and it is a story which is being fought for at this very hour.

What child, upon seeing a modern wild-western movie, has not thrilled at the lawlessness, the cattle rustlers, and the barroom Mazies, which clutter the screen. However, the fact which is most thrilling to twentieth century youth is that it was not the barroom

Mazies nor the two-gun Petes who wrote the history which is our heritage. No; as Mr. Crockett has so ably pointed out, it was the good people of the early West who wrote the history which has lasted to this day. Those who gave us our pioneer heritage were the God-fearing, courageous men and women who crossed the prairie in covered wagons; men, who fought Indians by night that their families might live by day; women, who raised large families even in the face of the hardships of early frontier life. Those were the history writers of pioneer days, and in the light of their glorious deeds, the reckless men and women of that day are forgotten. They are forgotten because the men and women who made the heritage we now enjoy had a vision of freedom which they wanted to capture for themselves and to preserve for their posterity.

So it is today. Any number of the present adult generation despair at twentieth-century youth. Perhaps I feel so strongly about this matter because I am young, but regardless, I want to share with you a portion of a sermon made by Rev. Dr. William Ward Ayer, pastor of the Calvary Baptist Church in New York City, and which was clipped from a recent New York newspaper by a friend of mine. I quote Dr. Ayer:

"Swing bands have become the corrupters of American youth. Our age of jazz and swing is unmistakably one of low moral standards and vastly inferior ethics, manifesting an obvious degeneracy in our culture. Young America's wildness over swing music reveals the lightness and frothiness of the day, for swing is essentially light and frothy. We could not produce a Lincoln today any more than we could produce an oak tree in an ash pile. If Abraham Lincoln had been brought up in our jazz age and had followed its philosophies, he would never have been heard of.

"Swing music reveals the lawlessness of the age as well. It represents the lowest exalted and the highest debased. In this it is typical of our modern civilization."

It is too bad, indeed, that Dr. Ayer fails to recognize on the other hand the millions of youth today who are corrupted by nothing. I speak for modern youth when I say that there are two groups in our country today which shall speak and which shall be heard. The first of these groups is that large body of young men who are wearing the colors of our country. Perhaps you know a typical Johnny Doughboy; he may even have come from your own home. You saw him grow up, through the knee-pant stage, saw him go to Sunday School, where he learned the Golden Rule, and "thou shalt not kill." You saw him learn through his family relationships that the individual is the most important and highest thing in the world. Then, just about the time you were beginning to wonder what he was going to do with this now grown-up life, a government came along and said, "Young man, we have a war on our hands, and because you are mentally and physically alert, we want you to fight it for us." You heard very little complaint from young Mr. America, and with haste he donned the uniform of his country and marched away. Perhaps the next you heard about Johnny, he was flying his bomber over some far outpost of freedom. He may have come home with some decoration pinned to his uniform, or he may be one of those thousands who shall remain forever nameless to us, but who are doing a job gallantly. No doubt he will be about the same when he comes home for good, with the exception of an older look in his eyes. You see, he now knows what it means to fight for freedom, not merely talk about it. Yes, youth has been asked to do a pretty nasty job, and they are doing it gallantly. This group shall speak, and it shall be heard.

There is one more group I wish to mention, which shall be working hand in hand with these young heroes, returned. That group is a body of young men and women who today, through education, or work, or just through remaining at home keeping things "the same" are preparing themselves for tomorrow by building Christian courage and character in their lives. They shall work side by side with our young men to build a new kind of world in which all people shall be free, because they know that freedom is worth fighting for—and living for.

These two groups shall speak more loudly than any other group in our world today because of their great deeds, just as the gallant pioneers did things which spoke more loudly than the cheap and the mean factors in early America. They shall write the history which shall be posterity's heritage, and we hope sincerely that generations to come will be as proud of the heritage we give them as we are of the one you have given us.

The thing we need to do is to lift our eyes from the mean and the lowly of our time; not that we want to forget that they exist, but to dwell on them only leads to mental chaos. We must lift our eyes to the two groups of youth who shall write the history which shall be posterity's heritage. In her youth lies America's only hope.

War Services of the Bernard A. Foster Family of Spartanburg, S. C.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. BRYSON. Mr. Speaker, having just returned from some weeks' stay in our congressional district and having had the fine privilege of visiting among and talking with many of my constituents, I am pleased to report to the Congress that there is full and unstinted cooperation on the part of everyone with the war program.

It was my privilege while at home to meet those who have freely given their sons and daughters to the service of our country. I take great pleasure in calling special attention to the members of Mr. and Mrs. Bernard A. Foster's family of Spartanburg, S. C., who are in the service as follows:

Maj. Bernard A. Foster, Jr., Office of Provost Marshal, Munitions Building, Washington, D. C., formerly lawyer, Federal Trade Commission, District of Columbia.

Capt. Ralph V. Foster, Office of Inspector General, Eighty-eighth Infantry Division, Fort Sam Houston, San Antonio, Tex., formerly inspector of C. C. C. camps in Southeastern States.

Capt. Julian A. Foster, Officers' Casual Battalion, Pittsburg Replacement Depot, Pittsburg, Calif., formerly public accountant with L. C. Dodge, Spartanburg, S. C.

Maj. Donald C. Foster, Air Corps, Headquarters XII Air Support Command, now in Sicily. Thomason Act appointee to Regular Army at graduation from Wofford College.

Aviation Cadet Howard G. Foster, U. S. N. R., Preflight School at Dallas, Tex. Enlisted at Christmas, leaving junior classes at Wofford.

William Edwin Foster, seaman, second class, U. S. N. R., Naval Air School, Pensacola, Fla. Enlisted after graduation May 1943 from high school.

Dorothy Foster, married to First Lt. William P. Law, Jr., Fort Benning, Ga.

It will be observed that seven members of this fine family have answered their country's call, six brothers and one brother-in-law. As I commend this fine family in the highest terms I would not forget others who probably have not been fortunate enough to contribute so many sons, nevertheless, they too, have given freely of what sons they have.

It is very gratifying to know of the willingness on the part of parents to have their sons and daughters go into the service and, of course, each hour brings encouraging news from the battlefronts around the world.

I take pleasure in thus making special mention of the contribution made by Mr. and Mrs. Bernard A. Foster of Spartanburg, S. C.

The Outlook for Food Production in 1944

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. BURDICK. Mr. Speaker, James G. Patton, president of the National Farmers Union, has presented to Members of Congress an important letter concerning the production of food for 1944. This letter is of great importance to the country, since food production is actually more important than any other production in the present state of our war effort. Daily we are called upon to furnish more food. As each country is released from the Nazi yoke more food will be necessary until production can be again reorganized in those countries.

By reason of the importance of the letter, I herewith submit it in full:

NATIONAL FARMERS UNION,
Washington, D. C., September 12, 1943.

To the Members of the Senate and House of Representatives:

American farmers have responded magnificently to war demands for production of food. Despite wartime difficulties, such as shortages of credit, machinery, fertilizer, seed and feed and the scandal of simultaneous farm manpower shortages and surpluses, they have broken all production records. They have backed up their fighting sons and brothers. The working farm families of America have produced to the existing limits.

But this is not enough. The limits are unnecessarily low. They should have been lifted long ago. Today, 22 months after Pearl Harbor, with the demand for food rising daily and our present production level

of war foods far below present and anticipated needs, administrative agencies and the Congress should move with all speed to increase war food production by at least 20 percent in 1944 and 1945. Such a further increase is possible. It has been possible ever since Pearl Harbor. All that is necessary is to apply the same policies and methods to war-food production that have been applied with such brilliant success in industrial war production. American agriculture has yet to be converted, mobilized, and expanded for all-out war-food production.

Some steps have been taken by W. F. A. Administrator Marvin Jones. He has removed acreage restrictions. He proposes extension of support prices and, "when necessary," Government purchase and resale of farm products. The 1943 production goals were based upon production possibilities of an agriculture that was continuing on a "business as usual" basis. It now seems that the 1944 production goals are to be set in somewhat the same way. The States are to be asked whether they can meet their share of the Nation's proposed goals. Their replies, when compiled, will become the Nation's final 1944 goals.

If, in industrial war production, the W. P. B. had followed this method, we should today not have the weapons, munitions, and materials of war in the kinds and amounts needed to supply the advancing allied armies. In agriculture, we have yet to treat the war and post-war food needs as absolute imperatives which must be met. Because we have not yet faced up to these stern demands—not for "feeding the world," but for meeting our own and our share of world food needs—neither administrative agencies, the Congress, nor individual farmers have felt the imperative demand for enough food to win a total war and help establish a global peace.

The clearest, most comprehensive and incisive survey of food needs and ways and means of meeting them was recently made public by Secretary of Agriculture Claude R. Wickard, in a report made by an Interdepartmental Committee consisting of representatives of the Departments of Agriculture, State, War, and Interior; the Office of Economic Warfare and the Lend-Lease Administration.

The National Farmers Union believes that this report, if implemented, will solve our war food production problems. We have long advocated "a price structure designed to secure the essential war production adjustments" which the interdepartmental committee has recommended. We believe the individual prices in such a structure should be raised or adjusted to get the kinds and quantities needed, but, as a practical matter, we do not believe that prices on war foods should, in any instance, be set below the parity line. With this single exception, we endorse the interdepartmental committee's report and respectfully urge its careful consideration by every Member of the House and Senate.

FARM PROBLEMS REQUIRING IMMEDIATE ACTION

As the Congress reconvenes, it is faced with three food issues requiring immediate action. If production is to approach the volume necessary to meet our own needs and our share of world needs, provision must be made for all-out food production by all farmers. First attention should be given to:

1. Authorization of adequate loan funds to equip all underemployed farmers for all-out production.

2. Assurance that wheat goals will be met, such assurance to be given by restoration of crop insurance and parity payments.

3. Repeal of the disastrous labor-freezing provisions of Public Law No. 45, and immediate enactment of legislation designed to increase the mobility of farm labor and its fullest use under decent wage and living conditions.

1944 WHEAT PRODUCTION THREATENED

As matters stand today, War Food Administrator Marvin Jones has set 1944 wheat-production goals at 68,000,000 acres, an increase of 16,000,000 acres, or 30 percent over the 52,000,000 acres planted for 1943—and farmers have the prospect of being paid 21 cents per bushel less with no Federal crop insurance against losses.

Throughout the wheat country, farmers are watching and waiting to see whether or not the Congress will restore crop insurance and assure wheat farmers of parity for their 1944 crops, both wiped out by the present Agricultural Appropriations Act. Fall plowing and planting of winter wheat, normally well under way by September 1, has already been delayed 12 days by this uncertainty. Every additional day is important. Wheat farmers will be keeping track of Congress hourly by radio, waiting for the go-ahead signal. This decision affects not only wheat farmers but, since wheat is also a livestock feed, cattle raisers, dairymen, poultrymen, and finally the ultimate consumer of 1944 and later years. Every Member of Congress should vote for immediate restoration of parity payments and crop insurance.

FARM LABOR SCANDAL SHOULD BE ENDED

As the Nation's manpower crisis tightens, repeal of all or most of Public Law No. 45 becomes imperative. This self-defeating legislation appropriated $26,000,000 for recruiting, placement, and transportation of farm labor—and then in effect froze all farm labor where it was. Instead of mobilizing all farm labor for use whenever and wherever needed, under reasonable wages and working conditions, it has broken the United States into 3,000 little countries with the county agent as a little king, subservient in most instances to the largest farmers in the county. The law provides that no Federal funds may be used to transport farm labor from State to State without approval of the county agent. (No national farm organization will defend this provision.) In practice, this provision, along with the Tydings amendment to the Selective Service Act (which defers farm men so long as they are engaged in essential farming activities), and State laws against "labor snatching," are being used in combination to immobilize and freeze farm labor in whatever county it happens to be.

Thus, we have the scandalous spectacle of farm-labor shortages and farm-labor surpluses at the same time. While hundreds of thousands of farm-bred families are underemployed at low wages in some parts of the Nation, food is being lost in other parts because of labor shortages. These shortages, aggravated by an act of Congress, have forced us to divert troops and use war prisoners to harvest crops.

Such mishandling of our farm labor resources is equalled only in the continued refusal to equip and assist 1,300,000 undercapitalized and under-equipped and therefore underemployed farm families for maximum production on the land they occupy. Together, this wastage of farm manpower makes sense only to those determined to extend control of the Nation's agriculture further and further toward complete monopoly in the hands of commercialized agriculture and banking interests. The purpose is clear. Frozen labor is to be kept plentiful and cheap in some localities, and is to be replenished by small farmers and their families driven from their own land to work the land of others.

It should be enough to state that such a program is, of course, contrary to the very purposes for which this war is being fought. But it is also likely to result in declining farm production, rising food prices, and inflation that will strike at the heart of the entire war effort and endanger post-war rehabilitation and the making of a lasting peace.

ONE BILLION DOLLARS IN LOANS AND WAR FOOD PRODUCTION AGREEMENTS NEEDED

Not less than $1,000,000,000 in loans should be authorized immediately to provide small farmers with the things they need to get into all-out war food production. All-out war food production by all farmers can be best achieved by doing a production engineering job, using war food production agreements between the Government and farmers. Such agreements should assure to war food producers the same types of aid and service given industrial war producers, including credit, advance and progress payments, priorities, and other assistance in getting machinery, fertilizer, feed, seed, labor, and other essentials. The agreement should include crop and war risk insurance and technical advice and assistance. The soundness of this method has been proved by the F. S. A. record in increasing the war food production of 463,000 farm families. The F. S. A. and A. A. A., prior to the enactment of the last Agricultural Appropriation Act, had machinery through which individual agreements could be made with farmers. This machinery was adequate to write and administer war food production agreements. Those agencies should be fully utilized.

The National Farmers Union also renews its recommendation that adequate funds be appropriated to option land to provide farms for returning veterans while at the same time checking inflation of land prices.

The National Farmers Union favors lowering of the voting age to 18 years, believing that those who are old enough to fight and die in defense of their country are old enough to vote.

Respectfully yours,

JAMES G. PATTON,
President, National Farmers Union.

Renegotiation of War Contracts

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. ANGELL. Mr. Speaker, I am just in receipt from George K. Aiken, chairman of the Oregon Committee on Interstate Cooperation, of a resolution adopted by that committee on August 27, 1943, dealing with the renegotiation of war contracts by the Federal Government, and I ask unanimous consent to include a copy of the resolution as a part of my remarks, which is as follows:

Whereas the retroactive recapture of profits on renegotiation of war contracts by the Federal Government has subjected various States to the risk of serious loss of State tax revenues through the necessity of refunding State taxes already collected and in some instances already distributed to and expended by local governmental subdivisions, and has imposed on the States other administrative and budgetary problems; and

Whereas certain factors are taken into consideration in the renegotiation of war contracts, which factors are not ordinarily, and

should not be given effect in computing State corporate taxes; and

Whereas the States do not participate in the renegotiation of war contracts, which is confined to the exclusive jurisdiction of the appropriate departments of the Federal Government; and

Whereas the financial program of the State of Oregon is subjected to risk of serious loss of State revenue through the retroactive recapture of profits from the renegotiation of war contracts by the Federal Government, and by reason of the fact that in many instances funds so collected by the State have already been distributed to and expended by local government subdivisions; and

Whereas certain States have passed legislation declaring it the policy of such States to refuse to refund any income taxes already paid, because of renegotiation between the Federal Government and taxpayers in which said States did not participate on the ground that such refunds would upset the State's tax and budgetary system, and that other States are likely to enact similar legislation: Now, therefore, be it

Resolved, That the Oregon Committee on Interstate Cooperation respectfully recommends to the Congress of the United States and to the appropriate departments of the Federal Government the adoption of a method of renegotiation of war contracts which will relieve the States of the problems referred to herein and obviate the refunding of State taxes already collected; and be it further

Resolved, That this committee strongly urges, for the purpose of providing a uniform and equitable method of accomplishing the foregoing purposes, that every contractor be allowed on renegotiation credit for State taxes computed in accordance with the applicable State laws without adjustment for excessive profits recaptured after the end of the period on the basis of which the contractor's State taxes are determined; and be it further

Resolved, That the chairman of the committee transmit a copy of this resolution to the Senators and Representatives in the Congress from the State of Oregon with a request that they take appropriate action to secure the cooperation of their colleagues in the enactment of such legislation as may be necessary to implement the proposal herein, and that the chairman transmit copies of this resolution to the Council of State Governments, Secretary of War, Secretary of the Navy, Secretary of the Treasury, chairman of the Truman committee, and the Chairman of the United States Maritime Commission with the request that such legislation and administrative procedure be adopted to accomplish the purpose herein set forth.

The G. O. P. Grapples With Its Record

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John W. Owens from the Baltimore Sun of September 6, 1943:

THE G. O. P. GRAPPLES WITH ITS RECORD

(By John W. Owens)

Nothing could be more surprising in politics at this time than a satisfactory outcome of the deliberations on Mackinac Island of the Post-War Advisory Council of the Republican Party. Yet, this meeting is desirable and important. If the Republican Party is to be a worthy alternative to the Democratic Party—not a mere receptacle of dissatisfaction—a start must be made in the age-old process of removing handicaps by accepting them and stubbornly working out from under them, however awkward the performance.

In this business, the participants will certainly be nervous and self-conscious. They must eat crow. The Republican policy of 20 years on foreign relations has been overwhelmed by events. It began in the negations with which the Harding administration supplanted the Wilson administration's support of the League of Nations, and, excepting certain undertaking of limited scope, this policy continued into the fight against revision of the so-called neutrality laws. In that fight, most of the Republican leadership in Congress stood for a policy of isolation which, if it had been successful, would have left Britain in the fall of 1940 without an effectual friend in the world and might have broken the British will, with consequences that need not be elaborated. The record makes that long-continued policy impossible for the future. The crow is on the table.

To make the participants in the business at Mackinac Island more nervous, they have been hurried to the table where the crow is placed. There is little ground for doubt that the meeting is being held at this time because of the increasingly potent campaign of Mr. Willkie for an advanced party position in foreign affairs. Defeated by history, the regulars dared not delay longer lest Mr. Willkie appropriate the intelligent voters in the party. And to the regulars, another Willkie nomination would be a great gulp of the devil's own broth.

Unfortunately for the council, that is not the only trouble. An ironic punishment has overtaken the Republican Party. Because of the long continuance of grievous faults in foreign relations, the intelligence in the country naturally calls now for precision and exactitude in Republican pronouncements. Broad statements will be suspect when offered by men most of whom have been shortsighted. Yet it obviously is difficult now for any group to particularize on foreign relations.

In some respects, the whole international situation is more difficult than it was 25 years ago. Though it seems fairly safe to say that the masses of the people have better understanding of the need of international cooperation to establish international peace and order, the alinement of nations may not be as favorable. In 1918–19 the two most authoritative nations were the United States and Britain, kin in blood and institutions. Next was powerful France, with whom the English-speaking nations could have acrimonious differences, but no fundamental schism. After France came Italy and Spain and the smaller nations of Europe, mostly adaptable. The victor nation of the East, Japan, was difficult, but not then lawless. As to defeated Germany, we drew distinctions between rulers and people and held hopes of the republic. Russia was a Bolshevist curiosity. Thus, though troubles were abundant, the alinement was supported by certain natural balances. Today we look upon a violently changed alinement of nations, and in dealing with it there is no beaten path.

It is hardly reckless to guess that 75 percent of the problem of the United States in postwar relations and in the establishment of world order will be found in Russian relations. For the end of this war will show the United States and Russia to be the two great powers of the world. The British Empire will survive, to our benefit, but it will not possess either our strength or that of the Russian Republic. British population and British resources will be scattered all over the world. American and Russian population and resources will be concentrated, and they will be concentrated under economies which have shown miraculous powers of organization and production.

Since these are the facts that lie ahead of us, no one can blue print a plan of world organization at this time. We (in cooperation with the British) must learn what our relations with Russia are to be, particularly in the German settlement. If we have one sort of relations we must plan one sort of international society. If we have another sort of relations with Russia we shall be compelled to plan another and more limited sort of society. The misfortune of the Republican Party is that its record is so blackened by events that people demand particularization as proof of sincerity.

Republicans at Mackinac

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of September 12, 1943:

REPUBLICANS AT MACKINAC

The Republican Post-War Advisory Council went up to Mackinac Island and resolved itself into two committees from which public and press were rigidly excluded. Then each committee reported a mess of meaningless words.

Senator VANDENBERG, the tired old compromiser, said of the report of his committee on foreign policy and international relations: "First, we're going to remain a sovereign state; second, we're going to proceed by constitutional means; third, we're going to consult first the interests of the United States." As though anybody had proposed otherwise.

The party which saved the Union and freed the slaves was content to stage a "phoney" performance. The packed committee on foreign policy set up three straw men and then knocked them down. In the midst of a second great war, a war being won by sacrifice and death, it offered no more than Harding promised in the campaign of 1920.

To be sure, nothing was to be hoped from a hand-picked committee which included the isolationist Governor Green, of Illinois, and the outstanding internationalist, Senator AUSTIN, of Vermont. It was like putting Abraham Lincoln and Stephen A. Douglas on the same committee with instructions to bring in a report on which both could agree. Negatives were all that could be hoped.

Republican Governors who were members of the council were promptly put in their place. They had made the gains of the Republican Party in 1940. They had some constructive ideas of what the party ought to stand for. Two of them were put on each of the two committees—blanketed by two Senators and two Congressmen. And the whole show was being staged by Harrison E. Spangler, chairman of the Republican National Committee, an old party hack whom no one would suggest for President. The orders were to tell the country that the Republicans were united—isolationists and men who believe in a better world. "Promise

nothing but damn the New Deal" was the slogan.

The Governors stood for it. Dewey, who had arrived and who departed in his "special" car (private cars are out for the duration, but the New York Central found a way around that), who spoke of the "inevitability" of an alliance with Great Britain, stood for the meaningless report.

Governor Baldwin of Connecticut had said: "I think it would be a grave mistake to start off this council with a declaration that we will not yield or give up sovereignty in the interest of a better world order." He knew why that was being put in—but he accepted the slushy Vandenberg report just the same.

It was all a victory for negation. No wonder the isolationist Congressman HOFFMAN exclaimed: "As an America-Firster, I think it is a fine report."

One member of the council writing home said: "They produced nothing to make the father or mother, the wife or sister of a soldier believe that it is not to happen all over again in another 25 years." The men who give their lives were forgotten at Mackinac in the interest of party harmony.

Senator Taft, who never has understood and never will understand the American people, headed the committee on post-war enterprise, industry, and employment. Its first report was so empty that governors threatened to take the floor and attack it. So an expanded report was brought in. All it did was attack the New Deal. Dewey and Bricker, mentioned for the Republican nomination, were on the committee with Senator Taft. Neither could take the report to voters of his own State and get six votes on it. The farmer and the laborer in industry will find in it no promise for the future.

"Party harmony" was the watchword all the way through. The little group which met at Ripon in 1854 and began the Republican Party had said something that fired a nation. The hand-picked council of the great Republican Party, with pocketbooks so full that they had no worry for the future, no need of social security, said nothing. They talked much of courage, but they showed no courage. They gambled that the country would be so sick of the New Deal in 1944 that it would take anything, as it did in 1920. Again we return to the council member who wrote home:

"They produced nothing to make the father or mother, the wife or sister of a soldier believe that it is not to happen all over again in another 25 years."

Congress Must Regulate Government Bureaus

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. PITTENGER. Mr. Speaker, a friend of mine engaged in business in the Eighth Congressional District of Minnesota, which district I have the honor to represent in Congress, presented me with a cartoon on my trip back to Minnesota during the recent recess. This cartoon pictured numerous desks, heads of the different departments, employees, typewriters, and so forth. The owner of the business is explaining to a Government bureau representative that one accountant spends all of his time on company business, sales, purchases, and so forth. He further explains that the other 17 employees in the office take care of the Government reports, forms, deductions, taxes, quotas, questionnaires, and so forth. It is a tragedy that such a situation is literally true.

Just before leaving northern Minnesota I talked with a man who told me that he had to work evenings in order to make out forms showing how many miles his truck traveled a day, how much oil it used, and so forth. He was engaged in a small business enterprise, but told me frankly that the conduct of his business was seriously hampered by the numerous Government regulations and reports, which had to be studied, filled out, and sent in to Washington. I talked with other businessmen who told me they had to have extra help in order to comply with all of these foolish regulations and in order to fill out all of the foolish forms that are pouring out of the Government bureaus in Washington and which have the effect of hampering anyone engaged in ordinary business.

Of course, the Office of Price Administration has been the champion offender. Evidently they have a lot of men in that bureau who can think up more forms and more questionnaires, and most of them pure trash, than any other agency ever devised by the hand of man. On other occasions I have stated that this outfit was doing more harm than good to the country, and that instead of helping our war effort, so far as domestic affairs are concerned, that the Office of Price Administration was retarding our war effort. I reaffirm that sentiment here and now; however, I do not want to refuse to give honorable mention to dozens of other Government bureaus that are doing the same and doing their best to make a bad job of the whole situation.

All of these efforts are costing millions and millions of dollars, and it does not require much effort to figure out that the average citizen has to pay the bill either in the shape of direct or indirect taxes, or open or hidden taxes, or in the way of increased prices of commodities which Mr. Average Citizen must purchase throughout the day.

Of course, there must be some price control, and on some goods there must be a ceiling on prices as well as a floor. I would also like to say in this connection that our mounting public debt is giving concern to the thinking people in my district. They realize the need for bond sales, and increased taxes in our war effort. They want to do nothing that will cripple or hinder the War Department and Navy Department in their fight against the Axis Powers. People are, however, resentful of the waste and extravagance and mistaken policies on the part of Government bureaus in handling our domestic problems. When the war commenced, we were promised that nondefense bureaus and agencies would cut their expenditures and reduce expenses. This has not been done. On the other hand, the expenditures of agencies, not essential to the war effort, have multiplied and increased ad infinitum.

Congress should abolish the Office of Price Administration, and consolidate it with the War Production Board, which appears to have some businessmen in charge of most of its activities. The situation requires drastic action on the part of Congress because with increased expenditures, and an inflation program that is already under way, the time is going to come when the credit structure of this country is shakened. If it is ever destroyed, we face the same situation that prevailed following World War No. 1, when the French franc and the German mark became valueless, and a thousand francs would not purchase a 10-cent loaf of bread. Life insurance and all types of investments were wiped out. Not only did the average person who had accumulated property find himself bankrupt, but the laboring class of people was likewise inflicted with hardship and poverty.

We do not want a repetition of those episodes in this country either at this time or after the war. I think the situation that now exists, the utter confusion and overlapping of bureaus, the worthless and useless multitude of regulations inflicted on the country like a horde of locusts justifies legislation that will provide for a committee of the House of Representatives and a committee of the Senate to sit in and help formulate the different programs now going on, and to be made in the future, and to see to it that expenditures are reduced and the number of unnecessary employees curtailed. Such a committee could meet with the heads of the bureaus, give them good advice, and perhaps issue a few directives that would be helpful to the country.

While I am a member of the party known as the minority, I have no hesitation in suggesting to the party in power that there is no more important matter facing Congress at this time than this proposition of having Congress take away from the bureaus, so far as our domestic problems are concerned, some of their arbitrary power and authority and forbid them to issue directives which have the force of law without advice of some businessmen and direction of committees from Congress having something to say about it.

United States Secret Service With Additional Burdens Continues Its Excellent Record Protecting the Government and Citizens

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. COCHRAN. Mr. Speaker, charged with the specific duty of protecting the President as well as the United States Treasury, the work of the Secret Service during the past fiscal year presents a record seldom if ever equaled by that or-

ganization. As part of my remarks I include a statement issued by the chief enforcement officer that describes the activities in part. It follows:

Secret Service Agents of the United States Treasury have discovered a new wrinkle in the age-old counterfeiting racket, and thus found an opportunity to strike a blow in behalf of the stamp collection, "hobby of kids and kings."

Chief Frank J. Wilson reported to Elmer L. Irey, Chief Coordinator of Treasury Enforcement Agencies, that the division during the 1943 fiscal year smashed two audacious attempts to defraud stamp collectors, while approaching its goal of extermination of currency and coin counterfeiting and getting a decided jump on the check forgery racket.

The service encountered a new enforcement problem during the year, the counterfeiting of gasoline ration stamps, and cooperating with the Office of Price Administration, made a number of arrests. Nineteen defendants in these cases developed at Newark, N. J., pleaded guilty.

Money counterfeiting dropped nearer the vanishing point as a result of the cumulative effects of the "Know Your Money" program of educating the public in detecting bogus bills, which Secretary Morgenthau instituted in 1937. The same technique of preventing crime through teaching possible victims how to spot a bad bill or coin was used in one of the most intensive campaigns of the sort ever inaugurated, a campaign to prevent dependents of men in the armed services receiving allowance or allotment checks from being the victims of the check thief and forger.

With more millions of Government checks going out each month than ever in the history of the Nation, a tide now running at the rate of 199,000,000 checks a year, the number of all types of Government check cases requiring investigation increased less than 3 percent, and the number of arrests where criminal prosecution appeared justified actually declined from the 1942 figures. Chief Wilson believes the Secret Service crime prevention program contributed greatly to curbing this type of crime.

Two Pittsburgh dealers in philatelic items were sentenced to terms of a year and a day in prison as a result of their neat little scheme to defraud stamp collectors.

The dealers, Cyril J. Huber and Adam K. Bert, pleaded guilty to inventing a series of stamps of their own, bearing the wording "U. S. Postage—Free—For the Armed Forces." It was a colorful item with a red, white, and blue design of the American eagle and a shield. There is no such genuine stamp. Secret Service agents seized 300,000 of the completed stamps and found a "fraud within fraud" also aimed at stamp collectors. Huber and Bert had printed several thousand of the stamps with the eagle design inverted, to make it appear that they were misprints and therefore of unusual philatelic value.

Six New York men are awaiting trial in a somewhat similar case. With the cooperation of Post Office inspectors, the Treasury officers arrested Morris J. Stern, Abraham M. Kalish, Albert J. Rabinowitz, Michael M. Karen, Henry Lieblich, and Mervyn B. Haycock on charges of making bogus "overprints" and perforations on genuine postage and internal revenue stamps so as to make them appear rarities.

One $60 roll of stamps, which are distributed unperforated, was given bogus perforations so as to make them appear "accidents." New York philatelists who assisted agents in developing the case said that the stamps, had they been genuinely perforated, would have been valued at $6,000 in collectors' circles.

Secret Service agents assisted Cuban authorities in smashing a Havana gang engaged in counterfeiting $50 notes of the Federal Reserve Bank of New York. The plant was seized, and seven persons are awaiting trial in the Cuban courts.

Agents of the Service, with the assistance of local police, also captured a counterfeiting plant in Philadelphia, and arrested George W. Place, who was all set to manufacture bogus $10 notes. Place was identified with 51 offenses of breaking and entering, including safe robberies, and was sentenced in Pennsylvania courts to from 20 to 40 years in prison. The Federal indictment on the counterfeiting charge will be waiting, when and if he gets out of prison.

Secret Service officers, in cooperation with the Agricultural Adjustment Administration, obtained evidence that resulted in the arrest of six persons in Chickasaw County, Miss., in a case involving $400,000 in Government funds. James C. Barrett, county farm agent, and five associates were convicted of submitting numerous false claims for benefit payments, of forging checks, and collecting payments illegally. Sentences ranged from 10 months to 4 years. It is expected that civil suits will recover all of the losses.

Scarcely had Congress enacted legislation providing dependency and allowance benefits to the families of personnel of the armed services when the Secret Service began to intensify its "Know your endorsers" campaign to make the theft and forgery of these and other Government checks dangerous and unprofitable.

The Service showered recipients with warnings of the necessity of protecting themselves against loss of the checks by theft. At the same time, a Nation-wide campaign, in which State and city police extended efficient cooperation, was directed to merchants, banks, and other handlers urging them to require proper identification before cashing any checks.

The War and Navy Departments cooperated by mailing notices with the checks, showing how loss of the money might be prevented. Banks, surety companies, and other private firms printed several hundred thousand "Know your endorser" placards which were distributed among retailers. Warning notices have been printed on Government checks, and many State, county, and municipal governments and banks have followed this lead by printing "Know your endorser—Require identification" warning on their official checks.

As a part of its crime-prevention program, the Secret Service assembled an extensive collection of genuine and counterfeit money, including specimens of war currencies, invasion money, Japanese counterfeits, and Japanese war bonds. In cooperation with the Treasury's War Savings organization and Bureau of Engraving and Printing, United States War Savings stamps were printed at these exhibits, and $500,000 in War bonds and stamps were sold to visitors. Shown first in Rockefeller Center, New York, and later in Detroit, Cleveland, Omaha, and St. Louis, this display has been seen by 150,000 persons.

Secret Service agents were faced with many new problems in meeting their responsibility of protecting the President on his unprecedented journey to Casablanca in January. Through careful and thorough advance arrangements, and unusual protective procedures during the trip, movements were executed according to plan and were kept a closely guarded secret until the news was released officially. Great care also was taken to insure the President's security during his conference in April with President Avila Camacho of Mexico, at Monterrey, and on Mr. Roosevelt's inspection tours of war plants and Army camps.

Statistics for the fiscal year show to what dire straits the business of counterfeiting has come. Only 159 persons were arrested for offenses involving bogus bills and coins, compared to 317 in 1942 and the losses by victims of counterfeit money passers were reduced about 50 percent. Arrests for check forgeries declined from 1,171 in 1942 to 1,004 in the 1943 period. Of offenders brought to trial for counterfeiting, forgeries, and other violations, 98 percent were convicted.

Congress Should Forbid Drafting of Fathers

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. PITTENGER. Mr. Speaker, with Congress resuming its sessions today, a matter that should have immediate attention is the policy of the Selective Service Administration to draft married men with children while there are still single men available for Army and Navy purposes. I am opposed to this program, and very frankly legislation should not be needed to direct administrative offices in the exercise of common sense in performing their duties. I expect to support legislation, however, that will forbid the Selective Service officials to draft fathers until they have made an honest effort to supply the needs of the Army and Navy with single men, many of whom have been deferred for one reason or another. This idea that a single man is essential in war industry and cannot be replaced is, in my opinion, a nonsensical myth. It should not be tolerated.

While I was back in Minnesota during the recess, I had personal contact with some unusual situations. I contacted one officer in a shipbuilding concern, who told me that when they were directed by Government officials to train married men for work in that industry, they made a careful effort to comply with the directives. Orders were issued to hire and train married men with children, and to give them a preference even though single men with some skill were available. As a result, this particular shipyard does not have the problem of replacing any single men, or at least will have to replace only a small number. The officials had sense enough to know that unmarried men would and should be called into the draft. On the other hand I encountered another outfit making materials essential in the war effort which adopted the opposite policy. This employer saw the advantage of young healthy single men doing skilled work; saw an increase in his profits, and so he discriminated against married men with children. He employed single men, and trained them, and now has a bunch of young fellows, and he is yelling rather loudly to the effect that it will work a hardship on him if these single men are not exempted, or rather if the exemption which they have is not continued.

I have no sympathy whatever for this employer, and I am perfectly willing for

some other industrial plant to make up in the way of war materials whatever he cannot produce when the single men employed in his plant are taken into the Army.

I also encountered another situation where a large employer honestly complied with directives to train married men for positions in his line of industry. He did exactly that to the fullest extent, and told me the other day that he had claimed exemption for no single men, even though his industry was probably the most vital in our war effort. He told me that single men had been replaced with women wherever possible. His statement is most significant, however, to the effect that if these married men with children are now to be drafted, some of them are doing particular kinds of work which women cannot do. Consequently unless Congress acts immediately the war effort in this particular case will be very much retarded because there is no one available to fill these particular jobs.

Of course it is time that the Washington officials—even the Army has some bureaus—should begin to exercise good judgment. Congress should not have to pass legislation, but I fear it will be necessary. I have in mind the bungling and the mistakes that were made in the drafting of the essential farm help. This was carried on all last year, and apparently is still a glorified, mistaken policy of the administration. Take the case of a man who has an 80-acre farm; 18 head of cattle, and so forth. He is, we will say, 70 years of age; his wife is 65 years of age, crippled up with arthritis, and they have a son who is unmarried, 30 years of age. When this fellow is drafted the old folks find it impossible to carry on the food production; take care of the livestock, and so forth. This all means that they are not going to raise crops; that they have to sell the cattle, and the production of food comes to an end in this particular family.

There is no doubt that there will be a food shortage, and we can charge it up directly to the bungling mistakes of bureaucracy.

In these remarks, I have no criticism to make of the local selective-service boards in the various communities. They have to follow regulations which come to them from Washington, and which do not permit them to use proper discretion in the handling of these cases. It is time for a change in the program that comes out of Washington, and I hope that the proper committee will report a bill forthwith.

The Battle on the Home Front

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of J. Edgar Hoover, Director, Federal Bureau of Investigation, before the annual convention of the International Association of Chiefs of Police, Detroit, Mich., August 9, 1943:

I look forward each year to the opportunity of meeting with the members of the International Association of Chiefs of Police. Here we gather on a common ground of understanding to seek a solution to our mutual problems. From these gatherings comes a renewed inspiration and confidence to carry on, often in the face of obstacles of tremendous proportions.

That law enforcement, handicapped by the fact that there are fewer police officers today than a year ago, has been able to keep the home front secure is a tribute to its courageous men and women. The turn-over in police personnel has assumed alarming proportions, ranging as high as 60 percent in various cities. I believe the danger point has been reached, and some real understanding and appreciation of the strain and stress already placed upon law enforcement must be shown if the internal security of this country is not to be imperiled.

The efficiency of law enforcement has increased materially, as shown by the fact that more crimes were cleared by arrests last year than in the previous year. While we have gained some measure of success, dangerous days lie ahead. Whatever the difficulties, we must and will fight on. The men of law enforcement in every sense of the word are soldiers at heart—brave and courageous, persistent and determined—and they are fighting a battle that must not be lost.

This Nation in reality is waging war on two fronts. One is against the international purveyors of tyranny and barbarity that spring from the hellish hates of duplicity and chicanery which fester in chancelleries and palaces abroad. Their guns, bayonets, bombs, and tanks are aimed to crush the liberties of free people everywhere. Pillage, plunder, and destruction are their goal.

The other front is against our enemies at home who are just as determined, just as ruthless. The war could be won on the sea, in the air, and land campaigns and yet be lost on the home front. We of law enforcement fight less conspicuously, but our part of the conflict, like the other, affects every home in the land and every man on the foreign fighting fronts.

As a people, our energies must be unified and directed toward final and glorious victory on the far-flung battle fronts of the world. Any activity which imperils that effort must be pushed aside. Life cannot go on as usual; we have a war to win. I fear at times that our blessings as Americans have clouded our vision of duty. We have become accustomed to rights, but all too often we forget that for every right there is a duty, for every privilege a responsibility, and for every joy a sorrow.

We should keep foremost in our minds the real task of law enforcement. It is the protector of law and order—the cornerstone of civilization, the very keystone of democracy. It is the first step in the administration of criminal justice. Unless the investigator first gets the facts and apprehends the real wrongdoer, the most vigorous and gifted of prosecuting attorneys are powerless to act. Then, too, there must be a real spirit of cooperation between investigating officers and prosecutors. The only excuse for the existence of law enforcement is the protection of society. The general welfare of the people transcends the convenience of confirmed sex offenders, confidence men, check passers, arsonists, burglars, robbers, and murderers. Yet it appears that at times the convenience of the criminal transcends the welfare of society in some circles.

You know and I know that human lives are taken daily, homes are plundered, hard-earned life savings are stolen, and crimes by the score occur only because some gullible parole board or pardon dispenser has released upon society some unreformed criminal; or because some politically expedient prosecutor lacks the fortitude to prosecute, or compromises with defense counsel to allow the criminal to plead to a lesser offense though definitely guilty of the major crime, or because technical and capricious interpretation of statutes and rules of procedure theroretically takes the handcuffs from the criminal and places them upon law enforcement. When human jackals are loosed to prey upon society without even fundamental regard for the responsibilities of law enforcement, we should not hesitate to speak out.

The attitude of law enforcement in this respect is not due to a spirit of avengement but arises simply and solely from considerations of the safety of society. I submit it is an obligation of judicial administration to see that justice is done, rather than an obligation looking toward preferential treatment of criminals. You will be vilified and smeared by the special interests who are always vociferous in their championship of the enemies of society, but who give all too little thought to the long-suffering public.

It is no secret that hardened convicts in many instances leave prison at will; others enjoy privileges of "sob-sister" prisons closely akin to a country club atmosphere, with money, guns, and the comforts of life to be had for the asking. Likewise, it is no secret that criminals have bought their way to freedom from slimy renegades who slander the good name of law enforcement.

Law enforcement has gained much ground in the crusade against dishonesty and crime during the past decade, but recently we have suffered reverses. The present trend, unless abated, foretells difficult days ahead on the home front. We have the experience of the past to guide us. When law and order break down, you will find that public desire for law and order has first weakened.

The American daily press and magazines worthy of their name have performed a great service for law and order. For the most part, they have made a sincere effort to focus the healing rays of the spotlight of public opinion on law-enforcement problems. But there still remains, to besmirch the good name of journalism, certain psychopathic canard purveyors and others who, from motives best known to themselves, are constantly seeking to undermine public confidence in law-enforcement agencies. These oracles of disaster, who by some rare gift are able to answer every question, at least in their own estimation, should have the opportunity sometime to face a practical problem and wrestle with reality.

I think that every law-enforcement administrator, when such situations arise, should take steps at once to insure that the facts are known to the public. This will, of course, require courage. But the cause we serve is greater than any one of us. This thought must ever be in our minds.

Another trend which is again manifesting itself is the tendency on the part of some motion-picture producers to return to the formula which glorifies the criminal and ridicules the law-enforcement officer. This, combined with the gross distortion of historical facts indulged in by certain segments of the motion-picture industry, should receive the serious thought of the mothers and fathers of this Nation. You know how much damage such pictures can do in warping the impressionable minds of our American youth. Whenever any force seeks to glorify gangsterism and prostitute history, then it is time for those interested in law and order and real freedom to let themselves be heard.

Another problem which is rapidly reaching flood-time proportions involves civil violence, race riots, and insidious campaigns against

minority groups. It is a national disgrace and a reflection upon all Americans that altercations between individuals can touch off community-wide conflagrations, which are often seized upon by young teen-age hoodlums of both sexes to indulge in depredations of all kinds against property and persons.

Law enforcement is not responsible for such outbreaks. But, once lawless bands of people begin to take matters into their own hands, law enforcement does become responsible. When outbursts occur, pitting race against race, creed against creed, every officer must recognize his responsibility and realize that the only intelligent course of action is to adopt vigorous, prompt, and firm measures to restore peace. If force must be met with force, see to it that the protectors of law and order are marshaled in superior strength without delay and that they function for the good of all, with proper regard for the rights of all. Remember that crime thrives, violence and murder rage, only where law and public resistance are weak.

The real trouble causing these public outbreaks lies underneath, and we of law enforcement have a right to expect that the situation be recognized and corrected by those civic forces directly charged with such responsibilities. We are fighting for freedom of speech, but I hope the day will come when it will be recognized that freedom of speech does not carry with it the license to destroy, incite, subvert, and misrepresent the truth. Persecution or discrimination that takes place far away is often much easier to recognize than that which occurs in our own community, yet sane tolerance and democracy, like charity, ought to begin at home. They go together. Every victory for intolerance in America is a menace to democracy for all of us.

Our enemies in the war on crime include others than those who murder, rob, and steal. We have the harborers, the perjurers, and that countless class of criminal scum that subsist on the crumbs from the tables of the criminal overlords. And these include the crooked politician, the war racketeer, and the professional loose-mouthed vacuum-minded, rabble-rousers who subsist on the sweat and toil of the decent law-abiding citizen.

Among the enemies of society, we also must include those operators of dens of iniquity, debauchery, and crime, whose love of money eclipses their sense of decency. Then, too, there are the unethical physician and the shyster lawyer, both of whom are driven by the mad desire for money to give aid and assistance to our sworn enemies in this conflict.

Another element that is just as dangerous, yet less apparent until brought into bold relief by the spotlight of public attention, is the subversive group, those termites of discontent and discord, always alert to seize upon racial differences, economic stresses and political difficulties to advance their selfish and venial purposes. These "ism" termites scoff at our democracy and belittle the cherished freedom, liberty and fair play that characterize America. The threat against the American people from within is not merely a Nazi threat. It is the insidious infection of other foreign "isms" creeping up the pillars of the Republic under the false guise of democracy.

I am sure you will agree that delinquent and thoughtless parents are another problem facing us today. Some are victims of circumstances, but others, by their disregard of parental responsibilities and their frenzied chase after the extra pleasures or dollars available in these extraordinary times, forget the most sacred duty of all—that of rearing their children as self-respecting, law-abiding citizens who truly are worthy of the name American. The facts are stark and revealing, and possibly hold the key to this sad situation. Time and time again, children have admitted they did not consider their fathers as representative of honorable manhood, or that they were ashamed of them; and some have even said they were ashamed of their mothers.

What is needed above all else is more enlightened parents, to create better homes and take proper care of their children. Keep boys and girls from becoming criminals when they are young, and you can keep most of them from becoming criminals later in life.

Last year, the number of persons under voting age who were arrested and fingerprinted reached alarming proportions. Today, the situation is worse. The tragedy revealed by our latest survey is found in the fact that the arrests of boys and girls 17 years of age increased 17.7 percent. In reviewing further the trends for the past 6 months, we find an 89-percent increase in the arrests of girls for offenses against common decency. These girls are the future mothers of America. It is tragic that so many lives are ruined which could be useful, simply because right influences were not present at the right time.

Here is a real problem that calls for the intelligence and active interest of every police agency in the land. But this is not law enforcement's problem alone. Our American homes, churches, schools, and youth-serving organizations all must redouble their efforts to help young people make their way successfully to maturity. Law enforcement, having direct contact with crime, is in a better position to curb the perpetration of the actual offense than any other group, but the ultimate solution must come from the home, the church, and the school, through intelligent cooperation.

Yet law enforcement must be in the forefront of crime prevention. It is not alone the problem for sociologists, psychologists, and social reformers. It must be met with realism, understanding, and discipline, untempered with coddling and free from the cloudy mysticisms of new-fangled educational philosophies.

We still have with us those easy-going people who are too busy to vote, too tired to attend community functions, or to take a real interest in these matters of public importance. The sad truth is that most of them ill deserve the privileges and the unmatched freedoms we enjoy in this greatest of all lands. They have the fruits without contributing to the labor for its production.

But therein lies a challenge to you. For every one of these indifferent persons and every one of the delinquent parents you can convert by education and effort into an active supporter of law and order, so much easier will your job become. Citizens must be made to feel that they are a real part of the war; they must know the worst as well as the best.

In meeting your problems, please keep constantly in mind that the F. B. I. is ready every hour of the day and night to assist you. Assuredly, the security of America is law enforcement's greatest responsibility. Our problems, it is true, are major ones. They will try the patience and test the perseverance of strong men. But our war is a holy crusade. It is to protect the dearest of all our institutions—the home and the hearthside, under the double blessing of liberty and freedom. America must do some straight thinking and plain speaking in this hour of crisis. We are fighting not only the greatest military war of our history, but also the skulking enemies within our own gates.

Let us forsake all temptations to slip into careless ways. Let us avoid the tragic consequences of inaction and indecision. Let us be men enough, with courage and determination enough, to do our duty fearlessly here on the front assigned to us.

Then, when our men in khaki return after having won their war, they will find that we have not lost ours.

Chester Bowles Promises More Consideration to Small Business

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. PATMAN. Mr. Speaker, from a letter I have received from Mr. Chester Bowles, General Manager of the Office of Price Administration, I am informed small business will not be ignored in the future as it has been in the past by that agency. As chairman of the House Committee on Small Business, I have frequently criticized the Office of Price Administration for its dilatory tactics in failing to adjust hardship complaints and for issuing regulations which favored big business.

When Mr. Bowles took charge and began appointing businessmen who represented big business to replace college professors because of distrust by Congress of the latter, I complained to him that this might lead to similar protests because of those appointed or were reported would be appointed.

Mr. Bowles has assured me that he recognizes the problems of small business institutions and that he will demonstrate in the next month or two his genuine interest in that direction. He has expressed regard for their continued existence, and points out that, "One of the biggest single threats to our whole system of free enterprise is the gradual development of large organizations and monopolies which will tend to squeeze out the small independent operator."

CONCERNED OVER SMALL BUSINESS FUTURE OF THE O. P. A.

Mr. Speaker, I am very much concerned over the future outlook. As one of the sponsors of the Emergency Price Control Act, I am heartily in favor of its continuance as an active force in stabilizing prices. Mistakes have been made in the past but this was not the fault of the law but its administration. Rather it was the wrong conception placed upon the spirit of the law.

What some of the administrators of the act apparently knew was what they read in books and certain fancied theories which they conceived. Most of those coming within this classification if not all of them have been separated from this important work. Many of their actions were arbitrary and not founded upon common business practice. They did not follow section 2, paragraph h, which provides that:

> The powers granted in this section shall not be used or made to operate to compel changes in the business practices or methods, or means or aids to distribution, established in any industry, except to prevent circumvention or evasion of any regulation, order, price, schedule, or requirement under this act.

Some radical changes of business practices were injected into regulations. Preferential considerations were shown

in a number of maximum price regulations by operators. Large companies benefited from these regulations while smaller competitors were penalized. Manufacturers were ordered to change their production methods, grade labeling was demanded, and other practices were included that were highly prejudicial to recognized legitimate business of the smaller type.

With this background, Mr. Speaker, I was naturally concerned over the appointment of men representing big interests. I so expressed myself as chairman of the House Committee on Small Business to Mr. Bowles. They had business experience, but it was largely from the standpoint of big business. There is a decided difference in methods between these two types and it is highly important that so-called small business, representing more than 75 percent of total distribution, should not be penalized any more by the minority interests.

MR. BOWLES GIVES ASSURANCE

Mr. Bowles has given me his assurance that he will give small business his personal consideration to see that the complaints of the past will not be indulged in in the future. I shall watch the developments in that important branch which has so much to do with small business in which Members of Congress are deeply interested. We have all been home during the recess and have been able to get the reaction in our own districts from retailers, wholesalers, and manufacturers.

We know the importance of maintaining individual initiative and the need of equal rights to all and special privileges to none. I fully believe that the Emergency Price Control Act can be made to operate effectively and with good results to the country if administered according to its provisions.

Therefore, I present herewith the letter of reply of Mr. Chester Bowles, as follows:

AUGUST 30, 1943.

Hon. WRIGHT PATMAN,
Congress of the United States,
Washington, D. C.

DEAR MR. PATMAN: I honestly feel that the next 30 days will prove to you that you need have no fears about big business taking over O. P. A.

Jim Brownlee, whom I have known for years, has had wide experience with independent grocers from one end of the country to the other. Mr. Brownlee will head the Price Department. Under him, we will probably have four division heads in place of the present six: Carroll on food, Connolly on the Department Store Division, Sumner Pipe (the only top man in the Price Department who is not affected by the Congressional edict against professors) in charge of Materials and Fuel, and a new man, whom we ought to select the first of this week, in charge of the Manufacturing Division. The man we hope to get to head this division is definitely a small business man * * * at present the head of a small manufacturing company doing less than $500,000 worth of business a year.

It is quite true that both Carroll and Connolly have come from relatively big organizations. However, I know their point of view on the subject of small independents intimately since I have made it a point to talk to them at some length on this subject. I am satisfied that both of them will go to any lengths to see that small business is given every protection.

Already, Jean Carroll has talked to the National Retail Grocers Association, the National Wholesale Grocers Association, the American Wholesale Grocers Association, and the Independent Grocers Association. He has asked each of these groups for their recommendations on the branch heads who will serve under him. They have promised to give us names in the next few days.

We have already offered the head of the Fruit and Vegetable Branch to Ben Keith, a Texan who runs an independent fruit and grocery establishment. Mr. Keith was unable to accept the job because of his health. However, the man to whom we are now offering this same position is a small independent from Minneapolis.

Jean Carroll has also talked to the canners association and I am told that the man most likely to be selected to head that branch is a well-known small businessman.

Reagan Connolly, in the General Merchandising Division, is following the same procedure; that is, talking to all the various groups in the trades with particular emphasis on small business people.

Our Price Division will be staffed during the next few weeks and I am confident that you will agree with me when this job has been completed that small business is more than adequately represented.

As a matter of fact, I have watched with great interest your campaign in behalf of small business over a period of years, as this happens to be a subject after my own heart. It seems clear to me that one of the biggest single threats to our whole system of free enterprise is the gradual development of large organizations and monopolies which will tend to squeeze out the small independent operator. When the small businessman goes, it is very likely that free enterprise as well as our democracy will go along with him.

In Connecticut, where I served as State O. P. A. director for 15 months, I had an opportunity to see the wartime problems of small business from laundries to grocery stores at first hand. I was particularly concerned about the position of the independent grocers under the community price ceiling list, which called for publishing different prices for different sizes of stores. This seemed to me unfair to the independent as it advertised the lower prices of the chains and supermarkets with no counteracting statement of the extra service that the customers usually receive from these smaller independents.

For this reason, we only printed the ceiling prices for the smallest independents. We then controlled the chains and supermarkets below those prices by special lists to be hung in the stores, which applied to their stores only, and also by margin mark-up controls. It is our plan at present to follow this same program on a national basis.

I again want to assure you that I am sincerely concerned over this whole small-business problem and I think that you will find that our action during the next few months will clarify our point of view on the subject beyond any question.

I shall look forward to seeing you and talking to you.

My best personal regards.

Sincerely,

CHESTER BOWLES,
General Manager.

Mr. Speaker, distributors among retailers and wholesalers, as also manufacturers, will be much interested, I feel sure, in what Mr. Bowles said in this letter. It should create a new hope on their part if carried out. They want price stabilization but on a practical and constructive basis.

Women in War Industries

EXTENSION OF REMARKS

OF

HON. FRITZ G. LANHAM

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. LANHAM. Mr. Speaker, under leave to extend my remarks, I am including a letter I have received from Maj. Gen. Philip B. Fleming, Administrator of the Federal Works Agency, with reference to women in war industries and the care of their children during their working hours. This report of General Fleming was sent to me upon my request as chairman of the Committee on Public Buildings and Grounds of the House of Representatives, which request was made by me in order to get accurate information with reference to the present program concerning the care of children of working war mothers under the so-called Lanham Act:

FEDERAL WORKS AGENCY,
Washington, September 13, 1943.

Hon. FRITZ G. LANHAM,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN LANHAM: I am glad to send you herewith the report on our program of child care under the Lanham Act, which you requested. This program has been pursued actively for the past year under the able direction of Mrs. Florence Kerr, Director of our War Public Services program, who has had long previous experience in this field. Federal assistance has been provided on a substantial scale and, in certain communities, has proved an invaluable aid to war production.

In general, however, the use of the facilities thus far has been disappointing. The results point to need for a careful reexamination of the program, a discriminating limitation of allotments of Federal funds, and a change in the approach to the problem.

Summarizing briefly our information and our conclusions, as of today, it seems clear that the need for child-care services up to this time largely has been met insofar as Federal financing could meet it. Most of the child-care facilities are in the right areas; that is, where they should have maximum usefulness. As you know, there is no Federal operation. It is Federal Works Agency's responsibility to allot Federal funds to applicants to meet war needs. Nearly $12,000,000 had been allotted up to August 1. It is the responsibility of the applicant to operate the facilities after allotments have been made. Operation, which for the most part has been in the hands of school systems, is deficient, although there are highly creditable exceptions. Of more controlling importance, it appears that mothers have not taken jobs or continued to hold jobs in the numbers anticipated and that provision for child care alone is by no means a solution of the problem of effective utilization of womanpower.

Not quite half of the 3,385 nurseries and child care centers, which were reported to us as urgently needed, were so certified by other Federal agencies and were therefore approved, have actually been put into operation by the local sponsors. This seems plainly to indicate that the effective demand from the mothers, evidenced in a readiness to make commitments, has not measured up to the early estimates of need. Facilities in operation were being used, as of August 11, to less than half of capacity. Therefore less

than one-fourth of the total capacity of approved facilities were being used.

While the need for wartime child-care services is extensive, much of this need will manifest itself in effective demand from the mothers for the services only as working and living conditions may become better adapted to mothers working. And insofar as the demand is immediate and compelling it is not being met fully by the types of service and operation now being provided.

To meet these conditions we are undertaking the following measures:

New or additional facilities will be approved by this agency where, but only where, the war need is abundantly evident and there is more concrete assurance of their use. Previously approved projects will be extended only as effective use is proved in operation, by attendance and by satisfactory local support.

In allotting funds for new facilities, F. W. A., while continuing to work with school systems and other applicants where there is satisfactory assurance of use, plans to act in close cooperation with the War and Navy Departments and with industry, as principal seats of the demand for womanpower, so that there may be utmost possible assurance that the facilities will be utilized fully. Wherever possible—and safe—the facilities should be located close to the military installations or the industrial plants so that the transportation obstacle may be removed and the children may be close to the mothers. This holds promise of removing two major obstructions to effective use of facilities. The operating entity and the operating method will be adapted to these changes and efforts will be made to achieve maximum participation by other interested groups in the community.

Projects and units not meeting a substantial war need are being closed out and the allotments rescinded. This will be continued, guided by the results of further examination and conference with applicants.

A more complete spot check has been projected to follow the opening of the schools to determine how far, if at all, the end of the vacation season may lead to increased enrollments.

Funds will be kept available to provide additional assistance as the employment of mothers may be enlarged and as sufficient military and industrial as well as community backing may be obtained to give reasonable assurance of effective use of the facilities.

As we get more information and additional experience I shall be able to inform you more fully and conclusively both as to the outlook for this activity and our administrative action with respect to individual projects.

Sincerely yours,

PHILIP B. FLEMING,
Major General, U. S. A., Administrator.

Waging War on Roosevelt

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun:

WAGING WAR ON ROOSEVELT

It used to be easy, when certain industrialists met to rip the New Deal, to dismiss the event by observing that American reactionaries, like the Bourbons of France, seldom learn anything. But it isn't funny that a conference of top-flight business leaders, called by Donald Nelson to discuss production, should degenerate into an indiscriminate attack on the administration. That is what happened last week, according to information furnished the Chicago Sun by a disgusted informant.

It is not amusing when a large number of industrialists are more interested in complaining about persecution than in planning to meet critical prouction within our established frame work.

It isn't a joke when, in a war for democracy, certain businessmen cite the Army's discipline and longingly suggest a similar discipline for labor, nor when they agitate abolition of overtime pay—which means a wage cut—as the best manpower solution, nor when they reveal their ancient personal hatred of Mr. Roosevelt still smoldering and burning.

Before the war, anti-New Deal, anti-labor phobias were relatively harmless. The philosopher could recall that the coal barons of England, in the early 1900's, fought social reform with vehemence. Who will hate Roosevelt tomorrow—any more than British conservatives hate Lloyd George and Churchill today for having driven through Britain's first social-security laws?

But now, when the country faces enormous problems, when labor's wages are frozen to formula, when heavy taxation and severe economic controls are essential, it betrays an appalling psychological failure for reactionary industrialists to prosecute an anti-New Deal vendetta. It is as disruptive as John L. Lewis' persistence in waging war on Roosevelt instead of Hitler.

This newspaper, having knowledge of the more progressive viewpoint of many industrialists, does not believe the reactionary type of thinking is typical of the whole. By and large, American businessmen and industrialists are thinking more constructively today on major problems than for many decades.

Address by the Honorable James M. Barnes, Assistant to the President of the United States

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith an address delivered by the Honorable James M. Barnes, Assistant to the President of the United States, before the executives of 26 Illinois rural electric cooperatives in Springfield, Ill., on August 19, 1943.

It is as follows:

To me, the wide interest that has been attracted by this meeting on rural electrification is a sign of one of the most encouraging developments in American life. I refer to the increasing awareness of the American people as a whole about the problems of food supply and of the farmers who produce that supply.

Americans are thinking more realistically about the food they eat than ever before. That is a healthy thing. As a people we have been inclined to take food and our farmers pretty much for granted. The spectacular achievements of American industry have overshadowed the achievements of the farm for the public as a whole. That is no longer the case. Food is news today, and the country will be better off because it is.

The fact that the war has forced us to ration food may prove to be a blessing in disguise if it makes people realize that the abundance of food in this country is an undisguised blessing.

The Army, of course, and the Navy, and the Air Forces are keenly aware of the tremendous importance of food and the farmer in meeting their military schedules. Napoleon's famous maxim that "armies travel on their stomachs" was never more perfectly demonstrated than in this global war. The victories the United Nations are winning today are victories of camp kitchens as well as of bullets, of food warehouses as well as of bombs.

Consequently, you men who are the primary source of supply for the Nation's most important single resource have a personal stake in the military victories of the day. Every American farmer who is cooperating with the Nation's food program is entitled to feel a glow of pride in the impressive military power which this country has shown. For he has contributed to that power.

In fact, he has contributed to a miracle of productivity. You remember that shocking Pearl Harbor Sunday, when the radio told incredulous American that a Jap air fleet had swept out of the sky and destroyed some of our proudest battleships. Look back to that day, and then think where we stand now. We have come a long way, haven't we? The challenge that the Nazis and the Japs threw down to us was unprecedented in its danger and its enormous scale, but we have met that challenge and are crushing it, steadily and surely.

As the war began, sober warnings were given by our military leaders, our production chiefs, and our top Government officials. This war wasn't going to be a pushover, they told us. We could lose this war, they said.

That was a realistic warning. It was an intelligent warning. And it was grand to see how the people took it. You could almost see the Nation stripping off its coats and rolling up its shirt sleeves. You could almost hear 130,000,000 Americans saying out of the corners of their mouths, "Oh, yeah?"

Now, 20 months later, we have raised military forces totaling some 9,000,000 men. We have sent nearly one-fourth of those men overseas to smash the enemy wherever we find him. When President Roosevelt set the challenging goal of 50,000 planes last year, and equally unheard-of quantities of munitions and shipping, many people thought the figures fantastic. But today those goals are obsolete. Today we are concerned because our plane production was only 7,300 planes in July. In 1 month alone this Nation has turned out more tonnage of merchant shipping than the combined allied and neutral shipping which the Axis Powers were able to sink in 6 months.

But the tremendous job which our Nation has done since Pearl Harbor really began before Pearl Harbor. It began even before the lend-lease program by which we aided the British to survive the Nazi attack. Our preparations to defend ourselves have their roots in the years when we built up and preserved the potential strength of this Nation. When, 10 years ago, we undertook to keep our depression-hit people, our industries, and our farms in sound operating condition, we were already defending ourselves against attack. The reserves of strength which we are drawing on today were built up through the measures taken then to maintain the health and working skills of our people, to keep our businesses solvent, our industries producing, to rebuild and preserve our soil, and

to keep our farms and our farmers on the land and on their feet.

We took a notable step in our preparations to defend our free American democratic way of life when in 1935 we set up the Rural Electrification Administration, to carry the advantages of electrical power to all farm producers

When this program was started, only 750,000 farms, slightly more than 10 percent of all our farms, received electricity from central power stations. But at the end of 1941 when we entered the war, more than 2,000,000 of our farms had this service. Today, despite wartime restrictions, that number has been increased to more than 2,300,000.

We could ill afford today to be without the tremendous assistance that many of our farms are receiving from electrical energy. Food and our capacity to produce it his suddenly become a No. 1 factor in our war against the fascist aggressors. Electrical energy, by saving labor on the farm and increasing production, is now being translated into the calories and the vitamins, into the tremendous human energies that it takes to win a war like this.

Our farmers produced a record food crop last year, and they are doing a remarkable production job again this year. The weather has had a lot to do with it, of course. But let us not give weather too much credit. Weather did not plant and cultivate and harvest the crops. Weather did not feed the livestock and milk the cows. That was done by men and women and children on the farm. And on more than two million farms their efforts were multiplied by electrical energy that had at last come to their service.

We are fortunate, I repeat, that we launched this program in 1935. The country would have been wise to do it sooner. For years our farms, and particularly our smaller family farms that constitute the backbone of American agriculture, stood at the side of the road while power lines passed them by to serve the closely organized cities and their suburbs. The Government had to open the way and develop the means whereby the average farm could share in modern power benefits.

When we entered the war, we had 35 percent of our farms served by electricity. Germany, however, had long before electrified 90 percent of its farms. That is a grim thought. It carries a lesson for the future. We shall never again allow our agriculture to take a back seat in our progress as a Nation. Our strength does not lie only in the numbers of ships and guns and planes that we possess or can turn out. The real roots of that strength are the opportunities for full production and a healthful life that we have opened to all our people in farms and cities, to large and small operators alike.

Our war effort would be greatly strengthened today if we could extend now, to all our remaining farm plants, power and equipment similar to that enjoyed by the 2,300,000 farms now connected with central power stations. But, as you know, that cannot be done. The urgent need for critical materials for war production leaves no choice in the matter. At this time, further line extensions must be severely limited and must serve only the most essential demands.

Some, who for private reasons have long opposed the Rural Electrification program, seem to take pleasure in this enforced curtailment of rural electrification. They seem to consider the war restrictions as evidence that the Rural Electrification program is no longer needed. That is about as logical as saying we don't need water in a drought.

We need every bit of energy on our farms today that we can get. The Rural Electrification program is essential in helping to supply this energy to maximum production of food, without which we cannot win the war. And this is leaving aside the fact that many war production plants and services, including camps, aviation bases, radio beacons, and defense housing developments, are drawing their power from Rural Electrification systems.

Electric power has been a big factor in helping the American farmer carry the burden of food production in this war and that burden has been steadily growing heavier. During the first few months of the war in Europe the principal effect on food markets came from disrupted trade relations and interference with ocean shipping. Our food exports dropped off. Then came the blitzkreig of 1940. One European nation after another succumbed to German invasion. Italy joined forces with Germany. Unlike the First World War when markets in western Europe remained open to the United States, 1940 found the British Isles practically the only important overseas market for American farm products.

And for several reasons even that market was not a very active one. Great Britain had to keep down her food imports in order to acquire other essential war materials.

But as the threat of the Nazis and the Japs to this country became clear, we launched our own great defense program. As that program got under way, the demand for farm commodities sharply increased. Prices likewise rose. Then the lend-lease program went into effect, expanding our agricultural markets still more. The same farmers who had curtailed production in the 1930's in order to help maintain prices, now had to start expanding their output. And the more they expanded, the more they were asked to produce.

Today demands on our food supply resulting from the enormous expansion of our war effort go beyond anything the country has yet known. The American soldier in this war is eating even more than he did in the last war, for he is 10 pounds heavier and 1 inch taller. Today a single combat soldier eats about 5½ pounds of food every day compared with 3 pounds that are required by the average civilian. The American fighting man needs and gets about 4,500 calories a day—about 1,500 to 3,000 calories more than you and I need. And, of course, his diet must be well-rounded. He must be guaranteed all the vitamins, minerals, fats, and carbohydrates, all the calcium and phosphorus required to keep the human body at fighting pitch.

When we prepare for a military offensive we must store up great quantities of foodstuffs, just as we pile up stocks of munitions and gasoline. No new offensive can be undertaken without the assurance that ample food supplies are warehoused and ticketed for their destinations.

Food supplies are taken into account in laying out military schedules, just as much as guns. Unless we meet our food production schedules here at home, the Army cannot carry out its strategic plans abroad. The man on the farm is not merely a producer of food—in a very real sense he is part of our military service of supply. Although he wears overalls instead of a uniform, he nevertheless has a military obligation to produce to the top level of his capacity.

You have to consider, too, the importance of the American food supply for our fighting allies. In effect, we are giving them food in return for saved American lives. The battles that they win are battles that our men will never have to fight. Every Nazi slain by a Russian Army man—every Jap slain by a soldier of China—is a Nazi or a Jap who will never have a chance to kill an American.

Food for our hard-working civilian population, for our Army, for our allies, and for the invaded areas—all this demands tremendous productivity on the farms. The call has gone out for 4,780,000,000 dozen eggs this year. We need to produce 122,000,000,000 pounds of milk. We need to slaughter 30,400,000 cattle and calves, 24,000,000 sheep and lambs, 4,000,000,000 pounds of dressed chickens, 13,800,000,000 pounds of dressed pork. These astronomical figures are an indication of the tremendous task which lies ahead of the American farmer—not to mention the vast quantities of cereals and vegetables that must be grown. And this must be done at a time when the labor supply is only 58 percent of normal and when most farmers are working against shortages imposed by war—shortages of machinery, storage facilities, transportation facilities, and many kinds of supplies.

I know that the problem of manpower is especially in your minds. That problem is still growing more acute. War production requirements are going up—and so are farm-labor requirements—while the Army needs to provide fighting forces for its tremendous victory drive against the Axis. Inevitably manpower has been drained from the civilian economy of this country in order to serve in the armed forces or in war production plants. But some encouraging factors can now be seen in the picture. More than 90 divisions and a thousand squadrons of planes in our tremendous Army have been organized. Now it is possible to taper off manpower requirements for the armed forces. Already the numerous training schools for officers and specialists have been greatly reduced. The Army is now entering into the phase of development where the emphasis is being put on perfection of quality rather than on additional numbers.

The manpower shortage, of course, will be with us until this war is won. But the farmers of America are used to doing a hard job under difficult circumstances. I know that American farms, like American factories, have the energy, the grim determination, and the staying power to do whatever is needful in order to win this war as soon as the job can be done.

In spite of recent successes we know that there is still a lot of hard fighting to be done. Our fighting men will have to go through a harsh ordeal before we can destroy this ugly, venomous thing that has come upon the world bearing the name of fascism. The job has to be done no matter what the cost. And all of us, regardless of our work, today have part of the responsibility for that job.

Food will not only help to win the war, but it will also help to win the peace when the time comes to talk peace. Large parts of the world are looking to America for guidance and salvation for the future. The fact that we can save peoples from famine and hunger as we help them to restore their self-respect will inestimably enhance America's position of economic and moral leadership in the post-war world. Both nationally and internationally, it is of the utmost importance that we assure the sound position of the American farmer after the war, as well as during the war.

Of course, that is easier to say than to do. The agricultural program of today is enormous and complex. But I can tell you that the Government is watching closely every change in world conditions that may affect the American farmer, and is adapting the program to the best interests of the country and the farmer. The purpose of the Government is to do everything that can be done, both during the war and after the war, to assist farmers in adjusting production, in disposing of surpluses, and in maintaining fair prices and income.

For the first time in the 1930's, the country began to recognize the tremendous problems of the farmer—such problems as erosion control, soil building, and land reclamation—such problems as crop hazards and price differentials. Whatever the future may bring, the Nation as a whole must never again lose sight of the primary interests of the farm. For those interests touch the very life-stream of the people as a whole.

Up to now, for example, there has perhaps not been enough mutual understanding on the part of agriculture and labor. One of the good things which I hope will come out of this period of war is a closer understanding of each other's problems by farmers and industrial workers. During wartime, many a farm boy is going to find himself working and fighting next to men who have grown up in industrial work. They are bound to exchange views and ideas and experiences. The kind of understanding that can be developed in that way, the intimate awareness of the other fellow's problem, can be a strong force for the harmonious progress of the Nation in the time to come.

We will need harmony and understanding. For we have some serious obstacles to face, and we can face them successfully only if we face them together. Inflation in particular is an ugly menace. I know that all of you men who are gathered here today must be keenly aware of the dangers of inflation. I know you realize that although inflation would carry farm prices upward, farm equipment, supplies, labor, taxes and other costs would go up as well. Past experience suggests that some of these rising prices would stay up considerably longer than any higher prices paid to the farm. No one has more to lose from inflation than the farmer. My own contacts have assured me that farsighted men of agriculture everywhere see these problems clearly. But on the farm and elsewhere, we all have the responsibility to check inflationary tendencies that would raise prices for everybody and bring profit to nobody except a few speculators.

With success in checking the inflationary menace, I believe the farmers of America can look forward to the future with confidence. History itself is coming to the farmer's aid. At the beginning of our history America was an agricultural Nation. Then we became predominantly an industrial Nation. For a long period after the Civil War, the people and the Government lost sight of the farmer's problem. Now agriculture is once more coming back into its own, not as something separate from industry, but as a pillar side by side with industry in supporting the great economic and social structure of our Nation.

We are coming into an age of improved nutrition. This is bound to mean expansion in outlets for certain farm products. Education will influence consumer selection, and improved food distribution will increase demand. Dietary needs will take first place in the thinking of people as the basis of health and working energy.

There is a great new surge of interest in farm life and farm methods. This age of scientific agricultural development and improved understanding of diet is opening up vast new horizons for the farmer, as well as for every other group of American citizens. The great trend toward rural electrification is one of the splendid rays of hope in this new dawn. I believe from the bottom of my heart that the future of American agriculture is brighter today, and that the chances of the American farmer for a good life are better today than ever before in American history.

In Time of War Prepare for Peace

EXTENSION OF REMARKS

OF

HON. NAT PATTON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. PATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Roy Miller, of Corpus Christi, Tex., active vice president, Intracoastal Canal Association of Louisiana and Texas, at conference of the association's membership at Houston, Tex., August 26, 1943:

Measured in terms of tangible accomplishment, the past year has witnessed greater progress toward the ultimate achievement of the objectives of this association than in any like period of time since it was brought into being at Victoria, Tex., 38 years ago when patriotic and far-seeing citizens of Louisiana and Texas assembled at the call of the distinguished life president of the association, and perfected its organization. While that remarkable progress might not have occurred so speedily except for the tragedy of war, the association, I think, can claim a substantial share of credit for it.

After extensive hearings before the Rivers and Harbors Committee of the House and the Commerce Committee of the Senate, Congress passed and the President approved on July 23, 1942, the Mansfield bill, known as H. R. 6999. This important enactment, drafted, introduced, and sponsored by Hon. J. J. MANSFIELD of the Ninth District of Texas, the distinguished chairman of the Rivers and Harbors Committee of the House of Representatives, authorized:

1. The enlargement of the Gulf Intracoastal Waterway from Carrabelle, Fla., to Corpus Christi, Tex., a distance of 864 miles, from its existing dimensions of a 9-foot depth and 100-foot bottom width to a depth of 12 feet and bottom width of 125 feet.

2. The extension and completion of the intracoastal canal from Corpus Christi to the Rio Grande Valley on the basis of the same dimensions, and

3. The construction of a barge canal 12 feet deep and 150 feet wide from the west coast of Florida to Jacksonville, Fla., to connect with the existing 12-foot inland waterway extending from Jacksonville to Trenton, N. J., a distance of 1,064 miles.

During the month of October last year, Congress appropriated $6,485,000 to start the work of enlargement of the Gulf Intracoastal Waterway and the actual execution of the project was immediately begun.

In the second deficiency bill passed by the Congress on the eve of its recess July 8 of this year, there was appropriated the sum of $7,090,000 which, according to the estimate submitted by the Director of the Bureau of the Budget, will complete the enlargement of the entire waterway from Carrabelle, Fla., to Corpus Christi. By this time next year the job should be finished.

Construction of the barge canal across Florida and the extension and completion of the Intracoastal Canal to the Rio Grande Valley may have to await the end of the war. In a letter addressed to Judge MANSFIELD, dated July 1, 1943, the President said, in reference to the Florida barge canal:

"I have always realized the importance of an adequate and continuous inland waterway for barge traffic along our Atlantic seaboard and Gulf coast. * * * As yet, it has not been feasible to undertake work on sections of the waterway not now in existence, primarily because of shortages of manpower, materials, and equipment. Detailed plans and specifications for the Florida barge canal will be prepared so that its construction can proceed without delay as soon as these shortages are overcome."

While no definite decision has been announced by those in authority in respect to the extension to the valley, and no promises have been made, there is a chance or at least a hope that construction work may not have to await final termination of hostilities. When the enlargement now in progress to Corpus Christi is completed, dredging plant may be available and since no critical materials are involved there is a possibility that some of these dredges can be put to work on the extension.

The assured reality of a 12-foot inland waterway all along the Gulf coast, and the prospect that some time in the not far distant future we will have a 12-foot inland waterway "from Maine to Mexico" naturally recall the difficulties, vicissitudes, and disappointments of earlier years. Although the original objective of the association was "an inland waterway from the Mississippi to the Rio Grande," I am quite sure that in their most exuberant enthusiasms none of the early pioneers in the Intracoastal Canal movement ever had such a great waterway in mind. It is interesting to recall that the first result of their effort was a little canal 5 feet deep and 40 feet wide, which extended across the State of Louisiana and was ultimately constructed with the same dimensions from Galveston to Corpus Christi. Of course, those determined pioneers never had any idea of accepting a canal of that sort in full satisfaction of their vision and purpose. At our convention held in Houma, La., in October 1922, and largely at the insistence of our president, Hon. C. S. E. Holland, and the then chairman of our advisory council, the late J. S. Cullinan, our association adopted a definite and vigorous program demanding an adequate canal with a depth of not less than 9 feet "from the Mississippi to the Rio Grande."

Such a project (a canal 9 feet deep and 100 feet wide) was authorized from New Orleans to Corpus Christi in the Rivers and Harbors Acts of 1925 and 1927. Most of you are familiar with subsequent events. These measures were mere authorizations and did not appropriate the money to build the canal. Meeting conditions imposed by the Government on local interests, which included the furnishing of rights-of-way, the construction of highway bridges at local expense, the provision of spoil-disposal areas and many other difficult tasks, took time and trouble and required the manifestation of unusual public spirit upon the part of the communities along the route of the waterway. In due course, these obstacles were surmounted and the canal was finally completed to Corpus Christi.

Meantime the association continued its persistent efforts to assure the completion of the canal to the Rio Grande valley. Numerous surveys were made and economic reports submitted, but it was not until about 2 years ago that the Army engineers recommended construction. Now, however, under the broad terms of the Mansfield bill the extension is not only authorized but for a 12-foot instead of a 9-foot waterway.

So much for what has gone before. What lies ahead? What of your association's future activities?

First and foremost, of course, is a final completion to the Rio Grande, which has been the fixed goal of your association ever since it was organized more than three decades ago. Construction has been authorized. All that is needed is the money to do the work, an amount which probably will not exceed $5,000,000.

There may be those who might say, "let nature take its course" and "when the time comes" Congress will make the necessary appropriation. Unfortunately, and I speak from long experience, Congress does not always operate that way. The full force and influence of our association should be applied constantly and unrelentingly until the money is actually appropriated and construction contracts let.

There is another factor which, in my opinion, may require a continuance of organized effort even after a finished canal is an accomplished fact. We want a waterway that will be used, a waterway which will provide actual transportation facilities to the hundreds of

communities it will serve throughout the fertile reaches "from the Mississippi to the Rio Grande." Everyone knows that vigorous forces are constantly at work to destroy water transportation or, when they cannot totally destroy it, to cripple and limit its services. I speak for myself and I know I speak for the fast-diminishing group of patriotic citizens of Louisiana and Texas who initiated this movement when I say that we have never sought and do not now seek to build a waterway merely for the purpose of influencing freight rates. Of course, that is the inevitable result of waterways, otherwise they would not be built, but what we have had in mind and shall ever keep in mind is a great water transportation facility that will actually handle a tremendous commerce consisting of those commodities which particularly lend themselves to water carriage. I am thinking of raw materials, natural resource products, and things of that sort which normally do not move at all without cheap water transportation.

So far as I am concerned, I want the Intracoastal Canal to be a usable transportation facility that will do its full part in bringing about the great era of industrial progress and development which, if aided by cheap transportation, is certain to occur everywhere throughout the territory served by the canal. The Intracoastal Canal Association should continue as a protective agency to see to it that the great enterprise we have created and constructed is not despoiled and destroyed by its enemies.

As great as its services already are and as extensive as will be development in the territory it immediately traverses, that service is and will be largely limited to a restricted area contiguous to it. Its benefits ought to be extended as far inland as may be possible in both Louisiana and Texas. Therefore every stream and bayou in Louisiana and every river and inlet in Texas that bisects and connects with the canal (which can be feasibly and economically improved for navigation purposes) should be developed, put to use and become a part of the Intracoastal Canal system of Louisiana and Texas. Many of these bayous and streams have already been surveyed and recommended in whole or in part for such improvement. The possibilities of others should be explored and studied. Since the activities of this association have been generously supported throughout the years by many citizens, interests and communities not located directly upon the route of the canal, I personally feel it is the definite obligation of the organization to assist in bringing about such of these improvements as may be worthy.

I may be pardoned, I trust, if I say that the Intracoastal Canal Association of Louisiana and Texas, because of its long experience and large accomplishments, does have considerable influence and, I think, is everywhere respected by those in authority.

I do not need to point out to this audience, composed of progressive and thoughtful citizens of Louisiana and Texas, that the development of the water transportation facilities of our two great States has been chiefly responsible for the remarkable progress and growth they have enjoyed, particularly in their coastal areas, during the past 25 years. No two states in the Union possess greater possibilities for industrial expansion. They have in prodigal abundance the basic natural resources upon which the structure of a great industrial empire can be erected. They have the resources, they have the climate assuring ideal working conditions, and are in a position to supply in supplement of these advantages the most important factor in the industrial and commercial equation, namely, unexampled water transportation facilities.

The matchless progress of Texas in industry during the past 25 years, for example, can be measured almost precisely by the yardstick of port and waterway improvements. Thirty years ago the total commerce handled by all Texas ports and waterways was less than 10,000,000 tons annually. In 1937, before the recession of movements by water because of world conditions, the total commerce of Texas ports and waterways approximated 100,000,000 tons in volume and $2,000,000,000 in value.

When peace comes and our normal economy is restored, this remarkable trend is certain to resume. Decentralization of industry, one of the lessons we learned even before the war was thrust upon us, will pay its tribute to the superior advantages of the great Southwest. The extent to which we may profit by it will depend in no small degree upon our ability to improve, enlarge, and extend our water transportation facilities.

This great era of progress should not be limited to the comparatively few communities along the coast which possess the priceless advantage of cheap water transportation. Wherever it is possible from the standpoint of engineering feasibility and economic justification to improve our interior waterways connecting with our ports and the great Intracoastal Canal, it should be done. It is, I think, sound public policy to extend the incomparable benefits of cheap water transportation as far into the interior as may be feasible, practicable, and economic.

I am not suggesting such a program for immediate accomplishment. I submit it as something to think about, talk about, and plan about. No expenditure should be made now which is not essential to winning the war. No one can foretell when the war will end, and it may come with unexpected suddenness. When peace does come, we must be prepared to substitute private enterprise for public expenditure as speedily as possible. We shudder at the prospect of a national debt in figures which the human mind cannot comprehend, and we sometimes wonder whether we can preserve our system of private enterprise under the load of Federal, State, and local taxation we shall have to carry.

Personally, I am no pessimist as to the future of America. If our country is worth the toil, sacrifice, and blood of our boys who are fighting and dying to save it, we must and can find a way to insure not only her preservation but a greater and more glorious future. Our job is to plan and build a greater, richer, more prosperous, and powerful America. We can do that by a fuller development and use of our matchless natural resources.

Many years ago when the Congress of the United States passed the first billion-dollar appropriation bill for the maintenance of the Federal Government and when many doubted the Nation's ability to exist under such extravagance, the then Speaker of the House of Representatives declared, "Why, we've got a $1,000,000,000 country." Since that time our country has grown and prospered beyond imagination and Federal expenditures have reached astronomical totals. Waste, extravagance, and useless expenditures must be eliminated and unnecessary Federal services eradicated. But the thing we must bear in mind is that the possibilities for growth in America are still unlimited. We can assure America's glorious future and her continued uninterrupted progress by increasing our national wealth production. In that ambitious program the fullest possible development of our water resources, which constitute our most valuable national asset, offers the greatest opportunity. The utilization of these resources for every service of which they are capable, including flood control, irrigation, reclamation, soil conservation, hydroelectric power where it can be economically produced, as well as navigation, will bestow upon America a new frontier of limitless possibilities. The Congress should lose no time in setting up the program. In time of war, let us prepare for peace, and a greater and more glorious future.

Intelligence Unit of the Bureau of Internal Revenue Brings Over $56,000,000 to Treasury

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. COCHRAN. Mr. Speaker, as shown by the annual report, the Intelligence Unit of the Bureau of Internal Revenue continues its record of placing in the Treasury an amount greatly in excess of its appropriations. This money comes from taxpayers who tried to defraud the Government. Following will be found a brief statement submitted to the Secretary of the Treasury:

Citizens who live by cheating the public usually are disposed to cheat on Uncle Sam—but Uncle Sam can't be fooled for long.

This is one conclusion that can be drawn from the fiscal year report of the Intelligence Unit of the Bureau of Internal Revenue, submitted to Secretary Morgenthau by Elmer L. Irey, Chief Coordinator of Treasury Enforcement Agencies.

W. H. Woolf, Chief of the Intelligence Unit, said the Unit, in the process of rounding up chiselers against the Nation's wartime revenue needs, placed behind prison bars a professional card sharp whose "take" over a period of years approached six figures, a wealthy lottery czar, a racketeering tax adviser, and two purveyors of Blue Sky mining stock.

The exposure of these and other instances of mulcting the public was, so far as the Intelligence Unit is concerned, merely incidental to the business of prosecuting frauds against the Nation's tax laws. This work on the part of Intelligence and Revenue agents resulted in recommended additional tax assessments during the year ended June 30, of $56,444,954. The agents made nearly 1,000 of these investigations, and of those cases where criminal prosecution was instituted, 95 persons were brought to trial and 92 convicted. Criminal proceedings were instituted against 23 additional persons on miscellaneous charges, 17 were tried, and 15 convicted.

Mr. Woolf reported that judicial consciousness of wartime revenue needs resulted in an increasing tendency on the part of the courts to mete out severe sentences to persons convicted of tax frauds.

The long career of the card sharp, William D. Frad, of New York, who made his living by his wits, was terminated by the agents. Painstaking checking of his financial transactions and the identification and question-

ing of his victims built up a convincing picture of income unreported to the Government, and he drew 2½ years in Federal prison.

Officers said Frad posed as a son of a prominent family, associated with influential people, and plied his trade on trains and ocean steamers.

Evidence was that Frad, after becoming acquainted with wealthy individuals, would engage them in gambling games, during which the victims were led through early winnings into playing for high stakes. Then the professional and his confederates would "take" the amateurs for large sums. One businessman lost $96,000 in a single instance. The Treasury officers proposed additional taxes of $100,000 against Frad for the years 1936 and 1937.

Joseph Hotze, of Boston, was found guilty of income-tax evasion approximating $85,000 for the years 1936 through 1939, and was sentenced to 3 years' imprisonment and fined $10,000. Agents charged that Hotze had engaged in an illegal lottery business for a long period. Hotze failed to learn from a previous brush with Intelligence agents. He had been sentenced to 3 months in jail in 1935 after pleading guilty to income-tax charges. Officers said he continued his operations after this conviction, amassed a small fortune and acquired a luxurious home, while systematically understating his income for Federal tax purposes.

The Intelligence agents charged that Hugh Wilton and James Maxfield, of Las Vegas, Nev., made large profits by selling mining stock through fraud and misrepresentation, and evaded income taxes of $30,000 each. Both of the men were sentenced by the court to a year in jail, and were fined the exceptional amount of $20,000 each.

Another drastic money penalty was in the case of Dr. James W. Tipton, of Danville, Va., who also was fined $20,000, on a plea of nolo contendere to a charge of income-tax evasion over a 5-year period.

One of the neatest rackets uncovered by the Treasury brought a 2 years' prison term to Albert C. Harris, of Edwardsville, Ohio. Harris, whose business was assisting clients in preparing their returns, had them sign statements which originally showed their correct tax status, then altered the returns by setting up fictitious claims for exemptions and deductions. He pocketed the difference resulting from the lower tax liability. Harris went so far as to show an unmarried school teacher as having a dependent child which allegedly entitled her to $400 exemption under the revenue law as it existed at the time.

D. O. Mecklenberg, of Billings, Mont., and Glen C. Ackerman, of Great Falls, Mont., were prosecuted for making false statements concerning existence of a fictitious excise tax on gas-storage tanks.

An interesting tax case involving Japanese subjects developed during the year, in Florida, as a result of the seizure by Treasury agents of the assets of aliens following the attack on Pearl Harbor. Shinyu Noro, Shoei Marahide Goto, and Harna Taniguchi were in business in St. Petersburg, operating a restaurant known as Nikko Inn.

Inspection of their seized records disclosed two sets of books, one in Japanese and one in English. The revenue agent called into the case made a careful study of the Japanese characters and developed considerable ability in deciphering them. The investigation showed that the correct income, as recorded in Japanese, was $40,000 more than that reported in the English books on which tax returns were based.

The three were indicted. One of them is now in Japan, another in a detention camp, and the third is awaiting trial.

The Operation of O. P. A. as It Affects Manufacturers, Processors, Middlemen, Farmers, and Consumers

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an address delivered by me over WMAL, Blue Network, on the evening of August 28, 1943. I believe that this address will be of interest to the readers of the CONGRESSIONAL RECORD, and especially to my many friends and constituents in the Second South Carolina District. In mailing speeches to our constituents, as far as I am concerned, it is for the sole purpose of keeping them posted concerning problems confronting the Congress and my position and views thereon.

The address follows:

Last night I listened to a speech by Marvin Jones, the food czar. I was reminded of a real politician engaged in a red-hot campaign for reelection, trying to get the good will and the votes of the farmers. I am wondering what Donald Nelson, General Hershey, Paul McNutt, and especially Prentiss Brown, are going to say about it.

When the Office of Price Administration was set up, I requested a conference with those in charge. Dr. Galbraith and two other representatives called on me at my office. At that time I advocated actual price fixing to all groups from the bottom up, including fixed prices on farm products with a 100-percent bottom based on what farmers have to pay for that which they purchase, including the total cost of labor, with proper differentials for those operating between the farmer and the consumer, with price ceilings thereon.

You remember the O. P. A. started out with fixing prices on certain farm products, somewhere between the farmer and the consumer, stating at the time what would be a fair price for farmers based on the so-called parity formula, but prices of farm products were not actually fixed with a 100-percent bottom; they were subject to manipulation by speculators and by those who operate between farmers and consumers. The price on products placed under price ceilings rose gradually, but the prices of farm products and goods uncontrolled advanced so that the trend line of average retail prices, especially food, has continued upward at an unchanged angle not in any way increasing the farm prices, but at the expense of the consuming public.

An announcement has gone out this week by the O. P. A. that they are going to do something about the high prices to consumers on fruits and vegetables. Why this late attempt to remedy the serious situation, when the season for fresh fruits and vegetables is fast coming to a close?

Ask housewives how they have been held up and robbed with unfair, unreasonable high prices on fruits and vegetables. Today I priced peaches within one block of the Capitol; they were 27 cents per pound, $13.50 per bushel. This week, however, I tried to sell sweet potatoes from my farm. I was offered $3 to $4 per bushel. Here in Washington sweet potatoes are selling at 12½ to 15 cents per pound, $7.50 to $9.00 per bushel.

I wish I had the time to give you definite information concerning how the large meat packers were called into conference with the officials of the O. P. A. in connection with the price fixing of meat products in 1942, and how they put over a real stab in the back on the small meat packers, hog and cattle producers.

It would be equally interesting to tell you about how the O. P. A. proceeds to give relief to processors and manufacturers of farm products when they complain. This was illustrated in the case of Procter & Gamble—manufacturers of soap products—with roll-back of prices on fats and oils at the expense of producers of these products, so as to take care of every item of cost, including labor, advertising, radio programs, and profits as usual, all of which is paid by the consuming public.

How about farmers? Last year farmers were supposed to receive $50 per ton for their cottonseed. They sold for $35 to $50 per ton. In buying back cottonseed meal for fertilizer and feeding livestock, farmers had to pay a fixed price amounting to $8.50 per ton, added to the manufacturer's price, to take care of middlemen, jobbers, brokers, commission buyers, wholesalers, and retailers.

Government and lend-lease have purchased the best, regardless of the price, which means all of the good grades of cotton have been consumed and millions of bales of low-grade cotton have piled up in the hands of the Government and farmers.

Because of the shortage of labor this year, and the inability of the farmers to harvest their cotton promptly and properly, at least 75 percent of the total crop will grade Middling and below.

Under the price fixing arrangement, textile mills get low prices on low-grade cotton at the expense of cotton farmers. The present spread differentials on low-grade cotton (Middling and below) have been widened anywhere from $3 to $20 per bale in comparison with the price differentials in 1939–40, which will amount to actual losses of millions of dollars to cotton farmers.

From an investigation made by my committee last year, we found that the various war agencies were operating independently of each other, without a well balanced, coordinated program.

The War Production Board was operating without any serious regard to the importance of allocating priorities on critical material for the manufacture of improved labor-saving machinery to take the place of the shortage of farm labor.

Mr. McNutt, Manpower Commissioner, with the assistance of the United States employment agencies in the various States of the Union who are advertising daily for laborers, was concerned only in getting every one possible for employment by war contractors and war industries, who are operating under guaranteed "profit plus" contracts with practically no limit to the payment of high wages, apparently not realizing what it would mean in draining farmers and farm laborers away from the farms.

General Hershey, Director of the Selective Service System, and those in authority connected with the drafting of men for the Service apparently were interested only in seeing to it that they would be able to establish an Army of 10 million by the end of 1943.

They are still drafting men from the farm, contending that they are complying with the rules and regulations governing the Tydings amendment, whereby a farmer, to be deferred, must have a certain number of cows, pigs, chickens, and various types of special crops making up one or more so-called "units."

Secretary of Agriculture Wickard has a wonderful personality. He usually gets by with his very gracious smile, but we found that his position, in comparison with the war agencies, was that he was on the outside looking in, and he is still holding this position.

Chester Davis was appointed food czar, but they refused to give him any "gasoline." My committee reported a bill to give to him definite power to place agriculture on an equal basis with other war agencies; that power was not granted and he resigned. Judge Marvin Jones, who received his appointment from the President, succeeded Chester Davis. Remembering that old, familiar political song entitled, "Whose meat I eat, his song I sing," I left Washington for a fishing trip.

Recently I wired Judge Jones, War Food Administrator, as follows:

"Is anything being done to stop further drafting of farm labor and utilizing soldiers on the farm?"

I quote from his reply:

"Utilizing soldiers on the farm is handled by a soldier's own camp commander based on the merits of the case. (Now listen to this!) If you will contact the State Director of Agricultural Extension Service and the various County Agricultural Agents, you will find that they are able to assist with agricultural labor where needed."

What a joke!

Farmers are engaged in the most hazardous business of any group in the country. They can work long hours during this great emergency, planting various crops requested under goals set by the Food Administrator. For three reasons, however, they have no assurance as to just what they will be able to produce, harvest, or what price they will receive:

1. Having to contend with drought, floods, hailstorms, insect infestation, cattle and hog diseases.

2. If they produce a good crop, in spite of shortage of labor and farm machinery (as is the case at this time), tons and tons of their products will go to waste, unharvested in the fields.

3. In that they operate as individuals, without a fixed price, they have to accept whatever they are offered for their products.

This is not true with business and industry who are able to control their production, distribution, and actually fix prices. You can take it or leave it!

This is not true, especially, with war contractors and war industries. They are operating under a guaranteed "plus-profit" contract, regardless of waste and the price paid for raw materials, labor, including millions of dollars for advertising, and regardless of whether or not they produce on a 60- or 90-percent capacity; whereas, in the meantime, if the war should end in the middle of 1944 farmers will be left with the bag to hold as far as farm prices are concerned.

This is not true with war contractors and war industry. When the war ends they are guaranteed against any losses, regardless of the amount of war materials or implements of war which they may have on hand, and they have an assurance of a profit that will enable them to rehabilitate their private business, avoiding personal losses.

The only safeguard that the Government has in connection with "plus-profit" contracts is the renegotiation provision passed by the Congress. Those who operate under Government contracts, especially the large, monopolistic groups, are now flooding Congressmen and the country with tons and tons of propaganda—in the press, magazines, and mail—urging the repeal of the renegotiation provision, having in mind being in a position to get away with untold profits.

Because of the influence of these large groups, with the assistance of important departments which seem to be under their control, regardless of the unfairness of the request, I predict that they will procure sufficient votes in Congress to repeal this one safeguard in behalf of the taxpayers of the country.

We have too long wholly failed and refused to look true facts and actualities squarely in the face and take necessary constructive steps to insure the proper production and proper harvesting of vital foods and feeds which, as stated, are not only absolutely necessary in winning this war but in winning a world peace.

I can assure you that you are not going to be able to "keep them marching, keep them rolling, or keep them flying" unless you "keep them eating."

I understand Japan and Germany have from three hundred and fifty to five hundred million slaves working on schedules, uninterrupted, to produce, harvest, and store the greatest possible reserves of food and feed. Both countries have combed all outlying areas with a fine-tooth comb, so that any territory we win back from Germany and Japan will be populated by peoples facing absolute starvation.

Russian food and feed reserves have been reduced to dangerously low levels, and her productive capacity has been dangerously curtailed by areas of normal production having been overrun by Germany. She cannot continue fighting unless she receives material help from us.

England could not have fed her citizens without the help we have given and are giving to them, and without continued help from us, famine and starvation would quickly break down all possible resistance and physical ability to wage any kind of war.

China has all but reached the point where famine and starvation may force a negotiated peace with Japan, unless we are able to increase materially the food supply we have been and are furnishing to them.

I quote from the London Daily Mail:

"The specter of famine begins to haunt nearly the whole of Europe. Hunger has been stalking Europe for 3 years in varying degrees."

Money and credit can do much when there is something to buy, but all the money and credit on this earth cannot buy that which does not exist.

Today our farmers, including dairymen, poultrymen, and cattle and hog producers, are being backed up against a wall, and they cannot properly proceed, now or after the war, even based on patriotism, unless their serious problems are given prompt and favorable consideration, including definite, fair, fixed prices, with assurances, in line with war contractors and war industries, against crop losses and unfair prices for surpluses during and following the end of this war.

Mr. Speaker, for the purpose of a real show-down as to just who will have the definite power to administer the farm program—production, distribution, and price fixing—I have invited Judge Marvin Jones, War Food Administrator, and Hon. Prentiss M. Brown, Director of the Office of Price Administration, to appear before my committee, the House Committee on Agriculture, on September 20, 1943, or at the earliest date possible that can be arranged for the convenience of Judge Jones and Administrator Brown. The following is the letter addressed to Judge Jones and Mr. Brown:

WASHINGTON, D. C., *September 2, 1943.*

Judge MARVIN JONES,
War Food Administrator,
Washington, D. C.

DEAR JUDGE JONES: I listened with a great deal of interest to your speech on last Friday evening.

However, as far as I am concerned—and I believe I speak the views of the farmers of this country regardless of the line they are engaged in producing—the time has arrived that we should have a definite program in black and white given to the farmers at the earliest possible date, concerning production, distribution, and price fixing of the various crops that will be planted and harvested between now and next spring, as well as for the 12 months during 1944.

Therefore, I am inviting you to appear before my committee on September 20, 1943, at 10 a. m., to outline a definite program, as above indicated, which I can assure you is very essential, and which will be helpful in bringing about a necessary production not only in winning this war, but which will be very helpful in winning the peace.

I am also extending an invitation to Hon. Prentiss M. Brown, of the Office of Price Administration, to appear at the same time for the reason that my committee, as well as the farmers of the country, are anxious to ascertain the real facts as to just who from now on will have the definite power in connection with production, distribution, and price fixing of farm products.

The farmers of this country would like to know whether or not we are going to continue a program whereby perhaps two or more people operating in connection with the various agencies will have the power to override each other at will, all of which in the past has been bringing about serious confusion and, as a matter of fact, has been seriously operating against proper production, distribution, and price fixing based on a practical, commonsense program.

Please let me know at the earliest date possible if it will be satisfactory with you to appear before my committee as above requested.

Thanking you for past favors, I am

Yours very sincerely,

H. P. FULMER,
Chairman, House Committee
on Agriculture.

Mr. Speaker, there are many problems confronting farmers in the various sections of the country who are engaged in the production of various types of crops, including livestock, fruits, and vegetables, all of which are going to receive my very best attention, in that I have always felt that agriculture should be considered on a national basis.

However, at this time I want to call to the attention of the farmers of the Cotton States one of their most serious problems, which is unfair and unless corrected—which I am trying my best to accomplish—will cost our people millions and millions of dollars.

The O. P. A. has fixed price ceilings on textile goods, including therein every item of cost, transportation, and labor, with a fair profit which should reflect a price to farmers f. o. b. cotton mills, as follows:

	Cents
15/16-inch Strict Low Middling	23.12
15/16-inch Middling	23.12
1-inch Middling	23.49
1 1/16-inch Middling	24.35

If you will figure the freight and the price that we are receiving for our cotton today you will find that either cotton merchants, textile mills, or both of them, are buying cotton below the so-called fixed prices, all of which while not being added to consumer prices, are definitely coming out of the cotton farmers, and adding to the profits of either the cotton merchants, textile mills, or both of them.

The following letter contains definite information concerning what I am talking about:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 3, 1943.

Judge MARVIN JONES,
War Food Administrator,
Department of Agriculture,
Washington, D. C.

DEAR MARVIN: I was very glad to have the opportunity of speaking with you and Mr. Hutson yesterday on the important matter of the present differentials on cotton grading below middling, in comparison with 1939–40 differentials.

In 1939–40 we were operating on a normal basis without prices or differentials being interfered with by any war agency. As stated to you, these differentials have been widened, ranging anywhere from $3 to $25 per bale.

You remember Mr. Hutson stated to you yesterday, because speculators could lower the so-called price which farmers are supposed to receive based on the ceiling price of cotton, that any depression in the price, either by speculators or by spot buyers, would simply reflect an additional profit to cotton merchants or to cotton mills, or both of them.

I am quoting from a letter received from Mr. Appleby April 10, 1943, when I had this matter up with Messrs. Duggan and Appleby:

"At the time the schedule of premiums and discounts for the various grades and staple lengths of cotton to which you refer was discussed with the O. P. A., the law required that no maximum price be established for any agricultural commodity or for any product manufactured in whole or substantial part from an agricultural commodity below the highest of four alternative levels. The highest of these four levels for cotton was 21.47 cents per pound (the average price received by farmers during the period July 1919–June 1929)."

This was on a basis of Middling cotton 15/16 inch.

Quoting further:

"We understand that 60 points were added to obtain the equivalent average 10-spot market price for Middling 15/16-inch cotton. This is the long-time average spread between the mid-month price received by farmers and the average 10-spot market price of Middling 15/16 inch around the middle of the month. The addition of 60 points to the price of 21.47 cents per pound gave a minimum price of 22.07 cents per pound as an average 10-spot market price for Middling 15/16-inch cotton, which ceilings on cotton grey goods, yarns, and other cotton products, should reflect."

Continuing, listen to this:

"We feel that the wide differentials in the loan program are necessary to encourage cotton producers to shift to the longer staple lengths and to produce cotton of the highest grade possible."

I understand that, back in the old days, you actually worked on a cotton farm; if so, you know, as a fact, that the growing of longer staple cotton, 1⅛ inch or longer, is confined to very few areas, especially staple lengths above 1⅛ inch.

In fact, in the Delta section of the Mississippi (and I presume this is likewise true in Arkansas and perhaps in Texas), they grow more 1 1/16-inch than 1⅛-inch cotton. I am sure you have not forgotten that the farmer does not have anything whatsoever to do with just how many bales he will be able to gather (as stated by Mr. Appleby) of highest grade possible. The quality and grade of cotton is beyond the farmer's control.

Back in the old days, cotton commenced opening in August and farmers had to continue picking until perhaps March of the next year. Now, the breeding of cottonseed has been improved in an effort to get away from a long-continued picking season so as to get ahead of the boll weevil.

For instance, the cotton this year will all be open in the deep South and ready for harvesting during the month of September and from the 1st to the 15th of October.

Now, you know just as well as I do that farmers haven't any control over the weather and that, at this time, farmers are unable to gather their cotton crops promptly because of the labor shortage and because of the necessity of having to harvest other crops planted at the request of the Department of Agriculture, due to the great demand in connection with our war efforts.

As stated in speaking with you about this important matter, unless we are able to get prompt, favorable consideration as outlined by me, farmers are going to lose millions and millions of dollars on this year's cotton crop.

Because of the splendid demand for good quality and long-staple cotton, naturally those who worked out the scheme had in mind, no doubt, trying to penalize farmers by widening the differentials on cotton below Middling and increasing the price for quality and grades above Middling, which would tend to induce farmers to grow good-quality cotton as well as longer staple cotton.

Those who represent contractors and industry are always "in" on the working out of programs affecting their business and, of course, see to it that they are taken care of from every angle. This is not true with farmers. Absolutely, they are on the outside looking in.

Quoting further from Mr. Appleby's letter:

"You understand, of course, that there are at present no ceilings on raw cotton as such."

This is true, and there is no real bottom under the price which the ceiling price of the textile mills should reflect, as above quoted, of 22.07 cents per pound basis middling 15/16-inch cotton.

You remember I told you yesterday that, under the ceiling price arrangement with the textile mills, if cotton buyers or speculators wanted to put the price up above the price which should be reflected, then the textile mills would withdraw from the market and there would not be a possible chance to increase the farmer's price.

On the other hand, however, those interested in speculating and buying cotton at a cheaper price, including the mills (which they are doing today), can depress the price at will and the farmer is just as helpless as a man on the chain gang.

As stated to you yesterday, I have been in the cotton business—buying and selling—practically all my life and at this time I am actually producing cotton, along with various other crops, hogs and cattle.

I am in a position, therefore, to know just what is going on and that is what I am trying to get over to you—who should have full control of the farm program, production, distribution and price fixing—so that you would be able to look after the interests of the farmers of this country in line with those who are administering the various other war agencies and on an equal basis because agriculture is just as important as any other war agency.

In fact, so far as I am concerned, agriculture should come first, because if we are unable to eat, we are going to be unable to manufacture tanks and planes; and certainly if we cannot eat, soldiers are not going to be able to fight.

I sold from my farm last week cotton grading Strict Middling 1 1/16-inch and, according to Mr. Appleby's letter (with the proper differentials between 15/16-inch and 1 1/16-inch cotton on Strict Middling basis), I should have received 23⅜ cents; however, I was paid only 21 cents per pound and I could take it or leave it!

Because of the shortage of labor and the tremendous increase in wage prices, there will be a definite effort made (in fact, I believe you are already receiving letters) to increase the basis price up to 25 cents.

It is my firm belief that if you and the Commodity Credit Corporation will straighten out these differentials so as to put them on a basis of 1939–40, and place a bottom under the price which Mr. Appleby stated the farmer should receive under the price-fixing arrangement with the textile mills (that is, 22.07 cents basis Middling 15/16-inch cotton), this would be entirely satisfactory to cotton farmers. Naturally, to increase the basis price would bring about the changing of ceiling prices to textile mills and all along the line which, at this stage of the game, would be quite a job.

Mr. Hutson promised that just as soon as Mr. Smith, who has been working with him for quite some time and who is a real cotton man, returns, we will go into this matter again with the hope that something may be done on a fair basis to be helpful in connection with this serious situation.

Yours very sincerely,
(Signed) H. P. FULMER,
Member of Congress.

Prices of Livestock Go Down, Prices of Feed Go Up

EXTENSION OF REMARKS
OF
HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. STEWART. Mr. Speaker, to say that Oklahoma farmers, stockmen and dairymen are disappointed over the War Food Administration order permitting the Commodity Credit Corporation on August 1 to freeze cottonseed, soybean and peanut cake and meal at last year's ceiling prices and then release those products for sale at price levels for the current season, canceling existing contracts, the difference in price to go to the C. C. C., is putting it all too mildly.

Recently livestockmen, meeting in Kansas City, condemned the order, canceling existing feed contracts, as arbitrary and in no way tending to help them in finding a solution to their problem.

The result of the feed situation and uncertainty it has created in the minds of stockmen and dairymen is clearly written in the booming livestock sales, trimming many herds to the minimum, a marked decline in livestock markets and reduced dairy production resulting from an acute feed shortage and the reduction of dairy herds.

Stockmen in the higher brackets of production to a large degree express themselves as willing to pay almost any price for feed, if there was any assurance of obtaining necessary feed, and are prone to disregard the fact that the Commodity Credit Corporation is to collect the difference in price, that runs around $11.75 a ton, while smaller feeders and breeders, equally desperate over the feed

situation, are now more prone to complain over feed costs in the face of declining market values for their beef and pork.

In one instance a producer had 90 head of steers on the crowded Oklahoma City market the first week in September and buyers asserted none of the animals were fat enough for packers. Another stockman complained he had bought a car of steers on the strength of his existing feed contracts, when those contracts were canceled.

In the past 30 days the Oklahoma City livestock market has been flooded with cattle and hogs in nothing like a marketable condition and prices have slumped from $1 to $2 a hundred. There have been resultant losses taken by every stockman who has attempted to feed high-priced grains, chops, and other feeds. A Grady County farmer who had used $2.85 feed for 30 head of hogs relates that when they were sold he took a loss of $46.

There is a widespread move to sell all stock down to the minimum. Cattle and hog raisers as well as dairymen are calculating what they can reasonably afford to keep on the basis of limited feed supplies on hand and are hardly counting on future prospects for buying additional feed, indicating something of the general tone of discouragement.

At one farm market auction in the State recently the sponsor of the sale, helping start bids on a lot of pigs, offered 50 cents a head. He got the pigs at that figure when no other bids were offered. He tried different tactics on the next lot, hiking his figure to 90 cents. Once more he bought the pigs and then began wondering what he would do with the pigs.

Eight dollars a hundred is around the prevailing figure for 80-pound pigs, when feeders can be found to make offers at Oklahoma City markets.

Efforts have been made throughout the State to encourage dairymen to conserve every possible feed supply and maintain their herds without full rations of protein feeds, but campaigning to that end is not having its desired effect and there is a continued tendency to sell off dairy animals. In one of the State's largest dairy producing counties, one in which something like 50,000 pounds of cheese a week was being manufactured during last spring's peak production and before the drought and feed shortage bore down, there have been five of the largest dairy herds sold at auction since the first of the year. Labor scarcity, as well as feed shortages, have contributed to decisions leading up to these sales.

Obviously farmers and stockmen are discouraged. They know that feed supplies from State mills are the lowest they have been in years, that small grain production in the spring was low, that alfalfa hay is scarce and precious under existing prices when it can be had and that all late forage crops, as well as corn, have been cut to the lowest level since 1936 because of the summer's drought. Farmers have been making use of every available source of hay, such as railway rights-of-way and small meadows from which hay had never been cut before, hoping to salvage what feed they can despite the fact that it is inferior feed, struck by dry, hot weather.

In many instances cotton producers who have stock have openly asserted they will refuse to market cottonseed until they are assured they will receive a proportionate share of the meal or cake for their cottonseed.

In one of the leading alfalfa producing sections dealers say there is little alfalfa to be had and that most of the limited crop, cut by dry weather and insect invasion, has gone out of the State.

Protein-feed processors, concerned over the attitude of stockmen and farmers alike, assert the present trend will not encourage increased cotton acreage next year, unless there are incentive payments such as those to encourage longer staple cotton and increase in loan values, pointing out that cotton farmers feel they have been neglected on those points, so far as announced plans for the 1944 farm program are concerned.

One milling company, realizing that cotton production in Oklahoma this fall may be only half of 1942's small crop, is restoring one of its idle mills and is furnishing it to crush soybeans and peanuts, hoping that it can obtain the soybeans from Northern States through the Commodity Credit Corporation. The State has a peanut crop that is nearly double that for 1942, with estimates running around 550,000 acres, but it is to be remembered that 75 percent of the acreage this year is late and that the crop has been stricken by the drought. Where peanuts averaged something like 20 bushels to the acre in Oklahoma in 1942, the 1943 crop will average perhaps no better than 12 bushels. Much of the acreage lies in eastern Oklahoma, devastated by heavy spring floods, when thousands of acres of rich land were taken out of production for years to come or were damaged beyond reclamation, while crops on other land have been replanted as much as three and four times, as Secretary Wickard learned during his tour of the Arkansas Valley region in August.

In 1942 Oklahoma had 873 pounds of corn, grain, and sorghums per animal unit in Oklahoma. With the increase in livestock and drastic acreage reductions, along with the drought this year, stockmen have actual reason to express fear of the future. The State had a 30-percent increase in livestock in the past 5 years, while cottonseed meal and cake production has declined 44 percent, and now Oklahoma will do well, if there is enough corn, grain, and sorghums to provide 600 pounds of feed per animal unit. Oklahoma last year produced 687,000 bales of cotton and on September 1 estimates had dropped to around 350,000 bales. The wheat crop didn't amount to even half of the production for 1942.

Farmers and stockmen know that cottonseed oil mills have shipped out more cake and meal since August 1, 1942, than they manufactured, and as a result stocks are bound to be very low. On April 30, 1943, Oklahoma mills had 758 tons of cottonseed cake and meal on hand, which was only 6.5 percent of the 11,720 tons on hand April 30, 1942, when they had 9,880 tons of cottonseed as compared to the 1,226 tons on hand April 30, this year.

From August 1, 1942, to April 30, 1943, Oklahoma cottonseed oil mills have shipped 105,312 tons of cottonseed cake and meal, while in 1941–42 they shipped 95,159 tons during the same period. It is estimated that 11,000 tons of peanut meal and 34,000 tons of soybean meal were manufactured in Oklahoma. If the cottonseed cake and meal, the peanut meal and one-half of the soybean meal made in Oklahoma had been retained in the State, supplies per animal unit of all oil meal feeds would have been greater in the 1942–43 period than in the 1941–42.

If charges that "the Government's short-sighted policy is pushing stockmen around" are to be ended, steps must be taken to assure stockmen and dairymen that everything possible is to be done to provide badly needed protein feeds at price levels in line with the market value of their products. Soybeans and peanuts could be consigned to State mills for processing and drains on existing and potential supplies within the State should be ended.

It is to be remembered that on January 1 calculations were 4,589,000 animal units on Oklahoma farms while war production goals call for increased livestock numbers. Given its proportionate share of feed, Oklahoma stockmen and dairymen are ready to meet any demand placed on them for wartime food supplies. Oklahoma is doing its utmost to respond to demands of the emergency. They will go even beyond borders that circumstances establish, so long as they have assurance that they have a fair chance of working out their problems.

Certainly policies, such as the recent Commodity Credit Corporation order, have not been conceived in the minds of farmers and stockmen of Oklahoma. That order may have been issued to keep down speculation, but it certainly has not relieved any of the distress felt by drought-stricken eastern Oklahoma or the parched plains in the western part of the State.

There is not a section of Oklahoma today in which concern over abandonment of farm acres by the shifting of population to war industries has not been felt and we must agree that those who are running our farms are entitled to feel that they have a fair chance of economic stability at least.

Not many weeks ago the broomcorn growers of Oklahoma were concerned over the proposed establishment of a $220 ceiling for their product, maintaining they were being discriminated against. Since then the ceiling has been set at $300.

The feed and livestock problem confronting us now is more far-reaching than that in the broomcorn case and the decision that is to be made will mean much, not only in helping Oklahoma contribute its share to our war effort, but to the future of agriculture, dairying, and

stock raising of our State, along with brightening the mental attitude of our farmers, now critical and discouraged, if not altogether desperate.

Doubtless the feed crisis has already had its effect on prospects for 1944, but it can be checked before the move has reached a disastrous point. The sale of breeding stock, cows and sows, already promises shorter beef and pork production in Oklahoma next year, even if immediate relief is found for the feed situation.

The problem that is faced by stockmen is shared by poultrymen as well. We have only to look at a U. S. D. A. report for August 24 that shows Oklahoma's turkey production will be only about 85 percent of the 1942 crop and will be far short of the 1,500,000-bird record set in 1940. It is now estimated Oklahoma will market 954,000 turkeys, as compared with a 1,411,000 average for a 5-year period, 1935–39. Chicken raisers cannot obtain needed feed supplies, and egg production is down.

Farmers have been urged to plant wheat, rye, oats, and winter legumes to help offset a part of the loss in protein feeds. The State has been asked to boost by 2,000,000 acres the wheat acreage, as compared with 1942. It is true that a great many wheat growers have planned larger wheat crops, but they cannot plant wheat in parched soil. To a large degree they have not yet been able to get a plow in the ground and that fact is going to have some effect on response to the plea they have heard for a bigger wheat acreage.

With a near famine that has reduced crop production to 30 percent of normal yield in southeast Oklahoma, with very little feed aside from grass hay, the cattleman, farmer, dairyman, and poultryman cannot continue in operation.

These people will be off for defense work unless an adjustment is made in the price of feed with a guaranty for a sufficient amount to carry them through the winter months.

The farmer and cattleman cannot carry the entire load of price adjustments.

Middle of the Wrong Road

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun:

MIDDLE OF THE WRONG ROAD

The Republicans at Mackinac Island went down the middle of the road—the wrong road, the road to domestic chaos and foreign equivocation, the road back to 1920.

That is the dismal truth behind the postwar advisory council's turgid declarations on foreign and domestic policy. Who can speak now of a renascent and progressive Republican Party? If the leadership which prevailed at Mackinac dominates the National Convention, the American people will be confronted in 1944 with a backward-looking, stand-pat, narrow-visioned, intellectually bankrupt Republican Party.

Tragic echoes of 1920 already begin to surround the masterpiece of duplicity which the conference devised as a statement on foreign policy. Internationalists like Senator AUSTIN and Governor Baldwin interpret it as an endorsement of American membership in a United Nations council with police power. The Clare Hoffmans and the befuddled tools of isolationism like Gov. Dwight Green hail it as a ringing affirmation of sovereignty and constitutionalism—meaningless terms, unless they mean obstruction of a cooperative peace.

Even so, in 1920, Elihu Root could applaud Harding as the guardian angel of an association of nations, while others backed him for his isolationism. The only difference is that this time, facing a much stronger popular demand for a progressive foreign policy, the Republicans had to concede a somewhat more specific commitment. But they took care to surround it with escape clauses and ambiguous reservations, any of which could serve as pretext for killing the people's aspirations.

The domestic program brazenly reaffirms the G. O. P. leaders' determination to have no program. They demand full employment, but offer no measures to provide it. They speak for enterprise, opportunity, and security, but propose no means of protecting those values from the storms of periodic crises which threaten to sweep them away. With the cheapest of cynicism they describe as fascism the great effort of American democracy to meet the economic crisis of our times; and then advocate a return to the very conditions which created that crisis and laid the foundation for fascism. In short, the present leadership fails utterly to grasp the nature of the age in which it lives, and goes forth to meet that age armed only with a brutal and destructive recklessness.

Republican voters and independents who had hoped for a more enlightened awareness can take comfort from only one circumstance. The shocking inadequacy of the regular leadership has been ruthlessly exposed 10 months before the 1944 convention.

Fathers Draft and Farm Labor

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. LARCADE. Mr. Speaker, in order that my position may be known in regard to the question of the induction of family men and married men in the armed forces, I include in the RECORD a copy of a telegram which I addressed from my home town on August 7, 1943, to Hon. Paul V. McNutt, Director, War Manpower Commission, Washington, D. C., as follows:

OPELOUSAS, LA., *August 7, 1943.*

PAUL V. MCNUTT,
Director, War Manpower Commission,
Washington, D. C.:

Selective Service and industry have: First, taken necessary skilled farm workers and dairy industry laborers notwithstanding protests from myself and other Members of Congress who have predicted acute food and milk shortage. Second, by issuing multifarious statements in regard to drafting married men they have been in a state of turmoil and indecision being unable to make plans for the future. Third, military strategists claim that Army now has all men required in the armed forces and increase unnecessary and beyond capacity and further withdrawal of farm workers and laborers in essential industry will create further scarcity of food and essential production to supply armed forces, allies, and civilian population. Fourth, the drafting of fathers and married men presents a serious problem in destroying the homes and morale of the people of the United States and I urgently request further investigation and consideration of this question before proceeding with further announced plans in this respect. Fifth, unless you can prove to my satisfaction that these statements are incorrect my constituents instruct me to oppose these plans and your administration to the fullest extent when Congress reconvenes in September and if further action by Selective Service is not postponed at once to join other Members of Congress in requesting that Congress be called into session to take immediate and necessary steps.

HENRY D. LARCADE, JR.,
Member of Congress.

Mr. Speaker, I wish to further call to the attention of this Congress the fact that I have appeared here on numerous occasions as far back as January 12, 1943, and called the attention of our officials and this Congress to the question of labor for the farms and the dairy industry. Unfortunately, the fears which I expressed have come true. Especially in my district, which is the largest producer of rice in the United States, there is an acute labor shortage to harvest this important food crop, and as a further evidence of this labor shortage I am including the following newspaper article in the RECORD:

[From the New Orleans Times-Picayune of September 11, 1943]

RICE CROP LOSSES SEEN BY FARMERS—LABOR SHORTAGE MAY MEAN RUIN, SAY GROWERS

LAKE CHARLES, September 11.—At a special meeting of the board of directors of the American Rice Growers Cooperative Association in Lake Charles, La., September 9, which was called for the purpose of discussing the gravely critical shortage of labor for harvesting the rice crop in Louisiana, Texas, and Arkansas, the following resolution was unanimously adopted:

"The rice growers of the South are now inexorably faced with the fact that unless a great deal more labor is made available immediately much of the rice crop now ready for harvest in Louisiana, Texas, and Arkansas will be left in the fields because of their utter inability to cut, shock, thresh, and haul the crop without help.

"The largest crop in history is made. It is standing in the fields ripe and ready for the harvest. Much of it will be wantonly wasted unless the present acute labor shortage is relieved immediately.

"Appeals to governmental agencies for help were made months ago. We have attempted to secure war prison labor. We have tried to secure Mexican and other foreign labor. We have attempted to secure industrial workers with a farm background. We have investigated every possible method by which our labor needs might be met. These efforts have so far been entirely ineffective.

"Shining through the miasma of confused inaction, conflicting authority, misleading

and erroneous statements, voluminous red tape, surveys, certifications, and arbitrary regulations, is the indisputable fact that the governmental agencies having control over the labor situation have not in any degree made it possible to secure either war prisoners or foreign labor, and growers have become thoroughly disillusioned and disheartened.

"The agricultural extension divisions have been striving valiantly to render all the aid they possibly can, but they have been unduly and needlessly hampered by the confused situation with which they are faced on every hand.

"There is no further time to spend on surveys, certifications, inspections, and red tape. The situation is too gravely critical to permit departmental conflicts and prerogatives, divided authority, and the protection of theoretical group interests to stand in the way of rice growers, which in this instance, are also indisputably the needs of the Nation. We therefore in our distress appeal to the governmental agencies involved for quick and effective action and the final termination of those policies which have been so completely ineffective.

"We appeal to the war industries operating in the heart of the rice-producing territory to immediately furlough all those employees who have an agricultural background.

"We appeal to the older schoolboys and to their parents for help in this emergency.

"We appeal to the selective service boards to defer the induction of farm labor.

"We appeal to all others in towns and cities within the rice territory to do everything within their power to meet this grave emergency.

"As a people we must no longer delude ourselves with the comfortable belief that food comes from the corner grocery store. Food comes from the unremitting toil and sweat of farmers, who are today facing problems as acute as any in the Nation. Food will be too precious in the coming months to permit of its waste. We must face the fact squarely that in this emergency all the help from every source may still be too little and too late to prevent waste and want.

"AMERICAN RICE GROWERS
CO-OPERATIVE ASSOCIATION,
"HOMER L. BRINKLEY,
"General Manager."

The Atlantic Charter

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the New York Times, August 15, 1943:

THE ATLANTIC CHARTER

Two years ago at this time, in those apocalyptic days when the Nazi war machine appeared to be moving irresistibly toward world conquest, President Roosevelt and Prime Minister Churchill met in a dramatic conference on the high seas and proclaimed what has since become known as the Atlantic Charter. In it they pledged themselves to the "final destruction of the Nazi tyranny" and agreed upon a set of common principles to guide their respective countries in war and peace. The Atlantic Charter has since been signed by 32 governments as the common charter of that community of free peoples known as the United Nations. By that fact, as well as by express declaration of President Roosevelt, it has become valid not only for the Atlantic peoples but for all humanity—including the vanquished able to qualify for it.

Today, when largely as a result of that first conference the Nazi war machine is moving in reverse and Nazi satellites are beginning to fall by the wayside, Mr. Roosevelt and Mr. Churchill are meeting in another conference to discuss not only the final steps necessary to assure victory but also to lay plans for peace which will test the validity of the charter they originated. Unfortunately, the faith that is born in moments of extremity is often likely to lose its fervor when the danger has abated, and pledges taken in hours of peril are apt to be forgotten in hours of exultation. There is danger that unless the faith expressed in the Atlantic Charter is reaffirmed the charter itself may be sidetracked or nullified. For its pledges are being subjected to the skepticism of the men of little faith and the cynicism of the political realists.

No doubt the Atlantic Charter is subject to many interpretations, and its application to the political realities of the world is difficult. It may even be that a complete and immediate application of it in all parts of the world will be either impossible or impracticable. But it stands today as the pledge of the powerful and the hope of the oppressed. It is a declaration of an international morality above all selfish and greedy interests that precipitate war. It is no more specific than the Declaration of Independence; but it is a guide to men of good faith who alone can build a better world. As such it forms the best political weapon we have to rouse the enemy peoples against their brutal masters. And in the end it will be found that it is also the highest political realism.

For the Atlantic Charter envisages the only kind of peace which American and British public opinion will support. These two Nations have long since realized that international cooperation rather than domination is the key to peace; that friendly frontiers are more important than strategic borders; and that, above the clamor for vengeance of the day, though subject to just punishment of war criminals and the necessary reparation to the despoiled nations, even the vanquished will have to be accorded the right to live in freedom and self-respect.

In any case, whatever its ultimate fate, the Atlantic Charter has already accomplished this much: It has cemented a closer understanding and collaboration among the American and the British Nations than ever before. And in that solidarity, of which the Roosevelt-Churchill conferences are the visible token, rests the guaranty of their safety as well as the safety of those nations willing to join them.

The Manpower Crisis

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. SPRINGER. Mr. Speaker, the manpower crisis has reached a very critical stage in our country, and this tremendous shortage calls for prompt and constructive action on the part of those in power. Unless speedy action is taken on this subject our war effort on the home front will be in grave peril. We must produce the necessary food for victory, and the essential war materials and supplies must be produced in vast quantities—we must back up our Army and Navy with the things they need.

A very enlightening article appeared in the Evening Star, of Washington, D. C., by David Lawrence, of date September 8, 1943, on this subject.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, and to include therein the article written by David Lawrence, which I hope all may take the time to read on this highly important subject. The article follows:

MANPOWER CRISIS DUE TO "ARMY MIND"

(By David Lawrence)

The manpower crisis in an acute form, long predicted and long feared, is here at last. It is impairing war production severely not only by preventing war plants from reaching desired goals but by actually cutting down production of some of the most vital weapons needed on our far-flung battle fronts.

So serious is the failure to plan in advance, the failure to make the Selective Service System a mechanism of real selection instead of a hodgepodge choosing of soldiers irrespective of the real needs of industry, that one well-informed official was moved to say to this correspondent today:

"I really believe that if we took 1,000,000 men out of our Army and put them back into production our whole war program would go ahead faster and we would be much further ahead toward winning the war than we are today. We've got to make up our minds in America whether we are going to try to be the arsenal of democracy and at the same time furnish more than 10,000,000 men to the armed forces of the United Nations."

FEW DIVISIONS IN FIELD

This is not a war of manpower in the field. Relatively few divisions are engaged nowadays as compared with the World War. It is a war of mechanized weapons and that means industrial production on an unprecedented scale. No more important task in the war has confronted our Government than the proper selection and allocation of manpower.

While President Roosevelt is in a general way responsible for what has happened, the real blame must rest on the War Department, which has permitted the present situation to develop through an insistence that the Selective Service system must be dominated by the military. The key men in the selective service headquarters, including many State directors, are military men. These men go on the assumption that deferment means draft dodging or at least that the burden of proof is on the registrant. So they make it difficult for the registrant to determine his own relationship to industry and they have barred employers from any right to a hearing either before local boards or the appeals board or before the selective service national headquarters.

Many of the key men in the national headquarters of selective service are in uniform and, of course, are in the pay and subject to orders from the War Department. This is contrary to the spirit of selective service because the Nation was assured when the law was passed by Congress that the whole thing would be handled on a democratic basis as

a civilian activity which presumably would be able to pass on the relative needs of industry and the needs of the Army.

MILITARY MIND RESPONSIBLE

The military mind is responsible for the confusing regulations sent out to local draft boards, many of which boards have been scared away from deferments and many of which have ordered single men who are skilled workers into the Army because of a belief they must not call fathers. When Paul McNutt was given the chairmanship of the War Manpower Commission it was assumed he would not be intimidated by the military clique in selective service, but his failure to insist on the deferment of needed men in industry is well known. The directives and memoranda of the War Manpower Commission are merely advisory and there is no authority back of them—the boss of manpower is still the Selective Service System which now has enabled us to get a large Army, but at the expense of many vital industries.

Another mistake was made regrettably by Donald Nelson of the War Production Board. The President gave him power over all Government agencies. Mr. Nelson did not exercise it, but let the manpower issue get away from him. Today there is an announcement that the War Production Board and the War Manpower Commission have reached an agreement on how to handle differences between these agencies. And this takes place after the United States has been on a war basis for more than 3 years. Mr. Nelson or the War Production Board should even now be given full control of the manpower problem. The military men have made a failure of it in their zeal to fill the Army up in the shortest possible time.

Today the big bottleneck is in essential production for civilians who are absent from their jobs because necessary civilian services are unobtainable or restricted. Likewise airplane production is hampered by manpower shortages. The quickest solution, of course, is an over-all authority to determine where our manpower shall be allocated. Mobilization Director Byrnes has no bigger task at the moment than saving America from the break-down in our management of available manpower.

The International Scene

EXTENSION OF REMARKS

OF

HON. JOHN M. COSTELLO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. COSTELLO. Mr. Speaker, on Sunday, September 5, Mr. Rupert Hughes delivered an outstanding radio address in which he commented in his usual brilliant style upon the Communist activities which are still pursuing their subversive work in this country. Because of the outstanding merit of this address, I believe that it should be presented in the RECORD for the benefit of all the Members of the House, and for that reason I am including as a part of my remarks the address of Mr. Rupert Hughes, which is as follows:

ANNOUNCER. The National Broadcasting Co. presents Rupert Hughes, soldier, novelist, historian, and humorist. His remarks on the international scene phrase present day history in the entertaining style of the fiction he writes so well; Mr. Rupert Hughes.

Mr. HUGHES. For a whole week now I've been trying to get Joseph Stalin on the telephone, to tell him a few things he ought to know. But you know how it is with long distance telephones. Some army officer is talking to his wife, or some Nazi is telling Hitler something, or the static is ecstatic. Or I get the wrong number.

When I get through, Stalin's line is busy or he is away from his desk winning a battle or something. Then when he calls me back, he gets a wrong number, or my line is busy trying to persuade the market man to lend me a piece of meat for heaven's sake.

I've just about given up hope of reaching Stalin, so I'm going to tell you what I would say to him if I could get him on the wire, and if I could speak Russian, and if he'd stop the war long enough to listen to my advice. I'd say: Hello, Joe—I mean, Mr. Stalin. Who'm I? This is me. You wouldn't know if I told you, but I'm speaking from the United States—you know what country I mean—the one that has sent you two and a half billion dollars' worth of lend-leasings, including thousands of planes, thousands of tanks, tons of food. We also sent you Ambassador Davies and Harry Hopkins and Wendell the Willkie.

Yes; I know you sent the last three back, but we're sending more goods through, though many a fine ship and many a fine lad in the Merchant Marine, the Navy, or the Air Force has already perished in the icy seas getting help to you by way of the Arctic north. And right now Americans are sizzling in temperatures of 150 degrees of heat in Iran hurrying our supplies to you.

We made no complaint when you rented your fishing grounds to our enemy, the Jap. We made no complaint when you denied us air bases in Siberia. We made no complaint when you interned our American fliers who were forced down in Kamchatka after the last air raid on Japan.

Mr. Churchill said he didn't blame you, Mr. Stalin, for complaining because we haven't invaded northern Europe yet, according to your plans, specifications, and dates, but he hopes to atone for it soon.

Many people say we must not criticize or even comment on anything your people do or don't do, because it causes disunity among the Allies. When you organize in Russia a Free Germany movement, while we're insisting on unconditional surrender, we must pretend not to care. Your papers sharply criticize our Allied governments' training of military governors for occupied countries—the group called AMGOT. You say the grammar's bad and change "Amgot" to "Ain't gonna get." But that's your privilege.

Don't think I'm criticizing you, Mr. Stalin. You're minding your own business and giving us a much-needed reminder to mind our own. I think you would respect us more if we were as self-respectful and outspoken as you are. But that's outside my bailiwick. I just want to have a brief heart-to-heart with you about some funny people I've met over here who claim to represent your views.

They are American born, but they call themselves Communists, when it's convenient—and deny it when it's convenient. Somebody over there sent a lot of money over here some time ago to help convert us to communism, but the ones I'm talking about don't need foreign help. They make lots and lots of money right here in this America for which they have so much contempt. They want to overthrow our democracy and substitute the very communistic government you threw overboard when you drove out the Trotskyites, and jettisoned the basic principles of communism. Mr. Willkie says you are now paying energetic young factory managers as high as $30,000 a year and paying extra money for extra incentives for your 60-hour-a-week workers to work even harder. I was reading about one of your farmers buying 1,300,000 rubles' worth of Russian war bonds out of his savings as a farmer. And you sent him a letter of thanks. A little while back, no large Russian farmer would have been let live long enough to save up that much money. But that's ancient history. The important thing for you to know is that one reason our country and Britain have been slow about getting as ready to help you as you'd like was the activity of these very American Communists.

When the United States began to make ready to defend itself from the growing menace of Hitler, you were an ally of his—you remember. Of course, you were merely trying to hold Hitler off long enough to make ready for his surprise attack—and your surprise defense.

But your American Communists didn't know that. They thought you loved Hitler. So they did their utmost to prevent America from getting ready to meet the peril. They held up ships, they held up trucks, they fomented strikes, they beat up people who wanted to work, they screamed against preparedness, they even picketed the White House as a protest against the President's lend-lease policy, which has since come in so handy for you. They never dreamed that while they were joyously crippling their contemptible old Uncle Sam, they were also crippling their dear Uncle Joe.

Imagine their embarrassment when surdenly Hitler turned on you and you became our ally instead of his! No, don't try to imagine the embarrassment of the American Communists, because nothing embarrasses them. It does not embarrass them in the least to be as loud now in screaming for lend-lease, second front, all-out sacrifice as they screamed against them when they thought you and Adolf were really buddies.

I don't usually talk much about myself because other people break in and talk about themselves or walk off and leave me talking about myself to myself. But while I've got your ear glued to the wire, I'd like to tell you about my experience with one typical American sympathizer with the Communists.

All my life, Joe—I mean, Mr. Stalin—I've been howling for preparedness. I used to write articles and make speeches pleading that we should make ready for the inevitable war against Hitler, and that we should be ready to go to the aid of Britain and France and Poland and Czechoslovakia and other free peoples, as soon as they were attacked, instead of waiting a year or two to declare war, then taking a year and a half to get ready—as we did before, and did again; and thus letting millions of them die, as we did before—and did again.

I had been a major in the First World War, had gone to the Army War College and become a lieutenant colonel in the Reserves. I tried in vain to get back into the Army; but was given command of one of the State guard regiments. The State guard, by the way, by taking over the guarding of many danger points, released thousands of men and officers for combat training. In fact, we trained thousands of men and officers who went into the regular services.

Well, while I was working and shouting for preparedness in every form, the American Communists plastered me with every horrible name for trying to drag our Nation into the horrors of war. Whole groups of them resoluted against me, actually calling me, I quote: "A foul old degenerate who longs to have American boys slaughtered in cold blood to satisfy his psychiatric manias."

In spite of that, one of the universities out here invited me to a debate on pacificism and preparedness. For half an hour I had

to listen to an American citizen of Communist sympathies reviling the United States Government and England and the infamous lend-lease and the foul Conscription Act. He praised you, Mr. Stalin, as if you were a god, though you were at the time the ally of Hitler.

The American Communists had been working on American youth for years, calling them the lost generation, giving them the big head with nothing in it but notions. These youth booed the President and mocked his wife.

The pinks and reds had nearly taken over this university. Their young men and women hissed and hooted such students as were drilling with the R. O. T. C. When this speaker opposed all American preparation for war and made his horrible oration against his own country, the pink shrimps cheered him to the echo.

I was so infuriated by hearing such talk on American soil that I tore into the man, and into you, Mr. Stalin. I said that if I criticized Russia that way in Russia I'd have been shot or mobbed before I finished my second sentence. Well, I was hissed and booed till my voice was almost drowned.

And now the pay-off. After Germany invaded Russia, that very speaker who had got me hissed and booed at the university, had the nerve to come down and—unbeknownst to me—enlist in the regiment I commanded. And I wasn't permitted to put him out.

Such people are making the vast majority of us Americans pretty hick at our hummocks, Mr. Stalin. They make no friends for you.

We let them live. It's our way over here—freedom of speech. We can call almost anybody almost anything, especially if we smile when we say it. We never shoot people here for political reasons. We shot nobody after our long Civil War. We didn't shoot a single spy in World War No. 1. We haven't executed a spy in this war except those few Germans who came over in a submarine to blow up the war plants our American Communists did so much to slow up.

American Presidents are often the victims of our freedom of speech. When Mr. Roosevelt doesn't like what a columnist or a radiotor says, the President just calls him a liar—in severe cases a chronic liar. The man the President has called a liar says, "You're another." And that's that. It horrifies foreigners, but we're still going strong after 160 years of free speech, while most of the governments that have forbidden it have gone glimmering one after another.

The story is going about now that the Communists are going to change their names and call themselves the American People's Party, or something. But they'll still smell like American Communists. Our nostrils are weary of them.

Mr. Stalin, what would you do if several thousands of Russian-born men and women should start a movement to overthrow your government and substitute a democracy like ours? If they called themselves "Americanists" and insisted on putting up candidates for all the offices, including your own, Mr. Stalin? And if they sneered at all literature and art that was Russian instead of Americanist?

And if they invaded your schools and colleges, poisoned your young people with discontent and distrust? And stirred up your 60-hour-a-week laborers to strike for 40 hours or less and double pay for extra hours? And if they picketed the Kremlin and denounced you and the most ardent patriots as foul old-fashioned degenerates? What would you do, Mr. Stalin, to those Russian-born Americanists?

Is that you laughing, Mr. Stalin? Or is it a roar of static? Did I hear you say, "Liquidate 'em"? But we don't liquidate people here. We never have had any group of Americans trying to interfere with Russia's decisions or policies. But we, too, are in the midst of a war, Mr. Stalin. There can be no lasting peace if your vast nation and our great republic got to quarreling.

But, unless you do something to disown these rabid propagandists who pretend to speak for you there will be increasing friction, legal pressure, and perhaps mob violence, with incidents that might provoke war. These people don't like our Government, but we're not going to let them change it. And we can get awful nasty when we get mad. I beg you, Mr. Stalin, for your own sake, call off your dogs or take away their tags, or we'll have to send the dog catcher after them. And now, Mr. Stalin, you can go back to your war making, and may you continue your glorious success with it.

That's what I wanted to say to Mr. Stalin if I could have reached his ear.

I'm afraid I'll never do that. Among the answers to my message will be a few more letters and post cards from Communists calling me an isolationist because I love world peace well enough to believe that the best hope of it lies in a great and powerful America free and not shackled to the wrists of any other nation.

The Communists will criticize me for saying these things because they cause disunity. Coming from Communists, talk of disunity is funny. Their dearest wish is to make this the Disunited States.

But I can hear the Communists shouting, "Get off the air, you so-and-so."

They even want to monopolize the air. Well, I'm in favor of giving them the air—also the ether. If only they'd take ether. And sleep for the duration. What lovely operations we could perform on them.

ANNOUNCER. You have been listening to Rupert Hughes, world renowned author, historian, and humorist. Rupert Hughes is heard every Sunday at this time over most of these stations.

Retirement of Army Officers

EXTENSION OF REMARKS

OF

HON. WARD JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. JOHNSON of California. Mr. Speaker, the War Department is retiring at this time many hundreds of officers because of age, under the provisions of Section 3 of the act of June 13, 1940, which provides:

On June 30, 1942, all brigadier generals of the line who are then 62 years of age or over and all promotion-list officers who are then 60 years of age or over shall be retired and thereafter all brigadier generals of the line shall be retired at the age of 62 years and all promotion-list officers shall be retired at the age of 60 years, except that all officers in the grade of general officer whose names are carried on the promotion list are exempted from the operation of this proviso.

Retirement of many outstanding military leaders, in perfect physical condition with a background of many years of experience, is being carried out at a time when the services of these men are most needed by the Nation, and at a time when American homes are being broken up by the drafting of fathers into military service, regardless of the number of small children they may have to care for in their homes.

This act should be suspended, at least for the duration of the war, and no man should be retired from military service simply because he has reached the age of 60 years. Although it may not be advisable to have many military leaders beyond the age of 60 years in actual combat duty, there are many other highly responsible positions now being filled by these men to their credit and to the benefit of the war effort.

Especially does this condition prevail on the west coast at this time among commanding officers of many training camps and important ports of embarkation. These men are rendering far greater service to the war effort than any man can possibly render, who has had a brief military background and short experience in the training of our boys to be soldiers and the supplying them with food, clothing, arms and ammunition at points many thousands of miles away.

A very interesting editorial on this subject has just appeared in the Long Beach Independent, of Long Beach, Calif., and I set forth the same hereafter as a part of my remarks:

RETIREMENT AT SIXTY

At a time when the best trained executives are needed the most, the Army is retiring hundreds of the best men they have simply because they are 60 years old. It is a rule and the Army must operate by rule. Or does it?

As these men are retired we have the example of Douglas MacArthur, aged 64, directing his men from an airplane, landing in hostile jungles and doing the work few younger men could stand.

We have the 65-year-old Winston Churchill jumping all over the globe in never-ending work, which his many years of experience and training makes so effective.

We have President Roosevelt, past 60 years of age, doing the work of a dozen men, cheerful and even preparing for another 4 years in office.

We have thousands of the most efficiently operated war plants directed by executives past 60 years of age and many past 70, whose loss to us would be as great as the loss of a major battle. Henry Ford, who recently pased his 80th birthday, is an example. And yet hundreds of U. S. army officers in this country handling the most vital executive jobs are being retired.

The magnificent successes of our armed forces on battle fronts must not cloud our vision to the point that we forget that old rules, old jealousies and inefficiencies still exist and that here is an example of waste which should be corrected.

Among these officers who hold the rank of colonel or less are men whose experience in handling transportation, logistics, and administration cannot be replaced, because nothing takes the place of experience.

There is no examination to show whether or not an officer is capable mentally or physically to continue doing useful work, but rather there is an old rule which says a man is no longer useful after he has reached the age of 60 years. What tommyrot.

In our own community we have dozens of men past 60 and many past 70 years of age who are today the greatest assets we have in the city. These men not only work harder than most young men but their brains are as young and clear as at any time in their lives.

To retire these men from our civic and industrial activities would be a tragic error none of us would countenance and yet men of comparable ability in the Army are daily being retired.

An excuse of the War Department is that to retire some men and not others would be favoritism and not good for morale. Why then is not MacArthur retired and others above the rank of colonel? Results are what count and not the feelings of men.

There may be men to be retired who are not efficient or who cannot learn the new things necessary to carry on the war but age is not the yardstick that should decide such cases. No man should be left in a responsible post if he is not efficient, regardless of age, but many men at 60 are far more efficient and physically capable than others 10 or 20 years younger.

It would seem the Army might be as flexible in their rules as they demand civilians be in reordering their lives and this is one rule which is a very bad example of how the Army utilizes its manpower and a reason why the people question the Army when it calls for the drafting of fathers.—L. A. C.

Post-war World: Paradise Won? Paradise Lost? or Upward Climb?

EXTENSION OF REMARKS

OF

HON. JOSEPH MRUK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. MRUK. Mr. Speaker, I insert in the RECORD a statement on peace planning as published by me in my August 1943 monthly news-letter report from Washington to my constituents:

INCENTIVE TO PLANNING FOR THE POST-WAR WORLD

As the Allies against the Axis warm up to more and bigger victories-in-arms, and the first of the enemy kingpins, Il Duce, topples, and Italy abandons bluster, goosestepping, and international violence as national policy, discussion (which is a good thing) of post-war collaboration between nations becomes ever more timely.

The world is not planless as to the making of a new world. There are something like 34 resolutions on the world after the war in the Seventy-eighth Congress; 1,200 proposals have been advanced by United States thinkers. The many plans run from leagues for peace to world superstates. Although every country at war has stated some peace aims, most of the peace plans are of American or Anglo-American birth.

Our President is not at this date offering a plan—his plan. The League of Nations was the plan of our first World War President, Woodrow Wilson, and he offered his plan while the world was at war. Thus far in this war, Winston Churchill may be more specific than Franklin Roosevelt. This is Churchill: "One can imagine that under a world institution embodying or representing the United Nations, and some day all nations, there should come into being a Council of Europe and a Council of Asia. It is upon the creation of the Council of Europe and the settlement of Europe that the first practical task will be centered. Now this is a stupendous business. In Europe lie most of the causes which have led to these two world wars." Churchill fixes the primary responsibility for the keeping of the peace in regional councils. England's cradle-to-grave security planner, Sir William Beveridge, has endorsed the peace idea of another Englishman, Lionel Curtis, who advocates an international authority with its powers "limited to defense, foreign policy, colonies, civil aviation." Sir William prefers the Curtis plan as against more ambitious federation schemes.

INVENTORY OF PRACTICAL CONSIDERATIONS ON ANY ROAD AWAY FROM WAR

The responsibility for the kind of world that results will be ours in the United States in part only. Even if we wanted to try, we could not foist our plan (which?) upon the rest of the earth. They will have their own plans. We all shall have to merge our plans. Some of us will seek hopefully a common ground on which to take a united stand for alternatives to the mistaken, shortsighted, narrow policies of us all in the past.

Our people in the United States and their Congress, the British people and their Parliaments have yet to approve a plan in support of their enunciated aims. The nearest approximation to an official plan, the Atlantic Charter, is not really a plan, but only a statement in general terms of ideals which our President and the British prime minister conceive the Allies to be fighting for. The President has just reported to the American people that "the United Nations are substantially agreed on the general objectives for the post-war world," but that "they are also agreed that this is not the time to engage in an international discussion of all the terms of peace and all the details of the future." He said further: "We must not relax our pressure on the enemy by taking time out to define every boundary and settle every political controversy in every part of the world. The all-important thing now is to get on with the war—and to win it." This is, of course, good sense.

Americans and British together will influence the course of post-World War II history—but, be their joint inclinations as they may, what of Russia? Stalin will have much to say about our world. Asia, with its greater China, should have much to say about it. A big worry in our national capital today is the position which Russia will take. Will Stalin go his own way? Russia has not relaxed its policy of strict neutrality toward one of the triumvirate of international banditry, Japan. Russia has not cooperated with the United Nations to open a second front in Asia. Russia has put forth its own peace plan for Germany—a communistic government in place of Hitler and his Nazi gang. How will Stalin's peace plan for Germany, how will Russia-on-its-own fit in with British-United States plans?

The fighting men of every nation returning home will wish to have a voice in the designing and ordering of the newer world (that is as it should be for our own returning defenders).

The shape of the world which will follow this war will, therefore, not be determined by the United States alone, nor by the Senate of the United States alone, nor by the presidential election of 1944. The final important decisions will not be made while the war goes on, may even be quite remote from this date of August 1943. The fate of the world will be evolved at conference tables, in elections, and by the future leaderships of a number of leader nations over a period of some years. Human nature everywhere will, as always, be a mighty factor of influence. Individual outlook, political and other movements, majority accord within the nations will all be factors. We are one world, as a matter of physical actuality. But, there will be new disputes, and many of them (that is history according to form). The nations will differ in purposes and motives. Each will have its own ideas as to what it was fighting for. Their definitions of "freedom" are not alike. Please note that the "four freedoms" are, today and as a future program, in most communities in most parts of the world, and within our own United States borders, beautiful aspirations which have yet to be worked out in human nature and in relations of men to each other. These freedoms pose economic, monetary, and social questions which have never been less than difficult, internationally and within nations. The question of strategic frontiers in Europe—and balance of power—could once more prove too great a stumbling-block.

To ignore the practical considerations is merely to day dream, and without reference to the world's storehouse of accumulated experience. So, let us consult—and stop characterizing, with intemperateness, by this name or that—as "crazy altruists" and "starry-eyed dreamers," on the one hand, and as "American fascists" and "blind isolationists," on the other hand—leaders of thought, just because they see it all a little differently than we, or we see it a little differently than they—and let us on to down-to-earth thinking together (and with less blood in our eyes), to thinking concretely. Let us start thinking about how much, or how little, is attainable in our time, in any one generation.

WHY NOT A BLUEPRINT FOR STEADY PROGRESSION TOWARD THE GREAT GOALS?

Whatever the eventual plan, it will have to be generally accepted, or, at the least, only peace-ardent countries with the courage within themselves to enforce their peace sentiments by forceful action (which might require military action, limited and temporary) will keep the peace. As to whether this is a war for a new world outlook on life—or another war over a map, they of the rest of the world, and we, will decide, in concert of all, or by cooperation of the leader nations only or of some of them only.

Again we shall all—including the defeated—have a grand opportunity to try a parliament of man—that is, talking things over, and seeing how well we can settle upon a common plan, and then finding out by more experience how the plan will take and how we can make it go. Such goals as the brotherhood of man and the four freedoms are the best objectives the world will ever have to work toward. Can anybody think of any better, and more to be desired?

But, with thought to the realisms which have confronted the earth's humanitarians since the beginning and which have operated since Christ and since Moses, would it not be (with regard for history and all the factors) a progressive step in civilization's long, slow march if first we made a blueprint for, let us say, the next quarter of a century? * * * a program of common specifics for peace, to prevent World War No. 3 in our time. Perhaps there will be world organization, some day, with each member-nation sufficiently sovereign within, and with controls over personal and perverted ambitions. But sooner, freedom from war may be practicably achieved by: World-wide education for understanding and tolerance, a schooling not only by the churches and the schools and societies, but also, and moreover, a schooling sponsored by the cooperating nations; a continual exchange of good-will missions and of letter-writing between the youth, and their elders, around the globe; measures of cure from the war spirit applied inside every nation; the teaching and the enforcement of law, as the only opposite of violence; constant vigilance and awareness by those nations which ally their wills for peace, against dangers and trouble zones; immediate, effective action in such unison as is possible, to end forthwith any new threat on the world horizon.

A MENTAL ATTITUDE FOR A FORWARD MARCH OF PEACE

"Incline your head toward the sky, look only at the stars, and you will lose your stride and stumble. Bend your head toward the earth, look only at your feet, and you will lose your stride and stumble. Keep your head erect so that your eyes can be lifted to the stars, and at will turned downward to see the immediate step; look straight out upon the road ahead; and you will travel it without stumbling and in stride."

United Americans of Italian Origin for United Nations Victory

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me over National Broadcasting Co. network, August 6, 1943:

My fellow Americans, prior to and since Pearl Harbor, Americans of Italian origin have been serving our Nation with blood, labor, and property in the mines, factories, and fields and on every battlefield. Approximately seven hundred thousand young men, Italian immigrants and sons and grandsons of Italian immigrants are now in the armed forces of the country. Their heroic conduct in battle, their achievements on the far-flung fronts have become epics in the history of this war. The stories that come out of Sicily, North Africa, and the Pacific, narratives of bold, courageous exploits of these men constitute an eternal tribute to a people whose undying devotion to the country of their adoption and birth is historical.

This is neither new nor unusual. It is in keeping with a great tradition of loyalty and patriotism. There has never been a time in the life of our country, when democracy was at stake and when men and women of high courage and devotion to liberty were needed in its defense that those who came to our shores from Italy did not rise to the occasion and defend those principles of freedom which they love so well.

From the earliest days of our Republic, the honor role of liberty lists names of illustrious Americans of Italian origin who have rendered service to the cause of freedom and progress with great distinction.

Filippo Mazzei ranks with Thomas Paine and Jefferson in his fight against tyranny and his flaming pen spurred on our heroes in the war for independence.

The signature of a colonial patriot of Italian origin, William Paca, is among those appended to the Declaration of Independence. The victory at Vincennes, a feat which began the expansion of our country north of the Ohio and west of the Mississippi was made possible by Francesco Vigo. In the ranks of the Union Army, during the Civil War, there were thousands of Italians, many of whom had come purposefully from Italy in order to participate in the fight against slavery in America.

The historic message from Garibaldi to Lincoln in words that will always live in the memory of man as long as he struggles for liberty is just as inspiring a force to the American of Italian origin in 1943 as it was to his ancestors in 1861.

This record of today and of yesterday disposes with complete finality the falsehood that Italians cannot and do not want to fight. It proves irrefutably that Italians can fight and do fight well for freedom, but will not fight for tyranny. It is precisely because Italian soldiers have refused to fight in the interests of Axis tyranny that the Mussolini regime was rocked to its very foundations to be toppled over by the hammering blows of the United Nations in north Africa, Sicily, and in the Soviet Union. Italy had become a conquered province serving the Nazi Government in Berlin in negation of her own destiny. This national enslavement was oppressive to the people of Italy; so oppressive that her soldiers have been revolting against it by laying down their arms. This revolt and the victory of our armed forces have ended the violent career of the man who was a despot to his people and a supine agent to a foreign tyrant.

Now that the people of Italy have set themselves free from the Mussolini bonds that kept them helpless for 21 years, they are once again asserting their will and desire to fight on the side of democracy.

The Italian people want peace with the United Nations. The abdication of July 25 signalized not only the overthrow of the Fascist tyrant, but it was also the inexorable expression of the will of the Italian people for the cessation of the war against the United States and our allies. That is the immediate demand of the people of Italy and no government which denies it will last. They will draw no distinction between a pro-axis war and fascism because there is none. No matter who continues the war against us, he is considered by them as their enemy and a betrayer of their interests to the forces of nazi-ism. They know and they say that any policy which prolongs the war against the United Nations for even one minute is still fascism, for such a war is a Fascist war and is not and has never been the war of the Italian people. They overthrew Mussolini in order to terminate the war. The overthrow of Mussolini to them represented the ending of the war, for fascism and the pro-axis war were and are identical. They will not be confused nor satisfied by mere changes in governmental structure. For them, there is one test, and one test alone, and that is immediate peace with us and our allies. To the people of Italy every consideration is subordinated to that of the cessation of the war against the United Nations, for only the ending of the pro-axis war will insure the complete and utter destruction of Italian fascism in Italy.

For the Americans of Italian origin, our duty and task remain the same as always—to unite with our fellow Americans for the continuance and intensification of support of the complete victory of the United Nations. We recognize that without such a complete victory it will not be possible for Italy to receive the benefits of the Atlantic Charter and the "four freedoms." Our attitude, our conduct, and our feelings toward Italy are those expressed by the President in his recent radio address. The President said, "Our terms to Italy are still the same as our terms to Germany and Japan—unconditional surrender." We of Italian origin wholeheartedly renew our pledge and rededicate our energies to carry out these terms. We, as Americans, are resolved that there can be no peace except on the terms of unconditional surrender. We endorse the policy of our Government to accept unconditional surrender from anyone who can effectuate it. It is not important who formalizes the surrender, what is important is that it be unconditional surrender. We must not become dupes to any propaganda which calls for a peace on a basis of so-called neutralization of Italy.

Neutralization of Italy means withdrawal of our troops and an abandonment of Italian bases from which we must continue aggressive war against Hitler and his remaining partners. Let us bear in mind that our main concern is victory against the Axis enemy and that this victory can be achieved speedily only by pursuing every advantage heretofore gained and exploiting every opportunity placed at our disposal. To do otherwise, would be to temporize with a ruthless and still powerful foe. A foe which still has at its command 300 divisions in Europe, submarine wolf packs in the Atlantic, a powerful navy and a conquered empire in the Pacific. Therefore, the neutralization of Italy and the consequent remittance of bases in Italy from which to successfully conduct our war will mean the sacrifice of untold numbers of American lives, and will jeopardize our chances for early victory. Such a course is sham sentimentality. It is aid and comfort to the enemy. It is propaganda set in motion to weaken the victory effort of a united people.

Further let us bear in mind that the realistic guaranty of the safety of the Italian people and Italian cities is the might of the air power of the United Nations and of our naval and land forces. This course is genuine sentiment for the land of our parents.

We support the President's pledge that "He, Mussolini, and his Fascist gang will be brought to book and punished for their crimes against humanity." We enthusiastically endorse the President's historic pronouncement that "we will have no truck with fascism in any way, shape, or manner, and that we will permit no vestige of fascism to remain." This is the iron-bound assurance to the generations of tomorrow against any repetition of the holocaust of today.

As for the people of Italy, we feel that we have no right to interfere with their decision as to what form of government they shall have. What is involved here is the principle of self-determination which they themselves must apply. We have every confidence in the people of Italy. We know that they will work out their own destiny in keeping with the best democratic traditions of the Sicilian Vespers, of the Renaissance, of Galileo and Christopher Columbus, of the martyrs of the five days of Milan, of the defense of Venice, of the legionary heroes of Garibaldi, and of the unification of Italy.

The forces of the Italian masses set in motion on the 25th day of July will restore Italy to the family of nations as a great democratic nation.

We say with the President of the United States, "Italy will reconstitute herself. It will be the people of Italy who will do that, choosing their own government in accordance with the basic democratic principles of liberty and equality."

What Is Motive of O. W. I. in Russian-Polish Dispute?

EXTENSION OF REMARKS

OF

HON. SAMUEL A. WEISS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. WEISS. Mr. Speaker, the American public admires the great courage

and unstinting sacrifices of Russia's army and her people. When the history of this devastating war is written, Russia will be given full credit as the nation that stopped the ruthless onslaught of Hitler and started him on the road to defeat. We cherish the friendship of the Russian people, and we gloat in numbering the Russians among our allies.

Poland and her people are also our courageous allies. Polish soldiers and fliers are proving gallant Allied comrades-in-arms on the battlefronts of the world. Why, then, is the Office of War Information conducting a survey among the Polish people of the Nation, submitting to them a list of leading questions all tending to strain existing relations among Poland, Russia, and ourselves? This is a time for unity and understanding. The Russian-Polish dispute weakens the alliance between the United Nations, and thus hinders mobilization of all forces for the winning of the war in the shortest possible time. Settlement of this dispute and reestablishment of normal Russian-Polish diplomatic relations on the basis of equality of both parties is an urgent call of the hour.

Let us awaken, O. W. I.! Let us work in harmony with our allies, not against each other.

I am happy to include as part of my remarks the editorial comments on this vital subject which appeared in the August 27, 1943, issue of the Pittsburczanin, the leading American-Polish weekly. Vic Alski, editor and publisher, is an outstanding American, and although he is a registered Republican, Mr. Alski is a great friend and supporter of President Franklin Delano Roosevelt and his foreign policy:

WHAT IS MOTIVE OF O. W. I.?

Not only the Polish language press but the American press as well, was greatly stirred by a suspicious survey, or rather an investigation, conducted on the Polish question in various larger cities with considerable Polish population, and among others, in Pittsburgh. Of marked pro-Soviet tendencies, this curious survey was conducted by the "National Opinion Research Center, University of Denver," although as stated by Elmer Davis, Chief of the Office of War Information, it was done on the request of the O. W. I.

When about a week ago we learned that two women from New York opened offices in the William Penn Hotel in Pittsburgh and are engaging Polish women to conduct some "mysterious" survey among the Polish community, naturally we became interested in this activity. Shortly after, we acquired the 4-page questionnaire together with the special instructions for the investigators and everything seemed to point that this action was undertaken for the benefit of the Soviets and against Poland and, to a certain extent, against the United States.

We admit frankly that after reading this highly provocative questionnaire, in which we even suspected Communist-incited propaganda, our first impulse was to call this survey to the attention of the local office of the F. B. I. On second thought, we decided to inquire at the source and invited Mrs. Yl'visaker, of New York, the director of this survey, to our office. In contradiction to the statement made later by Elmer Davis, this lady assured us that this is a private survey of the National Opinion Research Center, assisted by the O. W. I.; after pointing out to her a series of tendentional and obviously antagonistic to the Polish cause and highly insulting to the Polish-American questions, she continued to maintain that this survey is being conducted "impartially" and its only aim is to ascertain Polish opinion for further "studies." However, she could not enlighten us as to who was going to benefit by this opinion.

The reason for secrecy in this survey, as explained by Mrs. Yl'visaker, a member of the O. W. I. from New York, was the desire to gather the most "unbiased public opinion" which could not be attained once it was publicized in the Polish press. Yet our visitor could not advise us as to the reason for such questions as:

"What do you think about the question of Poland's future? Do you feel it should be decided now or should wait until the war is won?"

"* * * Do you think Poland should have about the same boundaries as before the war or do you think they should be different in some way?"

"A. In what way should they be different? What particular territory should Poland get or what should it give up?"

"Which one of these four things comes closest to what you think the United States should do about Poland after the war?

"D. Guarantee a fair territorial settlement for Poland, even if it means fighting Russia."

Disregarding such tendentional posies as, "Do you happen to know whether any land that used to belong to Czechoslovakia was taken over by Poland around the time the war started?" or "Stalin said not long ago that he wants a strong Poland after the war. Do you think he really meant this?" The crowning point of this unbiased survey are the questions:

"14. Do you think the Polish Government in exile really represents the Polish people or do you think it represents only certain groups of Poles?"

"15. Do you think the Government in exile is doing all it can to help win the war or do you think it could be doing a lot more?"

And finally, the most incredible:

"16. Which of these do you think would be best as Poland's official representative at the peace conference: A man born and raised in Poland, a Polish-American, or an American who is not of Polish descent?"

There isn't a slightest doubt that, due to the construction of this questionnaire, an uneducated person, or one who does not orient himself quickly, will inadvertently reply in the favor of the Soviets if we only point to the question, * * * "If the allies win the war, who do you think will have the most to say in writing the peace treaty?" * * * where in the first place we find Russia, then England, and in the third place only the United States.

When you further consider that this survey is anonymous, and in other communties, allegedly pro-Soviet sympathizers were engaged to conduct same, it is quite difficult to refrain from the supposition that the aim is rather in favor of some undercover communistic propaganda and evidently antagonistic to the Polish cause.

As far as Pittsburgh is concerned, in all fairness it must be stated that with one or two exceptions, if there were any ulterior motives on the part of the arrangers, they completely backfired. By a strange coincidence, the ladies engaged here, on the average highly intelligent women, would never permit themselves to be used as tools of communistic propaganda, and conscientiously noted the replies received. And to the credit of the Polish community it must be stated—as ascertained from the information received—in almost 95 percent of the answers to the questionnaire, they have proven themselves as enlightened citizens who place the welfare of the United States on the first plan and next to it Poland, without any admixture and much less, of the communistic brand.

One should also bear in mind that this whole miscarried investigation is quite an expensive plaything to the pockets of the taxpayers. The cost of printing two kinds—in Polish and in English—of 4-page questionnaires, the transportation and several day stay of directors from New York, rental of offices in William Penn Hotel, etc, etc., engaging several (we believe the amount was 15) investigators, who for securing 400 replies were paid $60 each, plus 6 cents per mile for traveling expenses; all in all, in Pittsburgh alone the cost will amount to several thousands of dollars. Multiply this by larger centers as Buffalo, Detroit, New York, and Chicago, where very likely a larger personnel was necessary, this survey will cost tens of thousands of dollars, which at present could be used to better advantage in the conduct of the war.

This unsavory investigation had its one humorous side and another, exceptionally unpleasant to us, American citizens.

To the humorous category one can count question No. 8: "Have you ever heard of Colonel Matuszewski?"

Of course, the question referred to the anti-Polish Government refugee, Col. Ignacy Matuszewski. But since his activities are almost exclusively known to only a small group of the intelligentsia—who were excluded in the survey—according to the information received by the investigators, the answers to this question were almost identical, namely:

"Sure I know Teddy Matuszewski, the well-known realtor and able secretary of the Central Council of Polish Organizations of Pittsburgh, but I never knew that he is a colonel."

The regrettable side of this whole affair is, that it first received its publicity and in their own light, in the anti-Roosevelt and of the not far distant past anti-Polish newspapers of McCormicks and Pattersons in Chicago, New York, and Washington, who allegedly surmise in this survey the initial steps for the 1944 presidential campaign and the desire for sounding out the opinion of the Polish Americans as to a fourth term for President Roosevelt. In this respect, it was a most deplorable disservice to the Polish cause. President Roosevelt is too deeply engrossed with important pregnant matters to win the war to worry about sounding out the opinion of the Polish Americans, as to his chances for a fourth term. And as far as that goes, neither Roosevelt, nor those close to him, need any surveys as to the feelings of Polish Americans. They all know very well that the Polish Americans were, are and will be loyal to President Roosevelt; that they see in him the greatest President of the United States, and at the same time, the most sincerest and unwavering friend of the Polish cause, and they know also that whether President Roosevelt announces his candidacy for the fourth term, or due to the international situation is drafted by the entire Nation, he can be sure that the Polish vote, Democratic, as well as, Republican, will go 100 percent for Franklin Delano Roosevelt.

This will not be changed, neither by the unfortunate activities of the O. W. I., nor by the intrigues and insinuations of anti-Roosevelt McCormick newspapers.

Address by the Honorable Sam Rayburn, Speaker of the House of Representatives, Delivered on the Occasion of the Unveiling of His Portrait and the Presentation of an Honorary Degree at East Texas State Teachers College, Commerce, Tex., Friday, August 6, 1943

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

President Whitley, ex-students of the Mayo College, my fellow countrymen, I thank you, Dr. Whitley, for your generous words, and also my colleagues in the House of Representatives who have been kind enough to come here and participate in these ceremonies, and want to thank every man, woman, and child who had any part in these arrangements. They have devoted their time and their energy without stint. I am glad to be back home at any time, and especially am I glad to be in Commerce on this occasion. You have done me great honor and I have come to thank you for it. To have a likeness of me hung in these halls that are already historic and will become more so is a recognition that touches me deeply and for which to my last day I shall feel toward you an undying gratitude. To be back on this hill after all these years brings to me a satisfaction that words cannot put into expression. Here are clustered memories that are sweet and everlasting. When I left here, many now living and many dead wished me a safe journey. That journey to now has been a safe one and, if you will pardon me, in a measure a successful one. If I can put into the last port in the same safety, I will be happy and satisfied.

How great it is to be a citizen and to have the privilege of residing in a country like this where liberty is still secure and democracy is still safe. A country that is fit to live in is a country worth fighting for. The sons of America are fighting and dying for this country in order that you and I and they may, in the future, have a decent place in which to live. They fight to preserve, protect, and defend the firesides, yea, our very civilization itself.

When the men who help to run the Axis need advice they go to Adolf Hitler. When Adolf Hitler needs it he goes to a hideaway on the top of a tall mountain and consults his intuitions. Here in this country, when the Congress of the United States feels that need it goes home to its people.

Thank God, this is our way. Here, among our home folks, we—the Members of that Congress—find the helping hand that only a democracy can hold out to its leaders. Here we are the students, not the masters. We get tuition, not intuition.

In the past, through my 31 years as a Member of the House of Representatives, I have mingled the pleasure of renewing old friendships with the business of finding out what my people want. Today the sight of friendly faces back home, the clasp of familiar hands, are as dear to me as ever.

But this time, for me and for each of my 530 colleagues of the Congress who are now scattered through the Nation, the homecoming is a little different. This time we have come to you on business, 100 percent. And, to my mind, one of the first items of that business is to take stock of ourselves and what we have done toward winning the war, calmly, clearly, with the windows of our national house open and the smoke of politics swept from the air.

We are here given the opportunity to come to a better understanding of ourselves as a fighting nation. And it is only by reaching this kind of understanding, man for man, neighbor for neighbor, that we shall be able to work best together, to knuckle down quietly to the job that remains to be done here at home while our boys are winning this war abroad. That, fellow Americans, is our opportunity. Let us make the most of it.

Overseas, our part in the fight goes well. Under the leadership of a man who has long been in the habit of going to his people—Franklin D. Roosevelt—our armed forces and those of our allies are steadily, surely, closing in on the enemy. We have been hitting hard in north Africa, in Sicily, in Italy, in the South Pacific, and all along the hazardous routes by sea to those battle arenas. No matter how many more blows we shall have to strike, we are out to crush fascism, and we are out in force. A thing of evil is at bay, and we are set for the kill.

But what of this other battle line? This noisy, squabble-ridden front at home, where, so we are told, there has been too much criticism, too much bickering, too many rifts and recriminations. Here on this front the private speaks his mind without waiting for the general to get out of earshot. That is his right. That is one of the rights we are fighting to save, and Americans have not hesitated to exercise it—now or in any other war we have fought.

Don't mistake me. Criticism is one thing, grumbling another. Just as the men who fly our planes into battle have to cope with the sabotage of those little fellows they call gremlins, so we too, working behind the lines, have our own breed, our saboteurs of the spirit. A fit name for them, I think, is grumlins.

The grumlin is a fellow who drinks his morning orange juice, eats his cereal and his two eggs and toast while he looks at pictures in the newspapers propped before him—a picture of a smiling American boy who has had his arm blasted off in the gun turret of a Flying Fortress over the jungles of New Guinea, a picture of another lad who had had two aircraft carriers shot out from under him, and, chin up and chest out, is now going back for more. And, as he sips his coffee, this grumlin feels sorry for himself and fusses at his wife because she has used up all the red stamps and can't serve him any bacon!

Yes; we have our grumlins. But the grumlin does not hold the same position in this country that he has gained in Germany or Italy. Here in America he is a minority party. Probably not one American in a hundred is a grumlin. We imagine there are more because the main features of the grumlin are a big mouth and a loud voice. One grumlin can make more noise than 99 Americans who are busy using their strength on the job of winning this war. And so, when they set up their chorus we are fooled sometimes into thinking that they are in the majority. Let us not be deceived by that chorus. Let us not be lured into it. Rather let us keep before our minds the pictures—the boyish grin of a young American who has gone through hell for his country and has had his arm shot off in a Flying Fortress, the sailor lad who has lived through two sinkings and is going back to sea.

But there are the critics, too. Those who, though they are not grousing about personal sacrifices still do not like the way we are fighting the war. Much of this criticism has been helpful. But speech is free in this country. A commodity that is free has a price of zero. And sometimes it is overpriced at that figure. Sometimes, while we are trying to work together toward a common goal, we seem to be listening to a symphony of sour notes. We become confused, distracted. And when this happens it is time to tone down the volume of this sound and fury and make a calm, considered appraisal of the tremendous piece of work which we call our war effort.

The measure of a nation's war effort cannot be shown at once in the field of actual combat. There is always a time gap. Upon what we do now depends much of the showing in combat which our armed forces will make a year from now. In the same way the hitting power of this country today is the yardstick by which we can fairly measure the work we did in preparing ourselves, beginning 2 or 3 years back.

How good was that job? Do you want the real measure, the one that counts? Then look at north Africa, at Sicily, at the Solomons. Look at the tanks and planes that are performing so magnificently on that long battle line where four millions of Nazis have been stopped cold—yes, and as I speak, rolled back—by our Allies, the Russians. They are stopped cold now. They will be stopped a little colder a few months from now. American tanks, American planes, are on the job there. Or look at the Ruhr, at Cologne, Hamburg, Dusseldorf, Kiel—that long tracery of rubble that was once the backbone of Adolf Hitler's war machine. Look at the photos of dead Japs on New Georgia Island, Guadalcanal, Attu. There, in these pictures of 1943, you have the real story of what America did in 1940 and 1941.

Of course, mistakes were made. Of course, judgments went wrong. But looking back on them now, I do not think the worst of our misjudgments were as wide of the mark as the dire prophecies of the critics who deplored them. The noise those alarmists produced almost drowned out the factory whistles. The result was that in those years when our mighty war machine was coming out of the blueprint, this Nation had almost forgotten its own strength. We were building better than we knew.

I think we are still, in 1943, building better than we know. Yes, it is a long war and a hard one. We agree with the headlines that warn us of this. We agree that there is still more we must do to shorten it. We do not waste breath trying to shout down the symphony of sour notes. But back of it all, quietly, steadily, the people of America go on making the tools of warfare, building the strength of their Nation, doing the things that are going to count when our boys meet the enemy on tomorrow's battleground. We promised the fathers and mothers of America that their sons would never be sent to battle until they were the best trained soldiers that the United States ever sent forth and had in their hands the most complete equipment for defending themselves, and for fighting the enemy, of any soldiers who ever went to battle in the history of the world. That we have done.

For the benefit of the grumlins who do not know enough to care, and of the hecklers who do not care enough to know, I offer eight points, things to remember about our war effort which may help to cure their respective ailments. Here is my list:

1. The United States Army has sent abroad the largest overseas force of any nation in history and, to date, after months of service and important gains in combat, shows the smallest losses in proportion. Our men overseas now number more than 2,000,000. In transporting them, our total losses to the U-boats have been fewer than 700 men. That army is tough and well outfitted with steel. In the First World War, we provided

1 piece of artillery for every 1,100 soldiers. Today there is 1 piece of artillery for every 46 soldiers. As a further and more specific example, since the outbreak of the war, America's armament industry has turned out about 160,000 large caliber artillery for our ground armies, nearly 1,300,000 machine guns, and 5,000,000 rifles and submachine guns. We have made 165,000,000 rounds of artillery ammunition, not including ammunition for naval guns. Our ordnance plants have so far produced the astronomical figure of 22,000,000,000 rounds of small arms ammunition—enough to enable our forces to fire 1,500 bullets at every soldier in the Axis armies.

2. Our Navy has added, since January 1 of this year, 200 new warships. For every fighting ship that we had at the end of 1942, we shall have 2 such ships by the end of 1943. In other words, within a single year we are doubling the numerical strength, and more than doubling the hitting power of the United States Navy.

3. The Air Forces of our Army and Navy have been increased by more than 64,000 planes in the past 12 months. The new planes added to the Navy in the first 7 months of 1943 alone doubled the entire number in service before Pearl Harbor.

4. We are winning the fight on the U-boat. With better weapons at sea, and bigger attacks on the bases ashore, we have already taken the profit out of Germany's submarine warfare.

5. For the greatest overseas force the world has ever known, we now have a transport vehicle and an air umbrella to match. To give you some idea of what this means in the transportation of a single item—gasoline—Gen. Jimmy Doolittle says that in 1 day the operations of his Air Force in the Mediterranean consumed 1,100,000 gallons, enough to fill 70,000 automobile tanks here in Texas, if we were filling them up in Texas instead of knocking them out in Italy.

6. Our food supply, for our own use and for our allies, is the greatest ever amassed by any nation in history. And our farmers are planting still more heavily. These farmers and farmer's wives are not only giving their sons but they are doing their part in this great effort of production.

7. In the matter of price control, after all the fussing within and around the O. P. A., too much fussing, a great many mistakes, many things done in the wrong way, we find these revealing facts: That the total, over-all cost of living in America in the forty-fourth month of the first World War was 40 percent above the level at the start of that war, August of 1914. And that in the forty-fourth month of the second World War, the cost of living has arisen 26 percent above the start of this war, September 1939. Up 40 in the last war, up 26 in this one. The complainers have opened all the stops of their gripe-organs on this subject of price control.

No one wanted price control and we would never have had it unless it had been absolutely necessary to hold down the cost of living where the common man could eat, and to prevent run-away inflation which would have been destructive to us all, but after all is said and done, we have been denied few things under rationing. Many have complained about the lack of all the sugar and coffee and meat that they wanted to eat. I have a simple answer in the form of a story that I think fits the complainers.

A lady who clerks in a store was telling of a man who came in, bitterly complaining that he could not get all of everything he wanted. She finally said to him, "My friend, do you have a son in the Army?" The man answered "No." She said to him, "I have a son in the South Pacific, and two nephews that I love like sons in north Africa. They are probably in Sicily now. I am willing to do without some of these things, or all of them, that these boys and other millions of boys may have what they need to keep them strong and well." That should be the spirit of every American.

8. The fitness of our fighting men—and I am sure that for this item every American will give his thanks to the God that watches over those we hold dear—the fitness of our boys, as reported by experts, scientifically studying it, surpasses that of any other fighters, including our own in past wars. Today the average American soldier eats better, sleeps better, is trained better, hears, sees, marches, and breathes better than he did in 1917. He is almost an inch taller, nearly 10 pounds heavier.

These are the solid realities, these the silent headlines out of which the story of victory will one day be written. That day still lies beyond a horizon of more blood, more sweat, more tears. So long as there remains a single enemy line to be stormed, so long as the life of a single American soldier is imperiled, we at home cannot afford to be complacent. In the knowledge of what we have done, we find new strength of heart, the will to go on doing still more; and it is in this spirit that I have ventured to list these eight accomplished strides on our way to victory. They are the combined works of a people and its Government, a free people, a democratic form of government. They are the measure of a strength greater than we ourselves have understood; a leadership fulfilling, in battle, the hopes of its people; a people answering, behind the lines, the call of its leaders. Only let the faith be kept, and against this people, this Government, no enemy can endure

One more word and I am through. We must and we will win this war. I am today thinking of what kind of a world the future holds for us and all people throughout the world who love liberty. But we must not forget our obligations of today or tomorrow. We of the United States of America, the greatest and most powerful nation upon the face of the earth, must not forget that we must do a man's part in the world's great work of peace. We must not stick our heads in the sand and forget our obligations to help in bringing about an enduring peace. Civilization cannot stand a shock like that which we are passing now, every quarter of a century. Unless we build on solid foundations for permanent peace, we will have failed this day and generation but I have the hope to believe that our people and the people allied with us throughout the length and breadth of the earth will pull together to preserve civilization and make the world a better place in which to live.

Address by the President to the Canadian Parliament

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, September 15, 1943

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by the President to the members of the Canadian Parliament on August 25, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your Excellency, members of the Parliament, my good friends and neighbors of the Dominion of Canada, it was exactly 5 years ago last Wednesday that I came to Canada to receive the high honor of a degree at Queen's University. On that occasion—1 year before the invasion of Poland, 3 years before Pearl Harbor—I said:

"We in the Americas are no longer a far-away continent, to which the eddies of controversies beyond the seas could bring no interest or no harm. Instead, we in the Americas have become a consideration to every propaganda office and to every general staff beyond the seas. The vast amount of our resources, the vigor of our commerce, and the strength of our men have made us vital factors in world peace whether we choose it or not."

We did not choose this war—and that "we" includes each and every one of the United Nations.

War was violently forced upon us by criminal aggressors who measure their standards of morality by the extent of the death and the destruction that they can inflict upon their neighbors.

In this war, Canadians and Americans have fought shoulder to shoulder—as our men and our women and our children have worked together and played together in happier times of peace.

Today, in devout gratitude, we are celebrating a brilliant victory won by British and Canadian and American fighting men in Sicily.

Today, we rejoice also in another event for which we need not apologize. A year ago Japan occupied several of the Aleutian Islands on our side of the ocean and made a great to-do about the invasion of the continent of America. I regret to say that some Americans and some Canadians wished our Governments to withdraw from the Atlantic and the Mediterranean campaigns and divert all our vast supplies and strength to the removal of the Japs from a few rocky specks in the North Pacific.

Today, our wiser councils have maintained our efforts in the Atlantic and the Mediterranean and the China Seas and the Southwest Pacific with ever-growing contributions; and in the Northwest Pacific a relatively small campaign has been assisted by the Japs themselves in the elimination of that last Jap from Attu and Kiska. We have been told that the Japs never surrender; their headlong retreat satisfies us just as well.

Great councils are being held here on the free and honored soil of Canada—councils which look to the future conduct of this war and to the years of building a new progress for mankind.

To these councils Canadians and Americans alike again welcome that wise and good and gallant gentleman, the Prime Minister of Great Britain.

Mr. King, my old friend, may I through you thank the people of Canada for their hospitality to all of us. Your course and mine have run so closely and affectionately during these many long years that this meeting adds another link to that chain. I have always felt at home in Canada and you, I think, have always felt at home in the United States.

During the past few days in Quebec, the Combined Staffs have been sitting around a table—which is a good custom—talking things over, discussing ways and means, in the manner of friends, in the manner of partners, and may I even say in the manner of members of the same family.

We have talked constructively of our common purposes in this war—of our determination to achieve victory in the shortest possible time—of our essential cooperation with our great and brave fighting Allies.

And we have arrived, harmoniously, at certain definite conclusions. Of course, I am not at liberty to disclose just what these conclusions are. But, in due time, we shall

communicate the secret information of the Quebec Conference to Germany, Italy, and Japan. We will communicate this information to our enemies in the only language their twisted minds seem capable of understanding.

Sometimes I wish that that great master of intuition, the Nazi leader, could have been present in spirit at the Quebec Conference—I am thoroughly glad that he wasn't there in person. If he and his generals had known our plans they would have realized that discretion is still the better part of valor and that surrender would pay them better now than later.

The evil characteristic that makes a Nazi a Nazi is his utter inability to understand and therefore to respect the qualities or the rights of his fellowmen. His only method of dealing with his neighbor is first to delude him with lies, then to attack him treacherously, then beat him down and step on him, and then either kill him or enslave him. And the same thing is true of the fanatical militarists of Japan.

Because their own instincts and impulses are essentially inhuman, our enemies simply cannot comprehend how it is that decent, sensible individual human beings manage to get along together and live together as neighbors.

That is why our enemies are doing their desperate best to misrepresent the purposes and the results of this Quebec Conference. They still seek to divide and conquer allies who refuse to be divided just as cheerfully as they refuse to be conquered.

We spend our energies and our resources and the very lives of our sons and daughters because a band of gangsters in the community of nations declines to recognize the fundamentals of decent, human conduct.

We have been forced to call out what we in the United States would call the sheriff's posse to break up the gang in order that gangsterism may be eliminated in the community of nations.

We are making sure—absolutely, irrevocably sure—that this time the lesson is driven home to them once and for all. Yes, we are going to be rid of outlaws this time.

Every one of the United Nations believes that only a real and lasting peace can justify the sacrifices we are making, and our unanimity gives us confidence in seeking that goal.

It is no secret that at Quebec there was much talk of the post-war world. That discussion was doubtless duplicated simultaneously in dozens of nations and hundreds of cities and among millions of people.

There is a longing in the air. It is not a longing to go back to what they call "the good old days." I have distinct reservations as to how good "the good old days" were. I would rather believe that we can achieve new and better days.

Absolute victory in this war will give greater opportunities for the world because the winning of the war in itself is proof—certainly proving to all of us up here that concerted action can accomplish things. Surely we can make strides toward a greater freedom from want than the world has yet enjoyed. Surely by unanimous action in driving out the outlaws and keeping them under heel forever, we can attain a freedom from fear of violence.

I am everlastingly angry only at those who assert vociferously that the four freedoms and the Atlantic Charter are nonsense because they are unattainable. If those people had lived a century and a half ago they would have sneered and said that the Declaration of Independence was utter piffle. If they had lived nearly a thousand years ago they would have laughed uproariously at the ideals of Magna Carta. And if they had lived several thousand years ago they would have derided Moses when he came from the mountain with the Ten Commandments.

We concede that these great teachings are not perfectly lived up to today, but I would rather be a builder than a wrecker, hoping always that the structure of life is growing, not dying.

May the destroyers who still persist in our midst decrease. They, like some of our enemies, have a long road to travel before they accept the ethics of humanity.

Some day, in the distant future, perhaps—but some day it is certain—all of them will remember with the Master: "Thou shalt love thy neighbor as thyself."

Monsieur le Premier: Ma visite à la ville historique de Québec rappelle vivement à mon esprit que le Canada est une nation fondée sur l'union de deux grandes races. L'harmonie de leur association dans l'égalité peut servir d'exemple à l'humanité toute entière—un exemple partout dans le monde.[1]

[1] English translation of the previous paragraph: My visit to the old city of Quebec has recalled vividly to my mind that Canada is a nation founded on a union of two great races. The harmony of their equal partnership is an example to all mankind—an example everywhere in the world.

Our American Constitutional Commonwealth—Is It Passing?

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 15, 1943

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and informative address delivered by the senior Senator from Nevada [Mr. MCCARRAN] at the commencement exercises at Georgetown University, Washington, D. C., September 12, 1943. The address is entitled "Our American Constitutional Commonwealth—Is It Passing?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Reverend president, members of the faculty of Georgetown University, honored graduates, my friends: The president of a great university was once asked the question: "Why is it that your university is called a great reservoir of knowledge?" To which he answered: "I don't know, unless it may be that the freshmen bring so much knowledge in and the seniors take so little out."

Although I am being facetious, you members of the graduating class will think of that expression more and more as you travel through life.

Reverend president and members of the faculty, I would, indeed, be short in my expression of gratitude were I not touched by the honor that has been conferred upon me today. Of all the institutions of learning in the world, I would have chosen this honor from the hands of this university. And so with all my ability by human language to express my feeling here today, I make known my gratitude to you and to your great institution.

I shall take this honor as an inspiration for the life that is mine to carry on. I shall hold it sacred, because to have such an honor from this great institution impresses upon one a responsibility demanding every ounce of his energy.

My friends of the graduating class, you today go out into a world of trouble; each of you in civilian clothes for the last time, perhaps, for some months. Regardless of the particular school from which you graduate, and no matter where your footsteps may lead you in the months to come, it behooves us to remind you of the fact that you are Americans, and, being Americans, remember that your brothers are in arms today on many battle fronts of the world. You, too, will take up the battle; you, too, will carry on the obligations; but, with God's will, you will return to a Nation that looks to you in the post-war period for its sustenance, its continuation, and its future guidance. So today, that you may take with you at your graduating hour some of the things that are in the minds of those who carry the responsibility in government, I have attempted to formulate some thoughts that might impress upon you the fineness and the splendor of the Government that gave you freedom of life. Then I would bring to your attention a few of the dangers that appear to be imminent, threatening the very existence of that Government. Those of us who take the responsibility of government seriously realize and see those dangers, and, seeing them, would militate against them, so that on your return from military fields you may have and enjoy the freedoms that have abided in this great country for a century and a half.

Public administration is never so difficult, and good public administration is never so important, as in time of war. In wartime it becomes the appropriate function of Congress to vote vast lump-sum appropriations, and to make the broad delegations of power which the Executive needs. But the fact that we are engaged in a war does not mean that we must revise our form of government. We are making war as an organized Nation, and one of the purposes for which we fight is the preservation of our constitutional liberties and our constitutional form of government. We must not let that essential truth escape us.

The founders of this Republic, the framers of our Constitution, were passionately devoted to the principle of government by consent of the governed. Adherence to this principle presupposes an orderly procedure under which laws are enacted by the elected representatives of the people, interpreted impartially by the courts in the light of our great basic law, and administered by public servants in accordance with such interpretation. Nothing could be more violative of the principle of government by consent of the governed than a system under which laws are made by appointive officials, interpreted by the same or other appointive officials, and administered by the same or still other appointive officials.

It is no fallacy, and it is no quibble, to say that a large body of our law today is so made, so interpreted, and so administered. Not only by Executive order, but by a constant stream of "directives" issued by various administrative agencies of the Government, rules and regulations are continually being put in force and given effect which have had no sanction by the Congress. Yet, without such sanction, and often without color of support from any constitutional source, these rules and regulations have all the force of law; more than that they are law; and frequently they actually supersede laws passed by the Congress.

Statutory provisions enacted by the Congress, in the exercise of powers clearly constitutional, have been expanded or contracted, added to or subtracted from, by the Executive branch of the Government, without hesitation. As an example of expanding a congressional act, we may cite the Anti-Inflation Act. An example of adding to statutory authority is the Executive order setting up

the War Manpower Commission, section 5 of which provides that "no employer shall retain in his employ any worker whose services are more urgently needed in any establishment, plant, facility, occupation, or area designated as more essential" by the Chairman of the War Manpower Commission. We have been unable to discover anything in the Selective Service Act, or in either of the War Powers Acts, or in any other Act of Congress with which we are familiar, which can be cited as the basis for that decree.

This trend toward greater centralization of governmental power, with and through the growing tendency to legislate by directive, is either a sound and logical development within the framework of our American constitutional commonwealth, or it is a departure from that framework, a movement away from the basic principles of true democracy. If the latter, it is either justified by events and results, or it is unjustifiable. It will profit us to examine just what is the case.

When the framers of our Constitution rested from their labors, they rested firm in the conviction that the document which they had drawn would forever preserve and protect those rights which must remain in the States, and those rights which must remain in the people, in order to preserve that happy balance of government which would insure our national security and perpetuity.

The system of checks and balances provided by the Constitution, with three branches of government, the legislative, the executive, and the judicial, was regarded by those constitutional founders, with what seemed to them unassailable logic, as a perfect protection against too great an accumulation of power under any one authority; for they considered it unthinkable that any one branch should ever be able to usurp the powers of another branch.

But that was in 1787. In July 1935 a President of the United States wrote to the chairman of a House Subcommittee on Ways and Means urging passage of a certain bill and concluding with the statement: "I hope your committee will not permit doubts as to its constitutionality, however reasonable, to block the suggested legislation."

Only a few decades ago the Congress reprimanded most severely a Cabinet member who had the unprecedented temerity to send to the Senate the text of a bill which he wished to see enacted. Today this procedure not only is common practice but is by no means confined to Cabinet members. If you list the major bills which have been enacted into law by the Congress in recent years, you will find that a substantial number of them originated, not in response to popular demand expressed through the duly elected representatives of the people, but in the brain of some one member of the executive branch of the Government, or some small group within that branch, and were drafted, not in the Halls of Congress but in some administrative office, or executive conference room, or in the cubbyhole of some second assistant supervisor of auxiliary functions. Such a bill, however brilliantly written, cannot be an expression of the will of the people, but only a mirror of the ideas and ideals of its author and of the mood of his executive and administrative superiors.

In a few of their objectives, in some of their attitudes, and in many of their excesses, no small number of these wearers of the bureaucratic purple are reincarnated Romans in full accord with the traditions primarily responsible for the fall of the Roman Empire.

When you give any man unlimited power, it is like giving a schoolboy a gun; he wants to go out and shoot it off.

When a man rises to an important position it is customary to suppose that his advancement has been due, at least in part, to some special merit; but this is not always true even in private business and industry, and certainly it is not always true in government. Still, most people are likely to believe it. Usually, the one who believes it most strongly is the man himself. As a result of this rather common failing, most of the men who write our administrative law, and who interpret it and administer it, have come to regard themselves as rather superior beings. In some cases they are. In many cases they are not. This feeling of superiority is manifested in a great many ways, ranging all the way from the petty dilatory tactics with which sundry petty bureaucrats seek to bolster their own petty egos, to the complete disregard of ordinary civil rights and established democratic processes and procedures which every now and then is evidenced by some new executive promulgation or administrative interpretation.

The Constitution contains many provisions intended as safeguards against too much centralization of authority in the executive (or administrative) branch of the Government.

In article I, section 2 provides that "all legislative powers herein granted shall be vested in a Congress of the United States." Is there anything unclear about the meaning of that?

Paragraph 2 of section 6 provides that "no person holding any office under the United States shall be a Member of either House of Congress during his continuance of office." Why this provision, except to avoid any overlapping of executive or administrative functions, on the one hand, and legislative functions, on the other?

Paragraph 18 of section 7 specifically delegates to Congress the power "to make all laws which shall be necessary and proper for carrying into execution * * * all * * * powers vested by this Constitution in the Government of the United States or in any department or office thereof." This is an expansion and reiteration of the second section, but it is also important because it covers specifically the situation which the average "directive" purports to meet, that is, a need for additional "law"—rule or regulation—necessary and proper for implementing some power or powers already granted to some department or office of the Government. We see that the Constitution says Congress shall make such laws. Do we hear the voices of a chorus of administrative lawmakers saying: "Congress is too slow, so we'll do it; Congress can't be trusted, so we'll do it"? Or is that only their actions speaking for them?

We are minded on occasion to call to the attention of one or another Government administrator the fact that Members of the Congress are not alone in taking oath to support the Constitution. Paragraph 3 of article 6 requires that not only Senators and Representatives, but the members of all State legislatures, "and all executive and judicial officers both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution." Compliance with that paragraph is just about 100 percent. That is, everybody takes the oath.

It is not only in the body of the Constitution that we find provisions bearing on this question.

The Bill of Rights sets up further safeguards. Sometimes we fear there is a tendency to overlook some of the provisions in these first 10 amendments to our Constitution. We wonder, for instance, if all the rules and regulations of the O. P. A., and their enforcement, are in strict conformity with the fourth amendment which provides that: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized."

We wonder, whether the provision of the fifth amendment that: "No person shall be deprived of life, liberty, or property, without due process of law," ever contemplated, in the intention of its framers, a process of administrative law under which a "hearing commissioner" of some executive branch of the Government will sit as judge and jury over a citizen charged with violation of some order promulgated by an executive officer of the Government without any specific authority from the Congress of the United States.

We wonder how such a procedure, under administrative law, comports with the provision of the sixth amendment that: "In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury."

The last two items in the Bill of Rights are of tremendous importance. They are sentinels against overcentralization of government, monuments to the wisdom of the constitutional framers who realized that for the stable preservation of our form of government, it is essential that local governmental functions be locally performed.

The ninth amendment to the Constitution provides that "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

The tenth amendment to the Constitution provides that: "The powers not delegated to the United States by the Constitution, now prohibited by it to the States, are reserved to the States respectively, or to the people."

Many signs today seem to indicate that the wisdom of the philosophy which guided the framing of these amendments is being forgotten. We have heard it said that the belief is spreading in this country "That the people are not capable of governing themselves; that the problems of today are so complex that the citizen at large must of necessity be detached from his own difficulties." If such a belief ever becomes the prevailing political philosophy of these United States, we cannot predict what type of government we shall then get. Perhaps a benevolent dictatorship, perhaps a dictatorship not so benevolent; perhaps national socialism; perhaps even a monarchy; but certainly not a democracy.

Fully centralized control of all governmental functions, in a bureaucracy founded upon administrative law, is the very antithesis of that democracy in which all our rights are rooted; the democracy from which spring all our hopes, not only for a better future, but even for a maintenance of the unnumbered freedoms which we as a Nation have enjoyed since the foundation of our Republic.

We must remember that the more strongly centralized a government becomes, the more important it is that the government be just, and wise, and responsive to the interests of the people. In the words of Mr. Justice Jackson: "When government pervades all life, holds the economic system in its hands, becomes the greatest employer, the biggest customer, the largest borrower and the largest lender of money, neither incompetence nor low standards of disinterested conduct can be tolerated."

The Governor of a great American State, who afterward became President of the United States, once said: "To bring about government by oligarchy, masquerading as democracy, it is fundamentally essential that practically all authority and control be centralized in our national Government. The individual sovereignty of our States must first be destroyed. We are safe from the danger of any such departure from the principles by which this country was founded

just so long as the individual home rule of the States is scrupulously preserved and fought for whenever it seems in danger." That statement is as true now as when it was made, 13 years ago.

Dictatorship is not always a creature of war; sometimes it comes tiptoeing stealthily upon an unsuspecting people in time of peace; and sometimes it is builded secretly by the people themselves, unknowing the potentialities of what they create; until like Frankenstein's monster, similarly builded, it is unleashed to accomplish the enslavement or destruction of its creator.

It has been said that true statesmanship must know a higher purpose than vote getting. We cannot argue with that thesis. But we say to you that if every Member of both Houses of Congress guided his every action by the criterion of whether what he did would win him votes or lose him votes at the next election, the body of law enacted by such a Congress would be vastly preferable to a body of law created by men owing no allegiance to any group of voters, and giving no particular thought or weight to public opinion, either in the country as a whole or within any particular section of it.

With every upsurge in the power of the administrative lawmaker and his alter ego, the bureaucrat, there is a concomitant slackening of initiative, a mushrooming of inertia, in the handling of State and local problems. This is more than a temporary tilting of the scales; it is a derangement of the fundamental balance which has maintained our form of government for over 150 years as the outstanding example of a free democracy. It may be a tipping of the chute down which, if it be not righted, we may eventually plummet toward the abyss of fascism. May God forbid!

Government by administrative law breeds opportunity for personal arrogance; evades the courts; sneers at the rule of stare decisis; affords no precedents; and fortifies itself by pointing ridicule at Congress and other lawmaking bodies of our Nation.

Administrative law has its seat of justice in the fiber and temperament of the individual administrator who may, if he chooses, recognize individual human rights and freedoms; or who may ignore or abrogate such rights with relative impunity, protecting himself with the law he has made and the law which is his to make.

The growth of legislation by administrative directive is the step between democracy, with constitutional guaranties protecting the body of the law in the people, and a government by men with their backs to the wall, hurling defiance at constitutional and substantial changes prompted by progress and founded on the spirit of the law.

Is this the bridge upon which we as a Nation now stand? If so, which way are we facing? The one end rests on the glory of the spirit of the law; the other on the popularity or prudence of the administrator. On one hand is democracy; on the other is autocracy, the bond made of dictatorship.

I could not close my expressions to you, my young friends, without bringing back to you the words of that great priest, prince, and philosopher, James Cardinal Gibbons, when he said: "The law is not the people; the people is not the law. The law is the spirit of justice governing the people, and its application to individuals, to associations, to every form of civil life, must be so hedged around with reverence and security that the civil courts may in an hour of popular passion, protect all the people from the tyranny of what might be a lawless majority."

My young friends, may God speed you on your way in life. May your years spent here in this institution, with all the fine training you have had, be your guide through every trial and in every place, wherever you may go.

Give Our Fighting Men a Voice

EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, September 15, 1943

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Give Our Fighting Men a Voice," which appeared in the September issue of the Washington News Digest. The editorial contains a great deal of food for thought, and I thoroughly endorse its contents.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GIVE OUR FIGHTING MEN A VOICE

As the war gradually reaches a victorious end—though we still have a lot of fighting ahead—we will hear more and more of who is to sit at the peace table.

There will be a demand from many groups to have a voice in determining the destiny of both victors and vanquished.

Looking back to the sad experience which followed the peace terms of World War No. 1, the war that was to end all wars, it is our humble opinion that the older generation, which made such a mess of it all, might sensibly listen to the opinions of our young fighting men. Those who have sacrificed the most, it seems to us, should have the most to say when peace terms are discussed. After all, let us remember, it is our young fighting men (those who are fortunate to come out of it alive), who must pay for this war. It is their children who must repay the monumental debt. It is for them to have some voice in what kind of peace will give them and their children the assurance of safety against another war 25 years hence.

We hold to the opinion that the voice of our young fighting men, together with the young fighting men of our allies, might well play a part in the momentous decisions to be reached at the peace table. Certainly we believe it just and timely that Congress give to our young fighting men the feeling that when peace terms are discussed, their opinions will be sought insofar as is practical.

Joint Statement by President Roosevelt and Prime Minister Churchill to Marshal Badoglio and the People of Italy

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, September 15, 1943

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a joint statement dispatched by President Roosevelt and Prime Minister Churchill on September 10 to Marshal Badoglio and to the people of Italy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It has fallen to you in the hour of your country's agony to take the first decisive steps to win peace and freedom for the Italian people and to win back for Italy an honorable place in the civilization of Europe.

You have already freed your country from Fascist servitude. There remains the even more important task of cleansing the Italian soil from the German invaders. Hitler, through his accomplice Mussolini, has brought Italy to the verge of ruin. He has driven the Italians into disastrous campaigns in the sands of Egypt and the snows of Russia. The Germans have always deserted the Italian troops on the battlefield, sacrificing them contemptuously in order to cover their own retreats. Now Hitler threatens to subject you all to the cruelties he is perpetrating in so many lands.

Now is the time for every Italian to strike his blow. The liberating armies of the Western World are coming to your rescue. We have very strong forces and are entering at many points. The German terror in Italy will not last long. They will be extirpated from your land and you, by helping in this great surge of liberation, will place yourselves once more among the true and long-proved friends of your country from whom you have been so wrongfully estranged.

Take every chance you can. Strike hard and strike home. Have faith in your future. All will come well. March forward with your American and British friends in the great world movement toward freedom, justice, and peace.

Livestock and Feed Conference

EXTENSION OF REMARKS

OF

HON. HUGH A. BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 15, 1943

Mr. BUTLER. Mr. President, I have a copy of an address delivered by John R. Jirdon to the Livestock and Feed Conference held in Kansas City, Mo., September 2, 1943. Mr. Jirdon is the president of the Colorado-Nebraska Lamb Feeders' Association. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Members of Congress, Governors, and members of the livestock and meat industry, I am appearing before you today as president of the Colorado-Nebraska Lamb Feeders Association. Under normal conditions and in normal times around 5,500,000 lambs are fattened for market in the dry-feed lots of the country and about 1,000,000 head are fattened on wheat pastures in the Southwest. This portion of the lamb crop is known as winter-feed lambs and they are marketed during the first 4 months of the year—namely, January, February, March, and April. In normal times approximately 1,500,000 head of these lambs are fattened for markets by the members of our association located in Colorado, western Nebraska, and eastern Wyoming, in the irrigated regions of these respective States. The total annual slaughter of lambs approximates 22,000,000 head and from these figures you can see that approximately 70 percent of the lamb crop carries sufficient flesh and finish to be available for slaughter direct from the ranges and farms of the country. The lambs which the

members of our association purchase and fatten for market are known as feeder lambs. These lambs would have very little relative value for slaughter as they come from the western ranges and so we are performing an essential service in providing a market for these animals and carrying on a program of fattening them so as to make them available for market during the first 4 months of the year, and I want to call your attention to the fact that during the first 4 months of the calendar year practically no lambs from any other source are available to supply the market during that period. This industry of winter feeding lambs is economically sound for the reason that we provide a market for the western range man for that portion of his crop which is not suitable for slaughter and at the same time we supply the markets of the country with grain-finished lamb carcasses at a time when no other lambs are available.

There are many reasons why the lamb-feeding industry has grown to present proportions in our area of the country. First, we used to produce in these irrigated regions large tonnages of sugar-beet byproducts, such as sugar-beet tops and wet and dry pulp, which are byproducts of the factories. However, the volume of these sugar-beet byproducts will be reduced by 35 percent as compared with last season in our area because of Government control and the hostile attitude toward the production of sugar beets by the present administration. As you know, the sugar-beet industry is now under complete Government control and regimentation, combined with grower subsidy. The prices which the grower receives for his beet crop and the price he pays for his field labor is therefore determined by the bureaucrats in Washington. For many years now the people in charge of this governmental program have proven that they are unfriendly toward the sugar-beet industry and now are openly advocating further cuts in sugar-beet production. I want to bring out this point because of the important role that sugar beets play in the production of meat. An average acre of sugar beets provides sufficient feed byproducts to produce 300 pounds of beef or lamb, as compared with about 275 pounds of beef or lamb produced from an average acre of corn, so that livestock producers of the country are vitally interested in sugar-beet production because every acre of sugar beets which is taken out of production means the loss of a market for a feeder steer or 8 to 10 feeder lambs, and it means the loss of 300 pounds of beef or lamb to the Nation's food supply, together with the loss of 3,800 pounds of sugar for the tables of the Nation. Government agencies have found an effective way to strangle the sugar-beet industry by controlling prices that the grower receives for a ton of beets. This season these prices were set so low that the anticipated return from an acre of beets was sufficiently less than the attractive prices guaranteed for potatoes and beans by these same Government agencies that the producers automatically shifted their acres to these other crops, and this all happened at a time when it is necessary to ration the sugar supply of this Nation. This is just one more example of the results of the centralization of the power over our food supply in Federal agencies in Washington.

Weather conditions are much more favorable for lamb feeding in our section of the country than in other areas because of the light precipitation during this season, permitting us to have dry feed lots which are desirable for economical fattening of lambs. However, we cannot carry on a normal feeding program without the importation into our area of reasonable amounts of corn and protein concentrates in order to properly finish our lambs for market. The products which we grow on our farms are feeds which will provide for growth but in order to properly balance our rations we must have the privilege of importing these concentrated feeds which will provide that balance and will complete the fattening program. Under present rules and regulations of the Office of Price Administration there is no assurance that we will be able to import either corn or protein concentrates of any kind under the ceilings which have been placed on corn in the surplus producing areas of the country. It is much more profitable for the surplus corn producer to withhold this corn from market and feed it to hogs. The present ceiling prices for corn in surplus areas vary from 92 cents to $1 per bushel and it is possible for corn farmers to realize $1.30 per bushel or better when fed to hogs, and so the corn producer refuses to accept these so-called ceiling prices and he continues to increase his hog-growing operations or else he sells his surplus corn on a black market at much higher prices than prevailing ceilings. The same conditions apply to protein concentrates. Although the cotton crop promises to be about the same size as last year, southern cottonseed mills are advising us now that they do not expect to be able to ship more than a very limited quantity of cottonseed meal to the livestock-producing sections of the country. Under these conditions if the breeding herds of the country are supplied with their very minimum of requirements of protein in order to winter their breeding herds, there will be no protein concentrates available for use in the feed yards of the country.

These are the reasons why at the present time there are practically no feeding lambs under contract from the western producers by the members of our association and liquidation of western breeding sheep has already set in because of the inability of these people to secure concentrated feeds for wintering their herds, and unless conditions change you will undoubtedly see the largest liquidation of western breeding herds in history. Good young breeding ewes are already going to slaughter and many more will follow. What are the remedies to this situation? When ceilings on lamb carcasses were proposed, a representative of our association was called to Washington last August, at which time we were permitted to present our views. At that time our association suggested that a graduated ceiling be placed on lamb carcasses, permitting the price to rise gradually from January until April to cover the higher cost of production during that period. If you will go back over a period of years you will find that under normal conditions the prices of lambs gradually advanced from January until April and this advance is justified due to the high cost of production during this period. The officials of the Office of Price Administration refused to establish anything but a rigid and inflexible ceiling and refused to accept our advice.

If the Army and Navy and our civilian population are to be supplied with lamb carcasses during the first 4 months of next year, two things must be done immediately to encourage the feeding of lambs. First, a graduated ceiling must be established to take care of the higher cost of production during this period and it must be done now to relieve the uncertainty and to encourage feeders to purchase lambs from the western range man. Second, the ceilings and methods of distribution on corn and concentrates must be revised west of the Missouri River in such a manner that we can purchase these supplies from the new crop. If this uncertainty is not removed, lamb feeding will be restricted to the present volume of feeds which have been grown on our own farms and lamb-feeding operation in our section of the country will be reduced more than 50 percent. We believe that the wartime meat management program, which was adopted by the National Livestock and Meat Council, of which I am a member, must be put into effect. The war meat board, which was set up at our suggestion, must have authority to function. I am sure that the entire livestock industry is in complete accord with this program. There are other gentlemen here today who have discussed the wartime meat management program and the war meat board and I will not encroach on their subject except to say that we believe that this is the only workable program that has been proposed and it must be allowed to function in order to prevent chaos in the livestock industry.

The lamb feeders of this country face the same hazards of disease to our flocks, the hazard of unfavorable weather, and the hazard of continually increasing labor costs which have more than doubled in the past 2 years. We know that these same conditions prevail with the producers of feeder lambs and in the purchasing of the feeder lamb crop from producers, we believe that they are entitled to a price for their product that will insure them the return of their cost of operation plus a reasonable profit and likewise as lamb feeders we feel that we are entitled to the same consideration. We are unalterably opposed to experiencing the fallacies of regulation and direction from Washington and we know that any subsidy would simply mean more of the same thing. We believe that Government subsidy and dictation of any branch of private enterprise will mean ultimate strangulation of that industry leading eventually to complete state socialism in this country. We feel that there is much less need for a consumer's food subsidy in this country today than ever before in our history. The income of the wage earners of this country has risen much faster than the cost of food, resulting in idle dollars in the pockets of the people which are contributing to inflation and encouraging black markets in many commodities.

Feeders of cattle, hogs, and lambs will remember that day last May when the famous hold-the-line order which made headlines in the newspapers and on the radio and also they will remember the famous consumer subsidy and roll-back order on meat made into law by Executive order without the will or intent of Congress and they have a better memory of the fact that prices on live fat animals declined around 10 percent in price and have never recovered from that decline. I am asking, Who paid the bill? Wholesale and retail prices were lowered by that order.

Certainly, we have a right to ask and demand that ceiling prices on meat carcasses both wholesale and retail, be restored to the original ceilings which were in effect prior to the roll-back order.

You cannot encourage increased production of food unless you permit the food producers of this country to obtain a price for their product which will return that cost of production to them plus a fair margin of profit as a further incentive to bring about that maximum production. If our lamb-feeding operations should result in profits, we pay our just share of the income taxes due from these profits and we buy liberally of War bonds in order to carry on the war effort, but we feel that the money we invest in War bonds and that we pay in income taxes should be spent by the Federal Government as nearly as possible to carry on the war effort without being paid out in a subsidy to any group of citizens who do not need and are less entitled to a subsidy than at any time in the history of our country. But you cannot ask us to risk our capital in a lamb-feeding venture (without even the hope of returning that capital to us without loss) in order to produce the meat that this Nation so badly needs. The lamb-feeding industry is just as highly specialized as any other industry in the country. It requires specially designed facilities and equipment. It requires men of experience to carry on these operations. We do not believe that there is a bureaucrat in Washington who knows half as much about

our industry as the average man who spends his time in the feed yards and on the farms in this country.

I want to make it plain right here that there is no such thing as a cost of production. An explanation of that statement is in order. If it were possible to secure all of the data from every feed yard in the country it might be possible to arrive at a figure which would represent the average cost of production for a given season, but those same figures would not apply for the following season because of the change in weather and labor and feed costs and death loss and other hazards. It is impossible for the feed-lot operators of the country to produce lamb as cheap as it is produced when lambs are grazed in the wheat fields of Kansas and the Southwest, when nature is kind enough to provide the wheat fields with ample growth. It might be possible, under ideal conditions, to produce gains on lambs on the Kansas wheat fields as low as 8 or 10 cents per pound of gain, depending, of course, upon the value placed on the growing wheat and the fortunes of weather and other unpredictable conditions, while in certain feed lots of the country the cost of gain per pound on lamb may run as high as 25 cents per pound in extreme cases. Now, if ceilings are placed on the finished products with the intention of reflecting the average cost of production, it is easy to see that high-cost producers are forced out of the market. Our arithmetic will prove that if the average cost is used, approximately 50 percent of the producers will have a cost which is higher than that average. Consequently, these higher-cost producers must cease to operate. Understand this, that we are very happy to cooperate in any sound methods to curb uncontrolled inflation. Our industry has gone along a good many years risking our capital, taking both gains and losses as conditions developed, at the same time we have supplied the consumers of this Nation with lamb and mutton at prices they could afford and were willing to pay. You can rest assured that there will be no inflation, either in the pockets of the sheep producers or the lamb feeders of America under the present program and at the same time you can rest assured there will be continued liquidation of western breeding herds and materially reduced lamb-feeding operations this coming season, and with it a continuing reduction in the meat supply. I want to close by quoting from Thomas Jefferson who once said, "Were we directed from Washington when to sow and when to reap, we should soon want bread," and the same thing applies to meat.

The Challenge to Labor Leadership

EXTENSION OF REMARKS

OF

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, September 15, 1943

Mr. DANAHER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the September 1943 issue of the Connecticut State Journal entitled "The Challenge to Labor Leadership," written by Representative CLARE BOOTHE LUCE, a Member of Congress from the Fourth District of Connecticut. The article is most thought-provoking and is entitled to the serious and earnest study both of the Senate and the public to whose attention the CONGRESSIONAL RECORD will come.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHALLENGE TO LABOR LEADERSHIP

(By CLARE BOOTHE LUCE)

The next few years present to the leadership of organized American labor a great decisive challenge. For today the fate of the free enterprise system, which is a longer name for the profit-and-loss system, which is another longer name for capitalism, lies largely in the hands of the leaders of unionism. They can destroy it if they will, or they can, in large part, help save it. Which they will do, they had better make up their minds clearly in the next few years, for the war, which has saved American capitalism, cannot be expected to last forever. And when the war is over, if organized labor lets the decision go by default as it is currently doing, it will certainly go again against capitalism. I say "again" because until the day war orders began to pour in from abroad and until our own entrance into the war created an unprecedented demand on industry, American capitalism had been notably going into a decline. And it had been doing so for a very simple reason: Nearly every action this administration took over a period of 10 years was either intentionally or inadvertently calculated to drive enterprise capital out of the market into hiding, or to destroy it.

There is no evidence on hand, none whatsoever, that this administration will not revert to its former attitude toward the American capitalistic system as soon as the war is over. And there is a wealth of evidence that it will. In short there is very little hope that the new dealers, who do not understand either the nature or workings of capitalism, will try to preserve it. This being the case, it is quite safe to assume that if the same men, or like-minded men, are permitted in the next few years to guide the economic destiny of America, we will either slowly or rapidly evolve a totalitarian economy. Call it socialism, communism, or fascism. Naturally, if one of these systems appeals to the reader of this article more than the system America grew up in, it is a waste of time to read further.

Capitalism cannot save itself. Only men can save it. The men who can save it we may classify in three groups—politicians (government), capitalists (business), and workingmen (labor). The politicians who have been in charge of government, as I have said, either do not wish to save capitalism or do not understand how to do so. The capitalists are incapable of saving themselves. Even without the help of Democratic politicians for the past 10 years, even under preceding Republican regimes (and with the help of Republican politicians) they had slowly been encompassing their own suicide. There remains no group of men, in my opinion, intelligently and forcefully enough organized to save the free enterprise system but the labor leaders. For they, and they only, perhaps today, are capable of understanding the true relation of capital to labor. If they cannot or do not wish to make this relationship clear in the next few years, if they do not wish to play a major and militant part in the creation of public opinion among millions of workers in favor of capitalism, then capitalism in our day is doomed.

LABOR'S OPPORTUNITY

Labor cannot, and certainly will not, answer the challenge in the affirmative to save capitalism until it asks itself, with scrupulous honesty and with the minimum of bias, one important question: How is labor's bread buttered?

The time has gone by when the leaders of labor need ask the workingman "On which side is labor's bread buttered?" For today I believe that every intelligent person in the United States knows that labor's bread is best buttered on the side of collective bargaining, done through strong, established, orderly unions. I also believe that public opinion is not only reconciled to this answer but is enthusiastically in favor of it. Any concerted attempt on the part of private pressure groups or demagogic reactionary politicians to destroy the American trade-union movement, or wipe from our statute books the principle of collective bargaining, is doomed to certain defeat at the bar of public opinion—so long as there is any form of private industry left in this country with which labor can collectively bargain.

Naturally there are always a few bitter-enders. Naturally some few capitalists continue to fight against the principle of collective bargaining. But their only real fight today is against the continued extension of that principle. This, too, will be a losing fight. For the principle of collective bargaining is surely destined to become not only a national act but a state law everywhere. My point is simply that labor, however hard it may be fighting to extend the right to bargain collectively, is certainly not fighting on the national scene for the right to bargain collectively. This great victory has been won, even though in hundreds of cases the fruits of victory have not been garnered by the individual laboring man. Indeed, no greater proof could be given of the fact that labor has nationally won the right to organize and bargain collectively than the fact that labor has, in its own ranks, begun to compete for the exercise of the right to bargain, so that today labor's most spectacular fights are more often internecine in character than directed against the employer. In short, so much in demand is the product, unionism, that the purveyors of it have become competitive.

And in all this there lies a great danger. For the danger is that labor, absorbed in its highly justified and critical battles to extend the collective bargaining principles everywhere, and obsessed in its own ranks with its party battles, will forget, until it is too late—will forget why it fought in the first place for the right to bargain collectively. Perhaps I am being naive, but it seems to me that labor fought in the first place for the right to bargain collectively because this seemed the best procedure for workingmen to take in order to get a fuller and fairer share of—what? Why, of industry's profits. And that brings me back to the question: How is labor's bread buttered? Well, in the year 1943 of the Second World War the answer is inescapable; it is buttered by high war wages, paid out of high war profits by expanding private war industries in a period of full war employment. (At this point, in order not to send any reader's mind off at an argumentative tangent, I do not for an instant suggest that the amount of butter on labor's bread is what it could be, or should be. To argue the thickness of butter would lead into a discussion of the control of inflation and living costs, which is not a question germane to the general argument, or to the question of the relationships of the high wages to the high profits—which is germane, but will be touched upon later.) The point I wish to establish is how labor gets butter on its bread and not how much butter. The how is indisputable. Labor's butter comes through profitable employment.

And that is the way the workingman wants it to come. He does not want to be unprofitably employed—to be the walking advertisement of a boondoggle. That being the

case, I hope it is not naive to suggest that after the war the workingman will want to earn his butter in the same way—through profitable employment—that is, high peace wages, paid out of high profits by expanding private peace industries in a period of full peacetime employment.

Is this not the formula which labor leadership itself must concentrate on if, in the end, labor is to have plentiful and good jobs to bargain for, and decent and proper wages to bargain for?

Let me repeat the formula again: high wages paid out of high profits, by expanding private industry in a period of full employment. Remove any single word from that formula in any order you choose to remove it, and the result will be depression, followed by an increasing stagnation of the economy, dying capitalism, followed by a totalitarian ism, inevitably.

At this point, I should like to say that until the labor movement grew strong and powerful labor was guiltless of the decline of capitalism. The honor for the sabotaging of the enterprise system could be pretty evenly divided between capitalists and politicians, and this again for a simple reason: They were the boys who had the voices and the power. In retrospect we can see that capitalists made two egregious blunders. The first was in not cutting labor in directly and immediately on its own profits. The second was in excluding labor from the factory production team. Had it been part of the mores of capitalism to give the workingman an immediate cut, an immediate and direct profit bonus, production bonus, or profit-sharing plan in addition to good basic wages, the terrible schism which has developed between labor and capital would not exist. Well, the labor leader answers, capitalism and capitalists did not give the workingman a bonus, a share, etc., and he has not put us on the production team, and that precisely is why we organized. To which I must answer if that is why labor unions were organized, then that is what labor must increasingly struggle for. For now we have the how of the workingman's bread and butter, and the why of his unions, and we, therefore, would seem to have a clue to a future policy for labor.

I am speaking here of labor leaders who are really interested in the working man. I have no suggestion to offer to those who are only interested in organization for organization's sake, which was known when I lived in Europe as the "German disease."

For every patriotic labor leader there is now a great opportunity to move on to a great policy. The aim of this policy would be not only to further the interests of his union and the labor unions but in the crucial period ahead he should try to formulate the opinion of workingmen and the general public simultaneously on two lines: (1) The preservation of the free dynamic enterprise system, which is to say, an expanding high profit industry, the only kind interesting to finance capital and able to sustain employment. This means labor must take another look at the Nation's tax laws and fiscal policies which up to now had been destroying them; (2) labor leaders must try to educate the public, the workman, and the capitalists to the idea of labor-capital partnership. For partnership is the true relation between them and the only one that is moral. While pressing for higher profits for industry, labor leadership must press equally hard for a direct share in those profits, not in terms of higher wages but in terms of direct profit-sharing schemes and bonuses keyed to good basic wages.

I sometimes like to think of what would happen if the average workingman ever caught on to what a difference it might have made in his life between the years 1932–39 if his Government, instead of killing off millions and millions and millions of industrial profits just as it killed little pigs, had written into the law that he, the average workingman, should first collect the profits that had been produced by his hands, his brains, and his muscles. Needless to say, this idea of profit sharing will be bitterly resisted by employers, if at the same time labor is short-sighted enough to tolerate punitive taxation of industry and other Government policies which cause industry to shrink.

Give the workers a cut on the profits in his own factory, give his leader a place on the production team—and what will happen? Well, I can tell you what won't happen: There will be no drive among the workers to shorten hours except as is desirable for efficiency and health. There will be no make-work anti-technological drive. There would be, on the contrary, every incentive for workers and their leaders to do everything possible to see that the industy in which they shared the profits became more and more profitable. Stragglers and idlers, professional malcontents, and Communists, agitators, agitating for power's sake in labor's ranks, would be summarily dealt with by labor itself. And the most contentious problem in labor's ranks will vanish into thin air: Does an individual worker have a right to a job in any given plant? For his fellow workers will see to it that he has that right—only so long as he does his job well, because not to do it well is to dissipate their profits—and so long as he is needed—because if he isn't needed, he is also dissipating their profits. As an American I confess that I am a little ashamed that the Russians seem to have got onto this sensible idea before we progressive Americans did.

So long as labor leadership concentrates exclusively on high wages and make-work, while it allows its Government to enact deceptively pro-labor legislation which sucks profits, not into the pockets of the workers who made them, but into the coffers of the bureaucrats who pass it out in the shape of doles to men and women who had no part in it, while at the same time passing legislation that keeps capital from investing in new enterprises—just so long is labor on the road to economic disaster. The reverse is true; just so long as management refuses to pass the profits directly to the worker, it is widening the schism between labor and capital every day—and also pressing for socialism and encompassing its own suicide. Now labor is organized and can explain these things to its own members, put pressure on public opinion, and on Government to encompass them, far better than capital.

Today labor's relations with the public are very poor. There is no reputable labor man who will not acknowledge this. Why? Well, I believe, for one very simple reason: The general public has begun to believe that too many organized labor leaders are secretly the enemies of the free-enterprise system (i. e., either they don't know, or care, how their bread is buttered), and public opinion is overwhelming today in favor of the preservation of the free-enterprise system, if it can be saved. Selfish labor leaders, featherbedding in the midst of a terrible war in which the manpower shortage is acute, power-hungry labor leaders rowing over jurisdictional questions at a time when they themselves scream loudest for national unity, labor racketeers, Communist agitators in labor's own ranks, have all given labor a terrible black eye with the public. It is my own opinion that there are in the ranks of labor men of great vision and ability, who understand economics far better than some of our New Deal economists. Now is the time for them to take over and beat the drums for a new right: The right to preserve and share in the profits of the Nation's industries—the right to go into full partnership on an individual factory-to-factory basis with industry. For capital to deny labor this right, or for labor to fail to press for this right, is inevitably for both to conspire in the downfall of our system and their own destruction. In this respect the present administration has been as great an enemy to labor as it has to capital. It has always, and tirelessly, sought to conceal and obscure the relation between them. It has widened at every chance it had the gap between them for political advantage. It has caused business to shrink, and capital to go into hiding, and labor to identify itself with every interest except its greatest—the profit system. If the war had not come to reveal in a great light, albeit a sulfurous and hideous light, Mars-engendered, that labor's last best hope lay in an expanding high wage, high profit, full-time employment in private industry economy—we would be today, without that war, well on the road to chronic depression. There was no other solution in New Deal economy.

The State of Connecticut is the fourth largest industrial State in America. Connecticut's unions have made a splendid wartime record. Connecticut manufacturers are cooperating magnificently with those unions. No other State provides such a happy laboratory for new capital-labor relations as Connecticut. What a challenge it is to the businessmen and the labor leaders of our State, to sit down in their factories now to discuss their post-war relations, and how they can work together as a great production team in a post-war economy, to expand profits, share profits, and provide employment! What they cannot do between them, working in harmony to prevent depression, the Government will do. But if labor were ever once to take a good long look at capital's problems, and vice versa—there would be very little for Government to do. That the best governed were always the least governed was the truest thing ever said, and in our times—forgotten.

New Alliance Debate Likely in Congress

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 15, 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "New Alliance Debate Likely in Congress," from the pen of David Lawrence.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW ALLIANCE DEBATE LIKELY IN CONGRESS

(By David Lawrence)

Although for one reason or another debate on our relation with other allies seems to have been frowned on as likely during the war to open up differences, Congress seems certain to debate considerably from time to time the suggestion advanced in many quarters recently that the United States enter into a post-war military alliance with Great Britain.

The proposal on its face looks innocent enough—just a continuation of our present effective and efficient collaboration with our principal ally. But the United States has never entered into a peacetime alliance with any nation since George Washington's warning against permanent alliances, so the experience would be rather novel.

Thus, for instance, how much of the cost of the combined peacetime navy will Great Britain contribute and how much of the air forces of the world will each nation maintain? Also, what obligations will the United States undertake with respect to the protection of the various parts of the British Empire, including far-flung colonies and dominions?

It so happens that the United States had a Navy about equal to Britain's at the outbreak of war in 1939 and we now have arranged to treble the size of our fleet, entailing an expense unprecedented in world history. Britain has merely replaced her losses, so that at the moment her navy is about equal to what it was in pre-war days

POLITICAL OBLIGATIONS

This means that if the United States and Britain are allied, either the size of the American Fleet can be cut down or, if it is maintained, that the financial burden will be a substantial part of any peacetime budget and that that budget will be considerably increased.

There is no such thing, moreover, as a military alliance which does not involve political obligations. Our foreign policy must coincide with that of Great Britain throughout the world and America must undertake the protection of all British possessions if there is to be equal responsibility for military or naval action in any emergency that arises. Will the United States wish to underwrite British policy in India, for example?

When Governor Dewey, of New York, proposed a military alliance between Britain and America, he may have had his tongue in his cheek. As a political stroke, it was masterful. He had been accused of being an isolationist. He was looked upon by many of the Willkie supporters as being less in favor of international cooperation than the 1940 Presidential nominee. In one fell swoop, Mr. Dewey erases that impression and makes himself a cooperationist. In fact, he goes further than Mr. Willkie ever has gone.

Governor Dewey took little chance in coming out for the alliance. There isn't much likelihood of it being voted on at the polls this year or next because the post-war settlements are not likely to be reached for a long time and the question of what kind of a world organization is to be set up will probably come to the fore along with the military alliance suggestions, so that Mr. Dewey, who says he isn't running for the Presidency, at least not in 1944, can say almost anything about the world situation and not find himself confronted with any concrete opposition.

CONTRARY TO UNITED STATES HISTORY

The most important aspect of any military alliance seems to have been overlooked by those who are zealously espousing it for America and Britain as a means of keeping world peace. That aspect concerns the provisions of the American Constitution which states that our Congress can declare war and only Congress can provide money for the national defense. If an alliance is proposed, it would require a treaty, and under the terms of such a treaty the future Congresses would, in effect, be required to renounce the constitutional right of ordering our troops or our Navy into action. The Congress would, in effect, be delegating the war-making power for all times to a joint Army and Navy board or combined command of both countries.

This is contrary to the whole history of the United States. Temporary alliances for wartime purposes have been validated in 1917 and in 1941 by a temporary delegation of power to the Executive by Congress—good only for 2 years—but it is a serious question whether Congress could make any treaty with Britain delegating for all time the war-making power and preventing Congress and the American people from deciding in each instance whether the lives of American citizens should be sacrificed and for what purpose.

Post-War Collaboration

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. HATCH. Mr. President, on the 12th of September the distinguished Senator from Utah [Mr. THOMAS] delivered a very able address at Carnegie Hall in New York City on the subject of post-war collaboration. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Whether or not human nature can change is a subject I shall leave for the sociologists to discuss in a calmer moment; at least we know that human nature can be brought under control and self-discipline, and that it can profit by the experience.

On March 4, 1919, while President Wilson and his associates were in Paris negotiating the Treaty of Versailles, a resolution was introduced in the Senate by 37 Senators which in effect said that two-thirds of the Senate would not consent to ratification of the League of Nations Covenant. This warning to the world not to trust our negotiators in Paris is one of the most tragic events of our history. From that moment there began a retreat from the ideal of world cooperation—a retreat to the Second World War.

In striking contrast, on March 16, 1943, a resolution was introduced in the Senate which would accomplish the very opposite result. Two Republicans and two Democrats—Senators BALL, BURTON, HATCH, and HILL—have introduced a resolution urging that the United States take the initiative in organizing the United Nations to establish temporary administration for areas occupied by the United Nations; to administer relief and assistance in economic rehabilitation; to establish methods for peaceful settlement of disputes and, most important, to provide for the maintenance of a United Nations military force and to suppress by immediate use of such force any attempts at military aggression.

This resolution not only deserves overwhelming support but is receiving it. Some of us have been speaking for the resolution throughout the country this summer.

In addition to the Senate Resolution No. 114, to which I have just referred, a large number of other resolutions has been introduced in the Senate, some preceding and others complementing it. It was my privilege, on May 5, 1941, to introduce a resolution authorizing the Committee on Foreign Relations, or a subcommittee, to make a full investigation of the matters pertaining to the establishment of an everlasting peace throughout the world.

Again, on February 11, 1943, I presented another resolution to the Senate, which stated, "That it is the sense of the Senate that action should be taken immediately with a view to planning and formulating a comprehensive program of international economic cooperation which will be just and equitable to all the nations of the world, and for that purpose and in order to lay the foundations for world economic stability and a lasting peace the President is hereby requested to call such conferences of representatives of the United Nations, and to take such other action, as he deems desirable and necessary."

The success of the Food and Agriculture Conference, the high hopes for the forthcoming conference on relief and rehabilitation, and the monetary discussions about to begin show that the United Nations are facing post-war problems.

And again, on May 6, 1943, I presented a resolution expressing the sense of the Senate and House of Representatives: "It is the sense of Congress that the United States will cooperate fully with other nations in establishing and preserving a just and lasting peace and in establishing such organizations as may be necessary to suppress any future attempt at military aggression by any other nation."

So the great discussion has already begun—in every forum, labor hall, and church of the land—and the meeting tonight is one of many. Discussion has begun in Congress and will occupy much of our attention this fall.

The tragic history of the last 25 years taught us that it is no good winning a war unless, as our President has said, "that war stays won." Lasting peace will never come by fiat. It must be planned and made to work. World wars do not just happen by accident. They grow out of causes; they result from the things men do and from the things men leave undone. As our Commission to Study the Organization of Peace stated: "Peace under modern conditions cannot be a static condition of life achieved by the renunciation of war, nor a mere pious desire to live at peace. Peace must be a dynamic and continuous process for the achievement of freedom, justice, progress, and security on a world-wide scale."

The prevention of war, rather than its cure, must be the ultimate solution of this difficult problem. This may seem to some of us like an utterly unreal dream, but I do not think it is. There is at least no reason why we should not plan and strive to make this the last of wars among the civilized people of the world.

Two lines of action lie before us. First, we must reduce the risk of war by disarming the bandit nations, and then—but not until then—reduce the armaments of the whole world to the lowest level consistent with the maintenance of domestic tranquility. Then we must agree that the employment of force in international matters be never permitted to any nation which refuses to accept pacific means of settlement of disputes, in court or arbitration, conference or diplomacy.

But this means that to get rid of war we must enthrone justice in the place of force and a decent regard for human rights in the place of violence. So we must understand that any plan to keep order in our world, and to prevent another war, must include a court system which can deal with the disputes of nations. For those disputes are not going to end, but to continue. They will be adjusted by one of two means: The means of peaceful decision, or the means of violence.

Then, too, if our world is to know any lasting peace there must be for its peoples a reasonable hope of a tolerable life. Not all parts of the world may know such fortunate conditions and glorious opportunities as we can hope for, but hopeless despair and unrelieved misery on the part of many of the world's millions will mean a resort to war. It is useless to say that we are not concerned with the condition of other peoples. Our first consideration should be for the condition of our own people. That goes without saying. Justice and peace, like charity, must begin at home. But our welfare can be increased in proportion as other people are able to buy our goods under fair conditions of trade and in proportion as they make the goods they sell to us under decent standards of livelihood. The more they can buy the more we can sell. Poverty anywhere helps no one.

There is a moral as well as an economic reason why we cannot be indifferent to injustice and suffering. It tests the fiber of our conscience and the strength of that precious heritage of kindliness which is the outstanding quality of America. In this we shall not fail. We shall help to fight starvation and disease, whether it be in gallant China or in suffering Europe. Helping China to help herself to a better life when Japan is crushed will be one of our greatest opportunities. Not only will it be an opportunity, it will be one of the best bases for our lasting prosperity. The emergence of China from economic misery will cause growing demands for our agricultural surpluses and growing markets for our industries. Four hundred million customers who are able to buy should be a concern of every businessman.

Since war and peace are now proved beyond question to be matters of universal concern, there can be no doubt in anyone's mind that the United Nations must maintain a peace force. That force must be directed from that center where the United Nations' power has been and is now being directed in the war. This is what I interpret Senate Resolution No. 114 to mean when it states:

"To provide for the assembly and maintenance of a United Nations' military force and to suppress by immediate use of such force any future attempt at military aggression by any nation."

We must realize that in addition to helping to keep order and to promote opportunity, we must be concerned for liberty all over the world. We should not try to dictate the form of governments under which others should live, but we should know by now that when any powerful nation crushes all freedom and teaches its youth perverted cults of hate and blood and evil, the peace of our world is insecure. There will need to be some means by which the nations can be restrained from doing this and restrained before rather than after such dangerous creeds are acted upon. Liberty is like love—the more you give, the more you receive.

If all this is to be done there must be developed a sense of world community and a growing sense of world citizenship. And to this our own national experience can contribute greatly. In our own Federal system there is much that can help us, for an important suggestion as to the place of the individual in a world society can be found in our Constitution. According to that great document, we are citizens both of our Nation and of the State in which we reside. It took us some time to come to that concept. At first it was fought bitterly by those who thought only in terms of their own States.

It will take us long to come to a fully recognized concept of citizenship in our own Nation and in the world. But that is the way we must move, that is the direction we must take, if we are to enjoy a lasting peace.

Our own Nation cannot build a world of order and opportunity and freedom all alone. But it can give leadership to that great endeavor. Not only because of our strength, not only because of our wealth, but because we have in our own heritage the tradition for organization of a great peaceful, freedom-loving community. The Federal idea is capable of great enlargement.

Our world today is a smaller community than were our Original Thirteen States. It can be encompassed in 4 days' travel. It can be instantly informed of the news and views of all peoples. It will know peace and opportunity and freedom as a whole, or no part of it will long be secure or prosperous or assuredly free.

Aristotle taught that no state should be larger than the ability of its people to know on one border that they were being attacked on another. News of attack in one part of the earth can now be told to the whole world sooner than such news could be told throughout the small Greek city-states. Thus war and peace are of world-wide concern even under Aristotle's concepts.

Once we realize this the planning of a lasting peace will not be hard, for the way of peace is in the world today, even though men are not treading the path of peace.

I do not agree with those who say that after Germany surrenders unconditionally there should be a cooling-off period before peace settlements are drafted and the United Nations organized to accomplish what has been contemplated in Senate Resolution No. 114 and my resolutions to which reference has been made. The very contrary practice should be followed. Peace settlements should be prepared before hostilities cease, and in those cases in which that is impossible, the methods of solving them should be agreed upon.

The United Nations should be organized as quickly as possible, so that when the war ends the universal structure of peace to promote economic justice and to prevent aggression, by whatever means or force necessary, will be ready for man's use.

Slow Down the Trains!

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis (Tenn.) Press-Scimitar, dated September 8, 1943:

SLOW DOWN THE TRAINS!

The Pennsylvania Railroad's Congressional Limited is a remarkable train, about 30 minutes faster than others of the Washington-New York run. Monday afternoon The Congressional didn't finish its trip because of a "hot box," burned-out bearings, and a twisted axle on an old-type coach in the middle of the train. As this was written the bodies were still being counted at Philadelphia.

The New York Central's Twentieth Century Limited is another crack passenger express, fastest on the Chicago-New York run. Monday night the locomotive on this limited exploded, killing the crew and derailing the train.

Other de luxe limiteds on other lines, some transcontinental, the pride of American railways, are still trying to maintain the high-speed schedules that were possible with safety in peacetime, to save a few minutes or a few hours in trips from one point to another.

Our railroads have turned in an astonishing performance, handling the tremendous burdens of war transportation, and for the most part continuing civilian services unimpaired. But it appears possible that the railway industry may be attempting too much, in this time of shortages of materials and manpower, difficulties of maintenance and repairs, rolling stock wearing out, and roadbeds running down.

Wouldn't it be better for the railroads to cut the pattern of service to fit the cloth of available equipment? Most of the people riding the trains would rather sacrifice a little time to gain greater assurance of safety.

Naming the MacArthur Lock

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. BRADLEY of Michigan. Mr. Speaker, in the Evening News of Sault Ste. Marie, edition of July 10, 1943, Mr. Clergue C. Schilling, an attorney of that city, who is presently in Washington serving on a wartime assignment, wrote a very interesting article prepared exclusively for that paper on the chronological history of the legislation through Congress which led to the construction and naming of the new MacArthur lock; which was formally opened on July 11, 1943, with the passage through the lock of the steamer *Carl D. Bradley*, named after my father and owned by the Bradley Transportation Co., which is a subsidiary of the United States Steel Corporation.

Mr. Schilling is not only a well-known attorney of Sault Ste. Marie, but likewise is well known in Washington in congressional circles, having served on the staff of former Representatives Frank D. Scott of Alpena, Robert H. Clancy of Detroit, and Larry W. Musselwhite of Manistee, as well as former Senator Prentiss M. Brown. As soon as the war is over and he can be relieved from his present assignment, Mr. Schilling intends to return to his native city and reopen his law office.

Under leave to extend my remarks in the RECORD, I include this very interesting article:

TRACE LEGISLATION IN CONGRESS GIVING NEW LOCK MACARTHUR AS NAME—OTHER OPENINGS RECALLED

(By Clergue C. Schilling)

WASHINGTON, July 10.—With the opening of the new lock at Sault Ste. Marie it is interesting to trace the legislation in the Congress which gives it the name "MacArthur lock" and gives the official designation to the present fourth lock as the "Sabin Lock."

The resolution for this purpose was introduced in the House of Representatives on January 18, 1943, by Representative FRED BRADLEY of Rogers City. After hearings before the Rivers and Harbors Committee of the House and the Commerce Committee of the Senate it was adopted in each branch of the Congress and approved as a public law by the President of the United States on June 15, 1943.

In support of his measure before the Rivers and Harbors Committee Representative BRADLEY placed in the record a comprehensive history of the opening of the fourth or Sabin Lock which was contained in the annual report of the Lake Carriers' Association for 1919. Excerpts from this report follow:

"REPORT ON FOURTH LOCK, ST. MARYS FALLS CANAL, MICH.

"The Fourth lock at the Sault was placed in commission on September 18, 1919.

"Completion and opening of the Fourth or Sabin lock.

"When the fourth American lock at Sault Ste. Marie, Mich., was formally opened at 5:15 p. m. on Thursday, September 18, 1919, another epoch was written into the annals of the greatest of water traffic—the Great Lakes. With this, a twin of the Davis lock, yet possessing some additional features that make it stand out as the world's most superior lock, the efficiency of the system of locks at the Sault is now such as to remove the probability of any congestion of the fleet of bulk freighters occurring in the near future. Being 1,350 feet long, two of the modern 600-foot bulk freighters may lock through together, end to end, and be lifted or lowered 20 feet with cargo, each totaling 13,000 gross tons, in 8 minutes. The width of the lock chamber being 80 feet, and as the ideal breadth of the modern freighter is 60 feet, its width will suffice for all needs for many years to come."

"In any other country the ceremony attending the formal opening of such a marvel of engineering skill would have been ostentatious but the ceremony on this occasion was marked for its simplicity, though animated and largely attended. The Lake Carriers' Association was represented by William Livingstone, president; Harvey D. Goulder, general counsel; George A. Marr, secretary and treasurer; and W. D. Becker, John J. Barlum, S. B. Cady, and A. C. Sullivan; while E. L. Woodruff, superintendent of lighthouses, and H. E. Gilpin, president of the Great Lakes Towing Co., attended as guests of the association. The train bearing the party was due at Saulte Ste. Marie at 12:25 p. m., but did not arrive until 3:10 p. m. As on the occasion of the opening of the Livingstone Channel, steamer *William Livingstone* of the W. C. Richardson fleet was placed at the disposal of the Lake Carriers' Association, hence the party proceeded to the steamer, where luncheon was served. In addition to the above named those at the table included Col. J. G. Warren, division engineer, United States Army, Buffalo; Col. E. M. Markham, United States engineer in charge of the Detroit district which includes the Sault; L. C. Sabin, resident engineer and superintendent of the locks; Capts. F. A. Bailey, W. G. Stewart, and Warren C. Jones; Capt. Otto Gentz, of the steamer *William Livingstone;* W. S. Hoag, chief engineer of the Richardson fleet, and Capt. F. D. Root, manager of the Great Lakes Towing Co. President Livingstone, as toastmaster, recited the historical features and remarkable growth of navigation since the locks were first conceived, after which speeches appropriate to the occasion were made by Colonels Warren and Markham and Messrs. Goulder, Woodruff, and Sabin.

"At 5 p. m. the steamer *William Livingstone,* escorted by the Government boats *Voyager, Alfred Noble, General G. J. Lydecker, General G. C. Sears,* and *Clover,* and the tugs *L. C. Sabin* and *Alabama,* entered the new lock amid a din of whistles and the waving of a salute from the crowd on other boats and on the lock walls. Added to the animated scene simultaneously but without prearrangement, the steamer *Crete* was locking up in the Poe lock; the *Luzon, John Ericsson,* and *Saturn* locking down in the Davis lock, while the *Huronic* was in the Canadian lock.

"In passing through the lock the afternoon's ceremonies were resumed in the observation room of the steamer. Mr. Goulder, in a few well-chosen words, proposed that the new lock be christened the Sabin lock. Felicitous speeches were made by Mr. Livingstone and Colonels Warren and Markham eulogizing Mr. Sabin and endorsing the unofficial christening of the lock, following which those present unanimously adopted a resolution to call this lock the Sabin lock. How spontaneous was this feeling, covering some period before the official opening, that it be so named in recognition of Mr. Sabin's many accomplishments at the St. Mary's Falls canal may be gathered from the fact that popular feeling at the Sault favored such action, while at the meeting of the advisory committee of the Great Lakes Protective Association as early as September 4, the following resolution was unanimously adopted:

"RECOMMEND SABIN LOCK

"'*Resolved,* That as a mark of appreciation of the long and efficient service to the Government by Mr. L. S. Sabin, the resident engineer in the construction and maintenance of the locks at the Sault Canal, we recommend that the lock that is now about to be completed shall be known as the Sabin lock.'

"With the completion of the fourth lock there comes to an end a long and active campaign for more adequate locking facilities at the Sault from the American Government. So long ago as 1909 the following statement embraced a part of the annual report of this association:

"'The growing difficulties we have been experiencing for some time with the locks at Sault Ste. Marie have been steadily on the increase and the conviction has been forced upon us that owing to the length of time required for obtaining the necessary legislation and appropriation and the time required for the construction of the lock after the appropriation has been secured, that it was an absolute necessity for us to take immediate steps toward the construction of a fourth lock. The campaign was continued from year to year until finally the Congress, realizing also that improvements at the Sault were not keeping pace with the remarkable expansion of lake commerce, took favorable action.'

"Actual work on the lock began in April 1913. The excavation work was completed in just 2 years' time, or precisely on April 25, 1915. The total amount of this contract for excavating through clay and rock a distance of one-quarter mile and for a depth of 50 feet and width of 100 feet was $481,726.90. In the fall of 1915 the work of concreting the walls and floor was started. This incurred the largest expense of the lock, and amounted to more than $1,000,000. It was not completed until January 16, 1919. The work of installing the gates and machinery, the building of the west approach to the lock, was started in 1917. The contract for the gates amounted to $230,445; furnishing and installing the machinery and valves cost $221,895; the stone engine shelters cost $25,694, and the east approach to the lock cost $235,693. Altogether the lock was built at an expenditure of $2,500,000 and of 6½ years' time."

The original Bradley bill as reported from the committee to the House by Congressman GEORGE A. DONDERO, of Royal Oak, Michigan's member of the Rivers and Harbors body, instructed the Secretary of War to designate the new lock as the General Douglas MacArthur lock and the present fourth lock as the Colonel L. C. Sabin lock. How the names were changed to the simple title "MacArthur" and "Sabin" is shown in the Dondero report to the House, and Senator ARTHUR VANDENBERG'S report from the Senate Commerce Committee to the Senate, together with Secretary of War Henry L. Stimson's letter to the chairman of the Rivers and Harbors Committee:

DONDERO'S REPORT

The Committee on Rivers and Harbors, to whom was referred the bill (H. R. 1258) instructing the Secretary of War to henceforth designate the new lock in the St. Mary's River at Sault Ste. Marie, Mich., as the General Douglas MacArthur lock and designating the lock at that point now known as the fourth lock as the Colonel L. C. Sabin lock, having considered the same, report favorably thereon with an amendment and recommend that the bill as amended do pass.

The amendment is as follows:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That the new lock now in the course of construction by the War Department in the St. Marys River at the falls, Michigan, shall be designated 'MacArthur lock,' and the lock at that point now known as the fourth lock shall be hereafter designated 'Sabin lock.'"

Change the title so as to read: "A bill to name certain locks in the St. Marys River at the falls, Michgan."

The purpose of the bill is to honor two distinguished Americans, namely, (1) Gen. Douglas MacArthur, for his brilliant military accomplishments in the Pacific theater of war operations; and (2) Mr. Louis C. Sabin, a former civilian engineer employee of the Government with an outstanding record of service.

VANDENBERG'S REPORT

The Committee on Commerce, to whom was referred the bill (H. R. 1258) to name certain locks in the St. Marys River at the falls, Michigan, having considered the same, report favorably thereon without amendment and recommend that the bill do pass.

The bill has the approval of the Secretary of War and the Bureau of the Budget, as will appear by the following letter to the chairman of the House Committee on Rivers and Harbors as contained in the House report and which is made a part of this report.

"(H. Rept. No. 283, 78th Cong., 1st sess.)

"The purpose of the bill is to honor two distinguished Americans, namely, (1) Gen. Douglas MacArthur, for his brilliant military accomplishments in the Pacific theater of war operations; and (2) Mr. Louis C. Sabin, a former civilian engineer employee of the Government with an outstanding record of service."

The Secretary of War reported as follows on this bill:

STIMSON'S REPORT

WAR DEPARTMENT,
Washington, March 6, 1943.

Hon. J. J. MANSFIELD,
Chairman, Committee on Rivers and Harbors, House of Representatives, Washington, D. C.

DEAR JUDGE MANSFIELD: Reference is made to your letter of February 3, 1943, requesting the views of this Department as to the advisability of enacting House bill 1258, instructing the Secretary of War to henceforth designate the new lock in the St. Marys River at Sault Ste. Marie, Mich., as the "General Douglas MacArthur lock," and designating the lock at that point now known as the fourth lock as the "Colonel L. C. Sabin lock."

The War Department has no objection to the enactment of the bill. The new lock which it is proposed to name in honor of General MacArthur is now under construction by the Department, its construction having been authorized in the interest of national defense by section 17 of an act of Congress approved March 7, 1942 (Public Law 490). The so-called fourth lock was completed in 1919, and Mr. Louis C. Sabin, a former civilian employee of the Government whose long period of service in the Engineer Department was exceptionally able and meritorious, had much to do with its planning and construction.

It is suggested, however, that the phrasing of the bill be changed as indicated on a copy of the same herewith.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

HENRY L. STIMSON,
Secretary of War.

Here is the exact language of the measure as it passed both Houses of Congress and approved by President Roosevelt:

"An act to name certain locks in the St. Marys River at the falls, Michigan.

"*Be it enacted, etc.,* That the new lock now in the course of construction by the

War Department in the St. Marys River at the falls, Michigan, shall be designated 'MacArthur lock,' and the lock at that point now known as the fourth lock shall be hereafter designated 'Sabin lock.'

"Passed the House of Representatives May 17, 1943.

"Attest:

"SOUTH TRIMBLE, *Clerk.*

"Passed the Senate June 10, 1943."

"[Public Law 72—78th Congress]

"[Chapter 124—1st Session]

"[H. R. 1258]

"An act to name certain locks in the St. Marys River at the falls, Michigan.

"*Be it enacted, etc.,* That the new lock now in the course of construction by the War Department in the St. Marys River at the falls, Michigan, shall be designated 'MacArthur lock,' and the lock at that point now known as the fourth lock shall be hereafter designated 'Sabin lock.'

"Approved June 15, 1943."

The names—MacArthur and Sabin—which highlight the opening day ceremonies are by no means new to the Sault and especially in the vicinity of the locks. In one way or another these names have been associated with the locks area since well before the turn of the century. It was in the 1890's that Sabin began his employment at the Sault when the Poe lock was under construction. In 1906 he was appointed superintendent, a post he held with distinction for many years before retiring to accept an executive assignment with the Lake Carriers' Association. During Sabin's superintendency he had as his able assistant the late Frank T. McArthur who later became acting superintendent for a time.

When work was commenced on the excavation work for the construction of the Sabin lock, oddly enough, the contract was let to the MacArthur Bros. Co., of Chicago and New York. This company which was headed by the brothers, Arthur F. and John R. MacArthur, were the prime contractors for the excavation.

A few years later another McArthur appeared on the scene at the locks in the person of the late Howard McArthur in the role of marine reporter for the Evening News. Since his father, Frank T. McArthur, was assistant superintendent, he had a friendly news source and part of his duties, of course, included interviewing Colonel Sabin daily.

This name business is purely coincidental. There is no evidence that Gen. Douglas MacArthur is related to the MacArthur brothers who dug the hole for the Sabin lock or to Frank T. McArthur, but the fact remains that the names MacArthur (pronounced the same any way you spell it), and Sabin carry on at the Sault locks and they will be bywords for a long, long time.

New England Problems and Federal Policy and Legislation

EXTENSION OF REMARKS

OF

HON. FOSTER STEARNS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. STEARNS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Edward E. Chase, president of the New England Council, in Boston, Mass., on September 10, 1943:

The speakers whom I shall introduce will present certain facts and views bearing on some pressing problems of New England which involve Federal policy and legislation. They have been asked to present pertinent facts mainly, and views and opinions only when deemed to prevail in informed New England opinion. Having asked these speakers to deal with tangible and prevailing views, I have the temerity, in opening, to express some ideas on intangibles.

My professor in government was fond of quoting from Sumner, who wrote in his essay on democracy that majorities cannot determine what is right and what is wrong; that all a majority can determine is what we will do next. In these times, when we are swept by events into the "next" before we decide to go there, I wonder whether a majority can have lost even that power.

There is a theory that government should follow public opinion. A more practical view holds that government should lead public opinion while appearing to follow it. Neither theory nor practice, on this line, works fast enough. In the long run, public opinion determines what is right and wrong. But I submit that it is often more important that a majority should decide quickly what to do next.

Before we become committed to the principle of government by public opinion we ought to ask ourselves if there is such a thing; and if there is, what are its capacities for decision. We should remember that any time between elections it takes a 75-percent prevailing opinion to force a majority decision. We should remember that in our own times the collective public mind and the individual mind have been swamped by a tidal wave of change; that minds—to mix a metaphor—are groping for light and gasping for breath; that hardly anyone knows where he is at or what he thinks and that almost everyone is willing to admit it. In geometry I was taught that a straight line is the shortest distance between two points. I am now advised that this is not true, but that there are only a dozen who would be competent to explain, provided I were bright enough to understand, what is the shortest distance. In almost every field of thought—social, scientific, economic, political—the average citizen is sure only that he is not sure of anything.

The state of the public mind is confusion and inconsistency. Almost everyone is talking one way and acting another, without knowing it. There is no such thing anywhere as enlightened consistent public opinion. Public opinion is a state of flux in chaos. If there is anything clear in current clamor, it is a cry for something to stay put—for something permanent and fixed and stable upon which a man can rely and in which he can have faith.

This sorry state of mind may be the most important fact we have to face. We have lost our compass and our reckoning and we have to make a landfall to get our bearings. Something has to stand still in plain view for long enough to sight on it. We cannot afford to tear down all the pillars of confidence. What people want and need, today more than ever, are stable institutions. Wherever evil exists it must be attacked; but this should be done by specific charges against named persons and not by innuendo and loose charges against groups. There are too many manhunts—too many smearing expeditions. For every public enemy uncovered, hundreds of honest men are made suspect. The price is too high for the meager results. There is too much uncoordinated and unlawful power trying to push people around by threats and scares and tricks. Let us remember, when we speak of post-war plans, that no plan is worth anything unless people are on speaking terms with one another after the war.

One American institution, intact in its framework, faith in which still abides, still retains and has recently demonstrated the capacity to act. This is representative government. Perhaps nothing has given the people of New England more courage than the recent resurgence in Congress of faith in its own capacity. I am aware that by an inconsistency characteristic of the times there are many who want Congress to be subservient to pressure while at the same time expecting Congress to be independent. But since Congress cannot be both, I believe it should openly adopt the independent course. It would be a great event, I think, if some day, when Congress is showered with pressure letters and telegrams, each Senator and Congressman should answer his constituents by collect telegram saying, "Please send me all the facts bearing on this matter." I can think of no better way to demonstrate that Congress usually knows infinitely more than those people who presume to advise it.

So far as I know the minds of our directors, the New England Council would say to the New England congressional delegation: "Let us help you get the facts; and having the facts, act independently for the national welfare as your judgment indicates. You are our representatives—the repositories of our confidence—the trustees of our political fortunes. It is necessary to trust someone, even at risk of occasional betrayal. We shall trust Congress. We affirm our faith in representative government, as the only hope of a free people in a world of infinite complexity. Restore to representative government its former dignity and vigor."

To restore confidence and unity, and to stimulate intelligent planning and constructive leadership, prompt action by Congress is needed along the lines indicated.

A foreign policy frankly based upon realism and national interest, implemented by adequate force committed to maintain peace, instituted and ratified by constitutional procedure, depending for support upon the general approval of the enlightened and the complete silence of the ignorant.

A definition of the functions and fields of free enterprise, and of the scope and purpose of business regulation; a restriction upon the expansion of Government into the field of business without clear showing of necessity and without express legal authority; a declaration of intention regarding the responsibility of industry for post-war reemployment, and an indication of the measure of Government support of post-war construction and production; with legislation designed to make possible the accomplishment by the business organism of the tasks assigned.

A thorough overhauling of the system of Federal taxation, to simplify procedure and computation, and promote the established policy for free enterprise by substituting incentive for handicaps, using the elimination of waste motion and complexities to reconcile the beneficiaries of simplification to increased tax collections.

A declaration of the right of individual security expressly conditioned by the obligation to work to the extent of capacity, fixing the responsibility for providing the opportunity, and stimulating production to a level where a guaranty of security can be made good by stressing the obligation to work rather than by providing the population with spending money.

Legislation fixing the maximum amount of currency to be outstanding and drastic measures to bring back into circulation the hoarded currency.

As for New England, we ask no favors or special advantage. In civilian supply we want an equitable distribution, whether of surplus or shortage. We would like to see an increase in New England's representation on congressional committees dealing with

legislation affecting our economic interests, notably on the House Committee on Interstate and Foreign Commerce, to which has been or may be referred important legislation on freight rates, risk capital, and aviation policy. We suggest that it would help us, and that it might help our Senators and Representatives even more, if the New England delegation could be organized by the assignment of special functions to selected individuals who could serve as contact points and centers of information on particular subjects, in order to promote unity in New England along lines of common interest.

Today's Challenge

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. PLUMLEY. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include an address I made at Williamstown, Vt., on Old Home Day, Sunday, August 1, 1943:

This is old home day in Williamstown. What a world of significance is found in that slogan. What a wealth of meaning is hidden in that word "home." It is very fitting for us to spend this day in observing such an occasion as brings us here together.

I am glad of an opportunity to meet old friends and to make new ones, though, as I stand here, I can and do appreciate just what an elderly lady said in addressing a similar gathering. She said, "I am almost overwhelmed by the fact that, as I look out at this audience, I see more faces of people who are not here than I can count of you who are present."

Such a day necessarily revives old memories, recalls old friends, old occasions, old days. "We count our rosary by the beads we miss."

Almost as soon as a Northfield schoolboy or girl learns to read he or she learns that the first land in Northfield was cleared by one Elijah Paine, of Williamstown; that the mountain was named after him and in his honor; and that the Paines, of Williamstown, contributed most of any and of all the early inhabitants to the establishment and early growth of my native town. The names of many others of Williamstown's distinguished citizens are woven inextricably into the warp and woof not only of the history of Williamstown and Northfield, but of the State and Nation, which they served so well. I pay my tribute to their achievements and to their memory.

"All we have of freedom,
All we have or know
This our fathers bought for us
Long and long ago.

* * *

Leave to live by no man's leave
Underneath the law."

I intend to speak to you briefly this afternoon, and in no partisan spirit, but as an American citizen profoundly concerned and seriously disturbed over the present trend in public affairs that seems to me to threaten the very foundations of democracy.

We are rightly concerned with respect to what must be our post-war attitude in dealing with our allies and our enemies in order to establish a just and enduring peace.

We should be more concerned with respect to what is happening to democracy right here at home, for what does it profit a man to save the whole world and lose his own soul?

The great British historian, Lord Macaulay, writing from London on May 23, 1857—over 80 years ago—commented in this clairvoyant fashion on the probable trend of events in the United States during the twentieth century:

"The day will come when, in the State of New York, a multitude of people, none of whom have had more than half a breakfast or expect to have more than half a dinner, will choose a legislature. Is it possible to doubt what sort of legislature will be chosen? On one side is a statesman preaching patience, respect for vested rights, strict observance of public faith. On the other is a demagogue ranting about the tyranny of capitalists and usurers. I seriously apprehend that you will, in some such season of adversity as I have described, do things which will prevent prosperity from returning; that you will act as people would, in a year of scarcity, devour all the seed corn, and thus make the next year a year not of scarcity but of absolute famine. There is nothing to stay you. Your Constitution is all sail and no anchor. Either some Caesar or Napoleon will seize the reins of government with a strong hand; or your Republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth."

The blessings of representative democratic government under which you have been raised and under which you live did not come about by accident. Have you ever pondered the long series of events and sacrifices by which the concept of democracy was made real in the world? Democracy is essentially a way of life; it is not a bed of roses; it is a dangerous way of living; it is for men, not weaklings. It is not the soft and sheltered existence that a wise and benevolent monarch grants his cringing subjects—the type of government which so readily degenerates into cruel despotism and to which oriental peoples have been accustomed since the dawn of civilization. It is distinctly a product of western Europe and history shows how recently has been its emergence. At Tours in 732, Charles Martel flung back the advancing tide of Saracens and the domination of an oriental despot which would have followed in its wake; again at Wahlstatt in 1241, the Count of Silesia and his German knights checked the Tartars under Bebu Khan and thus prevented the overrunning of western Europe by the "Golden Horde" that settled later along the Volga in southern Russia; and once more, in 1683—76 years after Jamestown was colonized in this country—the peoples of western Europe were called upon to throw back eastern despotism when they defeated the Turks at the gates of Vienna. The Englishman more or less clinched his personal right to democratic freedom at Runnymede through the Magna Carta in 1215, while we Americans owe our liberty to the sacrifices of our ancestors in the 2 crucial decades from 1770 to 1789. Probably there is not a man or woman present whose own ancestors have not participated in those momentous fights for human freedom. The student of genetics can demonstrate to you mathematically that, if your forefathers came from western Europe, some of them must have been involved in these struggles because otherwise there would not have been enough ancestors to go round.

Today these hard-won rights to democratic freedom are in real jeopardy in the United States.

The principle of the sovereignty of the people is found at the bottom of almost all human institutions. It is obeyed without being recognized, or if for a moment it be brought to light, it soon hides itself in most countries. In America, however, this principle of the sovereignty of the people is never concealed. We are outspoken in our declarations, though we may not be too active when it is involved. In these United States, as nowhere else in the world, this doctrine of the sovereignty of the people is appreciated; both its dangers and advantages derived therefrom are foreseen.

I believe it is most important that we have an enlightened people, an educated citizenry, in order that the people may rule, and righteously so. Those wise men, the makers of our Constitution, called their new Government a republic, and were correct in so doing, for such of necessity was its form. Do not forget for a moment, however, that they knew they were establishing a democracy, and an independent nation. This fact was constantly and everlastingly present in their minds.

If you will study the Constitution and the debates which led up to its adoption, you will find that these forefathers of ours did not attempt to set any barrier in the way of the popular will. They sought to put effective obstacles in the path of sudden action impelled by popular passion, whim, or the excitement of the moment. Their experience with the Confederation taught them to regard a weak government with horror.

Every end they sought to accomplish or had in view was for the establishment of a democracy with a strong government, but safe as well as strong, freed from the peril of lapsing into autocracy on the one hand or into disorder or anarchy on the other. They came here to undertake to do just what they did, and that was to establish a government in which the will of the people must be supreme. They made it so.

One of the fundamental rules and guides they followed was to make sure that it was the real will of the people that ruled. To this end they undertook to make it certain that there should be abundant time for discussion and consideration of measures and policies, in order that the public mind could and should be thoroughly and well informed. Above and beyond anything else perhaps they appreciated the value of education.

In these distressful days through which we are passing, we may at times feel that the way of life which has been called civilized may have been lost or forgotten. We may wonder from whence shall come the light that will lighten our darkness, or the guide who will lead us out. And here again the story of the ages tells us that our safety lies in the education of our people.

We must idealize the real if we would realize the ideal. Facts must be faced as facts. We may well keep our wagon hitched to a star, but we must keep our feet on the ground. Ideals are the thoughts, hopes, plans and resolutions of a people. They are their purposes, resolves and principles. The ideals of this Nation are the thoughts of what its people are going to do, have got to do to save themselves. The ideals of education in this country are the thoughts of those who carefully consider what education is for and what it must do for the people.

Henry James once said that "The greatest discovery ever made by man was made by the Greeks, who cutting themselves free from the traditions of the ancient world lighted upon the conception of a civil state where citizens should be free. To carry out this momentous experiment to its ultimate consequence is the most momentous experiment we have undertaken."

Times change and conditions with them. New times and new conditions must be met by and with the action and legislation they demand. All wisdom did not die with our forefathers, so also it is true all wisdom was not born yesterday. Yet not a single new

question arises but involves some one or more of the oldest theories of government. History repeats itself, and the experience of the ages is always a safe guide.

It is for us then in these dark days to do our best to help in the work of reconstruction, keeping our heads clear, our aims unselfish, and our hearts strong. If we do this we shall see humanity raised to a level yet unheard of. But the path is a rough one, and it is a long and tortuous road which we must tread. The journey cannot be accomplished overnight. Since the beginning of time two conquests have had to be made and will continue to have to be made until the end thereof. One is the conquest of nature, and the other of human relations. The first is relatively easy of accomplishment. The second decidedly not so. Only a mere beginning of a solution of this last problem has been made. If you do not believe it just stop to think for a moment that the earth produces food enough and to spare and to waste, and for all of us. Yet, at this moment, thousands are starving; hundreds of thousands going hungry, and all suffering from the paroxysms of unspeakable anguish, both physical and mental.

The problem is not solved. It is not insoluble. There is a way out.

I hope I may not be misunderstood or charged with partisan politics, nothing is further from my intent and purpose than to make a political speech, but in this presence I am constrained to emphasize the fact that the real vigor and strength of American institutions is due in large part to the restraints which these forbears of ours in their wisdom born of experience with kings and despots placed upon and around those in authority over them; they did not deliberately destroy the superstition of the divine right of kings, in order to foolishly create another situation more indefensible in a democracy; they were too wise for that, as is evidenced by the Constitution of the United States, the eventual fruit borne by their labors.

The growth, unparalleled, which these United States have enjoyed, is due more than anything else to the lofty spirit of individualism which this written Constitution and the unwritten laws, and the underlying positive determination of the people have sought to protect and to conserve, as much, I say, if not more, than to the natural resources with which God has so richly endowed the land, and blessed us as a people.

We should never forget that the doctrine that the will of the individual must be subordinated to that of the majority, when and if, and only when and if the common good demands, still stands. It stands, however, only to the end that the largest freedom may be insured to the state, the community, and the individual. It is for this reason that democracy is progressive. Democracy grows with and just as rapidly as the individual. "Under our flag," said President Calvin Coolidge, "sovereignty rests in the individual, and his rights must be protected."

Every effort of these ancestors of ours was definitely directed toward the accomplishment of the noble end of establishing and rearing a society of utterly responsible individuals, the only society on which an enduring democracy can rest. Your military power is nothing; your wealth is nothing; your numbers are nothing without the seed from which all greatness comes, namely, enlightened citizens.

Local self-government is the germ cell of democracy, but it is of no avail to count our millions, either of money or of men, if the individuals who make up the government are ignorant and weak and venal, for zero multiplied by any conceivable magnitude still results in zero.

It must constantly be borne in mind that the training of the free citizen is not so much a development of certain lines of knowledge as a development of certain essential qualities of character and habits of action. Courage, independence, discipline, and loftiness of purpose are the things really necessary for maintaining a free government. If a citizen possesses these qualities of character, he will acquire the knowledge which is essential to the conduct of the country's institutions, and to the reform of the abuses which may arise. If he does not possess these qualities, his political learning and that of his fellowmen will not keep the state from destruction. If he has not the courage to exercise his political rights in the face of purges and possible intimidation, no amount of acquaintance with constitutional theory will save his vote from suppression or prevent popular government from becoming a mere shadow. If he has not the discipline to subject his will to the restraints of law, no amount of knowledge of the beneficent effects of these restraints will save the people from that revolution and anarchy which invite tyranny from within or conquest from without.

In conclusion, may I say that in my opinion, the most profoundly important work which falls to the lot of the American citizen is his work c" guiding the destinies of the country. It is at once his greatest privilege and his heaviest duty. If by precept and example we train the members of the rising generation to do this well, all other things can be trusted to take care of themselves. If we do not train them to do this well, no amount of education in other lines will make up for the deficiency.

May I undertake to impress the thought that democracy acknowledges no sovereign. This republic cannot stand still. The world which is rising into existence is still half encumbered by the remains of the world which is waning into decay. The Dark Ages cannot return; it is an insult to our intelligence to suggest to the contrary. The world that is in the making is the world of generations to come. Those of us whose years are fairly full will be lucky if we see even the beginning of it. How long it will take to get it started is purely conjectural, but the youth of our day have the prospect of coming into an inheritance of great things accomplished and the prospect of greater things to be performed, beside which the accomplishment of the last 50 years will become utterly insignificant.

On the wall of the room in which Victor Hugo died, in the Place des Vosges, in Paris, is written over his autograph this prophecy:

"I represent a party which does not yet exist: The party of revolution, civilization. This party will make the twentieth century. There will issue from it first the United States of Europe; then the United States of the world."

His contemporaries and many of those who have lived in later years have thought he was out of his head. Some of you who are listening to me may live to see the fulfillment of his prophecy. We cannot and must not undertake to avoid our destiny.

In our individualism is found our security. When the day of the pioneer as an individual closes, then the night of oblivion for the United States of America will have arrived. Individualism as comprehended by the liberties we claim under our Bill of Rights is the backbone of democracy and of representative government everywhere. Let's stiffen it as we continue to fight valiantly to maintain the integrity of our Republic.

To grasp faintly the future of this country is to bewilder and exhaust the imagination. The past is but the happy prologue to the swelling act of an imperial theme. No problem is too great for our solution. No work is too great for our achievement. Tomorrow keeps new yesterdays in store.

"God bless our native land!
Firm may she ever stand,
Through storm and night:
When the wild tempests rave,
Ruler of wind and wave,
Do Thou our country save
By Thy great might!

"For her our prayer shall rise
To God, above the skies;
On Him we wait:
Thou who art ever nigh,
Guarding with watchful eye,
To Thee aloud we cry,
'God save the State!'"

The Betrayal of Palestine

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. CELLER. Mr. Speaker, from thoroughly reliable sources, information of a bitterly dismaying nature has come forth that a joint statement will be issued shortly by the British Foreign Office and the State Department, silencing all discussion on the Arabian-Jewish question in Palestine, and which will with one devastating stroke smash the hopes of those who dared look toward Palestine as the one realistic approach to the solution of the homelessness of a driven people. It will, in effect, be an implied, but nonetheless conclusive, acceptance of the MacDonald White Paper of 1939 which decreed that no more than 75,000 Jews will be admitted to Palestine for a 5-year period. The joint statement will with its "Silence, please," drown the clamor of the tortured Nazi victims pleading for a haven of refuge. Of the allotted 75,000 certificates of entrance, less than 29,000 now remain unused. These, more or less, will be confined to children. Adherence to the MacDonald White Paper means that in 1944 Jewish immigration into Palestine must cease altogether if so voted by a majority of Arabs.

Even more alarming is the accompanying information that the joint statement will be issued with the knowledge and consent of the President. Although he was importuned to stay the hand of the State Department, the reactionary forces were stronger, and while it may be somewhat softened as a result of the intercession of the President, it spells the doom of the Zionist cause and the beginning of the end of the long trek home. In the name of expediency and appeasement, under the shallow pretense of military and political necessity, Palestine as a homeland for the Jews becomes the lost Atlantis of a helpless, hopeless, unwanted people.

Neither we nor Britain can fall back upon the hackneyed, exaggerated, and

convenient excuse of military necessity or expediency. The lessons of history seem unavailing. Our scrap iron and oil did not appease Japan. Our appeasement of Vichy and Petain gave us Laval. Our diplomacy with Franco and his Falange and with Argentina has been artless and childlike. They play and continue to play ducks and drakes with us.

How ill have the Jews used Palestine that now the one open door must likewise be slammed shut in their search for dignity and security. They husbanded the arid soil of Palestine and made it rich in the fruits of the earth; they built hospitals for the Jew and Arab alike; they brought the lamp of learning to the desert with schools and the world-renowned university; they brought music and science to a world that had been left behind in civilization's march.

That which was uncultivated and considered uncultivable by the Arabs has been cultivable and cultivated by the Jews. The sands of Rishon le Zion, the swamps of Hedra, the rocks of Motza, the stony hills of Hanita, and the largest malarial area in Palestine, the Huleh Basin, which has been classified not only by the Arabs but also by the British Government as uncultivable land, are now being turned into the most prosperous and productive land of Palestine. They had to reclaim, drain, reforest, fertilize, and irrigate; they introduced modern and intensive methods of cultivation, modern machinery, new breeds of cattle and poultry, new plants, and seed rotation of crops. In 1939, the Peel Royal Commission stated: "12 years ago the national home was an experiment; today it is a going concern."

There has been since then further expansion. New industries have been started, textile, chemical, wood, metal, electrical, food, building, clothing, which supply the home market and the Near East as far as India. In 1941 alone, over 200 new Jewish industrial undertakings were established.

Nor has the immigration and settlement of Jews in Palestine been at Arab expense. The increase in the yield of the land has made it possible not merely to provide for additional settlers, but makes it possible for the old settlers to enjoy a higher standard of living. The Arabs, it was shown, have chosen to live in the greatest numbers in the neighborhood of Jewish settlements, and the increase of the Arab population has closely paralleled the Jewish increase, not only through the lowered death rate, but also because large numbers of non-Palestinian Arabs had seeped into the country to enjoy the highest standard of living in the Near East. Indeed, it would be a calamity for the Arabs if the Jewish settlement in Palestine were to be liquidated. The much vaunted limitations of absorptive capacity of Palestine is a myth in the light of Dr. Weizmann's statement that there is room for 2,000,000 more souls in Palestine, and even that estimate has been deemed conservative. It is time to ask why these facts are not given space in newspapers and magazines of large circulation? Have not they earned a right to be heard?

"Let the Jews go elsewhere," it will be said in mocking parallel to "Let them eat cake." Of all the nations fighting together in the name of freedom and liberty, not one has raised its voice to make them welcome, to offer them rescue, refuge, or asylum.

What answers can those responsible for the statement give when asked, "What is the remedy?" Where shall these people guilty of no crime but that of being born Jew go? What plans are offered by the authors of the Atlantic Charter and the "four freedoms" for the resettlement of the Jews after the war? Will the anti-Semites give the final answer to an uprooted people?

On the contrary, it would appear that certain forces have done their work exceedingly well in preparing for an uncritical receptivity of the forthcoming statement. A number of inspired articles have appeared, all following in what seems to be a planned sequence, to create the proper atmosphere, beginning with the publication of King Ibn Saud's statement in its opposition to Zionism and continuing through with the publication of the articles by Cyrus L. Sulzberger in recent issues of the New York Times, which were more sensational than accurate and more impolitic than wise. Why was this period chosen to review adversely the Jewish question in Palestine? Is there any connection between the appearances of these articles and the mischief to be loosed shortly by Whitehall Street in London and our State Department?

How relevant may or may not be the fact that one or more of our industrial giants have received valuable concessions from King Ibn Saud we do not know. Public-relations counselors are canny people.

Small wonder that Mr. Churchill has sleepless nights when he thinks of his friend Chaim Weizmann, Zionist leader, for did not Mr. Churchill say in 1939 at the appearance of the now infamous MacDonald White Paper:

> I feel bound to vote against the proposals of His Majesty's Government. As one intimately and responsibly concerned in the earlier stages of our Palestine policy, I could not stand by and see solemn engagements into which Britain has entered before the world set aside for reasons of administrative convenience or—and it will be a vain hope—for the sake of a quiet life. I should feel personally embarrassed in the most acute manner if I lent myself, by silence or inaction, to what I must regard as an act of repudiation.
>
> I was, from the beginning, a sincere advocate of the Balfour declaration, and I have made repeated public statements to that effect. * * * There is much in this white paper which is alien to the spirit of the Balfour declaration, but I will not trouble about that. I select the one point upon which there is plainly a breach and repudiation of the Balfour declaration—the provision that Jewish immigration can be stopped in 5 years' time by an Arab majority. * * * What is that but the destruction of the Balfour declaration? What is that but a breach of faith? What is it but a one-sided denunciation—what is called in the jargon of the present time, a unilateral denunciation of an engagement? Is our condition so parlous and our state so poor that we must, in our weakness, make this sacrifice of our declared purpose?

Mr. Churchill was aware that 53 nations, including the United States, had ratified the Balfour declaration. On the 21st day of September 1922, our American Congress by way of resolution approved the establishment of a national home for the Jewish people in Palestine. Nay, over and beyond the universal acceptance and approval of the Balfour declaration, on December 23, 1924, a convention was signed by the then Prime Minister of Great Britain, Austen Chamberlain, and our then Secretary of State, Frank B. Kellogg, concerning the rights of Britain and the United States in Palestine. Significantly, article 15 and subarticle 7 of article 28 read as follows:

ARTICLE 15

> The mandatory shall see that no discrimination of any kind shall be made between the inhabitants on the ground of race, religion, or language. No person shall be excluded from Palestine on the sole ground of religious beliefs.

SUBARTICLE 7 OF ARTICLE 28

> Nothing contained in the present convention shall be affected by any modification which may be made in the terms of the mandate, as recited above, unless such modification shall have been assented to by the United States.

Yet in open violation of both the Balfour declaration and the Convention of 1924, the MacDonald White Paper flouted the weighted decision of responsible government heads. The Balfour declaration was consented to by the United States. The Convention of 1924 was consented to by the United States. Who consented to the promulgation of the White Paper? What can Mr. Anthony Eden say when confronted with the forthcoming statement as his own phrases uttered in this country reecho through his mind:

> Never again—

He said—

> must the civilized world be ready to tolerate unilateral infraction of treaties. That would be to sap the whole foundation of the secure international life which it is our principal purpose to restore.

What is the White Paper but a unilateral infraction of a treaty solemnly entered into?

Surely silence cannot break the back of bigotry and racial antipathies. Enlightenment can only follow in the wake of the truth, the truth about the Arabs, for instance. The Allied Nations are well aware that of all the semitic tribes in the East only the Jews contributed the full measure of loyalty to the Allied cause, bringing in proud belief their blood and humble treasures. Not so did the Arabs of Egypt, Syria, Iraq, and Iran. Far from being neutral, they were actually hostile, easy prey to the foul noises of German propaganda. Is it necessary to point to the Iraq revolt to illuminate that point?

The Arab landed aristocrats, the emirs and military chieftains are as insatiable as Satan. It were just as impossible to satisfy or appease them as it is to try to hold back the tide with a groan. You

cannot deal with them "cartes sur table." And be it remembered these potentates and princes are Arabia—Pan Arabia. Moderation and palliation are considered by them as signs of weakness. They take suitable advantage. Just as Rommel and his Afrika Korps were ready to leap from El Alamein to Cairo and then seal the fate of the Allies in the Near East by closing up the Suez Canal, the lately avowed friend of America and Britain, King Ibn Saud, had not a word to say, could not spare a single trooper, camel or donkey for Britain's use. More British troops were required to patrol the doubtful Arab areas and cities, especially in Egypt, than there were actually facing Rommel's Afrika Korps in the Libyan Desert, Pierre van Paassen reports.

It was the Jews of Palestine that stepped forward as a man, voluntarily, not waiting for an army call. How many know or care to know that Palestine furnished the British armies in Libya, Eritrea, Ethiopia, and Somaliland thousands of doctors, nurses, and dentists, and placed the great Hadassah medical center of Jerusalem at the disposal of the Empire? Who is there now to give public recognition to the courage, loyalty, and steadfastness of the Jews in their aid to the Allied Nations in achieving the tremendous victories? The striking fact remains that the countries of the Near East with an aggregate population of 45,000,000—if Turkey is included—have contributed not a single soldier to the forces of the United Nations, the one exception being Palestine which has given her volunteers of whom more than three-fourths are Jews. These Palestinian Jews alone in the British Imperial forces numbered 17,000 in September 1942 in addition to the 10,000 in the military constabulary of the country.

Yet such has been the reward of the Jews that Arab appeasement is placed above Jewish honor. In Algiers another cruel blow is struck by General Giraud's abrogation of the Cremieux decree, depriving the Algerian Jews of their French citizenship, theirs since 1870, when Minister Cremieux in recognition of their loyalty and service to France so decreed, a citizenship that the Arab never wanted and never welcomed.

The MacDonald White Paper must be examined in the light of events since 1939. If it was a breach of faith then, how much greater is the betrayal today? No other course but its abrogation is open now, and the entire problem of the Jews and Palestine must be reexamined at the forthcoming Intergovernmental Conference on Refugees. To foreclose consideration of additional Jewish immigration into Palestine by any joint pronouncement now would doom the conference to failure. It would merely repeat the cruel mockery enacted at Bermuda and the tragedy of errors at Evian. It would make us coconspirators in the violation of international decency and honor.

In the wake of the terrible scourge of war, the bitter lesson is hammered home that the Jewish problem is a problem of the civilized world, Jew and Gentile alike. The apathy of nations to the burning, slaughtering, and massacring of Jews in Germany did not prevent the horror from spreading to Czechoslovakia, to the Poles, to the Dutch, to the French. That which was viewed as a Jewish question became a world conflagration. Inhumanity is not exclusive; it cannot confine itself to one people without overflowing in all directions to drown a world in hatred and in flames.

No peace can be just or adequate until the Jewish problem is settled. The one realistic approach is Palestine.

I yield to no man in my admiration for the British men and women and their magnificent efforts in this tremendous crisis. The "common man" in England has performed heroically the superhuman tasks occasioned by this greatest scourge in civilized history. The English people and the American people, however, should not be blinded by the duststorms of official protest as to the fate of the Jews in Europe; they should not be deafened by the noise. Conversation is one thing; it can be charming, interesting, and often educational. But the situation has long since passed the conversational stage. Action now is necessary.

When the surgeon enters the operating room and his staff of assistants close in on him at the table upon which the patient rests, immediate action almost always results. The surgeon does not take scalpel in hand and make a few incisions and then cordially invite the boys to a game of poker. From then on all is deftness, coordination, and cooperation. A human life is at stake and time is of the essence. If, in the interests of humanity, the surgeon does not hesitate, what earthly reason can be presented at this time to countenance delay when the circumstances are surrounded by a complete aura of fatality.

I repeat my avowal of admiration for England's saintly sacrifices that have saved us and the world. But how reconcile that with her attitude toward Palestine. A halo need slip but a few inches to become a noose. She must open Palestine to mass Jewish immigration at once; otherwise, Europe becomes a massive Jewish sepulcher.

Because some of the English leaders regard the Jewish question as an insuperable burden that must be gotten rid of willy-nilly, I must remind them of a classic, favored story of their own King George VI. A boy is carrying an even smaller child up the hill. When asked if the burden was too much for him, he replied, "It is not a burden, it is my brother." Either Christianity in England and America give concrete meaning to "Love thy neighbor as thyself" or bear the stigma of hypocrisy. Be it remembered that not everyone who says, "Lord, Lord" shall enter the Kingdom of Heaven.

Reading the official protestations of horror, listening to the verbal expressions of compassion and vainly waiting for the bonds of inertia to drop from the hands of officialdom, I can almost hear the White Queen of Alice in Wonderland saying to Alice, "The rule is: Jam tomorrow and jam yesterday, but never jam today."

What schoolroom cat and mouse game is this to promise, then plague? Are the insatiable Arabs to be fed while the cry of distressed millions finds no answering call?

The British Empire upon which the sun never sets with its far-flung possessions can now find it in her heart and mind to deny the tiny portion thereof that is Palestine to a people who have watered and nourished it in reliance upon a mighty promise. Had she offered other havens to the storm-tossed of Europe, she might then have said as did King James to the fly: "Have I three kingdoms and thou must needs fly into my eye?"

What are we offering but silence?

The Jews everywhere—here and abroad—look to President Roosevelt as their only hope, their modern Moses to lead them out of the wilderness, to save them from a new and more terroristic diaspora. It apparently is too late to change the mold of opinion of Churchill, Eden, Halifax, and other English leaders save by drastic means. Their ideas are congealed except as Roosevelt will demand change. We humbly petition him to bear upon the British Foreign Office to seek the light that only justice, mercy, and humanity can bring. He must bring England back onto the beam of the Balfour declaration.

I call upon the good people of America to help in this crisis. There is so little time to act. Soon Roosevelt will meet Churchill. They may be in conclave now. Express your views to those in authority in Washington—to the President, to Secretary Hull, Secretary Morgenthau, and other members of the President's Cabinet, your Senators, your Congressmen. Your voice will shatter this conspiracy of silence.

The Fulbright Resolution—Importance Overestimated

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. PLUMLEY. Mr. Speaker, I shall vote for the Fulbright resolution if and when I have the opportunity so to do, for I favor the principle of the participation of Congress in negotiations with reference to international post-war plans for peace.

I do not take the resolution too seriously, however, for it commits us to nothing in particular, as it is in fact nothing more than a gesture, although made in good faith, in favor of a just and lasting peace and the contribution of Congress to that end.

It is a concurrent resolution, which fact suggests to me that when it comes

back from the other body it may not be even recognizable.

Therefore, I say not too much time need be consumed in its consideration nor wasted in its discussion; for the importance of the resolution has been exaggerated. The party to which I owe my allegiance has already twice committed itself to the policy of United States participation with the Allies in post-war planning; so I cannot go wrong to vote that Congress shall assert itself along that line.

At best, the resolution is only an expression by the Congress to the effect that it favors the creation of appropriate international machinery and the development of power adequate to establish and maintain a just and lasting peace. Everybody is for that as a general proposition. Anyway, the Republican Party is. It is not time for blueprints or scale drawings.

Then, again, the resolution has no binding force or effect on anybody, and, except for the fact that it puts the Congress on record as to its intentions, it is much ado about nothing at this day.

The President knows, without this resolution, that Congress as the legislative branch of our Government proposes not to be ignored in post-war negotiations. If this resolution serves notice to the world to that effect, it is worth voting for.

Wood-Pulp Shortage

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. BECKWORTH. Mr. Speaker, I wish to include in the CONGRESSIONAL RECORD a very timely editorial which appeared in the Dallas Morning News of September 11, 1943, with reference to wood-pulp shortage. The solution of the wood-pulp shortage suggested is very pertinent.

The editorial follows:

WOOD-PULP SHORTAGE

We think of the products of the press as intangibles—statements of fact, ideas, opinions, public movements. That is a correct appraisal. But there is one concrete material of the manufacturing industry we call the press. It is paper. And it is vital to the existence of the press. To limit the supply would be to limit the press just as effectively as it might be limited by law or dictator's ukase. This is especially true since, in event of a drastic paper shortage, the "little press"—the country weekly, the struggling independent periodical, the crusader and reformer—would be the first to go under.

The Nation faces such a shortage now. There is an abundance of timber in the forests of Canada and the United States, but the cutting of timber for pulpwood has largely been the off-season avocation of the farmer in the forest areas. And the farmer has gone to war as nearly unanimously as any group in the country. In Canada the situation is also complicated by the fact that the Government, while making farming an essential industry, has refused to include the gathering of pulpwood, although the farmers have asked for this classification. It has been stated, and denied, that the paper industry of the Dominion has favored the Government policy which has contributed to paper shortage. Whether this is a false accusation or not, the supply has dwindled—and paper prices have advanced. In the United States wood gathering by farmers has been classed as an essential occupation.

Facing a critical situation, the Nation's publishers, who have hitherto given much space to drives for scrap metal, grease, rubber, and other strategic materials, have suddenly found themselves in need of a hurried campaign for their own essential product. Large and small publishers are now joined in such an effort.

The farmers in the wooded regions hold the solution to the problem. In east Texas, where the paper industry is new, lack of knowledge of the ready market may be one difficulty. Lack of transportation is another, but at least one of the big east Texas paper mills is working out plans for operation of its own wood trucks on gathering routes. Because of the mild winters, east Texas farmers have an excellent opportunity to develop a remunerative avocation between crop seasons. Just at present they would be rendering a patriotic service, in addition.

Future expansion of the southern pulp and paper industry may free the press of this region from dependence upon the paper industry of Canada. In doing so it would establish a market for another crop to add to the diversification available to east Texas and old South farmers. By aiding in the present emergency, farmers can help pull toward that end.

The Future of Aviation

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Future of Aviation", delivered by me at Quincy, Ill., on Thursday, August 5, 1943, at the Quincy Stadium.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am exceedingly grateful to the industrious and public-spirited citizens of Quincy who have arranged for this meeting in my honor. Happy am I as one of your United States Senators to come to Quincy and participate as the principal speaker in the culmination of a long, hard fight for a standard airfield for this thriving community. What I did in Washington was in line of duty as a public servant. What so many interested people did in Quincy to accomplish this noteworthy objective came through civic pride. You looked into the future. You had vision in the realization that aviation is only in its infancy. As this gigantic enterprise reaches into every section of the world in the post-war era, Quincy now basically prepares to meet that challenge.

My friends, I need not relate to the people of a wide-awake community that a revolution in transportation is plainly under way. The ramifications of this revolution are so great that none of us can yet grasp their full significance and implications. I firmly believe that we have never had such a vast picture to study and try to understand because it covers the globe.

A quick check on what it means, at least in part, to each of us here today, may be had by projecting Quincy's place in the air world. In 1940 Quincy had 6 licensed civilian planes. If we have 500,000 planes in 1950—as was recently estimated by the Civil Aeronautics Administration—Quincy's share should be 120 planes. In 1940, Quincy had nine licensed pilots. By 1950, it should have 480 licensed pilots, based on C. A. A. expectation that the general average will be four pilots per plane. Feeder planes will fly passengers, mail, and express to big population centers, and any one of us will be able to reach any point on the globe in 60 hours or less. These projections are based on facts. If anything, they are therefore conservative. At least they give us a glimpse, in terms of one enterprising community, of the age of air upon whose threshold we now stand.

The problem focuses perhaps more clearly in other terms. The aviation industry is today—temporarily—far and away the largest in the country if not the world. Ingenious new techniques of manufacture of aircraft, engines, and accessories have been devised under the pressure of war needs. These new techniques and processes at once cut unit costs and multiply output many times. We used to point with pride—and rightly—at the wonderful mass production technology of the automobile industry, which at its all-time peak in 1941 turned out a mass of products valued at $3,700,000,000.

Aviation production makes this figure seem small. From $280,000,000 in 1939, aviation production jumped to $6,400,000,000 in 1942—and for the current year our schedule calls for the huge sum of $20,100,000,000—more than five times automobile production at its peak, a fourth of our war budget for the year, almost a seventh of our estimated national income. The President has announced that 1944 production, calculated upon a basis of tonnage, will top 1943's by more than half—by 55 percent, to be exact. About 2,500,000 men and women of various skills are at work in our aviation plants and now dependent upon them for a livelihood.

These figures mean that we now possess what are beyond question the largest and finest aviation production facilities in the world. We simply cannot afford to allow them to go to waste and become rusty through disuse.

There are other assets. Consider the number of pilots and other aviation specialists now in service or in training. We shall soon have some 3,000,000 men in the air forces of the Army and Navy. Hundreds of thousands will be trained pilots. Many more will be skilled as navigators, mechanics, radiomen, meteorologists, airport and airways engineers. All will be familiar with one phase or another of flying.

Are these men going to be content to remain on the ground again, forgetting all about their fresh and exciting experience in the air after peace comes? Undoubtedly, hundreds of thousands of these men will continue to follow aviation either as a vocation or as an avocation, provided—and it is an important proviso—that it is not made too difficult for them.

Here, I think, is where present air-minded communities like Quincy come in. People are apt to forget that flying involves more than airplanes and pilots. It requires all kinds of visual and radio aids to flying and a vast network of airports.

What is our progress in these two respects? Before the war the Civil Aeronautics Administration made a Nation-wide survey of air-

ports, and with this as a base conceived a tentative plan for a network of 4,000 ports to serve the more or less immediate needs of the country.

If these airports were evenly distributed throughout the country, they would form a checkerboard 30 miles square. Of course, in some extensive mountainous or desert areas airports would not be required, and therefore these could be applied to the more thickly populated zones.

The war, of course, has caused many shifts in this plan. To date, approximately $400,000,000 has been appropriated by the Congress for the national defense airport development program, which is limited to the development and improvement of sites designated as essential to the war effort and approved by the Secretaries of War, Navy, and Commerce. All of the appropriation is now either allocated or encumbered.

At the present time there are almost 3,000 classified airports in the country—1,000 short of the prewar plan. Altogether, these airports could probably handle 300,000 airplanes, but an immense amount of construction would be required for facilities for housing and servicing. Recent development has necessarily been concentrated largely upon the larger fields. As a result, there has been an 11-fold increase in the number of our major civil airports, with paved runways at least 3,500 feet long and capable of handling the large transport craft. Whereas we had only 76 such fields 2 years ago, we shall have 865 by the end of the year. Nor does this number include many large airdromes built solely for military use.

The situation in regard to smaller airports is this. We have 1,238 class I airports, the lowest category, which are those having unpaved runways 1,800–2,500 feet long, and at least 300 feet wide. We have 905 class II ports, each of which has paved runways between 2,500 and 3,500 feet long. These fields are situated, for the most part, near smaller cities and larger towns.

Aviation's growth is further reflected in the growth and operations of the Federal Airways, which now totals 35,000 miles within our continental boundaries, a 700 percent increase since 1927. Their length has almost doubled since 1932. Traffic along the airways is increasing at an astonishing rate. Recorded movements along the official skyways were 6,000,000 during 1942. For the current year we estimate that they will reach 13,000,000 or 14,000,000, and we believe they will continue upward despite a probable slight dip immediately following the close of hostilities. We expect that by 1950 we shall have in this country at least a half million private, commercial, and military planes in active service. You will appreciate the significance of that when I tell you that at the end of 1941 we had in the entire country less than 25,000 licensed civil aircraft.

Our airways, unlike those of Europe, have been designed for mass traffic. Our radio and other control equipment is of the best, and we can count on our scientists and inventors to keep our lead in this respect. After a study of all other airways systems, Canada and Australia chose to build theirs on the American model. The Canadian airways are so closely integrated with our own continental and Alaskan systems that the three virtually form a vast continental system, covering all territory north of the Rio Grande. Gen. Salinas Carranza, director of civil aviation of Mexico, visited Washington a few weeks ago and declared his intention of extending a similar system throughout Mexico. He expressed the belief that the Central American countries might do likewise, and that we could well contemplate a continental airways system extending from the Bering Sea to the Canal Zone. Radio men and airways engineers of the C. A. A. are not only improving and extending our domestic skyways, but are cooperating with the armed forces in establishing routes across the seas to all the other continents. We have recently installed four intercontinental super radio stations which in their combined range blanket the world, providing direct communication from our shores to an American plane in flight anywhere on the globe. The major units are located at New York, New Orleans, San Francisco, and Honolulu with supplementary stations at Seattle, Anchorage, and many of the Pacific islands. Such are the unseen aids upon which air transport is built, connecting Quincy with the uttermost corners of the globe.

War is primarily responsible for the quickened pace in this global development of aviation. Within a short space of time the genius of our American engineers have advanced our fighter planes to the point where they are second to none. Our bombers are superior to all. I am sure the savage Japanese would even admit this. With a bomb sight no other nation has, with pilots that have no equal in training, audacity, and courage, we are gradually closing in with the help of our allies upon the Axis criminals. Strange as it may seem, when this war was planned in Berlin, Rome, and Tokyo by the Axis criminals they were more than certain that the airplane was the deadly weapon which would destroy what they term the "decadent democracies." Hitler, Mussolini, and Tojo, and their infamous stooges, all drunk with power, saw in the airplane the chief instrument of death that would destroy the democracies of the earth and enslave their people. They came near succeeding, my friends, but fate sometimes steps in with a mixture of strange phenomena. Today and tomorrow the airplane will be our chief weapon in forcing the dictators to the terms of "unconditional surrender."

A peaceful democracy has been aroused from its lethargy. Few people now underestimate the danger that was ours only a short while ago. Our production in planes, tanks, ships, and guns with all of our home front problems will be recorded by those who write history as the miracle of the age. And yet, my fellow Illinoians, we have only begun to produce. Tomorrow Quincy will be as close to London as she was to Springfield 30 years ago. Does any reasonable and prudent mind believe that with such a speedy development of an industry that wields such power in peace or war over the life and death of a nation that we can remain aloof from the rest of the world in times of peace?

In this ghastly war commercial air lines and our Army and Navy transport services are making 500 flights a week across the North Atlantic, and this is just a beginning. Every day new routes are being pioneered, and with the coming of peace many more will be opened up for the transport of cargo and passengers. According to a recent conservative estimate—and it may well be too conservative—there will be an eightfold increase in intercontinental air passenger traffic by 1947, and an eightfold increase in mail and express hauls. Operations of domestic air lines will increase fivefold within the same period.

On the home front the greatest boom is going to come in the field of private flying for business or pleasure purposes. This has to be if aviation is going to do for our economy after this war something of what the automobile did after the last war. Bear in mind that commercial vehicles—trucks, busses, ambulances, hearses—constituted only about 20 percent of our automotive output in normal times. We must create a similar situation in our aviation business. Cargo and passenger air liners will never keep our net aviation production potential busy and healthy.

Manufacturers now assure us—and we can accept their assurances, I think—that after the war we shall have small, safe, and inexpensive private planes costing no more to buy and operate than a medium-priced car. The most revolutionary development in this field is the new Sikorsky helicopter. Its inventor predicts that hundreds of these will be performing short-run cab- or bus-type services within a few years of the signing of peace, and that many hundreds of thousands of them will be carrying individuals and their families wherever they wish to go. The helicopter may well take over the collection and distribution function now performed by the mail pick-up operation. It seems to me that the pick-up scheme can serve best as a preparation for a service of wider scope. It is all right to yank a sack of mail off the ground, and wind it up into the plane, or even some kinds of express matter, but what if it is a passenger who wants to go?

Commercial air transport will continue to grow steadily. Between 1927 and 1942 the number of passengers riding the air lines increased from 8,700 to more than 4,000,000 a year. In the same period, air mail jumped from 1,270,000 to 44,600,000 pounds annually, and air express and freight from 46,000 to 22,300,000 pounds. Remarkable as it is, this rate of growth in my opinion will be considerably accelerated during the next decade. The day is not far distant, I believe, in which all first-class mail will go by air, with pick-up and feeder services tying the smaller communities to the great trunk air lines. Such nonstop pick-up services have been thoroughly tested during the past 3 years on routes totaling almost 1,500 miles, and the equipment has been so successful that the Civil Aeronautics Board has before it 23 applications for the establishment of similar routes in all parts of the country. So far we have no more than scratched the surface. If you consider the flying done in Alaska on the basis of the ratio of its population to that of continental United States you will find that Alaska has 100 times as many airplanes, flies 20 times as many passenger miles, 75 times as much mail, and about 1,050 times as much express and freight. Of course, Alaska's lack of roads and railroads is an important factor, but that shows what can be done.

Recent growth has been most marked in the field of air express—that is, in the carrying of small packaged goods of high intrinsic value such as films, radios, precious metals, spare machine parts, and similar articles needed at once in a particular place. In October 1942 air express was up almost 125 percent from the same month in the previous year, and it is certain to go on increasing.

It is axiomatic that after victory is won we must retain the supremacy of the air. We must continue to have the best aviation in the world. We cannot afford to give up a single air base that we have won in the Pacific through the sweat, blood, and tears of our heroic men. Security for the Anglo-Saxon institutions demands no less. America will want to be an integral part with a convincing voice in the air fields that we are now establishing in certain other parts of the world. There can be no monopoly of the air in the commercial trade routes of the world when the war is over if we expect to establish a real foundation of permanent peace.

I do not share the views of some who are predicting that the airplane is about to make our railroads, steamships, and trucks quite obsolete. This only confuses and misleads the public on the real values of aviation. If we have the type of prosperity that is in the offing in the post-war era, we will need all forms of transportation.

The question here, as in all commercial air operations, is relative cost compared to other forms of transportation. Traffic tends to flow, other things being equal, along the cheapest medium of transportation. Higher rates will only be paid when some advantage can be gained by great speed of delivery, convenience of service, flexibility of operation, or

similar factors. Air transport service does offer speed, convenience, and flexibility in many instances. But so far as the general run of freight is concerned, the differential between plane rates per ton-mile and those offered by railroad, truck, and steamship is still very large. It is difficult, indeed, to envisage our wheat, iron ore, coal, petroleum products and so on winging their way to their destinations.

The airplane has an essential job to perform, and it will do this by supplementing—and not by supplanting—other forms of transportation. In its own proper field, however, its future is practically boundless.

Whatever Quincy's course—or, in pilot language, whatever your "flight plan"—your enterprise and farsightedness would seem to assure you a clear horizon, a tail wind, and a happy landing.

Post-War Peace

EXTENSION OF REMARKS

OF

HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. BALL. Mr. President, I ask to have printed in the Appendix of the RECORD an address on the subject of post-war peace delivered by me at a mass meeting held at the Chicago Stadium on September 11, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Twenty-five years ago the United States fought in a great war to end all wars. Victory in World War No. 1 was to "make the world safe for democracy." Our arms were victorious in that war, but our cause—democracy and peace—was lost in the blind reaction and muddled diplomacy of the twenties and thirties. Our gallant youth did their share on the battlefields, but the peoples and governments of the democracies, our own included, failed to accomplish their share of the task.

Because of that failure, we are fighting today in another and greater World War No. 2. Again it is a war for democracy and peace and against tyranny and aggression. Again our fighting youth—on the snowy hills of Attu, in the steaming jungles of New Georgia, on storm-tossed oceans, and in the roaring skies of Europe and Asia—are winning on the battlefield. They are buying with their lives the military victory that will give to us another chance to assure victory in the world for our cause—democracy and peace.

Are we at home ready to do our share of the job, do it with the same courage and determination with which our fighting men are winning battles? That is the issue we meet here tonight to discuss. How effectively we answer it will decide whether the future holds freedom and peace for America or whether it holds growing regimentation and war. To those of us on the platform tonight, Democrats and Republicans, it is an issue far greater than any political party or personality, because at stake is the future of America.

Today we hear on all sides the question: We know what we are fighting against, but what are we fighting for? Our people at home are asking it, our own soldiers and sailors and airmen, risking their lives, are asking it. Our allies are asking it, and the enslaved millions of Europe and Asia are asking it.

We can, with justice, criticize our Government, both the executive and legislative branches, for their failure before now to give us and the world a clear-cut answer to that question. On the Pacific front the need for an answer has long been apparent, and more recently the timid, muddled, fascist-appeasing policy of expediency in north Africa and Italy has made the need for an answer in Europe urgent.

Yes, we can criticize our Government, but we the people also have our own responsibility. In the final analysis, it is the people who must answer the question: "What are we fighting for?" That is the reason for this mass meeting; that is why a score of us in Congress have been stumping the country on this issue, seeking to make sure that as we win the war we also win the peace.

What is America's stake in a just and durable peace, in helping to prevent World War III from happening? From a purely material viewpoint, the United States cannot afford another world war. We are shipping our high-grade iron ore out of Minnesota at the rate of 90,000,000 tons a year. There won't be enough left for another great war. The end of our huge oil reserves in continental United States is in sight, the tremendous quantities of oil used in war have just forced more stringent gasoline rationing in our Midwest. We always have imported tin, rubber, and scores of other critical materials. Our reserves of lead, zinc, and copper are running low. These materials are vital to our industrial economy. Our very prosperity, the continued operation of our production plant, will depend after the war on maintenance in the world of stability and peace, the only conditions under which we can import these materials in the quantities needed.

But far more important than the wastage of our natural resources in war is the wastage of our human resources. Democracy as a form of government depends for its strength on a continual supply of leadership from the people, leadership with the intelligence, integrity, and courage needed to solve today's complicated problems. Recurring wars deplete and eventually destroy this most vital of all resources of a democracy.

There are those who believe that the only safety for America lies in maintaining sufficient military strength so that no one would dare attack us. Consider the cost. If America must depend entirely on its own strength for security in a world in which there is no collective security, we'll spend fifteen to twenty billions a year for defense after this war. That would mean a continuation indefinitely of W. P. B., O. P. A., W. L. B., O. D. T. and all the other regulations which today curb enterprise and curtail our freedoms. That sort of total mobilization of our economy and national life is an essential part of modern, total war, and it is also part of total defense. Eventually we'd have to balance the Federal budget and we'd pay, not 20 percent, but 50- or 60-percent income taxes, and our living standards would go down proportionately.

No single nation can feel safe in the world today without going a long way toward complete militarization, and militarism and democracy simply cannot exist for long together.

This is not just our second chance to build a lasting peace. It is our last chance, as a democracy. Everyone who has seen what this war has done and is doing to our democratic institutions and our individual liberties is certain that the very democracy we fight to preserve today would go under in World War No. 3 if we permit it to happen.

That is America's purely selfish stake in a durable peace. It is equally true that a lasting peace, the elimination of fear of aggression, is fundamental to the continued growth and progress of democracy in the whole world. We can hope to solve all of the complicated international problems—colonies, minorities, distribution of raw materials, currency stabilization and air and sea routes—only in a world atmosphere of peace and security. Some of them will take generations to solve. And it would be futile to attempt the solution of international problems if every nation must be constantly on the alert against aggression, constantly striving for economic self-sufficiency as a defense measure. The first requirement of victory for our democratic cause is the maintenance of peace once the war is won.

With so much at stake, it is a cruel mockery of the sacrifice our fighting men are making, to talk of the peace in empty and ambiguous generalities. It is not enough to tell American fathers and mothers, whose sons are dying in distant lands, that "of course the United States must cooperate to maintain peace; just leave it to us and we'll work it out." Let's say what we mean and mean what we say. It's time for both the Congress and the Executive to come down out of the stratosphere and present to the American people a realistic, down to earth, specific program to make sure that the United Nations will keep the peace our sons are buying with their lives, and then implement that program with action.

Four of us in the Senate, two Democrats and two Republicans, have tried to set out clearly the minimum essentials necessary for a durable peace in Senate Resolution 114. That resolution reads:

"*Resolved*, That the United States take the initiative in calling meetings of representatives of the United Nations for the purpose of forming an organization of the United Nations with specific and limited authority."

Any attempt to maintain peace must be a joint venture of many nations. One nation alone can make war, but it takes two at least to remain at peace. There are only two methods of joint action by many nations. One is through alliances or pacts of mutual assistance, the other is through a democratic organization of nations.

Alliances are unstable. They are in the power politics, imperialistic tradition. Almost inevitably they mean dividing the world into spheres of influence, with the great powers running the show. And past experience indicates that the balance of power sooner or later becomes unbalanced and explodes into war.

On the other hand, an organization of nations, acting under clear-cut rules outlining and limiting its authority and functions, is in the democratic, American tradition. It is the way democratic peoples solve their problems. It recognizes the rights of smaller nations and the contribution they can make to world stability. The United Nations, so far only a concept and not a political entity, is the logical beginning of such an organization and the sooner it is organized, the better. Today, the forces pulling the United Nations together—our common cause, common enemy, our hope for a better world—are dominant in each nation. But the moment victory is won, those forces will be challenged by others—economic rivalry, imperialism, militarism, nationalism, deep-rooted prejudices and fears—and effective joint action will become much more difficult.

We propose United States leadership in establishing such an organization now for a very simple reason. Insofar as establishing an effective collective security system is concerned, the United States attitude is the biggest single question mark in the world. We do not know what we intend or want to do ourselves, how, how can we expect our allies to know? Twenty-five years ago, an American President persuaded the conference at Versailles to adopt the League of Nations, but a minority of the Senate vetoed United States participation. Our President, Republican or Democrat, cannot assume effective leadership in this field until the question of our policy is settled by positive affirmative action by Congress.

To continue with the resolution, the United Nations would be given specific and limited authority:

"1. To assist in co-ordinating and fully utilizing the military and economic resources of all member nations in the prosecution of the war against the Axis."

Winning the war must always be our first objective, and while the general staffs run the war, a United Nations organization could assist in many ways.

"2. To establish temporary administrations for Axis-controlled areas of the world as these are occupied by United Nations forces, until such time as permanent governments can be established."

The personnel doing this temporary administration job, whether it is A. M. G. O. T. or some other agency, is not so important, but the policies to be followed are, because to a very large degree they will set the pattern for the peace to follow. If we cooperate with pro-Fascist elements for the sake of expediency in this temporary job, we are making it that much harder for the local people to establish real democracy later. If the peace is to be a United Nations peace, the temporary administration policies should be United Nations policies. Perhaps Russia's attitude would not be quite such a question mark today if there had been some joint agreements in this field before North Africa.

"3. To administer relief and assistance in economic rehabilitation in territories of member nations needing such aid and in Axis territory occupied by United Nations forces."

Steps already are being taken to establish this work as a United Nations function. It should be that, rather than solely a United States or an Anglo-American set-up. It will be a huge job, and every nation should contribute according to its ability to do so.

"4. To establish procedures and machinery for peaceful settlement of disputes and disagreements between nations."

I do not believe there is much argument on that point. Obviously, if we are going to outlaw war as a means of settling international disputes, we must set up machinery to settle them peacefully, by arbitration, conciliation, and adjudication. The argument comes over the final function, to make peaceful settlement stick.

"5. To provide for the assembly and maintenance of a United Nations military force and to suppress by immediate use of such force any future attempt at military aggression by any nation.

"That the Senate further advises that any establishment of such United Nations organization provide machinery for its modification, for the delegation of additional specific and limited functions to such organization, and for the admission of other nations to membership, and that member nations should commit themselves to seek no territorial aggrandizement."

The final paragraph would make sure that we have a living organization, capable of growth and change as the world changes, and not simply an international authority dedicated to maintenance of the status quo regardless of justice.

The heart of our proposal is the fifth function, an international police force. That is the question on which the issue will be fought in Congress this fall. The question is: Do we really want international law and order and peace, or are we merely talking nice generalities but determined to go back to the old system of international chaos and recurring wars? No government at any level, local, State, or Federal, however limited its functions, ever functioned successfully without having somewhere the force necessary to enforce its rules and punish violations.

The League of Nations outlawed aggression, but depended on individual nations to supply the force to make it stick. That did not work. Individual nations will not go to war or risk war simply to save the peace of the world, even though it is now clear that their own peace is involved sooner or later. They will go to war, and this is particularly true of democracies which are devoted to peace, only when their own security is threatened vitally.

Whatever the deep-rooted causes of war may be, and we can be certain it will take generations, and they must be peaceful generations, to get rid of all of them, wars always start in just one way—by aggression. One nation crosses the boundary of another with armed force. If we can devise effective machinery to stop and control that first fatal step, then we have war under control.

Aggressors are not deterred by diplomatic protests, world opinion, or even by sanctions, as we have found. They respect only force—force which they know can and will be used against them. The developments of modern war eliminate the need for any huge land armies to do this policing job. Some naval units would be needed, but, primarily, the international force would be air force.

Even a relatively small air force, available for instant use, would be tremendously effective. Consider, for instance, how different the history of the past few years might have been if at the time of Munich the League of Nations had had authority to use and had available to use against Hitler just 5,000 first-class fighting planes. That is just one-tenth of America's production in 1942 and one-twentieth of our production this year.

In joining such an organization, every nation, including ourselves, would give up one right of unlimited national sovereignty—the right to wage aggressive war. We would delegate to the international organization the right to use force to stop military aggression. The United States would have a voice roughly equivalent to its contribution and world influence in that organization, but we would not control it, and should not seek to do so, if we truly believe in democracy.

Congress will vote on that issue this fall. It is the most important issue our Nation faces today. We can make mistakes on domestic issues—farm, labor, and tax policies—and we are strong enough to survive and correct them. But our democracy will not survive World War No. 3. It is the lives and freedoms of future generations that are at stake. Let your Congressmen and Senators know what you think, watch how they vote this fall, and if they are wrong, replace them next year with leaders who will be right on this all-important issue.

To do nothing today is to invite disaster. A policy of drift, a policy of wait and see, a policy of delay until all the little problems and prejudices obscure the main issue has landed peace-loving America in two wars in one generation. And as sure as I stand here tonight, such a policy will land us in World War. No. 3.

Of course, there are difficulties to be overcome. There are jealousies, extreme nationalists, short-sighted leaders who worship the status quo, and all kinds of other hazards in the way.

But there were far greater difficulties, far more dangerous hazards at Bataan and Guadalcanal, on Attu, on the slopes of Hill 609, and in the flying fortresses over Hamburg and Berlin.

Our youth today are offering their lives for something bigger than themselves, outside of themselves and their own personal interests. Theirs is the ultimate act of faith—faith in the future of America, faith that out of this horror will be born a better, braver world, free of the curse of war, faith that we at home will not let them down.

While they fight, we at home are the custodians of that faith of theirs in the future. We must not fail that trust.

Statements of Policy Adopted by Directors, Wisconsin Council of Agriculture

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD statements of policy adopted by the directors of the Wisconsin Council of Agriculture, meeting in Madison, Wis., on September 9.

There being no objection, the statements of policy were ordered to be printed in the RECORD, as follows:

FOOD IS VITAL FOR VICTORY

Food production and distribution are the most acute and challenging problems facing the people of the United States. These problems will become more serious as time goes on.

National policy should be formulated with a view to producing the maximum of needed foods and fibers. The war emergency should not be used as a means for furthering social and economic reforms that fall outside of war needs and retard full agricultural production. Full production requires increased returns to farmers. In a wartime economy total agricultural production becomes a responsibility of the national administration. It is imperative that this responsibility be discharged with greater dispatch and efficiency in order to meet the ever-increasing costs of feed, labor, and equipment and to overcome the handicaps of restricted labor, equipment, and supplies.

SUBSIDY IS DANGEROUS AND UNNECESSARY

Farmers accepted Government aid during the depression as an emergency measure. A program of Government subsidies has never been considered by farmers as a permanent solution. It is in the interest of the Nation that agriculture be placed on a self-supporting basis.

Subsidies and roll-backs do not combat inflation. To prevent inflation, purchasing power must be held in check and production must be increased. Subsidies and roll-backs do neither. On the contrary, they increase consumer purchasing power and are not dependable and effective incentives to farmers for increasing production. Farmers react more enthusiastically in their production efforts to a fair price in the market place than to Government payments in the form of subsidies that add greatly to the mounting national debt. We believe that those who eat the food should pay for it now, when there is full employment and high wages, rather than postpone the living cost of the present to be paid in the indefinite future by the taxpayers under conditions of probable lower wages, lower prices, and unemployment. It is not in the interest of either agriculture or the Nation to apply the principles of subsidies or roll-backs which lead consumers to believe that they are entitled to get food at less than it costs to produce it.

Subsidies cause confusion and uncertainty rather than incentive to produce. They promote inflation by increasing consumer purchasing power to the extent of the subsidy. Subsidies increase the national debt not only by the amount of the subsidy but also by the added cost of administration. Subsidies require vast numbers of people for enforcement at a time of manpower shortage.

We stand equally opposed to subsidy in new form or name such as the contemplated new program of Government purchase and resale at a loss. We hold that such programs are an unjustifiable and unnecessary consumer subsidy which will add to the mounting national debt and would be inflationary and conducive to further bureaucracy.

PRICE CONTROL

We are not opposed to price control as a war measure. But we demand that price limitations recognize the need of prices sufficient to cover the expenditures necessary for all-out farm production. We favor prices that cover costs rather than any system of minimum prices supplemented by subsidies. The function of price as an inducement to production must be more fully recognized in the future. There has been too much disregard of facts and historical background in the setting of prices. Margins lower than ever existed and restrictive ceiling prices have curtailed the flow and availability of goods and unnecessarily restricted the production of food.

The rigid freezing of prices causes maladjustments in the production and distribution of foods resulting in surpluses in some items and scarcity in others. This situation creates confusion resulting in uncertainty which unnecessarily complicates production planning on the part of the farmer. We urgently insist that sufficient flexibility be maintained for correcting serious maladjustments so that total production is not impaired.

We urgently suggest a change in present price policies of O. P. A. By restricting the maximum price of top grades and by failing to establish proper price differentials between the top and lower grades, the incentive to produce quality products has been eliminated. This set-up seriously hampers quality programs which have been built up through much work and effort over a period of years. Present price policies encourage low grades to sell at ceiling price.

We believe extreme legalistic methods, complicatingly and confusingly worded regulations, coupled with too many theoretical and often impractical plans have characterized the whole price-control program and often have little or no practical relation to the need. Too many, inexperienced in the problems of food production and distribution, have been placed in control of price making. Too often in the administration of price control there has been a predetermination for reform rather than a practical determination to fulfill the purpose of O. P. A. Too often the advice and knowledge of those experienced in their respective fields have been neither called for nor used.

Provision should be made for more frequent reconsideration of fixed prices so as to keep commodities flowing more evenly in the channels of trade and to provide more quickly for adjustments in production and distribution as conditions vary and occasions arise.

RATIONING

We believe that rationing is necessary as a wartime measure whenever the supply of essential foods and commodities is short or threatens to be less than the demand.

Rationing to be successful must be adjusted to the quantities of specific goods available for distribution. At present some of the rationed commodities are not available in many localities because there are not sufficient supplies to go around. Ration points should not exceed supplies available for distribution. Ration stamp values should be adjusted in accordance with supply and demand. Leakages and diversions that aggravate vital shortages should be prevented as far as possible.

UNIFIED ADMINISTRATION OF FOOD PROBLEMS

Such functions as are to be exercised with respect to the production, pricing, rationing, and transportation of food should be consolidated in one Federal agency under a single responsible administrator who is qualified as to background and experience, and in whom authority is vested. Until one administrator has full charge of food production, pricing, and distribution, confusion will continue. Such unified authority should have full knowledge of and be familiar with the production and distribution problems of agriculture.

TAXATION AND EFFICIENT EXPENDITURES

We believe that increased earnings should be taxed heavily in an effort to carry as far as possible the current cost of the war. We feel that the weight of such taxation should fall heaviest on those whose net incomes have increased most.

We believe it is a responsibility of the Congress itself to do all in its power to reduce nonessential Government expenditures, to stop waste in war expenditures, and to take a hand in seeing that appropriations are efficiently and effectively administered. We believe that Congress should institute all possible improvement in control over appropriations and authorizations for appropriations.

OLEOMARGARINE

We urge that oleo should not be permitted to continue the unfair trade practice of masquerading under the butter standards of flavor and color. We have no objection to the manufacture, distribution, and sale of uncolored oleo, or oleo colored and flavored in some characteristic manner, not in imitation of butter, when produced from American fats and oils. We recommend that the regulatory power over oleo be transferred from the Bureau of Internal Revenue to the United States Department of Agriculture. We urge that all regulations applying to all processed butter be made applicable also to oleo.

SUPPORT MEAT-MANAGEMENT PROGRAM

The livestock industry has not been remiss in its efforts to meet the war situation, to promote production, and to equalize the distribution of meat. In April, 1943, representatives of almost 100 of the leading livestock and meat organizations of the country adopted a meat-management program, calling for the formation of a war meat board with full authority to handle problems arising in the emergency. The program outlined the following major points:

1. Encourage livestock production.
2. Adequate control of livestock slaughter.
3. Keep demand in balance with supply.

(a) Satisfy meat needs of armed forces.

(b) Establish effective rationing program to control and supply reasonable consumer demand.

(c) Determine remainder of meat supply and limit lend-lease purchases to the available supply. (In this way prices would be automatically controlled.)

4. To establish an over-all Government meat-management program under a responsible administrator to coordinate all the demand for meat with the total available supply.

5. Full and strict enforcement with an adequate educational program to enlist public understanding and support.

FARM LABOR PROCUREMENT

An effective farm labor procurement program for 1944 necessitates proper planning immediately. We recommend the earliest consideration of a sufficient appropriation to make possible the continuation of Public Law No. 45 through 1944.

POULTRY

For the protection of the poultry industry and to guarantee a supply of poultry and eggs, we insist that the industry be informed at an early date regarding the 1944 Federal plans for poultry. At present the poultry industry is handicapped with such conflicting statements as: "More poultry and eggs are wanted," and, "A sharp reduction in hogs and poultry is necessary to bring them into range with the prospective feed supplies."

We recommend that O. P. A. ceilings on eggs be discontinued except on consumer grades at retail levels of trade. Present regulations establish the objectionable confusing ceilings on wholesale grades by defining "current receipts" in such a manner as to turn back our quality egg program to the lack of standards of a quarter of a century ago.

Because of the ease with which eggs and poultry can be handled and transported, we are convinced that the rationing of poultry and eggs would be impractical.

CRITICAL BUTTER SITUATION MUST BE CORRECTED

The present shortage and maldistribution of butter has become a critical national food issue. To meet this situation, butter production must be increased. To encourage increased butter production, higher prices for butter, more in line with other dairy product prices must be permitted. Diversion of butterfat to nonrationed and uncontrolled dairy product outlets must be prevented.

CONTROL OF MILK POWDER

We contend that whole milk powder should be subject to price ceilings as well as other dairy products.

We believe it is inexcusable that condensed skim milk shipped in 10-gallon cans with no cost of packaging or danger of regrading and subject to no set-aside order should be purchased without price regulations at a price of 15 cents per pound for solids, while dry skim milk is subject to a set-aside order and is subject to ceiling prices averaging about 13½ cents per pound for solids, including the cost of drying, packaging, and inspecting, plus the possibility of being regraded.

PRICE POLICIES AFFECTING CHEESE

By placing one maximum price on American cheese, and by failing to establish a proper price differential between classes of cheese, the incentive to produce quality cheese has been killed, thereby seriously hampering the quality program which has built a great reputation for Wisconsin cheese. By placing maximum prices on a Plymouth plus base, Wisconsin is severely penalized. Furthermore, a lack of proper price differentials between the smaller size styles of natural cheese and the larger types of cheese demanded by the Government and desired by the processors, has strangled the production of natural cheese for consumer use and has practically eliminated the curing and aging of natural cheese. The dairy industry of Wisconsin spent many years in building a market for aged natural cheese.

DANGEROUS PRICE POLICIES AFFECT FOREIGN TYPE CHEESE

Foreign type cheese prices have been manipulated by the deliberate creation of inequities in an attempt to juggle production and get diversion of milk into supposedly preferred products. These manipulations have created many embarrassments and have lowered the production of all major varieties of cheese. If all-out production is to be considered, then each branch of the cheese industry should be encouraged to do the best job possible and proper adjustments should be made to increase prices which will reflect a proper relationship between foreign type cheese and other commodities.

MINIMUM MILK PRICE OF $3.05 NEEDED

We believe that our Government should increase the price of milk going into manufactured products to a minimum of $3.05 per hundred pounds on a 3.5 percent basis.

Food News

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. PACE. Mr. Speaker, I have found very interesting the following address by Francis A Flood, assistant to the War Food Administrator. It will help you to understand the task before the farmers of this Nation and how splendidly they are doing the job.

OUR FOOD FUTURE BEGINS NOW

Our food future—however bright or gloomy it may be—begins now. So we must look into the cupboard as well as in the crystal bowl.

I would like, in my 20 minutes today, to do the impossible. I would like to answer every question about our national food problem and describe it with such complete facts and such simple reasoning and in such plain words that everyone could understand.

Now, if I were a blind optimist I could describe it by saying this—and saying it very truthfully: Our supplies of food have never been greater. Our production of food has never been greater. We have never eaten more food in our history, per capita, than during the past 3 years. During the other war our farmers did a great job of producing food, as we all know. But our food production for this year and last is 50 percent above the food production in 1917 and 1918.

There is much more to the problem than that, but that is the way I would explain it if I were a blind optimist.

Or if I were a blind critic—and there are some in the United States—I could describe our food situation by limiting myself to reciting spectacular examples of local maladjustments, mistakes that have been made, shortages here and there—these things which have always happened in wartime and always will. I could scare you, and never stray from the facts. I read a food article in a national magazine recently which so skillfully paraded all the shortages and disturbances that are inevitable in wartime—that at the end of the article the poor reader could only feel that famine is just around the corner, that the only way to keep from starving to death is to go outside and cut our throats.

Now, I want to be neither a blind optimist nor a blind critic—because neither serves his country. Each is guilty of performing an actual disservice to his country, and to do that in time of war is a very serious thing.

Neither am I a prophet. I cannot tell you just what our food supply will be next year, how much we will produce and how much our allies will produce. That has never been possible in peacetime and is still less possible in wartime. Yet, many are critical when our Government is not able to lay out months in advance the whole food program, or when changes are announced.

Nor can I tell you exactly what our food demands will be. Demand, too, changes in peace time with changes in purchasing power, prices, etc., and these influences are more active and less predictable in time of war. It is hard to tell how much food will be demanded by our civilians with their swollen purchasing power, how much will be needed in all the many theaters by our armed forces so that they can destroy our enemies, how much we should spare for our allies who are destroying our enemies, how much will be needed in the unknown number of countries we shall have liberated and by those who are also helping us destroy our enemies.

So I will not coax you to listen by reciting our record production and consumption—nor scare you into listening by the sharp practice of destructive criticism, nor try to prophecy.

First, I'd like to give a summary briefly of the food situation as it now exists. When the war began, our food and our farming situation could hardly have been better if we had known war was coming. Our reserve surpluses of food supplies were at record levels. Our food supplies were at record levels. We had never had greater reserves of food.

Besides that, our farm land and its soil was at a high productive level, partly because of the recent soil conservation programs. I learned the other day that our yields per acre for the past 5 years averaged 16 percent higher than the yields for the 20 years just preceding, even omitting the drouth years of 1934 and 1936.

From that running start the American farmer broke all food production records every year for the past 6 years. The great crop of 1941 had seemed to be the limit. Even the farmers doubted they could equal it in 1942 with shortages of farm labor and machinery. The critics were sure it couldn't be done, and they said things were in a muddle. But the American farmer broke that great 1941 record last year by a full 10 percent.

But the critics still said things were in a muddle for 1943. The farmer's answer was to plant 10,000,000 more acres even than last year, to milk more cows than ever before, to carry more beef cattle than ever before, and to farrow the largest pig crop in our history. In spite of the bad spring and the disastrous floods, the present outlook is for a total food production for 1943 which will break all records again, even last year's.

The program for next year calls for a still greater food production for 1944. This, mind you, in spite of the farm labor problem, farm machinery difficulties, and all the other obstacles which always must be expected in time of war.

These obstacles and problems will continue. This country cannot wage the biggest war in its history and still have no farm labor or machinery problems or other difficulties.

I will make the critics happy today by promising them that as long as this war lasts there will be problems and difficulties and shortages and disturbances for them to complain about. Yes, just as surely as we will always have critics with us, we will also always have unsolved problems and shortages and hardships in time of war.

Now what about food consumption? History will record—and some of us may blush when we read it—that during the last 3 years when our friends in occupied countries were starving by the thousands and when most of our allies, who have been destroying our enemies at such profit to us, were on very short rations, our own civilians here have enjoyed the three greatest food consumption years in our history. In 1942 and 1941 the American civilians ate more food per capita than ever recorded before. And current estimates indicate that for 1943 our per capita food consumption will be greater than any year in the twenties or thirties.

Some who could always afford unlimited selection of unlimited food will eat less now than before. But many, many more of our people are eating more and better food now than they did in peacetime. We have always had food rationing—with the dollar as the food coupon. There were always people who did not have enough of these dollar coupons for an adequate diet. These food coupons were unevenly distributed. Some had an unlimited number of food coupons in their checkbook and others had very few.

Now the food coupons are distributed more evenly. There are some chiselers, of course, but those who try to beat the game are few in proportion, and the American public will try to keep that number limited.

The result is that our total food supply, now larger than ever in its history, is distributed more evenly than ever before, more nearly equal to all.

We would have more food if we did not share with our allies. But they have destroyed many times as many of our enemies as we have. From a purely selfish standpoint it is in our own best interest to keep our allies at top fighting strength—with food no less than guns and tanks and planes. For in so doing we speed the day of victory and thereby save the lives of many of our own sons and the sons of our allies as well.

We do not send a very large percentage of our food to our allies, only about 6 percent of our production last year to Britain, and Russia, and the rest. The year before it was still a smaller percentage. But, without it, our British and Russian Allies might have been immeasurably weakened. Limited as this aid was by the available shipping supply, the military picture in Russian and in the Mediterranean might not today be so bright without it.

To keep this up we must produce more food next year.

This can be done. Our real farm goals are whatever it takes. Even though we have seemed each year to reach our peak we can always do better next year.

The record of Britain is an example. I might review it here as an illustration.

I went to Britain on a bombing plane to see how they have met their wartime farming problems. I spent several weeks there visiting British farms and seeing what I could see.

In the first place, I was surprised to learn that Britain is a real agricultural country. For example, Britain is about the size of Iowa and Indiana combined—two of our best farm States—but Britain, pre-war, produced half again as much wheat, almost twice as much hay, more beef, and more eggs and 50 percent more milk than Iowa and Indiana combined. It had more cattle than Iowa and Indiana combined, half as many sheep as the whole United States. Britain produced almost half as much beef as Argentina on this small area the size of Iowa and Indiana. Our national wheat yield average last year was about 20 bushels per acre; Britain's was 37.

In spite of this already high level of farm production Britain has increased during the war her total food production by more than half on a tonnage basis. We have done amazingly well here, as you know. Britain starting from a higher level of production has increased still more in the face of greater obstacles.

They had a farm-labor problem because a greater proportion of the population is under arms and in the war industries than here. They have had a farm machinery shortage, and there have been many obstacles that our farmers here have not had. The blackout is one. Every farm home and every barn is blacked out every night. You can't even carry a lantern around the barn at night. I can hardly describe what an obstacle this total blackout is to total farm production.

There are other obstacles. The fields are stuck full of poles every few rods to keep invading airplanes from landing. The farmer must farm around these poles by the thousands.

Because of the shortage of feed the British farmer must buy feed for his dairy cows,

for his beef cattle and for his hogs against ration coupons just as we buy sugar here. I am sure you can guess how difficult that would be. Much of the farm labor is women, old men, and school children. But although a cow is a cow there and requires the same care and attention, the Englishman did not sell cows when he lost his help. He got city girls for his labor, and dairy production in Britain has increased.

There are other obstacles. I visited a farm that had 53 bomb craters on the one farm. I visited another farm from which the owner had hauled 500 incendiary bombs in cartloads one morning after a raid. These bomb craters had to be filled in, fenced off, or farmed around. One home out of every five in all Britain has been damaged by bombs. They are short of materials, labor, machinery, and equipment.

Yet, in the face of all these obstacles and starting from their high level of production, they have increased their plowed acreage and their total food production by more than half.

This suggests that we have not reached our limit here in the United States. We cannot rest on our records. The battle is still on in the Pacific; it is still on in Europe; it is still on here on the farms of the United States.

But we must keep in mind that no matter how much food we produce or how evenly distributed here at home, or how wisely it is shared with our allies, there will not be enough.

Particularly, there will not be enough for two groups. One is those of us here in America who may want all the choice of all the food that we can eat. There is not enough for that. The other group are the hundreds of thousands of starving people—the Greeks, the Poles, the Czechs, and the others—who have been dying by the thousands while resisting our common enemy. There will not be enough for them.

These are the two groups which will remain unsatisfied.

Insofar as there may be food above our actual needs it may be divided between those two groups, but there cannot be enough for both.

Let's look at the first group for a moment. Last year our civilian population consumed 86 percent of all of our enormous food production. And with their pockets lined with money they asked for more. Our national income last year was the highest on record, and our people, unable to spend that money for automobiles, tires, and many other things in short supply—and being human—wanted to spend it for food. That is understandable. It was the first time that a large percentage of our population had ever been able to buy as much food as their neighbors. Mrs. O'Grady had as many food coupons as the colonel's lady, and she had enough money for the first time to buy as much food as the colonel's lady could get. As long as this condition of large purchasing power remains it will be difficult to produce enough food to satisfy it. So much for that group who will continue to ask for more food.

Now for the other group who will continue to ask for any extra food—the starving peoples who yet remain after their hundreds of thousands of relatives and friends have died of starvation. Anyone will agree that they need it.

The President has clearly stated our policy concerning food for the victims of Axis aggression. In a letter transmitted to the Congress on December 11, 1942, with the seventh quarterly report on lend-lease operations, he said:

"We also have another task, which will grow in magnitude as our striking power grows, and as new territories are liberated from the enemy's crushing grip.

"That task is to supply medicines, food, clothing, and other dire needs of these peoples who have been plundered, despoiled, and starved.

"The Nazis and Japanese have butchered innocent men and women in a campaign of organized terror. They have stripped the lands they hold of food and other resources. They have used hunger as an instrument of the slavery they seek to impose.

"Our policy is the direct opposite. United Nations forces will bring food for the starving and medicine for the sick. Every aid possible will be given to restore each of the liberated countries to soundness and strength, so that each may make its full contribution to United Nations victory and to the peace which follows."

But the amount of food we shall be able to send, considering our own domestic requirements, will depend upon a number of developments that cannot at this moment be foreseen.

Right now, and for the immediate future, it is, of course, the part of enlightened self-interest for us to give help to these hungry victims of our common enemy, some share of any extra food we have.

This will of course depend upon what our other allies will be able to contribute to the common cause. For certainly no one nation can undertake the task alone. Nor do our allies expect that either we or they will undertake the task alone. All will contribute what they can. To achieve this end preliminary discussions between the United Nations and the nations associated with them are now under way looking toward the establishment of a central United Nations agency to assume a responsibility for the relief and rehabilitation of the victims of war.

Because of this, the present outlook now is for shipping some 12 percent of our food production this year under lend-lease and for other export needs, instead of the 6 percent of last year's for Britain, Russia, and the rest, with Russia probably getting most of the increase.

While the war continues, our people will probably continue to accept as good business the practice of sending some of this food to our allies. To what extent this may continue after the war I suppose no one knows.

Perhaps we can best measure the extent to which we should send food to the stricken areas after the war by considering the reason for sending any at all.

Aside from its humanitarian aspects, a purely selfish attitude not only justifies but prompts the sending of what food we can to those in distress until they shall be able once again to produce for themselves, just as it is sound economically as well as socially to feed or otherwise rehabilitate an unfortunate citizen here at home so that he may later become a constructive member of society to our ultimate advantage. Therefore, it is enlightened self-interest for us to assist in liberating these areas and helping them get their land back into food production again, thus reducing the demand on our supplies—and bringing the cost to us down within manageable levels.

It has been said that the world cannot exist half slave and half free, and it may be similarly said that the world cannot exist half fat and half starving. Certainly there can be no sound and enduring world prosperity with much of the world hungry and unproductive. The strictest nationalist realizes that the prosperity of our neighbors is reflected in our own enduring prosperity.

Thus, the minimum assistance that we can wisely give would be to help restore the liberated countries so that they can again produce food. Our policy is to help those countries to help themselves in order that they may become self-sustaining in the shortest possible time. But until their production is partly restored it would seem wise for us to supply some food to help them regain their place as constructive world citizens.

But to what further extent should we help them get back into increased production? How will that help us?

A further advance depends on an economic and political world order which will enable the greatest production out of the human and natural resources of the world. In other words, it will depend on the kind of post-war world that we have. That post-war world is in the making now, out of the conditions that now exist. It is developing out of this forum and a thousand other forums going on today wherever a few people are talking about that time when peace is restored.

Our international food policy which will emerge is only one part of that whole post-war world—whatever it may turn out to be. If it is a world half slave and half free, world food policy will call for a world half starved and half fat. If it calls for a free world throughout, it will call for a world of abundant production of food throughout.

When I say that the food future begins now, and that we must look into the cupboard as well as into the crystal bowl, I mean that this forum and the public forum of the United States itself today is determining that future.

Security for All

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Security for All, broadcast by me over the radio September 15 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As the trend of this global war turns in our favor, we begin to see more clearly a basic lesson of military strategy. In the last 10 years, the Axis won brilliant victories, not so much through its own power as through weakness and division among its opponents. While the Axis countries conspired and struck together, disunity in the rest of the world made it possible for the Axis to pick off its victims one by one. Now that the forces of free humanity are working and fighting as a team, the Axis is falling apart under our concerted blows. The United Nations represent in fact an organization for self-defense. They must maintain that united front, in the war and in the peace to come, if they are to win their victory and make it stick.

In attacking domestic economic problems like unemployment, we have learned, in the same hard way, the same lesson of mutual defense against a common foe. In the years following the last war, we failed to use fully and effectively our great resources of manpower and industry, land, and mineral wealth. The resulting depression fell with cruel effect on the generation that had fought and bled in World War No. 1. That was the bitter fruit of a false economic dogma called rugged individualism, whereby prosperity was supposed to filter down to most of the people if you took good care of a few at the top.

In the aftermath of this war, I trust we will follow the basic American doctrine of working together as a team, in building

security for all. As Secretary Hull said the other night, there is little hope for an orderly world unless each country puts its own house in order. The security and well-being of the people, no less than military forces, are the armament of a democracy in keeping the peace.

Private enterprises, large and small, will bear the greatest burden in attaining that goal; but there is an important part to be played by communities and States, and by the Federal Government where only national action by the whole people can meet a manifest national need. I am speaking tonight about one phase of the total effort—a unified national plan of social security backing up the free enterprise system. The legislation was introduced last June, prior to the recess, by Senator MURRAY and myself in the Senate, and by Congressman DINGELL in the House of Representatives.

The bill creates a national system of public employment offices, to help about 30,000,000 returning servicemen and war workers to find regular jobs in private industry or on farms, when the country turns again to peacetime living. Where jobs are not immediately available, the bill provides unemployment insurance protection, on a national basis, up to 26 or possibly 52 weeks of unemployment. The weekly insurance benefit would vary with past wages, and increase with the number of dependents.

In another important feature, the bill includes about 15,000,000 more people under the present old-age insurance program, such as farm workers and domestic servants, employees of nonprofit organizations, and the independent farmer, professional and small businessman. Both the minimum and maximum benefits are increased, and the retirement age for women workers is reduced from 65 to 60. We also provide, for the first time, a regular monthly income for life to the insured person who becomes totally disabled before reaching the retirement age.

A major gap in our social-security law has been the complete absence of protection against sickness. This gap is making itself felt now, in the hour of supreme need. Almost one in every two young men of military age are being rejected as unfit for military service. And in our war plants, sickness is a major cause of absenteeism. Much of this disability or illness would have been avoided if a long-range health program had been in effect. The new bill insures against loss of wages because of illness, and makes possible full medical and hospital care, with some exceptions, for the insured worker and his dependent wife and children. This Nation-wide program safeguards the freedom of the patient, the doctor and the hospital, while fostering better medical and hospital care for all.

Each of the foregoing social-security programs will benefit returning servicemen as they move into peacetime jobs covered by the national plan. The bill goes still further, however, by giving them paid up benefit rights in every phase of insurance protection I have described, covering the period of military service as far back as October 1939.

The entire plan is accomplished by combining all existing and new programs into a unified national system, to simplify administration, eliminate bookkeeping, reports and overlapping of offices and functions.

The benefits for servicemen are paid out of the Federal Treasury. The cost for civilians is met by employees and employers, each paying 6 percent of pay roll into an insurance trust fund. The self-employed—farmers, professional and small businessmen—would pay 7 percent of the value of their services, for old age and permanent disability insurance, and health and hospital care. Contributions by the Government will be added as needed, beginning some years hence. For employers, this rate is a mere 1 percent increase over the contribution under the present Social Security Act, effective next year, and no increase over the rate provided by the law beginning in 1949. It is the employee who meets the bulk of the increase for the expanded social insurance plan, amounting in his case to 4 percent above the rate effective on January 1, 1944.

There is no Nation-wide program touching the lives of millions of our people which is so well understood and widely accepted as the principle of social security. Every test of public opinion shows that the extension and improvement of that plan now along the lines of this bill, meet with overwhelming public approval.

If you believe, as some mistakenly do, that the end of the war is in sight, then there is every reason for immediate action. If you hold, with our responsible military leaders, that a hard struggle lies ahead, then it is likewise essential to make an immediate start. It requires a year or more to pass and perfect legislation of this importance, to set up administrative machinery, and build up working reserves in the trust fund. It is already late to begin this task, having in mind the uncertainties in the military and political picture abroad, and the experience of the last war, when the armistice caught us completely without plans for economic adjustment at home.

The need for early action is reinforced by the home-front battle against inflation. Congress is now studying the President's request for $12,000,000,000 in new taxes or new savings, or both. The difficulty in obtaining all of this sum in new taxes is apparent. Certainly I do not favor a general sales tax on the necessities of life; that would be inflationary in effect, and fall with greatest weight on the lowest income group. If we turn to savings to make up a substantial part of the total sum, the social security plan I have described, covering the bulk of the population, would provide about $5,000,000,000 above present collections, in the first year of operation.

For the insured employee, farmer, professional or small businessman, the plan offers full money's worth in insurance protection, for themselves and their families in the postwar years. For the citizen as taxpayer, it would help meet the need for increased wartime savings, and reduce the cost of relief and similar public expenses after the war. For the businessman and the investor, it offers a well-established, conservative means to fight off the danger of wartime inflation, and to help maintain a high level of economic activity and purchasing power in the difficult post-war period.

The sponsors of this legislation are working for early congressional action. We are convinced that such proposals, as Sir William Beveridge has said, are "a sign of the belief that the object of government, in peace and in war, is the happiness of the common man—a belief which, through all differences in government, unites the United Nations and divides them from their enemies."

The Edwards Perpetual Calendar

EXTENSION OF REMARKS

OF

HON. JOSEPH RIDER FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. FARRINGTON. Mr. Speaker, I have presented to the House today a concurrent resolution requesting that the President, at the conference for the conclusion of treaties of peace terminating the present war, urge upon the nations of the world represented at such conference the adoption of the Edwards Perpetual Calendar.

The Edwards Perpetual Calendar is the creation of Willard Eldridge Edwards, of Honolulu, T. H., and has been formally endorsed by the House of Representatives of the Legislature of the Territory of Hawaii. The calendar and supporting resolution follow:

The Edwards Perpetual Calendar

New Year's Day (a day apart from any week or month) is the first day of each year, followed by the 364-day calendar shown below:[1]

JANUARY							FEBRUARY							MARCH						
M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S
1	2	3	4	5	6	7			1	2	3	4	5					1	2	3
8	9	10	11	12	13	14	6	7	8	9	10	11	12	4	5	6	7	8	9	10
15	16	17	18	19	20	21	13	14	15	16	17	18	19	11	12	13	14	15	16	17
22	23	24	25	26	27	28	20	21	22	23	24	25	26	18	19	20	21	22	23	24
29	30						27	28	29	30				25	26	27	28	29	30	31

APRIL							MAY							JUNE						
M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S
1	2	3	4	5	6	7			1	2	3	4	5					1	2	3
8	9	10	11	12	13	14	6	7	8	9	10	11	12	4	5	6	7	8	9	10
15	16	17	18	19	20	21	13	14	15	16	17	18	19	11	12	13	14	15	16	17
22	23	24	25	26	27	28	20	21	22	23	24	25	26	18	19	20	21	22	23	24
29	30						27	28	29	30				25	26	27	28	29	30	31

Leap-Year Day (a second day apart) is observed only in leap years between June 31 and July 1 as the first day of the second half-year.[1]

JULY							AUGUST							SEPTEMBER

[1] These 2 year-days, far from being "blank days," are definitely named and have a definite purpose. Considered apart from any week, they allow the calendar to become fixed and perpetual.

The text of House Resolution No. 79 adopted by the House of Representatives of the Legislature of the Territory of Hawaii, at Honolulu, T. H., on April 28, 1943, follows:

Resolution requesting the President or Congress to propose the adoption of the Edwards Perpetual Calendar by all nations at the peace conference and to propose that all United Nations now appoint a national committee to study the Edwards Perpetual Calendar with a view toward accepting it at the peace conference

Whereas the present calendar has fundamental defects, summarized as follows:

1. Inequality in the lengths of the months, quarters, and half-years.

(a) The months contain from 28 to 31 days;

(b) The quarters contain, respectively, 90 (91 in leap-years), 91, 92, and 92 days;

(c) The first half-year contains 2 or 3 days less than the second half-year.

2. Lack of fixity and regularity.

The calendar is not fixed but changes every year. The year contains 52 weeks plus 1 odd day in usual years and 2 days in leap-years. In consequence:

(a) Each year begins and ends on a different day of the week from the preceding year, holidays wander over each day of the week and dates of periodical events cannot be fixed with precision;

(b) The positions of the weeks in the quarters vary each year, overlapping the divisions of the years and quarters in a different way each time, thus complicating all comparisons, statistics, and accounts;

(c) The extra day of leap year is now credited to February once in 4 years, thus making monthly computations and comparisons even more complex;

(d) Since, from year to year, neither the months nor the years contain the same number of individual week days (i. e., work days), there can be no true statistical or commercial comparisons between one year and another;

(e) The various subdivisions of the year itself, the half-years, quarters, and months are likewise incapable of accurate comparison;

(f) The fifteenth and the thirtieth of each month are important dates as regards the falling due and the payment of wages and rents. When these dates are Sundays, the payments must be postponed or advanced;

(g) Under our present system Easter varies between March 22 and April 25, a range of 35 days for the celebration of one anniversary. This causes an annual displacement of all movable festivals and numerous civil disadvantages and inconveniences;

(h) The present calendar does not agree with the universal conception of the seventh day as a day of rest, of Saturday and Sunday as the week end, or of Monday as the first day of the week;

(i) With such a calendar, the loss in time and effort spent in needless computation is almost beyond belief; and

Whereas the Edwards perpetual calendar simplifies the present calendar so as to remove these undisputed defects and result in the following advantages:

1. All months have exactly 26 workdays and are directly comparable. There are also 65 school days in any 3 months' period;

2. All quarters have exactly 13 whole weeks, and fractions of weeks at ends of quarters, half years, and years are eliminated. This facilitates the preparation of all Government and other quarterly reports, saving much time and expense;

3. The position of the weeks in the quarters is fixed. The quarters are equal in length and the half years are equal in length. True comparisons can be made, both within the year and between 1 year and another;

4. Each year begins on New Year's Day, a holiday apart from any week or month, and is followed by Monday, January 1, the second day of the new year and the first workday;

5. The entire calendar becomes fixed and perpetual. Holidays and anniversaries fall on the same week-day each year and court sessions, educational schedules, and all public meetings and periodical events can be fixed with precision;

6. The 15th and the 30th of each month always occur on weekdays, coordinating periods of earning and spending and the payments of wages, rents, and bills;

7. Leap-year day occurs in leap years as a second holiday apart from any week or month, and is the first day of the second half year;

8. Easter on April 14 follows a provisional bill enacted by the British Parliament in 1928 providing for the stabilization of Easter on the first Sunday after the second Saturday in April (i. e., on or between April 9 and 15);

9. Monday as the first day of the week agrees with common business practice and with the psychological conception of this day. It allows for a rest day after 6 workdays and Saturday and Sunday become the week-end in fact;

10. Friday the thirteenth is eliminated from the calendar;

11. It is only necessary to remember 30, 30, 31—Monday, Wednesday, Friday, to be able to complete all future dates;

12. Several 3-day holiday periods are provided throughout the year; and

Whereas the perpetual calendar (also known as the Edwards Calendar) simplifies and revises the calendar scientifically and permanently with no more than 2 days' variation from the present system: Now, therefore, be it

Resolved by the House of Representatives of the Twenty-second Session of the Legislature of the Territory of Hawaii, That the Congress of the United States of America be and it is hereby respectfully requested and urged to propose that the Edwards perpetual calendar be adopted by all nations at the peace conference and to propose to all United Nations that they now appoint a national committee to study the Edwards perpetual calendar with a view toward its acceptance at the peace conference.

Crucifixion of a People

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Free World:

CRUCIFIXION OF A PEOPLE

As we go to press, there is a murmur in the air of an impending act that may prove to be the climax in that stark tragedy played across the continent of Europe for 10 bitter years. From London and Washington, and now from Quebec, come rumors that the door to their only possible haven—now and in the future—will be slammed shut in the faces of the Jews of Europe. The ominous grapevine, which correspondents call reliable sources, whispers that the British Foreign Office has finally won President Roosevelt's approval to a unilateral denunciation of the solemn pledges and treaties that established Palestine as a national homeland for the Jews at the end of the last war. More specifically, Congressman EMANUEL CELLER has just released a vigorous warning that "a joint statement will be issued by the British Foreign Office and the State Department * * * which will * * * smash the hopes of those who dared look toward Palestine as the one realistic approach to the solution of the homelessness of a driven people."

It seems incredible that among the collaborators in this act of the Jewish tragedy should be Winston Churchill and those members of his Cabinet who have so often and so eloquently protested in Parliament against the MacDonald White Paper, which Mr. Churchill described as "an act of repudiation" and "a breach of faith." For it is the phrase, "MacDonald White Paper"—that measure of official indifference and inhumanity limiting the number of Jews to be admitted to Palestine—which is most often heard in the hints and whispers and rumors concerning the projected action. The MacDonald White Paper of 1939 was one of the last acts of appeasement forced by Chamberlain's Government on a rebellious Parliament. It was an executive order, not only condemned by Mr. Churchill, Lord Wedgewood, L. S. Amery, Herbert Morrison, Philip Noel Baker, and other members of the Conservative party and of the Labor and Liberal Opposition, but actually declared illegal by the Permanent Mandates Commission of the League of Nations. Now, according to "reliable sources," it is this document that is to be used as authority for denying to the stricken Jews of Europe the possibility and hope of escape to Palestine. It is to be the reason for rejecting the extraordinary offer of Palestinian Jewry to welcome and support 600,000 Jewish refugees from Axis controlled countries. It is to be the excuse for the shameful inactivity of the Inter-Governmental Committee on Refugees when so much cries out to be done, when thousands of dead are the result of inaction.

However much or little truth there may be in these rumors, the fact remains that neither the United Nations nor Britain and America—who control the initiative of the United Nations—have taken any concrete steps to save the Jews of Europe. Every day of this inactivity sees freight trains bearing doomed men, women, and children from the western countries to Poland; sees other men, women, and children falling in their tracks from starvation in Rumania, Bulgaria, and Hungary; every day sees suffocation chambers eject hundreds of inert bodies, sees trench graves endlessly dug and filled. The shame and tragedy of this situation lies not so much in the vast numbers of helpless victims—at a time when young and strong men fall on the battlefield we grow callous to death—but in the fact that not even an attempt is made to save these tortured human beings. Not even a gesture, beyond pious ejaculations of horror and sympathy, lightens the last moments of this abandoned people. It is this inaction, this indifference, that constitutes the spiritual as well as the physical crucifixion of the Jews.

Yet there are ways and means of taking immediate and effective action. Jewish and other organizations have suggested many practical measures. At the recent conference held by the Emergency Committee to Save the Jews of Europe, a group of experts formulated a plan that, utilizing available facilities, promises to withdraw in 4 months 750,000 Jews from the actual and potential death pits of Europe. This plan has been presented to the United States Government in a memorandum to Secretary of State Hull. It postulates that a great proportion of the 4,000,000 surviving Jews of Europe can be saved prior to cessation of hostilities without hindering the successful prosecution of the war; it calls for the immediate creation of a separate and official agency dedicated to the specific purpose of working on this problem through available international channels; and it indicates the means of effecting the evacuation and finding asylum for the Jews of Axis-occupied and satellite countries.

But Palestine, and the freedom of immigration to Palestine, are the very essence of this plan. Only Palestine is so situated that the bulk of these refugees may be quickly transported there; only in Palestine is there a great body of the population willing and ready to support and absorb the Jews; only in Palestine will the Jews find a permanent haven of refuge where they belong "of right and not on sufferance," a right legally established when the United States and 52 other nations ratified the Balfour declaration, when the United States and Great Britain signed the convention of 1924.

This right and the corollary obligations of Great Britain as the mandatory power were cited by Mr. Churchill in his opposition to the MacDonald White Paper. His eloquent and noble words are just as valid now as they were when he uttered them in Parliament:

I feel bound to vote against the proposals of His Majesty's Government. As one intimately and responsibly concerned in the earlier stages of our Palestine policy, I could not stand by and see solemn engagements into which Britain has entered before the world set aside for reasons of administrative convenience or—and it will be a vain hope—for the sake of a quiet life. I should feel personally embarrassed in the most acute manner if I lent myself, by silence or inaction, to what I must regard as an act of repudiation. * * * I select the one point upon which there is plainly a breach and repudiation of the Balfour declaration—the provision that Jewish immigration can be stopped in 5 years' time by an Arab majority. * * * What is that but the destruction of the Balfour declaration? What is that but a breach of faith? What is it but a one-sided denunciation—what is called in the jargon of the present time, a unilateral denunciation of an engagement? Is our condition so parlous and our state so poor that we must, in our weakness, make this sacrifice of our declared purpose?

The people of the world recognize that now, less than ever, is the condition of the British Empire so parlous and her state so poor that she must take cognizance of the bogey of Arab resentment against an act of justice and humanity. They will consider any action that on such grounds bars the way to saving millions of Jews from impending doom as the forerunner of those political machinations and those violations of international treaties, moral laws, and human decency, which may begin with the destruction of the Jewish people but must end with the destruction of mankind.

Foreign Policy for Post-War United States

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Policy for Post-War United States," published in the Washington Times-Herald for July 6, 1943.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY OF POST-WAR UNITED STATES

There are moments when we feel highly optimistic about the war—that Germany may be licked this year and Japan next—and there are moments when we feel pessimistic about it. We suppose all of us have these alternating currents of optimism and pessimism; and maybe they are controlled by the amount of calcium, vitamin B, or what not in one's system at any given moment.

Whatever the cause, this is one of our most pessimistic moments. At this time it looks like a long war to us, despite recent cheering news. We have a feeling that the boys won't be coming home for good for maybe 2, 3, or 4 years; that many of them won't be coming home at all, and that many more will arrive home minus arms, legs, or other useful parts of their anatomies.

Those that do eventually come home, though, will be men—tough men, grim men, with first-hand knowledge of how fine a place the United States as they knew it was in comparison with the places they will have seen.

When they come home, the United States will be in effect theirs, and rightfully so, because they will have saved it from conquest and slavery and brought it to victory over a horde of barbaric enemies. These men will be entitled to run this country, not we who stayed at home and cheered them on with eloquent words while cussing the wartime deprivations on the home front.

There will be some ten or twelve million of them—which means that if they form a fairly well integrated bloc with intelligent leadership they can hold the balance of political power throughout the Nation, and can hold all Government policies that amount to anything.

If they react to this war experience as their fathers reacted to the 1917–18 thing, these men will have two prime desires when they get back: That they themselves will never have to go to war again, and that their children will not be dragged into another war 20 or 25 years hence.

They can't make certain of either of these things any more than their fathers could. But they can force this country, over the objections of the pacifists and the war-weary, to adopt a standing policy of adequate national defense and stick to that policy.

Such a policy would call for the world's finest air force, for plenty of submarines manned with trained crews at all times, and for such surface warships as we may need. It would also call for an army capable of being expanded to war strength almost overnight, because based on universal compulsory military training.

Even the most aggressive nations think a long time before they attack a nation which they know to be well armed and ready to fight. We spent $76,000,000,000 on the war in the fiscal year ended July 1; expect to spend around $100,000,000,000 this fiscal year. Had we spent $5,000,000,000 a year on our defense set-up ever since World War No. 1, we could in all probability have stayed out of the present war or gone into it, as we preferred.

WHERE DO WE GO FROM HERE?

Representative CLARE BOOTHE LUCE (Republican), of Connecticut, remarked in a recent speech that the United States has no foreign policy. There is a great deal of truth in Representative LUCE's statement.

We used to have a foreign policy; namely, stay out of Europe's eternal wars.

We abandoned that policy under Woodrow Wilson, and again under Franklin D. Roosevelt. In World Wars Nos. 1 and 2 our foreign policy has been nothing but Great Britain's foreign policy.

If we team up after this war in some world state run mainly by Great Britain and ourselves, we shall be hocked inescapably into the orbit of European politics. Every time Great Britain feels concerned enough over some European upset to go to war about it, we shall have to follow Britain into that war, as we have now done twice in a quarter century. And knowing that we are behind them with our great resources and manufacturing abilities, British statesmen will be the more encouraged to risk European wars.

We hope that the returning soldiers will insist on a return to our former foreign policy of staying out of Europe's eternal wars, minding our own business, and keeping our powder dry.

We realize that these sentiments are what are nowadays called isolationism, America Firstism, treachery to the human race, etc. Nevertheless, we expect that a large majority of our boys will be found to entertain precisely these sentiments when at long last they come home from this global war.

Lend-Lease Outright Gift?

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SMITH of Ohio. Mr. Speaker, President Roosevelt, in his letter of transmittal on the eleventh report to Congress on lend-lease operations for the period ended July 31, 1943, stated in substance that the people of the United States are to receive no payment in goods or money for the roundly $14,000,000,000 of lend-lease war supplies already transferred to other nations and the more than $36,000,000,000 additional appropriated for lend-lease goods.

On page 6 of the above-referred-to report the President said:

The United Nations are growing stronger because each of them is contributing to the common struggle in full measure—whether in men, in weapons, or in materials. Each is contributing in accordance with its ability and its resources. Everything that all of us have is dedicated to victory over the Axis Powers. The Congress in passing and extending the Lend-Lease Act made it plain that the United States wants no new war debts to jeopardize the coming peace. Victory and a secure peace are the only coin in which we can be repaid.

The President has denied responsibility for this statement, which appears over his signature. A second printing of the eleventh report to Congress on lend-lease operations has been put out by Mr. Stettinius, Lend-Lease Administrator, in which the two last sentences in the above-quoted statement are deleted.

In denying authorship of the statement contained in the first printing that—

The Congress in passing and extending the Lend-Lease Act made it plain that the United States wants no new war debts to jeopardize the coming peace. Victory and a secure peace are the only coin in which we can be repaid.

Does the President mean to imply the United States is to receive payment in substantial amount for the lend-lease goods—say, one-half, or one-fourth, or even one-tenth of the amount of lend-lease goods shipped out?

Would it not be the fair thing for the President to forthrightly tell the American people just what they should expect in return for the sweat and toil they have given and must continue to give, and the billions of debt this program has laid upon their backs and the many billions more of debt it will continue to pile upon their backs?

Why should the President in his explanation for deleting these sentences, by

implication at least, continue to hold out hope to our people that they may confidently expect payment in kind or money for lend-lease shipments?

The attitude of mind of those connected with the administration of lend-lease, as the hearings on the extension of the Lend-Lease Act clearly show, is one of complete forgiveness of all payment for lend-lease goods. Mr. Stettinius, on page 11, Hearings Before the Committee on Foreign Affairs, House of Representatives, Seventy-eighth Congress, said:

> We have kept from all the transactions anything of a spirit of commercial trade.

Mr. MUNDT, member of the committee on Foreign Affairs of the House, said to Mr. Dean Acheson, Assistant Secretary of State, during the hearings, on page 123:

> And throughout your statement you point out it is going to be difficult if not impossible to settle these accounts in either goods or gold.

Mr. Henry L. Stimson, Secretary of War, on page 153 of the hearings, in his testimony stated:

> This act does not represent a policy of charity by us to our allies. It is simply the method by which the resources of our credit and industries are put to the most effective use in fighting this war.

On page 162 of the hearings Mr. VORYS, a member of the committee, said to Mr. Stimson:

> What concerns me is how we can have dollar-sign economy at home and no dollar-sign international economy.

To this Secretary Stimson replied:

> You will find it is an old historical practice.

Mr. Stimson then attempted to point out a precedent in the subsidy policy which Great Britain carried on for centuries in connection with her numerous shifting alliances with other nations. He stated:

> Great Britain * * * had never loaned, had never rendered financial assistance in the form of loans to its allies, but always in the form of subsidy.

If Secretary Stimson meant to imply that Great Britain omitted the pound sign in those subsidy transactions, then his statement is wholly incorrect. The pound sign was never absent from any of those transactions and in making this statement I am not criticizing in the least the ever-present pound-sign policy of Great Britain.

Numerous other statements from Lend-Lease authorities and other high Government officials could be cited to show the view is general among most if not all persons in high authority that no material compensation is expected for lend-lease goods.

Among them might be mentioned the following: Mr. Berle, an Assistant Secretary of State, on page 226 of the hearings, tries to justify the giving away of our war supplies under lend-lease by citing the incident of Britain's delivery to the United States in the quasi war between the United States and France in 1797. In looking up this incident I find Timothy Pickering, Secretary of State, wrote to Benjamin Stoddert, Esquire, Secretary of the Navy, that Britain was in a position to deliver "24 cannon, French 24-pounders, and about 1,800 shot belonging to them on loan to the United States."

From this it would seem the citation given by Mr. Berle in justification of lend-lease was not apropos.

However the attempt to justify the outright making of a gift to our allies of war goods under lend-lease by attempting to cite precedents therefor is for the present entirely beside the point. The sole question now under consideration is the determination of the meaning of the President's statement in the first printing of the July lend-lease report, the deletion therefrom of the words "the Congress in passing and extending the Lend-Lease Act made it plain that the United States wants no new war debts to jeopardize the coming peace. Victory and a secure peace are the only coin in which we can be repaid," and his explanation of said deletion. Was it Mr. Roosevelt's purpose to hold out hope to the American people of payment in goods or money for lend-lease supplies?

The more forthright seem to make much of the proposition that lend-lease will avoid foreign war debts to us. They seem to claim great merit for this in that it will avoid repetition of the painful disillusionment the American people experienced following the other war.

It may be we will be spared that disillusionment, but may it not be that a much greater and more painful disillusionment is in store for us? What of the enormous debt burden that is being produced by lend-lease from which there will be absolutely no escape? It is the trouble this debt burden has in store for the American people that will trouble them, and there will be little compensation for them in being reminded that lend-lease spared them from the disillusionment they suffered with respect to World War No. 1 war debts.

But another serious disillusionment awaits the American people which may be far more serious than the one they experienced after World War No. 1. After all, the goods delivered by the United States to our allies in World War No. 1 were devoted solely to war operations. They went to the battlefield, where they were used to bring about military victory Not so, however, with lend-lease. This program is being used not only to supply military needs to our fighting allies. It is being used also as a policy for achieving all manner of international political objectives involving control of tariffs, commerce, and regulation of economic relationships between the several countries of the world. This is clearly shown in the master agreements.

The disillusionment will be great and painful indeed, when the American people learn the real truth about the lend-lease program—that military aid to our allies is one thing—the need and desirability of which no one questions—and lend-lease something else again.

Congress Should Make Post-War Plans Now To Prevent Unemployment

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. PITTENGER. Mr. Speaker, now that Congress has reconvened, it is imperative that administrative leaders and party leaders as well give careful attention to what is going to happen when the present global war comes to an end. Unless matters are carefully planned we are going to have a repetition of the so-called depression which followed World War No. 1 and which resulted in the collapse of business and in unemployment in every line of industry. Following World War No. 1 nothing was done in a constructive way to provide employment for the returning soldiers and sailors, and this catastrophe resulted or culminated in the bonus marchers coming to Washington. It is my hope that those conditions will not develop again.

I realize that many people will say we have Government bureaus amply able to work out these problems and do the planning. Past experiences and past performance does not indicate that these bureaus and Government agencies can meet the situation. Some of them are headed by able men, but I have no faith in the leaders in some of the other agencies. They will not work together. They are infected with jealousy, and very often even in this World War crisis work at cross purposes.

For these reasons I am of the opinion that Congress should take steps and enact necessary legislation so that a Committee of the House of Representatives and a Committee of the Senate can sit in with the different administrative officials and confer with them and work out plans for giving work to the American people and our returning soldiers and sailors when World War No. 2 comes to an end. I know already that plans are being made for highway improvements and the building of new highways, and I am glad that this matter is already receiving attention. However, when the time comes to carry out the plans I fear that Congress will not be fully informed, and in my opinion, now is the time to have Members of the House and the Senate familiarize themselves with the need for productive public expenditures, and the objects for which funds will be expended.

Parenthetically let me make a remark that was made to me by a sound constructive businessman following World War No. 1. He said in substance that a country that could spend millions for destruction purposes could afford to spend millions on projects that would contribute to the welfare of the American people.

Yesterday I talked with another man occupying a responsible Government position, and he said in substance that we are now spending billions of dollars for destructive purposes in the World War, and indicated emphatically his support for a program that would spend a few million dollars for productive projects that will help American enterprise, and very directly increase the number of jobs, and abolish the great waste of unemployed labor.

We want a post-war planning that will recreate the wealth of this Nation and increase its strength. It has been estimated that the recent depression cost the American people something like $200,000,000,000, measured in terms of what could have been produced and what we failed to produce because of industrial stagnation and resultant unemployment.

I just cite briefly one other example where post-war planning is needed; that is in the field of aviation. It is to be regretted, that last July that an $8,000,000 appropriation item providing completion and construction of 23 airports in this country failed of passage. I hope that Congress will become air minded, and wake up to the tremendous possibilities of aviation. These 23 airports should have consideration immediately. Most of them do not need to wait for post-war planning because they are already partly constructed with Government funds, and will deteriorate and become valueless unless they are completed promptly. It is only a matter of the exercise of good business to do this now.

In connection with our post-war planning, details should be worked out for a complete network—from the East to the West, and the North to the South—all over this country. The transportation of passengers and freight by airplane has unlimited possibilities, and, as I have said, we are on the threshold of new transportation methods which will make the present automobile and motor vehicle look small in comparison. Now is the time to take into account these possibilities when something over 1,000,000 aviators and men trained in the air forces come back following this war.

In this connection, last, but not least, in importance is the development of the rivers and harbors in the United States. In this connection I call special attention to the St. Lawrence seaways and power development project. There is pending in Congress a bill, H. R. 2280, providing for this work. Hearings were held on this measure in the summer of 1941, and these were probably the most exhaustive hearings ever conducted on any project. The St. Lawrence seaway project was then approved by the Rivers and Harbors Committee and included in omnibus bill, H. R. 5993, Seventy-seventh Congress. I will not here discuss the many advantages that would come with a completion of this project. I have on other occasions done so, and my remarks appear in the CONGRESSIONAL RECORD. I can point out, however, that in hearings held in the Senate during peacetime, General Markham of the Army engineers, stated that the savings to the American people the first year the project would be in operation would be $80,000,000.

We are going to end this war with a tremendous merchant marine. In other words, a great surplus of ships available for transportation purposes will be our problem. Are we going to scrap this shipping as was done in World War No. 1 or are we going to develop our rivers and harbors and waterways transportation facilities and use this shipping for the benefit of the American people? The whole course of this war has demonstrated the need for this project, and the hardships placed upon the country in a time of great stress, through the lack of its facilities, the old arguments that this country possesses a surplus of transportation facilities has been pretty well exploited at this time. The country now faces a pending break-down of its railroad transportation system, brought about in large measure by the reluctance of the railroad system to either expand their own facilities or permit other means of transportation to be constructed. It, therefore, ill behooves these same agencies to bring up this type of argument in the future as they have done in the past. Unless we utilize every natural resource we have to provide cheaper transportation we cannot hope to attain a high level of production at the end of this war, and to compete with foreign countries.

But to get back to the subject, the development of all of these rivers and harbors projects, including the development of the power that is going to waste on the St. Lawrence River, will give employment to tens of thousands of unemployed men. This applies not only to the project itself, but in connection with the making of materials in the factories and elsewhere, and in the development of new enterprises which will come about through the development of these resources.

Proceedings at the Conferring of Army-Navy E Banners and Pins at Union Bleachery, Greenville, S. C.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. BRYSON. Mr. Speaker, it was my privilege on August 26, last, to attend the ceremonies at Union Bleachery, Greenville, S. C., for the conferring of the Army-Navy E award upon this splendid industry.

Many years ago John W. Arrington, Sr., now deceased, with his associates founded the Union Bleachery near my home town of Greenville, this being one of the first finishing plants to be located in the South. As I stood in the presence of the large patriotic group of citizens assembled for these unusual ceremonies my mind went back to other days when as a child I traveled along the muddy road, now a beautiful concrete highway, beside which is situated this essential mill.

Since less than 3 percent of the industries engaged in the production of war goods have been fortunate enough to receive the special award for efficiency in production, the occasion was all the more significant. The management of the Union Bleachery is now in the hands of the Arrington brothers, sons of the founder, with many others who grew up in the community. High representatives of the Army, Navy, Federal, State, county, and municipal government were present, as well as hundreds of employees with members of their families and friends on this impressive day.

Under Secretary of War Patterson sent the following letter:

WAR DEPARTMENT,
OFFICE OF THE UNDER SECRETARY,
Washington, D. C., July 31, 1943.

To the Men and Women of the Union Bleachery, Greenville, S. C.:

This is to inform you that the Army and Navy are conferring upon you the Army-Navy Production Award for great accomplishment in the production of materials needed in the war effort.

This award symbolizes your country's appreciation of the achievement of every man and woman in the Union Bleachery. It consists of a flag to be flown above your plant and a lapel pin which each of you may wear as a sign of distinguished service to your country.

I am confident that your outstanding record will bring victory nearer by inspiring others to similar high achievement.

Sincerely yours,

ROBERT P. PATTERSON,
Under Secretary of War.

President R. W. Arrington replied to the above letter as follows:

GREENVILLE, S. C., *August 5, 1943.*

Hon. ROBERT P. PATTERSON,
Under Secretary of War,
Washington, D. C.

MY DEAR MR. PATTERSON: On behalf of the men and women of Union Bleachery, it is both a pleasure and an honor to acknowledge receipt of your letter of July 31 informing us of the Army-Navy Production Award

Your recognition of the patriotic accomplishments of our people is deeply appreciated and will inspire us to increased production and improved quality of the essential fabrics being handled at this plant.

Every worker will wear the E pin with pride, realizing that it is a symbol of work well done for our boys in the fighting forces.

Sincerely yours,

R. W. ARRINGTON, *President.*

Governor Olin D. Johnston made an appropriate address which was followed by Lt. Col. Christopher C. Baldwin, Jr., QMC, as he presented the Army-Navy E. Colonel Baldwin spoke as follows:

Mr. Chairman, men and women of Union Bleachery, and guests, less than a week ago, I received a letter from a close friend of mine, and of yours—Cal Harris, now a Quartermaster captain now stationed in England. I am sure you will be interested in what he had to say and instead of attempting a speech, I am going to tell you what he said. I quote:

"I was delighted today to learn that Union Bleachery is to receive the Army-Navy E and I am hoping this letter will reach you in time so that you can congratulate for me,

John and Dick Arrington and all my former coworkers who were responsible for earning this honor. I know what splendid work Union Bleachery is doing, the large volume that is turned out weekly, and I well know that quantity and quality cannot be produced without a lot of hard work, long hours and plenty of sweat.

"I am in charge of the clothing and equipage branch in the Supply Division of the Army Service Forces here, and every day we are in contact with hundreds of suits of herringbone twill—shirts, trousers, and all items issued to our men in the Army. I am in a splendid position to see just what huge quantities of clothing are needed and I know these supplies would not be coming to this and other theaters of war without the loyalty, cooperation, and backing of those at home.

"If you get this letter in time, tell my friends at Union that they are making a real contribution to the war effort in turning out more and more cloth, and by making it good and strong. I have seen what the boys go through with and believe me when I say those herringbone twill uniforms take an awful beating when the men get into the combat zones. The workers at Union were always loyal and I know they will continue to give their best when I tell them we need the best they can give.

"When we arrived here where I am stationed, we worked 15 and 16 hours a day and even now we are so busy that we never notice when Sunday comes around for we work 7 days a week. But, however hard it is, the results in north Africa and in Sicily were well worth our effort. You can appreciate our satisfaction in knowing that we here and those working at the Union Bleachery and other plants at home contributed to those successes.

"I am hoping that it won't be too long before I shall be back to see you and my friends in Greenville. In the meantime, keep our supplies rolling."

Those are the words written by Cal Harris who is now a great many miles from Greenville, expressing his confidence that you have done everything in your power for him and the other fighting men.

When I reply to his letter, I shall tell him his confidence was justified. I shall tell him how you maintained a three-shift operation at Union despite manpower problems. I shall tell him how your older, skilled workmen trained others to take the places at the machines of those going into the service, and I shall tell him that a number of Union workers, equal to 29 percent of your personnel, are in the armed services. That your record of bond and stamp purchases is unsurpassed in this area. I shall tell him that no matter what difficulties arose, you never for a moment permitted production to lag—in fact, increased it from 50 to 59.7 yards per man-hour.

For the War Department, I want to say that your record in maintaining peak production in face of shortages of critical materials is a noteworthy one. Of particular interest to the Army was the engineering accomplishment in perfecting a one-process water repellancy treatment increasing the speed of the process by 50 percent.

Of no less interest is your conservation and salvage program. I learn that every operator must turn in an old metal item for every new replacement, and that a salvage department has been set up for the purpose of sorting and renovating discarded articles for re-use. I find, too, that a majority of your repair jobs are accomplished through use and adaptation of salvaged parts.

I am confident that with this fine record, you will not permit anything to throw you off guard and cause you to relax your efforts. War news these days is encouraging, but when we look at a map of the Pacific and compare the few places we have recaptured from the enemy with the vast expanses to be regained, we are enabled to read the news with a new understanding of the immense task still ahead of us. And with this understanding, you will be able to continue your work with the same tireless spirit which pervades your own servicemen and their millions of buddies.

You have done well and are full deserving of the honor you are to receive. May I now present you, on behalf of the Under Secretary of War, the Under Secretary of the Navy, and the men and women of the armed forces, this Army-Navy production award. It consists of this flag for your plant and individual pins for yourselves. Let this award be your inspiration as you work to hasten the day when our boys will come marching home victorious.

President R. W. Arrington of the Union Bleachery spoke to his people as follows:

Mr. Chairman, Governor Johnston, Colonel Baldwin, distinguished guests, ladies and gentlemen, the employees of Union Bleachery, whom we honor today, are the right kind of people. They are a credit to the country we all love and to the boys representing us on the battle fronts. I know whereof I speak because we grew up together. They think straight and they act straight. When there is a job to be done, they set about doing it. Whether a Community Chest drive, Red Cross, or any other activity for the betterment of their fellowmen, they can always be counted on to do their share and more. They are conscientious and hard-working, loyal, honest, God-fearing, and God-loving men and women.

They are patriotic beyond all question. They have furnished 309 of their sons and husbands as well as 1 WAC and 1 WAVE to the armed forces. Two assistant foremen, with wives and children, who were not required to go, volunteered, and left only this morning.

Their absentee record is excellent and well below the average for industrial plants.

For over a year 97½ percent of them in number have allotted 10½ percent of gross pay roll to the purchase of Government bonds. We have proudly flown for many months the Treasury Minute Man flag. Quite a few of these flags have been awarded for 90-percent employee participation, but you won't find many that carry the Treasury T for purchases in excess of 10 percent of gross pay roll. Ours does.

They have labored long and hard in producing vital clothing for our armed forces.

In thinking of the employees of Union Bleachery I trust you will pardon a personal reference while I pay tribute to an employee who is not with us today. He would have gotten a greater thrill from this celebration than anyone present. Because of his untiring efforts during the infancy of our business, he is responsible, more than any other person, for the signal honor which is being accorded us today. He loved the people of this plant and, in turn, was loved by them. His sterling character was indelibly impressed upon the lives of those, his friends, with whom he worked at Union Bleachery—our father, John W. Arrington. In his absence I will ask our mother to rise and bow.

Colonel Baldwin, I have told you something of the kind of people you are honoring today. It is with deep pride and joy that I say to you, as the official representative of our Government, that I accept this flag in the name of the employees of Union Bleachery with deep humility. In accepting it we realize full well, and cheerfully assume, the responsibility placed upon us. We know we cannot let up, but must continue to equal or surpass our past accomplishments in order to keep it flying and in order to qualify for a star at the end of 6 months. We will continue, each and every one of us, to put forth our best efforts to bring this horrible war to a speedy conclusion, to keep faith with our boys at the front and to try in our humble way to help perpetuate the ideals which have made our great country stand out among the nations of the world.

Probably the most impressive portion of the program was the speech of acceptance of the Army-Navy E pins by Mr. W. A. Bishop, an employee for many, many years, as follows:

Mr. Chairman, Governor Johnston, and representatives of the Army and Navy of our Government, I feel that a great honor has been placed upon me to represent the employees of Union Bleachery on this memorable occasion.

Therefore it gives me a great deal of pleasure on behalf of all my fellow employees to accept the E pin award for our efficiency in the production of finished materials for the armed forces of our Government.

We are not sacrificing anything that will compare to that of our sons who are in the armed services of our country. My son has been in service 29 months. He feels that he will not be doing his part until he gets into actual battle with the enemy. Likewise many of you have sons, many of them on the battle fronts, fighting. They are sacrificing their all.

We feel that the management of the company deserves the greater part of the credit for this award today, because of the fine spirit of cooperation with the employees. Our problems are always their problems, along with theirs, which are many and hard.

May we continue to work and cooperate until victory is ours and "the lights are turned on again all over the world."

In addition to the outstanding and efficient services being rendered to the Government in its war program by the Union Bleachery, at least two of its former employees have given their lives to their country's cause, Milton Reece Surratt at Pearl Harbor and Oscar C. Stone in the southwest Pacific.

The following employees are no longer on the pay roll at the Bleachery because they are proudly wearing their country's uniform:

Beauford Allen, William G. Alverez, Paul M. Ambrose, Charles Anders, Paul M. Anders, Ted Anders, William Anders, James Welch Anderson, William Harold Andrews, Alton E. Anthony, Glenn W. Anthony, James P. Anthony, Willis Moras Anthony, J. D. Atkins, Barrett Brantley Aycock, Algie Bates, Jr., Albert T. Batson, Harold Batson, J. Heyward Batson, Ray Batson, W. A. Batson, J. Aromus Batson, William Henry Bell, Colie B. Bishop, D. Eugene Bishop, Grover F. Bishop, Jr., Roy Marshall Bishop, William Adger Bishop, Jr., William Clinton Bishop, Curtis C. Black, James Black, Walter Levi Black, George R. Blakely, R. Neal Boswell, James L. Bouchillon, Jr., Johnny Uris Bouchillon, Jr., Bunyan Bowers, James Bowers, Roy Hugh Bowers, C. Bruce Brazeal, Boyd William Bridgeman, Jesse Leo Bridges, Ansel L. Bridwell, Milton N. Bridwell, J. Ben Brockman, Charles M. Brooks, Frank C. Brooks, Iola A. Brooks (WAVE), Benjamin Franklin Brown, Melvin Brown, Walter Lee Brown, Wilbert Brown, Robert Edward Bruce, Thomas G. Bryant, William A. Burns, Hubert E. Camp, Cohen Campbell, Floyd Hugh Cantrell, James D. Cantrell, William J. Cantrell, Roy V. Capell, N. D. Carpenter, Walter B. Carpenter, Andy Carr, Randolph Center, Jesse James Chastain, Leroy Christopher, John H. Clifton, Paul Corbin, Manuel Cowan, Jr., Ruthel Coward, Troy Elihue Cowart, Fred Lowman Craig, Lewis Oliver Crane, Joe Ralph Cunningham, George W. Darby, W. Allen Davis, Walter A. Dean, Lucius Delk, William C. DeWitt, Ernest Dickey, J. Lester Dilleshae, Douglas F. Dix,

Smothers, Jr., Broughton M. Snow, Harvey K. Southerlin, W. Hugh Southerlin, Chas. A. Spencer, Jr., Ridlie V. Staton, Doyle Stewart, Joe N. Stinson, Jr., Theodore Croft Stone, Sherwood C. Stroud, Thomas C. Stroud, Russell H. Styles, John T. Styles, W. Bert Swindel, Thomas H. Tate, John Wiley Thompson, John Wesley Thompson, Ullen Lowry Timms, Roy W. Tomlinson, J. Wallace Trammell, Gus A. Trotter, Walter Lawrence Trotter, Eugene C. Turner, Hal Nicholas Turner, James M. Turner, Paul C. Turner, Jr., William Montgomery Verdin, J. Benson Waldrop, Willie McD. Waldrop, Ralph C. Ward, Louie O. Watson, Louis M. Watson, L. Ralph Watson, Charles E. Welchel, John D. Whittenberg, Willie Whittenberg, James Bunyan Wilbanks, Ellis C. Williams, George Thomas Williams, Jesse C. Williams, Jessie G. Henry Williams, Robert Paul Williams, Woodrow Wade Williams, Aaron Willis, C. Lavoyger Willis, B. F. Wood, Jr., Jimmie S. Wood, Kendell Wooten, Wm. Walker Wright, Rupert F. Wynn, Wm. A. Yown.

So long as we have such outstandingly cooperative relationship between our Government and its people, both employers and employees, there can be no doubt about the successful termination of the war.

It is with a feeling of extreme pride and happiness that I thus extend my heartiest congratulations to the good people of Union Bleachery who have attained this outstanding award.

A Test for the Senate

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of September 17, 1943:

A TEST FOR THE SENATE

Virtually all American discussion of postwar problems now starts from the assumption that this country must associate itself with other nations to maintain peace and then proceeds to a discussion of ways and means. In fact it would be possible at this time to secure a large measure of agreement to a number of specific preliminary steps toward the creation of international machinery to implement the basic aim. In other words, American public opinion has progressed beyond the point where it is necessary to debate the advisability of undertaking responsibilities in connection with the safeguarding of peace.

As yet, however, Congress has not ratified the national will. Whether because of inertia, or the deviousness of administration policy, or competition for prestige between its Houses, the legislature has wasted many months, during which this country's foreign policy and public opinion might have been building on the foundation of a formal expression of intent by the people's representatives. But each tense day that passes on the hotly contested beaches of Salerno shows forth more vividly the costs and risks of presenting a tardy front against aggression, and Congress is now moving toward a statement of America's determination that those risks and those costs shall not again be incurred.

Of the two chambers it is the House, traditionally closer to the people, which is advancing with the greater speed and decisiveness. Its Foreign Affairs Committee expects to bring the Fulbright resolution to a vote on Monday under a suspension of the rules which would forbid amendments but which requires assent by two-thirds vote. If successful this step would place the House cleanly and clearly on the record in favor of the creation of and American participation in "appropriate international machinery with power adequate to establish and to maintain a just and lasting peace." This is a minimal statement, surely, but it is broad enough to provide a sound basis for detailed and practical planning—and by its very conciseness it goes far to remove the temptation to tinker and define, which so frequently hampers congressional action.

The Senate could do much worse than to take up the Fulbright resolution as it stands. To be sure, the Senate also has available the Ball-Hatch-Burton-Hill resolution, which is somewhat more specific than the House measure, proposing immediate action by the United Nations in certain fields of joint effort—notably the creation of a military force to check future aggression. But the Senate also has a number of very opinionated gentlemen who have demonstrated great reluctance to learn by experience and who are less amenable to public opinion than their colleagues in the House. They may be expected to do as much as lies in their not inconsiderable power to bedevil any attempt to prove that the United States Senate knows the time of day.

In its own interests it behooves the Senate to take swift and effective steps to translate the popular will for some concrete expression of this country's intention into action. Here is no partisan question, as the recent meeting of Republicans at Mackinac Island made plain. The simple duty now incumbent upon the Senate is to prove that it is sufficiently responsive to public opinion and the Nation's needs to be worthy of the trust placed upon it by the Constitution and the voters. If the Senate can produce and pass a better declaration than that of Mr. FULBRIGHT it will be applauded by the House and by the country. But if it wanders into a morass of debate and delay it will suffer greatly in prestige and loss of public confidence. The House has taken the initiative. But it is the Nation at large which supplies the drive behind that initiative. The Senate must bestir itself—or be left hopelessly behind.

Chester Bowles' Figures on Reduction of Food Prices Are Wrong

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. JENKINS. Mr. Speaker, I secured leave to extend my remarks in the RECORD today because I desired to add to the remarks I had made previously today some additional matters including a table of quantities, prices, and percentages which will appear herein.

Up to the time the House met today—Friday, September 17—the Office of Price Administration has not been able to explain the basis of Mr. Chester Bowles' public announcement on September 13 that by the payment of subsidies of $100,000,000 on seven commodities the cost of living would be rolled back 2.3 percent.

Anticipating that there would be difficulty in securing such information, the Republican Congressional Food Study Committee has compiled the available data on these seven commodities with a view to ascertaining as correctly as possible what the true facts are, for it has been a notorious fact that during recent months governmental figures on food have been grossly inaccurate.

Based upon the 1942 over-all cost of living, which has been reported as $69,000,000,000—which figure should not be confused with the estimated consumer expenditure amount of $81,980,000,000, as reported by the Department of Commerce—and not allowing for any increase in 1943, a reduction of 2.3 percent would require subsidies amounting to $1,600,000,000, not including a probable administrative cost of an additional 20 percent to do all of the bookkeeping, accounting, check writing, recording, and other clerical duties to put such a subsidy into effect. Mr. Bowles states that it will cost only in the neighborhood of $100,000,000 of the taxpayers' money to effect such a saving.

Analyzing Mr. Bowles' statistics on the basis of the subsidies which he proposes the Government shall pay on these seven commodities, that is, apples, oranges, onions, potatoes, lard, vegetable oils, and peanut butter, and assuming that the entire estimated 1943 production of these commodities will enter into retail trade, the amount of the subsidy will approximate $525,000,000. This at best can only amount to three-fourths of 1 percent of the total cost of living; or one-third of 2.3 percent promised by Mr. Bowles. But no one expects the available supply of these commodities to enter into retail trade. Large quantities of some of these crops have already wasted and have been destroyed by bureaucratic inefficiency, as for example the large quantities of potatoes lost through lack of proper refrigeration both while in transit and in warehouses. If 50 percent of the entire production of these seven commodities found their way into direct retail channels, a saving to the consumer would amount to 1 cent on every $2.67 spent for living expenses; yet the subsidy cost to the taxpayer would amount to some $212,000,000 not including the costs of administration.

I present herewith a table prepared by the Republican Congressional Food Study Committee, listing each of these seven commodities, together with the estimated 1943 production expressed in pounds, with the retail price before subsidy, the amount of the subsidy, and the retail price after the subsidy. As Mr. Bowles indicated the amount of subsidy on each item except apples, it is but a simple arithmetical problem to ascertain the aggregate amount of subsidy necessary, presuming the entire 1943 production will enter the direct retail market. It is as follows:

[In pounds]

Commodity	1943 estimated production [1]	Present retail price	Subsidy	New retail price	Aggregate subsidy
		Cents	*Cents*	*Cents*	
Apples	4,434,816,000	[2] 11.3	2.55	8.75	$113,087,801
Oranges	8,518,587,000	11.2	1.5	9.7	127,778,805
Onions	2,634,709,000	8.0	2.0	6.0	52,686,000
Potatoes	27,630,720,000	4.0	.5	3.5	138,153,600
Lard	2,900,000,000		1.0		29,000,000
Vegetable oils	3,880,000,000		1.0		38,800,000
Peanut butter	400,000,000	33.3	6.8	26.5	24,320,000
Total					523,826,206

[1] Source: Department of Agriculture.
[2] Source: Bureau of Labor Statistics.

Mr. Speaker, is it any wonder that the American public, American producers of food and American businessmen have lost confidence in the administration of the Office of Price Administration? Notwithstanding the clear mandate of Congress in opposition to the payment of such subsidies, these O. P. A. officials probably believe that when they have spent $100,000,000 of the taxpayers' money they can come to Congress and ask for a deficiency appropriation for another $500,000,000 or $600,000,000 to fulfill the obligations they may have made.

The War Effort

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. GEARHART. Mr. Speaker, the American Legion magazine for August 1943 published a poem entitled "The War Effort," by Legionnaire James Patrick McGovern, of Bethesda-Chevy Chase Post of the Department of Maryland.

As the composer of those lines served as a captain both in the United States and in France during the First World War, the verses, written under the inspiration of sacrificial service, reflect a patriotic and beautifully expressed challenge and reply, sentiments which no American can contemplate without emotion.

Because these inspirational lines from the pen of so distinguished a member of the District of Columbia bar as Captain McGovern undoubtedly is should be accorded the widest possible audience, I incorporate them in the CONGRESSIONAL RECORD.

They are:

THE WAR EFFORT

Effort for this war? In freedom's hour
And very life's? Vain word of compromise
To dull our Nation's will to win, our power,
While civilization falters—lives or dies.

Effort for this war? Best terms are tame,
But this breathes doubt, and men who falter fail,
When action must follow thought like ball and flame,
And strength and truth inevitably must prevail.

Effort for this war? The martial call
To warriors on land, in sky, on sea,
Fortifying them to give lives—all,
For love of the Nation's reverent memory?

Effort for this war? At home, even those
Must serve with fullest heart and readiest hand
While light at Armageddon overthrows
Darkness, so that peace may smile in every land.

—*James Patrick McGovern.*

A Farce Trial

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SHAFER. Mr. Speaker, I rise at this time to call upon the Secretary of War to review the court martial of Col. William T. Colman, former commanding officer of Selfridge Field, Mich. Public opinion and the welfare of our armed forces demand this.

In this connection I include in the RECORD the following editorial from the Detroit Free Press:

A FARCE TRIAL

The court martial of Acting Col. William T. Colman was a whitewash. The verdict of the court was a farce. The punishment meted out is an insult to the fighting forces of the United States.

His punishment is that he shall retain his rank of captain, being merely relieved of his temporary colonelcy.

Charged with shooting his chauffeur and seriously wounding him, Colman tried to escape punishment by the old plea of temporary insanity, claiming "my mind went blank"—the oldest gag in comedy murder trials.

When he was denied the right of pleading emotional instability the military court then decreed that, while he was not guilty of shooting a soldier, he was guilty of "careless use of firearms."

Every serious charge was reduced by the court to the status of misdemeanor so that the nightlife-loving commander of one of the most vital military bases in the United States could retain his rank.

Yet if, as the court decrees, this man is mentally and morally unfit to be an acting colonel of the United States Army, how is he mentally and morally fit to be a captain in that organization when we are fighting the most desperate war in our history?

Why should an officer with self-confessed mental aberrations be allowed to remain in charge of men?

Detroit is the armory of the United States. The fate of the Nation depends upon the products of this area. If we had been attacked by the enemy this acting colonel would have been in charge of our air defense as the commander of the great air base of Selfridge Field. Why was such a man given such responsibilities?

Who is to blame for his being given such great authority and why was he continued on the job? Where is the military inspection general? Where were Colman's superior officers?

An answer to these questions should be demanded by the Military Affairs Committees of the United States Congress.

And the answer might be that some higher-up is being protected by this obvious whitewash.

Playboy Colman is not the issue. The gay dog of civilian friendships and the petty martinet of the command is an old, old story in any army. The question, let us repeat, is: Who is responsible for putting him in command and keeping him there?

He was tried on 28 counts for violation of the articles of war. Yet there was no mention of any crime of omission in connection with the defense of Detroit—a crime which conceivably could have led to a repetition of Pearl Harbor. The picture of an air force colonel in command of the great air base cracking up from "overwork," the companionship of civilian merry-andrews and booze, and finally going gun crazy, is all that the citizens of the United States and the men of the fighting forces can see.

So they give him a slap on the wrist and return him to his captaincy.

Congressman PAUL W. SHAFER, Michigan member of the House Military Affairs Committee, asks in Washington a pointed question: "I wonder what this court martial would have done if a drunken private shot his commanding officer?" And he adds an ominous note which should be accepted as a challenge:

"If an investigation goes far enough, it will involve some State officials and a lot of persons in civilian life. I want to know about the slot-machine racket and about a lot of other people not mentioned in the testimony."

The Free Press suggests that now that the court martial has finished its investigation the court martial itself be investigated.

Liberty at Home—An American Policy

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following report of the Mackinac Island, Mich., Committee on Domestic Problems of the Republican Post-War Advisory Council and an editorial from the New York Journal-American of September 11, 1943:

Immediately at the end of the war we shall face the vital problem of reconstruction at home. A military victory abroad without preservation in America of the fundamental principles on which our way of life depends will be no victory. It will be a defeat. The way we meet the problem of reconstruction will determine whether the American way of life shall survive.

We will prepare an affirmative program designed to preserve to our people all the freedoms for which we fight throughout the world, based on individual liberty, the independence of State and local government, and the independence of Congress and the courts.

That program must as promptly as possible return men to work in peace industry with special attention to those who have made sacrifices by serving in the armed forces, take Government out of competition with private industry, and terminate rationing, price fixing, and all other emergency powers. It must maintain full employment through private enterprise, and full production to furnish the goods and services so needed by our people. In so doing we must seek to make sure that the unemployment and insecurity of the years preceding the war do not return, and that hardship and poverty shall be prevented by a supplementary but comprehensive program of social security on sound principles. We must eliminate all unnecessary regulation of the individual and of business, restore and protect small business which has been so recklessly destroyed, and assure incentive and equal opportunity for the youth of America.

The present program of the New Deal administration, with the enlargement thereof set forth in the reports of the National Resources Planning Board, would wreck the country because the only remedy it proposes for any problem is unlimited Government spending of borrowed money. It would socialize all business, agriculture, and the professions. It would extend the power of Government until ultimately no man or woman could act, write, speak, or work without approval. It would substitute for American liberty the regimented existence of a subject people.

Our reconstruction, to insure real happiness, cannot be based alone on the improvement of standards of living, but it must be based upon the character of the American people, their religious faith, industry, morality, educated intelligence, and ingrained love of justice. Only thus will we remain a nation of freemen who are masters of our own souls.

The Republican Party is devoted to the Federal system of government by which basic rights and duties are reserved to the States, free of dictation, and subject to the control of their people. These rights and duties the New Deal has arrogated to itself.

It has now multiplied the number of Federal civilian employees five times. Three million of them now regulate the lives of our people. The number of bureaus has so multiplied that every detail of American life is now regulated by bureaucratic decree.

These are the instruments of fascism. They are the inevitable result of the policies of the New Deal. They must be brought to an end.

The Republic Party insists upon equality of opportunity for all Americans regardless of race, color, or creed, in the economic, educational, political, and military life of the Nation.

The production of food is vital to our armed forces, to the life of our own people, and to the life of the people of our allies.

The administration's policies on manpower and farm machinery, and inexpert price regulation, have hampered full production. Its bungling regulations issued through multifarious and overlapping agencies have interfered with farmers, processors, wholesalers, and retailers until the normal channels of trade have been completely disrupted. Many small operators have been forced out of business.

An immediate program of increased production and improved distribution must be adopted to be administered by a single agency clothed with full power over food in all of its aspects during the war emergency. Otherwise, we shall not only be without the means of relieving the starving people of Europe and Asia but there will be the most serious shortage and hardships in the United States itself.

For the post-war period our agricultural program must seek to assure prices in the market place comparable to the prices of other commodities. The production of successful crops shall be continued and encouraged and not eliminated by governmental action. The great field of new, improved, and suitable crops must be explored, and the greater industrial use of agricultural products should be vigorously encouraged. Our soil resources need to be conserved and sound reclamation projects should be developed.

The individual initiative of the American farmer must be unshackled and in all governmental action there should be a minimum control from Washington, and a maximum freedom of operation by the American farmer.

This council affirms its belief in the strength, the character, and the rights of the American workingman; his pride in himself; his aim to get for himself a bank account, an insurance policy, a home of his own with a self-reliant American family in it; his right to organize and bargain collectively through agents of his own free choice.

We denounce the political effort to reduce labor in the United States to the European level of a class-conscious vote-shackled proletariat. We reject the doctrine that the American workman's mind must be made up in Washington and his personal life turned over to the management of Washington's political coddlers. The destiny of American labor is not Fascist. It must remain American.

The basic position of American labor in the American economic system must be guaranteed by fair and equitable laws.

It is our solemn duty as a people to take these sound measures, as Abraham Lincoln once pointed out—to bind up the Nation's wounds, to care for him who has borne the battle, his widow, and his orphan.

The supreme obligation of our country is to immediately pay our debt of honor to those who are fighting our crusade for peace and freedom. Our post-war program must and does include fullest provisions for the rehabilitation and employment of the men and women of the armed forces.

Temporary help must of course be given, but that is not enough. The returning veterans must and shall have the right to launch projects, till the soil, work in the arts, in business or professions, free to forge ahead. They are entitled to jobs; good honest jobs; jobs with which they can start and go forward; send their children through school; own their homes; jobs which will feed and clothe them in comfort.

Veterans must not come home to be treated as wards of a state or nation, but must find their Nation a land of greater opportunity under a free American system.

The deepest yearning of our people is for victory and union of our families in peace. This is at the very heart of our whole life. If we build a better America with the highest standards of living and with deep spiritual values, we shall have met their challenge and shall have approached their devotion.

[From the New York Journal-American of September 11, 1943]

AN AMERICAN POLICY

The resolution on domestic policy adopted by the Republican Post-War Advisory Council at Mackinac Island is a well-considered American statement and reflects profound understanding of American principles.

Seldom have the stupidities and failures of the New Deal been so searchingly analyzed and so devastatingly exposed.

Too seldom, indeed, do American politicians see their responsibilities with the clarity and courage which raised the Mackinac Island conference above politics and partisanship to the higher level of patriotism.

The heart of the program to which the Republican leadership is committed is in its blunt statement of the following indisputable facts:

"The present program of the New Deal administration * * * would wreck the country, because the only remedy it proposes

for any problem is unlimited Government spending of borrowed money.

"It would socialize all industry.

"It would extend existing regulation until no man or woman could act, write, speak, or live without governmental approval.

"It would substitute for American liberty the regimented existence of a subject people."

It is not a Republican policy but a fundamental American principle that basic rights and duties are reserved to the States, free of dictation and subject to the control of their peoples.

But it is a stark fact, as the Republican statement asserts, that—

"These rights and duties the New Deal has arrogated to itself.

"It has now multiplied the number of Federal civilian employees five times.

"Three million of them, three times as many as during the last war, regulate the lives of our people.

"The number of bureaus has so multiplied that every detail of American life is now regulated by bureaucratic decree.

"These are the instruments of fascism. They are the inevitable result of the policies of the New Deal. They must be brought to an end."

The American people will read this statement of Republican policy with gratification—not as Republicans, or partisans, or with any political interest, but as citizens acutely aware of its exact truth.

The people are weary and sick of regimentation imposed in the guise of war necessity, but intended to be the permanent condition of the American people after the war.

The people are resentful of the stranglehold Federal bureaucracy has obtained upon them.

They are confused by Government restrictions which reduce their productivity, and which are conceived by arrogant bureaucrats never elected by the people or appointed by the representatives of the people in Congress, and which are ruthlessly enforced by hordes of other bureaucrats callous to the welfare of the people and contemptuous of the rights of the people.

They are alarmed and frightened by the staggering costs of Government and the mounting and monumental debts of the country—not the costs and debts of war, but the wasteful and unnecessary costs and debts of political bureaucracy.

The Republican Council has correctly appraised the New Deal.

It has correctly read the minds of the people, and has properly spoken for the people, and thus represents the people faithfully.

It augurs well for the return of the American Government to the course and policies of its founders, for the restoration of Government to the people, and for the repudiation of the New Deal concept of Government by a clutching bureaucracy.

Meeting of Republican Post-War Advisory Council

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. REECE of Tennessee. Mr. Speaker, the meeting of the Republican Post-war Advisory Council at Mackinac Island, September 6 and 7, has assumed a position of importance beyond the expectations or even beyond the hopes of its sponsors. The editorial comment throughout the country indicates a highly favorable reaction to the work of the council at this preliminary meeting. One newspaperman who observed the meeting said he thought it likely that it would be recognized in history as an event of great importance and that Chairman Harrison E. Spangler would be given widespread credit for his initiative, vision, and wisdom in setting up the council and directing its deliberations. In view of the important role our party is expected to be called upon to play in the near future, it is fortunate for the country that we have, at this time, so capable and broad-gaged chairman with such splendid qualities of heart and mind. In connection with these remarks I include copies of the resolutions adopted by the council and also copies of editorials from the Detroit News and the Washington Daily News, a Scripps-Howard newspaper, which are typical of the favorable sentiment reflected by the press:

DECLARATION ON FOREIGN POLICY AND INTERNATIONAL RELATIONS ADOPTED BY THE REPUBLICAN ADVISORY COUNCIL

The members of this council are aware of the gravity of the problems our Nation faces. We are fighting a desperate war, which must be won as speedily as possible. When the war is ended, we must participate in the making of the peace. This puts upon the Nation a triple responsibility.

(a) We must preserve and protect all our own national interests.

(b) We must aid in restoring order and decent living in a distressed world.

(c) We must do our full share in a program for permanent peace among nations.

At this time a detailed program for the accomplishment of these great objectives would be impractical, and specific commitments by this council, by the Republican Party, or by the Nation, would be unwise. We cannot know now what situation may obtain at the war's end. But a specific program must be evolved in the months to come, as events and relations unfold.

Therefore, we consider it to be our duty at the beginning of our work as an advisory council of the Republican Party to declare our approval of the following:

1. Prosecution of the war by a united Nation to conclusive victory over all our enemies, including

(a) Disarmament and disorganization of the armed forces of the Axis;

(b) Disqualification of the Axis to construct facilities for the manufacture of the implements of war;

(c) Permanent maintenance of trained and well-equipped armed forces at home.

2. Responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world.

In making this recommendation we ground our judgment upon the belief that both the foreign policy and domestic policy of every country are related to each other so closely that each member of the United Nations (or whatever cooperative organization, perpetuating existing unity, may be agreed upon) ought to consider both the immediate and remote consequences of every proposition with careful regard for, (1) its effect upon the vital interests of the nation, (2) its bearing upon the foreseeable international developments.

If there should be a conflict between the two, then the United States of America should adhere to the policy which will preserve its constitutionalism as expressed in the Declaration of Independence, the Constitution itself, and the Bill of Rights, as administered through our republican form of government. Constitutionalism should be adhered to in determining the substance of our policies and shall be followed in ways and means of making international commitments.

In addition to these things this council advises that peace and security ought to be ultimately established upon other sanctions than force. It recommends that we work toward a policy which will comprehend other means than war for the determination of international controversies, and the attainment of a peace that will prevail by virtue of its inherent reciprocal interests and its spiritual foundation, reached from time to time with the understanding of the peoples of the negotiating nations.

In all of these undertakings we favor the widest consultation of the gallant men and women in our armed forces who have a special right to speak with authority in behalf of the security and liberty for which they fight.

It is determined that this council make complete examination of the means by which these aims may be fully achieved with due regard for all American interests and responsibilities.

The council invites all Americans to adhere to the principles here set forth to the end that our place among the nations of the world and our part in helping to bring about international peace and justice shall not be the subject of domestic partisan controversy and political bitterness.

DECLARATION ON DOMESTIC PROBLEMS ADOPTED BY THE COUNCIL—LIBERTY AT HOME

Immediately at the end of the war we shall face the vital problem of reconstruction at home. A military victory abroad without preservation in America of the fundamental principles on which our way of life depends will be no victory. It will be a defeat. The way we meet the problem of reconstruction will determine whether the American way of life shall survive.

We will prepare an affirmative program designed to preserve to our people all the freedoms for which we fight throughout the world, based on individual liberty, the independence of State and local government, and the independence of Congress and the courts.

That program must as promptly as possible return men to work in peace industry with special attention to those who have made sacrifices by serving in the armed forces, take government out of competition with private industry, and terminate rationing, price fixing and all other emergency powers. It must maintain full employment through private enterprise, and full production to furnish the goods and services so needed by our people. In so doing we must seek to make sure that the unemployment and insecurity of the years preceding the war do not return, and that hardship and poverty shall be prevented by a supplementary but comprehensive program of social security on sound principles. We must eliminate all unnecessary regulation of the individual and of business, restore and protect small business which has been so recklessly destroyed, and assure incentive and equal opportunity for the youth of Ame ica.

The present program of the New Deal administration, with the enlargement thereof set forth in the reports of the National Resources Planning Board, would wreck the country because the only remedy it proposes for any problem is unlimited government spending of borrowed money. It would socialize all business, agriculture, and the professions. It would extend the power of government until ultimately no man or woman could act, write, speak, or work without approval. It would substitute for American liberty the regimented existence of a subject people.

Our reconstruction, to insure real happiness, cannot be based alone on the improvement of standards of living, but it must be based upon the character of the American people, their religious faith, industry, morality, educated intelligence, and ingrained love of justice. Only thus will we remain a Nation of free men who are masters of our own souls.

The Republican Party is devoted to the Federal system of government by which basic rights and duties are reserved to the States, free of dictation and subject to the control of their people. These rights and duties the New Deal has arrogated to itself.

It has now multiplied the number of Federal civilian employees five times. Three million of them now regulate the lives of our people. The number of bureaus has so multiplied that every detail of American life is now regulated by bureaucratic decree.

These are the instruments of fascism. They are the inevitable result of the policies of the New Deal. They must be brought to an end.

The Republican Party insists upon equality of opportunity for all Americans regardless of race, color, or creed, in the economic, educational, political, and military life of the Nation.

The production of food is vital to our armed forces, to the life of our own people and to the life of the people of our allies.

The administration's policies on manpower and farm machinery, and inexpert price regulation, have hampered full production. Its bungling regulations issued through multifarious and overlapping agencies have interfered with farmers, processors, wholesalers, and retailers until the normal channels of trade have been completely disrupted. Many small operators have been forced out of business.

An immediate program of increased production and improved distribution must be adopted to be administered by a single agency clothed with full power over food in all of its aspects during the war emergency. Otherwise, we shall not only be without the means of relieving the starving people of Europe and Asia but there will be the most serious shortage and hardships in the United States itself.

For the post-war period, our agricultural program must seek to assure prices in the market place comparable to the prices of other commodities. The production of successful crops shall be continued and encouraged and not eliminated by governmental action. The great field of new, improved, and suitable crops must be explored, and the greater industrial use of agricultural products should be vigorously encouraged. Our soil resources need to be conserved and sound reclamation projects should be developed.

The individual initiative of the American farmer must be unshackled and in all governmental action there should be a minimum control from Washington, and a maximum freedom of operation by the American farmer.

This council affirms its belief in the strength, the character and the rights of the American workingman; his pride in himself; his aim to get for himself a bank account, an insurance policy, a home of his own with a self-reliant American family in it; his right to organize and bargain collectively through agents of his own free choice.

We denounce the political effort to reduce labor in the United States to the European level of a class-conscious vote-shackled proletariat. We reject the doctrine that the American workman's mind must be made up in Washington and his personal life turned over to the management of Washington's political coddlers. The destiny of American labor is not Fascist. It must remain American.

The basic position of American labor in the American economic system must be guaranteed by fair and equitable laws.

It is our solemn duty as a people to take those sound measures, as Abraham Lincoln once pointed out—to bind up the Nation's wounds, to care for him who has borne the battle, his widow and his orphan.

The supreme obligation of our country is to immediately pay our debt of honor to those who are fighting our crusade for peace and freedom. Our post-war program must and does include fullest provisions for the rehabilitation and employment of the men and women of the armed forces.

Temporary help must of course be given, but that is not enough. The returning veterans must and shall have the right to launch projects, till the soil, work in the arts, in business or professions, free to forge ahead. They are entitled to jobs; good honest jobs; jobs with which they can start and go forward; send their children through school; own their homes; jobs which will feed and clothe them in comfort.

Veterans must not come home to be treated as wards of a State or Nation, but must find their Nation a land of greater opportunity under a free American system.

The deepest yearning of our people is for victory and union of our families in peace. This is at the very heart of our whole life. If we build a better America with the highest standards of living and with deep spiritual values, we shall have met their challenge and shall have approached their devotion.

THE REPUBLICAN ADVISORY COUNCIL ADOPTED AND APPROVED FOR FUTURE STUDY THE FOLLOWING SUMMARY OF PROBLEMS

The council has made a preliminary survey of the problems which at this time most vitally affect the present and future welfare of the country. Some of these problems grow out of the great issues created by our participation in a World War. Some of them will arise from the readjustment to a peacetime economy. Some are the normal problems which it is the duty of the Federal Government to meet. Some arise from mistaken polices of government in the past 10 years.

The council realizes that for some of these problems with which the next Federal administration must grapple there is no easy solution; no short-cut panacea. The council undertakes its work realizing that it may not be able to find a perfect solution of all the problems the country must face in the coming years, but it will make every effort to find the most just and workable solution of these problems.

The council pledges itself to study these problems and to arrive at a judgment on them, with one single objective. That objective is the welfare of the country as a whole. This council rejects the philosophy that there is a necessary and inevitable class conflict in America. It believes that the soldier, the farmer, the mechanic, the businessman, the saver, and the investor are all partners in a joint enterprise. The council pledges itself to favor no element in our Republic at the expense of other elements.

Among the problems which the council will consider are the following:

1. PROBLEMS OF FOREIGN POLICY

With the coming of peace we must make decisions which will affect the future of the American Nation. There must be plans for just and proper action at the conference of nations at the peace table. There must be plans for American collaboration in the restoration of order and normal economic life in ruined countries. We must make plans for this Nation's participation with other nations in a program to achieve permanent peace.

2. PROBLEMS OF POST-WAR INDUSTRY AND EMPLOYMENT

It is necessary to devise ways and means by which the Federal Government will encourage the quick conversion of war industry to a peace-time basis. A plan for the orderly demobilization of our armed forces must be worked out, to the end that it shall not create unemployment, hardship, and low wages. In connection with these two programs it is essential to consider the means of restoring the spirit of enterprise and investment, long since discouraged by Government hostility, at the same time maintaining a proper and reasonable regulation of competition and employee relations. The problem of controlling monopoly without terrorizing legitimate business should be settled. The extermination of small business, now proceeding under present Government policies, should be halted.

3. PROBLEMS OF SOCIAL WELFARE

The present Federal system of security against unemployment and the hazards of old age is in need of examination and revision. The proper safeguarding of the vast funds now collected from workers and employers is a matter to be considered. Programs to extend security to larger groups and to other needs must be examined. The efficiency and justice of various methods of relief of the unemployed must be analyzed. The dangers of federalization of relief and security should be avoided.

4. PROBLEMS OF FEDERAL ADMINISTRATION

The Nation must bring to a halt the ceaseless expansion of Federal bureaus which feed upon the taxpayer, govern by Executive decree outside the law, hamper private business, and invade private life. We must examine the mass of Federal corporations now using the people's money to promote miscellaneous projects of Government planners. We must consider the growing invasion of States' rights by Federal action and define the constitutional limitations upon such invasion. The excessive and dangerous rate of expenditures by the Federal executive branch must be reduced.

5. PROBLEMS OF FINANCE AND CURRENCY

It is essential that the Nation find a solution of the problem of endless Government spending, deficit financing, and unbalanced budgets, long since adopted as a peacetime program by the present administration. A provision must be made for the vast weight of Federal debt now resting on the people. The Federal system of taxation, now a chaos of emergency devices to raise revenue, must be simplified and improved. Our monetary system, demoralized by rash experiments, must be restored to order and simplicity.

6. PROBLEMS OF LABOR

A way must be found to establish clearly the rights and just aims of labor under the law, to the end that the grievous conflicts of recent years may be avoided and that harmony and cooperation will result, not only between labor and management but also within the ranks of workers themselves.

7. PROBLEMS OF AGRICULTURE

The health and solvency of our national agriculture must be assured. The present system of interference with agriculture by Federal authority is undermining the independence and the initiative of our individual farmers. The heavy load of bureaucratic control must be removed from the business of farming. This problem must be solved.

8. INTERNATIONAL ECONOMIC PROBLEMS

The end of the war will find many countries with exhausted resources, paralyzed industry, disordered shipping, inflated currencies, and vanished foreign trade. In its own interests and in the interests of world peace

the United States must cooperate in all proper programs for the revival of international trade and finance and the establishment of stable exchanges. We must develop a wise tariff and reciprocity policy for the Nation. We must make provision for the use of the ship facilities created by the war. We must establish a policy on international aviation.

In pursuance of its program of consideration of these problems, the council has set up eight policy committees, with a brief list of the subjects allocated to each. These and other subjects will be explored and studied during the months to come. They are as follows:

POST-WAR ADVISORY COUNCIL COMMITTEES

1. Foreign policy and international relations

Program and procedure in the making of peace.

Problems of aid and cooperation for distressed countries.

Collaboration with other nations in establishing permanent peace.

2. Post-war enterprise, industry, and employment

Provision for demobilization of armed forces.

Conversion of war industries to peace industries.

Encouragement of investment and of employment by industry.

Preservation of small business.

Problems of unfair competition and monopoly.

Domestic commerce and transportation.

Public works, highways, and reclamation.

3. Social welfare and security

Old-age security and unemployment aids.

Extension of social security to additional groups and additional needs.

The problem of the forms of relief.

Federal or State and local administration of social security and relief.

Public and private housing.

4. Finance, taxation, and money

The problems of an unbalanced budget.

The payment of Government debt.

A sound system of Federal taxation.

A sound currency system.

5. Reform of Government administration

The problem of Federal bureaucracy.

Economy in administration.

Limitation of executive power.

Limitation of powers of administrative boards.

Federal corporations.

Federal powers, States' powers, and local self-government.

6. Labor

Sound and equitable labor legislation.

Solution of problems of labor and industry.

7. Agriculture

A long-range program for the American farmer.

Agricultural problems of production, price, and distribution.

Decentralization of Federal control.

New crops and new uses for farm crops.

8. International economic problems

International trade.

Post-war tariff and reciprocity policy.

Stabilization of international exchanges.

Post-war shipping problems.

International air transport.

[From the Detroit News of September 8, 1943]

FORTHRIGHT AND POSITIVE

In its resolution on foreign policy the Republican meeting at Mackinac Island to establish the position of that party on post-war problems has had a far happier outcome than many had dared imagine.

The phraseology of the foreign policy resolution necessarily is general. Yet its meaning is explicit enough. It would pledge the party to "cooperative organization" among the nations to preserve peace "with organized justice" in the post-war world.

If this language is adopted by the platform committee at next year's Republican national convention, the effect, so far as one can see, must be to remove foreign policy as an issue in the presidential campaign.

No happier outcome could have been imagined. We have here a historic declaration, by virtue of which the dictum that politics "should stop at the water's edge" may be applied literally to our winning of the peace.

The declaration goes as far, if not further, in endorsing post-war collaboration for world peace, as any like statement thus far emanating from the Democratic administration in charge of the Government. It could be adopted word for word by the Democratic Party as its platform plank on foreign policy, and the hope that this will follow, expressed by one of the Mackinac conferees, yet may find fulfillment.

The Mackinac resolution on domestic problems is strongly worded, repeating and reinforcing Republican criticism of the New Deal philosophy of government. A presidential campaign fought out on those lines, with foreign policy, no less than war victory, set apart as a subject of national unity, will meet the wishes of the people.

[From the Washington Daily News of September 9, 1943]

MACKINAC FOREIGN POLICY

We like the unanimous foreign policy declaration of the Republican Post-War Advisory Council at Mackinac. We think most Americans will like it, because it points in the direction they want to go. They want a strong and free America, taking full part in the cooperative building of future world peace and justice. And that is the common ground upon which Republican leaders of various shades of opinion have agreed to stand.

Of course, Mr. Roosevelt ridicules the G. O. P. declaration. Perhaps that is the natural thing for him to do as Democratic Party leader and a fourth-term candidate, who does not want to see Republicans get together. But it might be better politics—and certainly higher statesmanship—for him to welcome this and try to duplicate it among the divided Democrats, so that foreign policy could be lifted above political partisanship. We doubt that he really dissents.

Some may wonder why the Mackinac declaration is not more definite, and extremists on both ends will be disappointed that it does not include their pet panaceas for perpetual peace. It could not take either extreme, of isolationist or superstater, and represent the majority of Americans.

As for definiteness, it obviously would be absurd for Republican leaders to fix details in a rapidly changing world situation on which no foreign government is yet committed. Indeed, experts as far apart as President Roosevelt and ex-President Hoover agree that final detail decisions cannot even be made promptly after the war, but probably must be matured over a transitional period.

This is as definite as it can be without goldbricking the public: "Responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world."

We like also the G. O. P. emphasis on adequate American armed forces, and on sticking to constitutional methods in determining foreign commitments. Any foreign policy not approved by the people and Congress is a dangerous delusion. But we are convinced that the people will support vigorously the general aims of the Mackinac declaration, which are exclusively neither Republican nor Democratic but American.

Mr. Speaker, these editorials reflect the views of the country itself toward the Mackinac declarations. An editorial from the Washington Star comments pertinently upon the attitude of the New Deal.

Says the Star, in part:

Despite efforts of the President and others to ridicule it, the foreign policy statement adopted by the Republican Post-War Advisory Council seems well suited to the needs of this time and the probable future requirements of the future. * * * The President and those others who seem disposed to ridicule what the Republicans have done would be well advised to consider the importance of removing the question of this country's post-war international stand from the realm of purely political debate. Instead of belittling the Republican program, it might be better for them to concentrate on persuading the Democrats to do as well.

Appeal to Hungary To Withdraw From the War

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. DAVIS. Mr. President, on Monday last, at the Fort Pitt Hotel, Pittsburgh, Pa., I had the distinct privilege of addressing the largest American-Hungarian organization in the United States—the Verhovay Fraternal Insurance Association.

This organization, composed of Americans of Hungarian descent, is doing everything within its power to sustain the American war effort and to insure the victory of Allied arms over the forces of totalitarian aggression. The members of this organization are to be found on the farm, in the production centers, and in the armed forces. They are determined to defend the heritage which America has given them.

In this connection, the organization has addressed an appeal to the citizens of their native Hungary to get out of the war—to surrender to the Allies immediately. Since this appeal to the citizens of Hungary may have a definite effect upon the Hungarian will to break the chains of Nazi domination, I ask unanimous consent that it be printed in the Appendix of the RECORD in order that the entire world may be apprised of the desire of the American-Hungarians to break asunder the world of Hitler, and to restore all nations to a status of freedom and equality.

There being no objection, the appeal was ordered to be printed in the RECORD, as follows:

PITTSBURGH, PA.

Hon. JAMES J. DAVIS,

United States Senate:

The board of directors of the largest American Hungarian society, the Verhovay Fra-

ternal Insurance Association, adopted the following proclamation at their session. Two members of the board of directors were instructed to contact Washington authorities through the American-Hungarian Federation in order to have the proclamation conveyed to the people of Hungary. Please use your influence toward having the proclamation reach its destination. If possible when Congress convenes, enter same in the CONGRESSIONAL RECORD. With kindest personal regards.

The military successes of the Allied armies advancing victoriously and the armistice signed with Italy, foreshadow more clearly the sad plight awaiting Hungary if she remains any longer in the unhallowed Nazi alliance. The board feels that as the largest fraternal organization of American-Hungarians, it is their obligation in these historic hours to turn to the Hungarian people with words of warning and appeal and for this reason they issue the following unanimous proclamation:

"PROCLAMATION OF THE VERHOVAY FRATERNAL INSURANCE ASSOCIATION TO THE PEOPLE OF HUNGARY

"Brethren, your blood brethren in America speak to you.

"We can speak freely. Our new country does not place a padlock on the lips of our sons.

"We can rightfully ask you to hear us. For, through decades we have sent you gift donations—money, clothing, food. 'Hoover kitchens' for the sustenance of starving Hungarian children. Our heritage and our little properties we left for you.

"We have never asked anything from you for these, but now we do ask.

"We ask you not to permit the 1,000-year-old state to perish, for it will always remain dear to us, and for you it is your country.

"Do not tolerate that the Hungarian people should bow their heads under the Nazi yoke in the manner of slaves. The domination of the Nazis has driven you to ruin. You can see this yourselves. Your sons have been driven into the maw of Nazi cannon by the tens of thousands. The whole Hungarian land mourns. Throughout the whole country Hungarian dead are being mourned, Hungarian wounded are being nursed.

"You have no bread nor meat because all your crops are taken away by the Nazis and they would take more if they would win.

"But they will not win.

"They cannot win. The liberty of men cannot be crushed.

"The power of the Nazis has wavered. The military strength of Hitler suffers one defeat after the other. The immeasurable strength of the nations allied against his despotism will shatter to dust his military and political power.

"The last hour of the Nazi regime has struck. The victorious allied military power has stepped onto European soil. The Italian Nation has surrendered. She has opened her gates to the military power of the United Nations by her unconditional surrender.

"And through the open door shines the sun of freedom. The Italian people greet the Allied soldiers with shouts of joy everywhere because they know that these stepped onto the land of their former enemies with good will and fraternity. The Italian people believe in the promises of the United Nations. The Italian people know that the United Nations' military powers will not crush the Italian Nation but will give it new, free life.

"You are promised the same things by every United Nation, the great-hearted and courageous protectors of the rights of men.

"Believe in the promises of the United Nations.

"Now is the time.

"Cast off from yourselves the shackles of Nazi-ism.

"Do not fight for another moment at the side of the Nazis.

"Do not give them either food or ammunition. Hide what you raise. Burn it, rather than give it to the Nazis. And, if the tyrannical revenge of the Nazis should throw you into prison or condemn anyone of you to death, choose rather the death of a martyr but do not permit the whole Hungarian Nation, the whole Hungarian country should perish forever. Do not fight against your own freedom and independence, the brighter future of your children.

"The hour of liberation is not far off. Every day brings closer to you the military strength of the United Nations victoriously pressing forward on the continent of Europe. And among the armies liberating you, your blood-brethren will also be there, our sons of American-Hungarian blood.

"Do not shoot at our sons. Do not fight against your brethren. But, stand beside them. Grasp the guns forced into your hands by the Nazi tyranny and turn them against the annihilators of Hungarian fate.

"Remove the Government, let everyone who is responsible for your being in the Nazi alliance clear out.

"Believe in us.

"We do not come to rob you, but to give. Not to subjugate but to liberate. From the day that the United armies step onto the soil of Hungary, you will not hunger, you will not be cold, you will not be ragged. We fight for you and not against you.

"The future of the Hungarian Nation is in your hands. If you will cast off the Nazi bondage and stand beside us in the crucial hour, you will save the future of the Hungarian Nation. But, if you will remain beside those who have misled and plundered you, then you will throw away even the hope of a happier future.

"The God of the Hungarians will bless or punish you accordingly, as you defy Nazi tyranny and stand beside us in the glorious battle for the liberation of Hungary.

"Dated at Pittsburgh, Pa., on September 9, 1943.

"THE BOARD OF DIRECTORS OF THE VERHOVAY FRATERNAL INSURANCE ASSOCIATION."

The board announces that the proclamation must be sent to the people of Hungary without delay by radio and in the form of pamphlets, if the respective American civil and military authorities permit and make it possible to do so.

COLOMAN REVESZ.

For a Little More Audacity

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of September 16, 1943:

FOR A LITTLE MORE AUDACITY

It is good news that the House Foreign Affairs Committee has decided to take the Fulbright resolution to the floor next Monday. The time has come for Congress to speak up on the question of American post-war policy, and the Fulbright resolution, favoring American participation in an organization with "adequate power" to enforce peace, does this well.

In the Senate there has been greater caution about facing the issue now. This is because a poll of Members is said to have shown two risks: first, that a long and acrimonious debate, possibly injurious to our relations with some of our allies, might precede the adoption of a declaration of foreign policy, and, second, that a two-thirds vote of support for such a declaration does not seem to be entirely assured. Since the Constitution requires a two-thirds vote of the Senate to ratify a treaty, any resolution now approved by Congress without that margin in the upper branch would have the effect of repudiating the very commitments it stated or implied.

Certainly there is a place for caution in matters of this kind, and certainly there is no use in courting a disaster by rash action. But it is a fair question, in this instance, whether caution on the part of the administration leaders has not begun to defeat itself.

It is now 24 weeks since the Senate Committee on Foreign Relations created a special subcommittee to study and report on a number of resolutions relating to the part to be played by the United States in the post-war world. This subcommittee held its first meeting on March 31. Since then not a peep has been heard from it.

And what has been happening meantime, outside the cloistered committee room where these resolutions sleep the sleep of death? By every available test of measurement, the tide of American opinion in favor of post-war collaboration has been rising irresistibly. The Gallup survey shows it to be overwhelming. It has run so strong that the House Foreign Affairs Committee found it wise to give unanimous support to the Fulbright resolution. It has reached so high a point that it swept the Republican leaders at Mackinac Island far beyond the moorings of their old stand for isolation.

No doubt there are some timid men, and a few complete irreconcilables, who, when approached for their opinion in an unofficial Senate poll, advise delay or threaten to make trouble. But we do not believe for a moment that either timidity or irreconcilability could stand up, in open debate, against the fierce demand of the American people for some positive action, this time, to prevent the outbreak of another war.

The time for a show-down is at hand. A little more audacity is needed.

Farm Bureau Program

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. PACE. Mr. Speaker, for consideration and study by the Congress, I wish to call attention to the following statement of Mr. O'Neal, president of the American Farm Bureau Federation, and presented by him to the President earlier this week.

I would not say that this program is perfect, or the complete answer to our

farm problems, but it certainly contains some helpful suggestions:

The food front is second only to the military front in war. It is the first front in establishing and maintaining a just and lasting peace. The broad objective of a wartime food program should be an abundant production, tied in with a permanent conservation program at stabilized prices which are fair to farmers, distributors, and consumers. American farmers are being asked to produce sufficient food to meet the needs of our armed forces, the United Nations, the starving people of the liberated countries, and our civilian population.

The ability of farmers to meet these needs is gravely jeopardized by confusing and hampering price policies and orders, unwise efforts to appease organized labor and consumer groups, shortages of farm machinery, farm labor and supplies, the multiplicity of agencies and the division of authority dealing with policies affecting the production, processing, and distribution of food. It is imperative that immediate action be taken to provide a constructive, practical, and coordinated war food program. The essential features of such program should be as follows:

1. Support or "floor" prices at adequate levels should constitute the foundation of a program to assure abundant production and stabilized prices. Such prices should be announced early and should continue long enough to protect farmers through the postwar readjustment period.

2. Ceiling prices must be adjusted so as to assure maximum production and avoid subsidies. Under no circumstances should the ceiling price be placed below the floor price. Subsidies to roll back prices or to maintain price ceilings in lieu of price adjustments are unnecessary and inflationary, and should be abandoned. There is no justification for such consumer subsidies when, according to the Bureau of Labor Statistics, during the period of January 1941 to June 1943 the average hourly earnings of industrial workers increased 40 percent, and average weekly earnings increased 63 percent, but the cost of living increased only 24 percent. It is an unsound and dangerous policy to add this additional burden to the Federal debt and pass on our current food bill to be paid by our boys returning home after the war and by future generations. The national income is now at the highest level in history; employment has reached an all-time high; and food costs are lower in relation to the income of workers than ever before.

3. All unnecessary controls and restrictions on food production should be removed during the war emergency and unneeded supervisory manpower should be freed for other work.

4. Relative prices as between commodities should be adjusted so as to encourage the production of the types of food most needed. Such an adjustment would not only be fair to farmers, but would tend to stabilize living costs and reduce consumers' expenditure for food.

5. To the extent that governmental authority is required over the production, processing, distribution, rationing, and prices of food, such authority should be centered in the War Food Administrator. He should be given more authority and cooperation in the procurement of adequate farm machinery, farm supplies, and farm labor. He should be represented on all boards dealing with all phases of the food problem, both national and international, and no decision relative to food should be made without his approval.

6. Responsible boards for the major farm commodities—similar to the War Meat Board—should be established under the War Food Administrator, to direct processing and distribution to prevent alternate gluts and shortages at major consuming centers, such as have occurred during the last year.

7. The public should be fully informed concerning the critical importance of maintaining adequate farm production and of conserving and sharing foods.

8. American farmers, in their supreme efforts to break all-time production records each year in order to meet the ever-growing food requirements, are entitled to the closest cooperation between the President and the Congress in establishing and maintaining an understandable, workable, and coordinated war food program.

Government Benefits for World War No. 2 Veterans

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a short speech I delivered on September 12, 1943, on the subject of Government benefits for World War No. 2 veterans. This speech was delivered as one of the regular reports I give to the people of my Sixth Congressional District each Sunday over the Springfield, Mo., radio stations—KGBX at 12:15 p. m., and again the same day at 5:30 p. m. on KWTO:

Fellow citizens: With your permission we will digress a little today from our customary report of news developments on the congressional front and discuss a subject of special interest to men in the armed services and their dependents. Many questions have been asked me about the laws now in existence for servicemen and their dependents and those under consideration by Congress. As you may know, I am a member of the War Veterans' Legislation Committee and have had special concern with this legislation.

While a war is in progress there is always strong public sentiment to do many things for those in uniform. This sentiment is shared by Congress. During peacetimes this sentiment dies down and the people as well as many of the people's leaders devote attention to other problems. For instance, before the American Legion convention at Chicago on October 2, 1933, President Franklin D. Roosevelt explained how he personally felt regarding the payment of benefits. Said he, "No person, because he wore a uniform, must thereafter be placed in a special class of beneficiaries over and above all other citizens. The fact of wearing a uniform does not mean that he can demand and receive from his government a benefit which no other citizen receives. It does not mean that because a person served in the defense of his country, performed a basic obligation of citizenship, he should receive a pension from his government because of a disability." That same year the President made this statement, 1933, the only real economy act of his administration was adopted repealing laws granting medical or hospital treatment, domiciliary care, compensation and other allowances, pensions and disability allowance or retirement pay for many classes of veterans and their dependents. Of recent date, however, the President promises liberal handouts from the Federal Treasury to veterans of World War No. 2. How well these promises may be kept may be found in ample measure in the President's life record.

HISTORIC AMERICAN POLICY

Other Presidents have expressed the public feeling about men who have had the honor and privilege of wearing the uniform of their country. George Washington said, "In what part of the continent shall we find any man or body of men who would not blush to stand up and propose measures purposely calculated to rob the soldier of his stipend and the public creditor of his due? And, were it possible that such a flagrant instance of injustice could ever happen, would it not excite the general indignation and tend to bring down upon the authors of such measures the aggravated vengeance of Heaven?"

Abraham Lincoln said, "It is the duty of the country to care for him who shall have borne the battle and for his widow and orphans."

It has been my opinion, exemplified in practice, that now while war is in progress Congress can and should take those steps which will guarantee the veteran against changes in public sentiment and leadership sentiment in the matter of veterans' legislation. Congress has shared this view, as a whole, and the committee of which I have the honor to be a member has made no promises and held out no tantalizing hopes to veterans and their dependents but rather has, without fanfare or publicity, written into the lawbooks of this Nation provisions which enable me to state now that no nation has provided for the veterans of its various wars, and their dependents, as well as has our own. Much remains to be done. However, veterans of World War No. 2 now have all the privileges and benefits of the World War No. 1 veteran (Public Law No. 10, 78th Cong.). While action in extending such benefits, with war still in progress, is unprecedented in our history, I am not forgetting we have also veterans of other wars whose problems must not be forgotten nor overlooked by Congress in its haste to take care of the millions of new veterans.

I do not favor any raid on the Treasury by war veterans. However, it has been a policy from the foundation of our Government to recognize the whole Nation owes a debt to its soldiers which must be paid by the whole Nation. It is no time to change that policy now. If we can afford to give away billions of dollars to foreigners we can afford to bind up the wounds of our own people. I think, however, that any public consideration of the question by a public official should frankly include recognition of the fact that this obligation is a colossal financial undertaking. The politician who promises rich rewards without stating that they must be paid for is playing politics of the rawest kind. In order to acquaint the public with the seriousness of the whole problem I favor a nonpartisan, nonpolitical survey of the whole field of pensions and compensation for veterans and their dependents by the Congress of the United States.

A REVIEW

I want to review briefly some of the things your Congress has already done for servicemen of World War No. 2 and following that to make a few short statements about what I think should and must be done in addition to that already accomplished. The CONGRESSIONAL RECORD contains detailed statements by me on what has already been done by Congress for the veteran. The greatest single thing done for servicemen in this war was the enactment of the Dependents Allowance Act. Under this law the dependents of men in the service are compensated so that they will not suffer unduly in a financial way due to the fact the family breadwinner is in uniform. It has been my pleasure to assist many of these dependents who

have written me in Washington, to get Government approval of their allotments which had been held up because of red tape. I am supporting a proposal to increase the amount of these allotments for the dependents of fathers who are soon to be inducted in great numbers. My investigation and observation have persuaded me that present allotments are in many cases inadequate. I also am supporting proposals which will help to eliminate some of the abuse to which the dependency allotment plan has been subjected by unscrupulous people.

As in the last war, the Government has provided life insurance which is available to all men in uniform. The National Life Insurance Act and the War Risk Insurance Act are very important to dependents. No man in the service should be without the full protection offered by these laws. Beneficiaries can renew the policy of an insured serviceman who is outside the continental limits of the United States (Public Law No. 13, 78th Congress).

When a soldier dies on active duty the expenses incident to preparation of his remains and transportation to the place designated by the legal next of kin are borne by the Federal Government. After the war I will insist that as in the last war, the remains of all men who die abroad be brought back to the United States for interment in national cemeteries if the next of kin so desire. Burial allowances are also provided for those who die in veterans' hospitals. Headstones are provided for deceased veterans.

Medical attention is provided for servicemen at all times including while on leave and is provided, also, to their wives who are expectant. Civil relief from court action is also provided in certain cases. Pensions are provided all who can establish service-connected disabilities of 10 percent or more. Pensions are provided all who are totally disabled for non-service-connected disabilities. Death and disability from the present war have brought to more than $2,000,000 per month the benefit payments being made by Uncle Sam. These payments are increasing each month. Disability payments average $40 per month and range as high as $250 per month. Pension payments to dependents of deceased veterans average a little more than $48 per month and insurance payments to dependents of deceased veterans of World War No. 2 are now averaging about $37.71 per month. The new vocational rehabilitation program, authorized by Congress this year (Public Law No. 16, 78th Cong.), is now getting under way. Last month 1,300 applications were filed and a number of men are already in training to earn a livelihood despite war-connected handicaps. After the last war 128,000 men completed such courses. It may interest you to know that 13,800 veterans of the present war have already been treated in Veterans' Administration hospitals. There have been veterans who do not feel kindly toward the Veterans' Administration because their claims have not been allowed by it. Congress, of course, can only write the laws. It is the duty of the President to enforce those laws as Chief Executive. The Veterans' Administration is his agency for this purpose. Congress has tried to keep a friendly attitude in the Veterans' Administration toward the veterans by requiring that its policy-making officials all be veterans themselves. On July 8, 1943, Congress enacted Public Law No. 144 (H. R. 2703) which will further streamline the complicated procedure of the Veterans' Administration and, I hope, be of great aid to veterans and their dependents. All of the provisions I have been talking about for servicemen apply also to women in the service. These things I have been mentioning, including a raise in the pensions secured by my committee this year, constitute just the highlights of what has already been done. A few minutes ago I said much remains to be done. I want to suggest just a few things which have been mentioned by others and a few ideas of my own.

LOOKING AHEAD

The administration failed, miserably, to solve the problem of unemployment before the start of the war and the present war boom, of the kind which accompanies all wars. The Department of Commerce the other day reported that if the war is over by 1946 we will have 19,000,000 unemployed unless we have reached a level of business activity higher than in 1940 just before Pearl Harbor. It goes without saying, then, that the greatest problem we face in helping the veteran is in finding a job for him. Congress has made feeble strides along this line. It has said that the veteran should get his same job back when he returns to civilian life. Congress has required by law that veterans be given preference in Civil Service appointments. There are those in places of great authority in Washington who say that the unemployment problem cannot be licked and that we will have to keep the men in the Army for many years, letting them out a dribble at a time, or keep the Nation embroiled in constant wars, or keep a great standing army as a world police force, to eliminate unemployment. I do not look with favor on any prosperity gained at the expense of the blood of young Americans. I have faith enough in the future of our country and in the intelligence and ingenuity of our people to believe that unemployment can be eliminated. It has not been suggested by anyone in the present administration but I think that one of the surest ways to solve unemployment is, after the war, to take the shackles off of business. If investors had confidence that they could make a profit, if business had faith that the Government would not harass it to death with rules, regulations, laws, snoopers, and taxes, we would see an expansion of the private enterprise which built this Nation. I would put this as the first point in any real plan to help the veterans. They will want jobs in private industry and small businesses of their own rather than Government hand-outs.

Second, it appears to me that the Government should take steps to encourage home ownership for ex-servicemen and women. This has not been mentioned by the administration. Veterans should be encouraged by Government to own homes and farms. This question is pertinent right now. More than half a million men have already been released in this war from the Army alone, due to physical or mental unfitness for service. By the end of this year the turn-over, exclusive of casualties in our armed forces, will be over one million per year. There is nothing new about the idea I have just advanced. The Homestead Act of 1862 developed the West with veterans of the Civil War. Following the Spanish-American and First World Wars, 21 States took action to aid veterans in home ownership. None of this legislation really gave anything away. It merely aided the ex-serviceman and guided his steps.

Other ideas I feel worthy of public and congressional consideration are, third, rapid reconversion of industry from war to peacetime production of civilian goods. Fourth, a public works program to supply jobs during industrial reconversion. Fifth, financial assistance during the period of transition, such as in muster-out pay as proposed by the President. Sixth, voluntary withdrawal from the labor markets of as many women, school-age youths, and over-age employees as possible. This can be accomplished through a more intelligent social security and old age pension system and through extension of the advantages of public education. Seventh, there should be a Federal job placement program to direct workers to available jobs.

The War Dads and related organizations now, and the veterans organizations of World War II, in later years, will be helpful in securing such legislation. I hope that it can be secured in the spirit and tradition of America's willingness to "care for him who shall have borne the battle and for his widow and orphans," and not because it is a political football much to be desired by the demagogue. For my part, this is the spirit in which I will continue my labors as a member of the War Veterans Legislation Committee of the House of Representatives of the United States.

The Fulbright Resolution

EXTENSION OF REMARKS

OF

HON. CARTER MANASCO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. MANASCO. Mr. Speaker, on Monday next we are to consider the Fulbright resolution which places the Congress on record as being willing to participate with other world powers to insure lasting peace.

It is difficult to see how anyone could logically oppose the resolution. We are all most anxious to have lasting peace. However, certain signs are beginning to appear which create doubt in my mind that even America is ready to lend its great influence in insuring permanent peace. Every effort that has been tried heretofore since the dawn of civilization has failed. What objection is there to trying another course? Human life cannot be measured in dollars. Property destruction can. The terrible disruption of economic stability, the destruction of homes, plants, and other properties by the gods of war can be measured. The hindrance to the progress of civilization caused by war can be roughly estimated.

I believe it will take a generation of teaching to develop respect for the rights of others and to uproot the ideologies that have been burned into the minds of the present generation of Axis peoples before we can hope for a permanent peace. We cannot hope to establish democracies in countries who do not have trained native leadership. This training will take a period of years. During that time the only safe insurance against war will be the maintenance of strong military forces.

I ask permission to include in my remarks an editorial written by Dr. L. L. Gwaltney, editor of the Alabama Baptist, appearing in the issue of September 16, 1943, entitled "The Mistakes of the Realists":

THE MISTAKES OF THE REALISTS

The mistakes of the so-called realists are tantamount to the mistakes of the isolationists. They suppose that the United States is wholly self-sufficient and is not in the

least dependent for anything upon any foreign nation or combination of foreign powers.

The war is now having to be fought on the outer circles of the German and Japanese powers—not at the center of these powers—because the isolationists supposed the outer circles were of no value in the defense of the nations. The Federal Congress refused to fortify Guam because, as it was said, that would offend our Japanese friends (?) and neighbors (?). And all the fighting with Japan now is to retake positions we have already lost, including the Philippine Islands. Isn't it queer how the realists think that their realism has so beautifully worked? It has worked so well that they don't want to try anything else other than that which is actually bleeding the world white.

One is reminded of the surgeon who had discovered a clever operation. When he was asked how many he had performed his operation upon he replied "sixty." Then, when asked how many of them got well, he replied, "They all died." Still it was a clever operation. If the best the realists can do is just what they have done to this world, then, in Heaven's name, it would seem the part of wisdom at least to try something else. But, no, they are still opposed to any collaboration among the Allied Nations and any federation looking toward a warless world. If this were tried and it actually failed, would the failure do anything worse to the world than their philosophy has already done?

Suppose there can be no world federation among the Allied Nations following the war? Suppose China is knocked out and Russia kicks out? And the South American republics revert to their sympathies to their European cultures, then what? Then Britain and the United States should stick together though the heavens fall and the earth be removed. The Stars and Stripes and the British Union Jack should be forever intertwined or Anglo-Saxon civilization is doomed. And suppose, by any stretch of the imagination, something could happen to contravene the friendship between the United States and Great Britain then what? Then the United States alone would have to build not a two ocean navy but a navy sufficiently strong to command all the seven seas and an air force and standing army of proportionate strength. The United States cannot outbuild all the balance of the world combined.

The British, though they were in a far more dangerous position, were as short-sighted as the American isolationists. Along with the British we are fighting to reopen the Burma Road, to retake Burma, and to defend China. The British supposed that the great bastion of Singapore would protect the Far East. But their big guns were all pointed out to sea and the Japs, painted green, swept up through the jungle from the rear and the British couldn't turn their big guns around.

We are fighting now to get a bridgehead in Europe and it will be at a frightful cost all because 4 years ago we didn't hold France, which was then and could have been held until now as our all-sufficient bridgehead in Europe. But France fell and then the Japs at Pearl Harbor, at long last, convinced our isolationists that we are not isolated. And finally the United States didn't declare war on Germany and Italy. Those powers first declared war on the United States.

All of this would be unnecessary to state but for the fact that there are still millions of so-called realists in this country and their influence is still great. They defeated the idealism of Woodrow Wilson for a realism—a realism indeed which broke the heart of the world and has filled it with woe.

The wonderful realists (?) that we are reading about ought to be realists enough to foresee just where their political philosophy will lead them if they carry this country their way. So why not give the idealists and men of faith a chance? Why not make at least an attempt to organize the states (governments) of Europe and the world in some such fashion as the 48 States of the United States are organized under a federal constitution and an international court and a joint police power composed of ships and planes to enforce, if need be, the decisions of the court.

Everyone knows that there are many difficulties in such a plan. But the alternative proposed by the realists has something worse than difficulties. It means perpetual blood and fire and war for this planet. It is just that and will be that forever if men do not at long last come to the place where they will organize the world so as to prevent it. The prophet said "He (God) shall judge among the nations and shall rebuke many people; and they shall beat their swords into plowshares and their spears into pruning hooks; nations shall not lift up sword against nation, neither shall they learn war any more." That prophecy is going one day to come true. That day must come and when it comes it will be because God, Himself, so impresses men with a sense of right and good will and justice that the world will, by good men, be so organized that wars will end.

Narcotic and Customs Division of Treasury Department Report Shows an Excellent Enforcement Record

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. COCHRAN. Mr. Speaker, the Narcotic Division of the Treasury Department, under the able leadership of H. J. Anslinger, continued its intensive campaign against importers and peddlers during the last fiscal year. A brief summary of its work is outlined in a release from the Treasury Department which I include as part of my remarks. It follows:

Mexico has replaced the Orient as the major source of narcotics entering illicit traffic in the United States, and Treasury officers, with the cooperation of Mexican officials, have carried on an intensive campaign during the past year to halt the flow of drugs from remote mountain poppy fields of our neighbor to the south.

At the same time, wartime shipping between far eastern ports and the United States has brought a widespread, small-lot traffic engaged in by orientals making up crews of many vessels.

In one of a series of reports to Secretary Morgenthau covering the 1943 fiscal year, Elmer L. Irey, Chief Coordinator of Activities of the six Treasury enforcement agencies, said that narcotics officers of the Bureaus of Narcotics and Customs reported a substantial increase in drug seizures following the sharp curtailment of traffic experienced during the first year of the war.

Combined seizures of opium-type drugs during the fiscal year were 9,933 ounces, against 2,445 ounces seized in the 1942 fiscal year. Similar seizures in the 1941 period were 5,863 ounces. Marihuana seizures of 14,315 ounces in the 1943 fiscal year were slightly smaller than the 14,709 ounces in 1942.

Treasury officers concluded investigations spanning a decade or longer to obtain convictions in two major cases prosecuted during the year, while an adventuresome undercover narcotics agent at Portland, Oreg., enjoyed the unique experience of being given a vote of confidence by the Chinese underworld just before he sprang the trap on a dangerous band of dealers in smoking opium and women.

George and Elias Eliopoulos, Greek nationals, who virtually monopolized world traffic of almost unbelievable proportions back in 1929, 1930, and 1931, were convicted in Federal court in Brooklyn and are awaiting sentence. They were flushed out of Europe by the war, and when they sought haven in the United States, were promptly indicted on evidence assembled by customs and narcotics officers.

The Drug Barons of Europe as the brothers were known, from headquarters in France, Germany, and Turkey sent enormous quantities of narcotics into this country and to the Far East. Claiming to be friends of kings and princes, and occupying powerful places in European finance, the brothers had heretofore jousted successfully with the laws of three continents.

Narcotics agents climaxed a 10-year drive to stamp out a highly organized, gangster-dominated traffic in the Middle West with convictions of the principals in the so-called Kansas City narcotic syndicate. Paul and Joseph Antinori, Florida suppliers of the ring, drew sentences of 7 and 5 years, respectively, and James DeSimone and Joseph DeLuca, Kansas City kingpins, were given 6 and 3 years in Federal prison, respectively. Numerous other members of the ring were prosecuted successfully or are awaiting trial.

The Oregon case principals were, with few exceptions, Orientals and their white paramours, but the prosecutions are interesting in that they dealt a substantial blow to the Chinatown underworld and uncovered an elaborate opium-smoking den of a type now rarely found in American cities.

The narcotics agent who spearheaded the Treasury investigation introduced himself into the gang and lived in constant peril for months while the evidence was being assembled. When he incurred the suspicions of some of the lesser lights, he boldly forced a show-down, and won a vote of confidence from a special meeting of the Oriental overlords.

Sixteen persons were sentenced in this case, one leader, Wong Suey, drawing 5 years in prison and a fine of $5,000.

A seizure of 225 ounces of opium of Mexican origin in this case was one of the largest in years for the Pacific Northwest.

Other important cases involving Mexican opium included seizure or purchase of more than a thousand ounces of smoking opium from an El Paso Chinese, Jim King Wong, who drew a 5-year prison term; and prosecution of Alfonso Montana, Ernest F. Culling, and Frank E. Taylor following seizure of 150 ounces at El Paso. These three also were sentenced to 5 years in prison. The cases were joint investigations by customs and narcotics agents. There were numerous smaller seizures on the border.

Meanwhile, a cooperative national government has struck a substantial blow at narcotics business originating in Mexico. Treasury officials have been informed that the notorious La Nacha, queen of the border dope traffic, will be interned as a menace to the war effort, on personal direction of President Avila Camacho. La Nacha is to be sent to the Government prison on Islas Tres Marias.

The Mexican woman smuggler, whose real name is Mrs. Ignacia Jasso Gonzales, successfully fought in the Mexican courts efforts of the United States to obtain her extradition to face indictments in this country. However, 13 members of her gang were in-

dicted late last year, and many of them convicted in Federal courts at El Paso and San Antonio. Narcotics agents worked their way into the lair of the smugglers deep in the hill country of Guadalajara to assemble evidence to break this major international dope ring.

J. W. Bulkley, Assistant Deputy Commissioner of Customs, in charge of narcotics enforcement, reported that it was necessary for his agents to search every nook on many vessels calling at United States ports, with opium, usually in chop-stick form, being found in every conceivable hiding place in some instances.

Most of this opium appeared to originate in Iranian and Indian ports of call, and was held in many cases by oriental crew members for their own use. However, other lots were of a size to indicate smuggling intentions. One resourceful Chinese was caught after he had swum ashore with a tin of smoking opium concealed in a specially constructed vest fitted with water wings. Individual vessels yielded total seizures of from 3 to 16 pounds of the contraband.

H. J. Anslinger, Commissioner of Narcotics, reported that the relative scarcity of illicit narcotics continued during the year, with prices still fantastically high. Prepared drugs such as morphine, heroin, and cocaine were especially scarce. Addicts and traffickers resorted in numerous cases to thefts from pharmacies and other registered establishments; and the cooperation of the legitimate trade was obtained in efforts to safeguard supplies of the vital war material. Numerous cases involving prescription forgeries were prosecuted. The Bureau won a major court victory in its efforts to prevent diversion of stocks when the United States Supreme Court upheld conviction of a New York distributor selling directly to a physician engaged in illegally dispensing drugs to addicts.

A steady trickle of marihuana continued along the Mexican frontier, but only petty violations were reported at seaports. A seizure by Customs of 170 pounds of bulk marihuana at Laredo was largest reported, this case involving Charles A. Smith of New Orleans, and three others. Smith was given a 2-year prison term. A new wrinkle in enforcement developed in this case, involving gasoline rationing violations. The marihuana was concealed in a truckload of onions.

Narcotics officers made two successful prosecutions of major marihuana peddlers in the Washington, D. C., area, and, with the help of Customs officers, obtained convictions in several other cities in what appeared to be a loosely knit, Nation-wide distribution system supplied by a common source in Mexico.

Arrests for violation of Federal narcotics laws increased slightly in 1943 fiscal year, from 1,777 in 1942, to 1,794. Marihuana arrests declined from 1,090 to 777.

Italian Finance

EXTENSION OF REMARKS

OF

HON. DONALD H. McLEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. McLEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Sun of September 10, 1943:

ITALIAN FINANCE

Italy's surrender raises some interesting financial problems—to say nothing of the matter of feeding that country—which in part, at least, probably will fall on the United States. Inflation in Italy has gone to great extremes, and its recent war loans were a failure. So low had the Italian Government's credit fallen that it was impossible to meet deficits either with taxes or with loans. The river was spanned, as it inevitably is in such circumstances, by resort to the printing press. For some time now the government has paid its way, in large part, simply by printing bank notes, which naturally worsened the situation. Signor Bertolini, Minister of Finance, is trying a conversion loan at a higher rate of interest, but although that undoubtedly would produce conversion and lift the carrying charge of the Italian debt, it would not produce a lira of new revenue. Heavier taxes are contemplated, but they promise little except in the realm of indirect levies. Italy had come to the end of her financial and economic rope as well as to that of her military cord.

In striving to regain some measure of financial stability the new minister announces virtual scrapping of state capitalism, which has involved the Italian treasury in about one-third of its debt to the Bank of Italy, largely the result of subsidies to hold down prices—an effort that has been so conspicuous a failure in Italy that it might well serve as a warning to this country.

In announcing his intention of traveling the hard road toward economic sanity the minister proposes "stringent economies in all categories of expenditure" and asserts that "above all" it is necessary to call a final halt to the policy of intervention and nationalization, and "to prepare for a gradual winding-up" of the internal debt held by the state. The Italian Government holds a direct or indirect interest in over 200 business enterprises.

A Burke Among Us

EXTENSION OF REMARKS

OF

HON. JOSEPH E. TALBOT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article entitled "A Burke Among Us" which appeared in the Hartford Courant, August 1, 1943, concerning my colleague, RANULF COMPTON:

A BURKE AMONG US

Congressman RANULF COMPTON, of Madison, who represents the Third Connecticut District, and who was decorated with the Conspicuous Service Cross for gallantry in the battles of St. Mihiel and Argonne, is on the blacklist of organized labor for having voted contrary to its wishes. In fact, he is accused of being more antilabor and anticommon people than any other member of the Connecticut delegation at Washington because he voted to continue the Dies committee, to liquidate the Home Owners' Loan Corporation, opposed subsidies, and supported the Hobbs antiracketeering bill and the Smith-Connally antistrike bill.

Mr. COMPTON meets this accusation by saying that so long as he remains in Congress he will continue to vote as his conscience dictates. "I appreciate the views of labor," he says. "I sympathize with the efforts of labor leaders to further the causes of organized labor, but I will resist with my last breath any and all attempts to set up a double standard of behavior and privilege in this country that gives organized labor immunity from the laws and restrictions that other groups and the main body of the American people are required to abide by."

In the specific instances referred to Representative COMPTON reminds his critics that his vote was in accordance with the majority's views, the legislation he favored having been adopted either by one or both Houses of Congress. Furthermore, it is his belief that the majority of the voters of his district uphold the position he took. But whether so or not, he says that "to vote always as labor dictates would be to violate my oath of office and to ignore the rights of those who believe in and want equality of treatment."

The attitude taken by Congressman COMPTON somewhat parallels that of Edmund Burke, who won his seat in Parliament against an opponent who promised the pressure groups of his day about everything they wanted. In thanking his constituents for supporting him, Burke, with characteristic independence, said that their desires naturally would have great weight with him, their opinions high respect, their business uninterrupted attention. He conceived it to be his duty to sacrifice his repose, his pleasure, his satisfaction to theirs, and above all to prefer their interests to his own. But he held it to be of the greatest consequence that a representative should not sacrifice his unbiased opinion, his mature judgment, his enlightened conscience to any man or to any set of men living. He held that government and legislation are matters of reason and judgment, not of inclination.

No representative in Congress of all the people has any sanction to speak for one group to the exclusion of other groups. His function is to give proper attention to the desires of labor, agriculture, business, industry, and the professions, while remembering at all times the interests of the unorganized, inarticulate majority. That calls for the constant exercise of independent judgment based on an understanding of all available facts and the courage to stand by that judgment once it is formed. It looks very much as if Congressman COMPTON had done exactly that, and if organized labor wants to take it out on him for not being subservient to its wishes, it is privileged to do so. But if he is a candidate for reelection the voters of the Third District may decide that it is worth their while to have a representative who cannot be intimidated.

Activities of Alcohol Tax Unit of Treasury Department Reduces Federal Liquor Law Violations

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. COCHRAN. Mr. Speaker, the Alcohol Unit of the Treasury Department in its annual report maintains violations of liquor laws declined sharply during the last fiscal year. A brief account of the work of this organization will be found in a recent statement issued by the Treasury Department which

I include as part of my remarks. It follows:

Despite the increase in Federal taxes on distilled spirits last November 1, from $4 to $6 per gallon, a factor which might under normal circumstances be a possible stimulus to bootlegging, Federal liquor law violations declined sharply during the fiscal year ended June 30, the Treasury reported today.

Elmer L. Irey, Chief Coordinator of Treasury Law Enforcement Agencies, reported to Secretary Morgenthau that arrests for the year of 10,090 were 50 percent fewer than in the 1942 period, and that mash seized—the best measure of the volume of illicit distilling operations—showed a decrease of about 68 percent.

Wartime rationing of sugar, together with gasoline and tire rationing, has made it increasingly difficult for bootleggers to operate, Stewart Berkshire, head of the Alcohol Tax Unit of the Bureau of Internal Revenue, said.

Another contributing factor in the drying up of sources of non-tax-paid liquor, Mr. Berkshire said, was the opportunity for lucrative employment in expanding war industries which attracted many potential bootleggers.

Alcohol Tax Unit statistics indicated a marked decline in illicit distilling in all parts of the country to the lowest level since repeal of national prohibition. The so-called moonshine areas in the Southern States continued the chief centers of the traffic.

Improvement in this phase of enforcement enabled the Unit to concentrate investigators on a drive against evaders of the floor tax imposed by the 1942 Revenue Act, as well as to supervision of the vastly expanded production for war of industrial alcohol, to which the Nation's distilleries have been wholly converted.

Assessments of $2,500,000 in taxes and penalties have been recommended in the 3,400 floor tax cases perfected, in which $2,000,000 worth of liquor was seized.

The 1942 Revenue Act provided for additional levies against liquor on the floor of distributors to bring the total tax up to the higher rate imposed at the manufacturing level.

Evidence obtained by the Alcohol Tax Unit resulted during the year in the liquidation of one of the most highly financed and strongly entrenched illicit alcohol manufacturing syndicates ever to operate in the New York area.

After a 3 weeks' trial in the Federal District Court for the Southern District of New York, 34 persons were convicted in what is known as the Giallo-Valenti-Palmeri conspiracy, headed by Vito Giallo. Sentences passed by the court in this case totaled more than 14 years' imprisonment to be served, and 34 years' probation.

The group operated 17 illicit distilleries in 6 New York counties between 1934 and 1941. The distilleries ranged from 500 to 3,000 gallons daily capacity, turning out high-proof alcohol. This was a "family affair," most of the operators being related by marriage or blood. Records submitted by sugar dealers indicated that this syndicate purchased three and a half million pounds of sugar.

Another substantial illicit operation in the New York area involved Anthony Vaccaro, Carmine Uvino, and three others. Uvino was alleged to have been financier of the project, which had five plants in Brooklyn and on Long Island between 1939 and 1941. All had been previously convicted in similar cases. The new case brought sentences totaling 9 years in prison.

Ten persons were convicted at Brooklyn for making false floor-stocks-tax returns, and were given jail terms and fined heavily. The defendants were bar and grill owners and George J. Andreola, an accountant, who was termed by alcohol-tax officers as the moving spirit in the conspiracy.

One of the largest operations involved in prosecutions during the year was centered in the Baltimore area. George Edward Dryden and three others pleaded guilty to charges of conspiracy in the operation of 19 distilleries. Each was sentenced to 20 months' imprisonment and fined $10,000 and costs. Operations of the group occurred between 1937 and 1942.

Eleven persons were convicted in June 1943, at Greensboro, N. C., in an extensive conspiracy to engage in interstate traffic in illicit liquor. This was known as the Rosie Copeland case, and involved distribution of 3,000 gallons of moonshine whisky made in Guilford and Rockingham Counties, N. C. Sentences totaled more than 7 years' imprisonment. Operations of the group extended from late in 1942 to February 1943.

During the year 5,654 stills were seized at which were found 1,700,406 gallons of mash. Property seizures included 926 automobiles and 154 trucks, with the total appraised value of confiscated property being $929,000, exclusive of property seized in floor-stocks-tax cases, which amounted to an additional $2,000,000.

Bristol, Virginia-Tennessee, War Loan Rally Speech of Ambassador Joseph Clark Grew

---

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. FLANNAGAN. Mr. Speaker, on September 6, 1943, we celebrated Labor Day in my home town by staging one of the greatest war-loan rallies ever held. The rally was preceded by a luncheon at the General Shelby Hotel, where several hundred of the leading men and women of our section heard I. W. Wingate, fire patrolman, second class, veteran of four major engagements against the Japanese in the Pacific, and who was a member of the crew of the U. S. S. *Vincennes*, which was lost last year during the invasion of the Solomons, recount his near death-taking experiences. Following the luncheon a gigantic parade, in which the Army air cadets of King College and the naval V–12 trainees of Emory and Henry College participated, marched to the stadium to hear Ambassador Joseph Clark Grew deliver the address of the occasion. That night the labor organizations of Bristol gave a banquet at Hotel Bristol, which was largely attended and at which a great many bonds were sold. I had the honor of introducing Ambassador Grew. Under leave to extend my remarks in the RECORD, I include my introductory remarks and the address of Ambassador Grew:

REMARKS OF HON. JOHN W. FLANNAGAN, JR., OF VIRGINIA

Chairman Anderson, Chairman Copenhaver, Ambassador Grew, my countrymen: Today, here on the home front, we launch another campaign against the enemy. While it is not a campaign that will test the valor and courage and strength and skill of American manhood upon the field of carnage, it is a campaign to furnish the armament, food, and equipment without which valor and courage and strength and skill would be helpless, but with which American valor and courage and strength and skill are invincible and will triumph over the heH-sent enemies of liberty and preserve the freedom that is ours by reason of our Christian heritage. While it is not a campaign where blood sacrifices are made in order to pay the price the ruthless Hun and treacherous Jap have exacted as the price a free people will have to pay in order to retain their freedom, it is a campaign that calls for self-denial and sacrifice here on the home front. The raising of $15,000,000,000 in so short a time is the greatest money-raising undertaking ever attempted by any nation in the history of the world, and will put to the acid test the sacrificial spirit of every American. Yes, the undertaking is a challenge to the spirit of sacrifice that freedom's peril has engendered in the very soul of every true American. We accept the challenge! And, Mr. Ambassador, when you return to Washington you can say that if the success of this campaign depends upon Bristol, Virginia-Tennessee, going over the top, then success has been achieved. Report that when our boys left our hearts left with them, that our prayers daily follow them, and that our dollars became theirs to command. Proclaim that the mountain men of southwest Virginia and east Tennessee, where freedom has ever dwelt, esteem it a privilege to sacrifice that freedom may ever live. Yes, Mr. Ambassador, the message we send back is this: No matter what the sacrifice, a Bristol dollar will never stand between our soldier boys and freedom's victory.

This is a rare occasion for the capital city of the mountain empires of southwest Virginia and east Tennessee. Seldom, if ever, have we been honored with the presence of one who has rendered such outstanding service to our country? At the time the treacherous, slimy Jap stabbed this proud, peaceful, and mighty Nation in the dark, the one who has honored us with his presence today was the distinguished representative of our country to the Government of Japan. His record while there is a glorious tribute to his brilliant, penetrating mind, his forethought, and his fidelity to a sacred trust.

Ambassador Grew, it is now my high privilege to present you to an audience composed of the purest Americans in America. Here in the mountains, where our crystal streams as they flow through our green peaceful valleys ever reflect the rugged emerald hills that surround and stand guard as sentinels of freedom, in the colonial days of long ago, it pleased the Master to set up his strongest citadel of Christian democracy and people it with a people dedicated, under Divine guidance, to freedom. Here, 18 months before the immortal pronouncement of Jefferson electrified an enslaved world and filled the breast of man with new hope, the voice of freedom first found expression in the Fincastle resolves that publicly, boldly, proclaimed our liberty and bid defiance to every human master of the mind, conscience, and voice of man. Here when the distress call of freedom reverberated over the hills the mountain men gathered 900 strong and, after a parting blessing from their spiritual leader, under the intrepid, liberty-loving Campbell, Sevier, and Shelby, marched through the mountain fastness 300 miles to Kings Mountain, and there captured or killed an entire army of the enemy, rekindled the fires of freedom, and started the victory rally that led to Yorktown and independence. And here through the years that have followed the descendants of those fathers of liberty have dwelt in the conscious knowledge that "where the spirit of the Lord is, there is liberty," maintaining their identity as if set apart for some Divine purpose, nurturing in their hearts their glorious heritage, and enjoying the freedom and liberty their forefathers conceived and brought into being; and, sir, today I am happy to record

that no men and women in our armed forces, no men and women on our home front, are battling harder to preserve and vouchsafe to their progeny that freedom and that liberty than the men and women of southwest Virginia and east Tennessee.

Men and women of the mountains, I present to you Ambassador Joseph Clark Grew.

ADDRESS OF AMBASSADOR JOSEPH CLARK GREW

As we look back over the past life of our country and survey the march of our civilization, the progress of our democracy, and the free development of our national institutions, our minds, especially today, hark back to an historic incident which took place in New York City in 1882, over 60 years ago. The incident was merely a parade, a parade of the Knights of Labor, yet from that parade sprang the annual observance of one of the great days in our national life, Labor Day. The real significance of the day and the inspiration to be drawn from it lie in the great progressive achievements and the steadily mounting capacities of labor as the backbone of our economic structure. For while it was the Pilgrims who unlocked the door, and the pioneers who explored and blazed the trail, it was the workers who, by skill and craft and toil, translated into concrete effect the dreams and visions of courageous planners and brought our country to the high degree of national advancement and strength it enjoys today. Therefore, while Labor Day in peacetime is essentially a day of rest and in time of war, for many, just another day of work, it should be at all times a day of profound national pride, a day when stock is taken of labor's achievements and of its mighty contribution to the building of our Nation.

Yet today reminiscent pride is not enough. Today we must take stock not of the past but of the future. Today we know that that process of building must continue with ever-increasing acceleration—if we are to continue steadily with the winning of the war.

We are going to win the war without any shadow of doubt. Indeed there has never been a shadow of doubt in my own mind of our ultimate victory, even though we passed through some pretty dark days of anxiety during the initial stages of the war when our enemies were still able to take the offensive and to menace even the gates and soil of our beloved country. But the very fact that we have passed through those dark days and are emerging upon a brighter prospect is in itself a danger. That danger can be succinctly expressed: It is the danger of premature complacency; the danger of relaxation. The war is not won yet, not by a long shot, and if we allow ourselves to indulge in that premature complacency and to relax, we shall beyond peradventure bring upon our country and our people two disastrous results—one a risk, the other a certainty; the risk that the war will end in a stalemate; the certainty that through the inevitable prolongation of the war, many more young American boys, who might otherwise have been saved, will have to lose their lives in battle.

Those thoughts should give us pause. You and I know what a stalemate would mean. It would mean that our Nation would have to remain permanently on a war footing, called upon, perhaps for another generation or more, to continue to sacrifice many of the good things of the world, and for another generation or more held back from a return to the advancement of our peacetime civilization and from much that we most love in our American way of life.

You and I know, too, what an indefinite continuance of those casualty lists would mean. I do not need to elaborate that thought.

We cannot afford for a single moment to relax our all-out, constantly accelerating war effort. We cannot afford to relax until we have brought our enemies, all of our enemies, to unconditional surrender. We must complete the job—now.

That being the case, I frankly cannot imagine any man, woman, or child in our great country who would not be miserable, who would not feel utterly ashamed, if he were not taking his or her maximum part in our war effort. A good effort is not enough. It must be maximum if our inmost consciences are to be clean and clear. I heard the other day the story of a group of visitors who were walking through a hospital which had just received some of our wounded soldiers from Tunisia. One of the latter had no legs. The visitors were embarrassed, but a man jumped into the breach. "How'd you lose 'em, buddy?" The soldier looked up, studied the visitor for a moment, and then said: "Lose what?" "Your legs; how'd you lose your legs?" The wounded man remained silent for a moment, thinking, and then he replied, almost as if talking to himself, "I didn't lose them; I exchanged them for a clear conscience."

My friends, we have our chance to clear from our own consciences a lot of underbrush, if it exists, now. I guess we would all like to have a direct hack at the Nazis or the Japs. Unfortunately we cannot all of us enjoy that privilege. I suppose that all of us are contributing to the war effort in one way or another, but are we all contributing our maximum, and can our consciences be clear unless we do? This bond drive opens one way—and an essential way; for without the financial sinews of war our workers could not continue to turn out those other sinews, the planes and tanks and ships and guns and ammunition, and without those sinews, our boys on the far-flung fronts could not continue to fight, could not continue to battle for the security of our country, for our way of life, for the "four freedoms" for civilization and for the future welfare of humanity here and everywhere.

We have not been slackers yet. Since 1941 we have bought nineteen billions in War bonds. The present drive is going to reach fifteen billions, but not without the full backing of every loyal American. Virginians and Tennesseans have made a fine showing, together purchasing $500,000,000 in bonds. This was a magnificent contribution, but now we must do even better. Incidentally I had the privilege of helping to launch the third and the fourth Victory loan drives in Canada and the Canadians went over the top in all four of them. We must keep the attack rolling—rolling along like Old Man River—if we are to bring those boys of ours fighting overseas back to their homes soon. Furthermore we must buy these bonds to stabilize our national economy so that when our boys do return they will find a strong Nation and a free one. We must do our part now, so that later there shall be no regrets. We must be able to look our returning soldiers squarely in the eye, proud of the work that they will have done, and they must know and be proud of our support.

Let us remember one important fact: In the totalitarian countries, the people are told when and how much they must contribute, and they do it—or else. In our democracy we determine those things for ourselves individually. If our democracy means all that we would have it mean, we shall know how to act. And that can only be our individual maximum effort.

Now I know that you will wish me today to say a word about our enemy, Japan. But, first, let me go back a little in history.

The scene was the regimental mess hall of one of the Prussian Guard regiments in Berlin; the date some time in 1912 or 1913; the hour late. Much champagne had been consumed, and restraints were off.

"Die Wacht am Rhein" had been sung in thunderous volume; glasses had been banged on the table to the toast "Der Tag." "In Vino Veritas." I said to the Junker officer beside me: "There you have the quintessence of the martial spirit. In fact, the German Army reminds me of a football team which after long training is tired of practice and wants a game." "Yes," he replied. "You are right. And we shall have that game, unquestionably. It's only a matter of time before we shall have to fight our traditional enemy France again." He spoke of it much as one might speak of our Army-Navy football game—as an inevitable engagement. "But that will be quite simple," he continued. "We are much stronger than France. We may have to go in through Belgium, but, of course, the Belgians won't fight; they will simply let us through. And the British couldn't fight if they wanted to; they're a decadent race, and, anyway, they are far too much occupied with their labor troubles and the Irish problem. We can count them out. As for you in America, it would be laughable for you to try to fight us. Of course, the hundreds of thousands of Germans in your country would never allow that, and even if you should try to come in, you could never get a single soldier across the Atlantic. We would attend to that."

Thus the Prussian officer before 1914.

Time moves on to the early spring of 1941. The panorama has moved, too, and another scene is presented, the garden at the Tokyo home of Matsuoka, Japanese Minister for Foreign Affairs. We walk up and down by the hour, both smoking pipes; he talks, and I, as usual, listen. "Democracy is bankrupt," he says—how precisely I remember those words—"this is the day of the great military powers. Germany will unquestionably win this war and will control all of Europe, while we are the stabilizing force in the Far East, and we shall create in Greater East Asia, including the South Seas, a new order constructed on the principle of coprosperity." His predecessor, Arita, had contrasted the great open spaces of the South Seas regions and their vast natural resources with overcrowded Japan, a country poor in resources. Matsuoka developed that theme. And then he went on to say that if the United States should get into a shooting war with Germany, even in defense against the German submarines, Japan would be obliged, on the basis of article 3 of the Tripartite Pact, to go to war with us. "Democracy is decadent," he repeated, and he added: "But if you insist on sending your ships into the European war zone, you will have to take the consequences."

A few months earlier, after Japan had joined the Axis, I was playing golf one Saturday when a messenger hurried on to the course and said that the Foreign Office wanted to see me immediately. As it was my first game in several weeks, I finished the 18 holes and then repaired to the official residence of the vice foreign minister. The higher officials were sitting in a circle with an Admiral of the Navy, expressions of deep concern written on their faces. They handed me a telegram and said: "What does this mean?" I read it. It was a press telegram saying that Mr. Hull had called home all Americans in the Far East who could be spared from their duties. I said: "Gentlemen, I have not yet seen this news; presumably a telegram is now on my desk in the Embassy. But I can tell you at once what it means. When you joined the Axis and entered into partnership with a country which has threatened my country and has announced its intention to wreck many of the fundamental principles for which my country stands, you believed that we would

become intimidated and would step back. I told you, on the contrary, that we would step forward. This is the first step." Those Japanese officials were amazed.

In international relationships, not only in past history but in contemporary affairs—and certainly this axiom will apply with equal or greater force in future—one of the fundamental sources of danger is the lack of understanding, the erroneous conception, among governments and peoples of the background, the underlying impulses and motivations, the psychology, stamina, and spirit of other peoples. Had the Germans in 1914 and the Japanese in 1941 better understood those things, had they more accurately conceived the inherent qualities of their future enemies, might they not have hesitated to rush headlong toward certain ultimate destruction? Democracy, they said, is bankrupt; the people of the democracies decadent, soft, flabby from too much luxury, disunited by too much individual independence, unwilling to save or to sacrifice their comforts, unable to unite or to endure the grim and constantly intensified demands of total war.

Alas, what they did not know and perhaps do not yet wholly understand is that, while we in the democracies begin war as novices and in low gear, because we are not in time of peace geared for war, with the wheels of our war effort grinding and groaning in the initial stages, gradually but surely we move up through the gears, and when finally and inevitably we slip into high gear with the component parts of the great machine working in unison, then nothing in the world can stop us. They did not know this. But they shall know.

What I am leading up to is this: Even in our own country—and I have been all over our country since coming home last summer—I find a surprising and ominous lack of understanding among our own people of the problems of foreign affairs and of the lives, history, resources, habits, and psychologies of foreign nations and foreign peoples. Various bodies throughout our nations are doing admirable service in fields hitherto inadequately explored, but they are only nuclei which should be greatly expanded as time goes on. After the war, when the liberal arts can once again come into their own, all of our institutions of learning should in my opinion lay far more emphasis than in the past on these things. I venture merely to lay down the general principle that in every country in tne world a goodly knowledge not only of foreign psychologies but of the problems—all the great problems—that beset foreign nations, is the surest way of avoiding future wars. Isolation in our modern world has become an anachronism.

But, first of all, we must win the war, and I should like to say a word about our enemy Japan. I know that enemy well as one should come to know any people well among whom one has lived for 10 long and trying years. Not many of our people really understand that enemy. There is still abroad in our country all too much fallacious thinking, to the effect that once we get around to it we shall have little difficulty in conquering Japan. Some of our people do not seem to realize that we have steadily, intensively, and progressively been getting around to that task ever since Pearl Harbor as a few outstanding incidents such as those that have happened in the Coral Sea, at Midway Island, at Guadalcanal, at New Guinea, at Attu, and in the Kula Gulf have brilliantly attested. Today, we are sending to the Asiatic theater every instrument of war that the traffic will stand, and the traffic itself is steadily increasing. Those who have said, and who sometimes still say: "When we're through with Hitler we'll mop up the Japs" seem to have little comprehension of the magnitude of the task we face. It is true that we are fighting a global war, a war waged in many theaters and on many fronts. No theater, no front is being neglected, and every success of our arms, the arms of the United Nations, in Russia or Africa, in Germany or the Near East, spells a success in the Pacific Ocean theater, and vice versa. I have high hopes that even though we still have a long way to go and a hard road ahead before we shall bring Germany and Italy to the unconditional surrender which is the irrevocable objective of our effort, the tide of war, now flowing in our favor, will never ebb. But even when we can turn our entire attention to Japan, let us not for a moment think that we can regard with complacency the problem of defeating that enemy

Today, the Japanese occupy tremendous areas throughout east Asia and in the islands of the Pacific, areas which contain every raw material needed by any country for national power, and they control some 300,000,000 native inhabitants in those areas whom we know, by experience, they will use as forced labor to develop those raw materials. In the ports that they have taken there exist great potentialities for additional shipbuilding facilities. The industrial plants everywhere in those regions they will have put in first-rate working order—for the Japanese are tremendously industrious, thorough, pertinacious, and scientifically expert. No grass will have grown under their feet—for they will undoubtedly have aimed from the start to make those areas so far as possible self-sustaining and independent of shipping facilities to and from the homeland. Their shipping is vulnerable and will become increasingly so as time goes on. Eventually, if we have not reached that point already, we shall sink their ships faster than they can build. They know this, and they will therefore prepare for the day when they can no longer depend on ships for maintenance of their supplies.

There's the problem. It isn't going to be so easy to "mop up the Japs." And there is no sense in thinking it will be. Complacency in war is always dangerous. That is what I have been trying to tell our people ever since I returned from Japan last August, over a year ago. And I have been telling them that there must be no halfway measures in solving that problem, no temporizing, no compromise, no half-baked peace. We can never relax in safety and security in our own country until that cancer of Japanese aggressive militarism, which has spread over most of east Asia—and which if left alone would assuredly some day spread over into our hemisphere—has been utterly destroyed, cut out to the last cell and rendered powerless ever to reproduce itself in the future. To most of our people the overweening ambition and megalomania of those Japanese military leaders are incomprehensible. Those leaders have long planned and built against the day when, having developed the immense potentialities of power now at their command, they would come over and attack these United States. When Admiral Yamamoto said in public before he was recently killed that the peace after this war will be dictated in the White House in Washington, he was speaking in grim seriousness. And only a few days ago another of his breed repeated the same thought.

Well, we are not going to leave that cancer alone. We are not, thank heaven, leaving it alone today. But we have a long, difficult task ahead beset, I fear, with much blood and sweat and tears. Once the American people fully comprehend the magnitude of this task, they will see it through with their traditional grit and determination. All of this adds up to three simple "musts": We must not relax; we must continually intensify our effort in this war; and our effort must depend not alone upon our boys at the front but upon every one of us throughout our mighty land

Now, what shall be done with Japan after we have achieved final victory? Here a good many imponderable factors enter into the problem. Among these factors will of course be the extent of the impact on the Japanese people of their losses, their defeat, and their final unconditional surrender, as well as the attitude toward Japan at that time of the other United Nations.

In any discussion of post-war policy it should be borne in mind that one fundamental principle set forth in the Atlantic Charter is respect for the right of all peoples to choose the form of government under which they will live. The charter, however, contains, inter alia, another principle of equal fundamental importance, namely, abandonment of the use of force and, pending the establishment of a wider and permanent system of general security, the disarmament of nations which threaten, or may threaten, aggression outside of their frontiers. In the light of that latter provision, common sense dictates that the military terms of settlement shall prevent Japan from again becoming a menace to international peace. This, of course, presupposes disarmament and the denial to Japan of certain strategic islands, quite apart from the restitution by Japan of other territories seized by force. It presupposes too the condign punishment of Japan's military leaders responsible for her aggression, as well as of those guilty of the hideous and utterly barbarous cruelties practiced alike upon prisoners and wounded and upon noncombatant civilians of the United Nations.

But that would solve only a part of the problem. Effective steps will undoubtedly have to be taken to rid the Japanese permanently of the cult of militarism of which, in varying degrees, they have been the unresisting pawns throughout their history. This will of course mean a substantial reorientation of their domestic life and outlook through the process of reeducation in all their institutions of learning from the kindergarten to the university.

My own opinion, based upon my 10 years of experience in Japan, is that this process will present no insuperable obstacles. At least a part of that process will come about automatically with the defeat of the Japanese nation. First of all, we must remember that in Japanese life and thought a loss of face plays an important role. When the Japanese people witness the complete defeat and discomfiture of their army and navy and air force—which they have been told have never yet lost a war and, being allegedly protected by their sun goddess, can never be beaten—that military machine will be discredited throughout the length and breadth of the land. Within the last generation there have been times when the prestige of the Japanese Army was so low that army officers were reluctant to wear uniform in public when off duty; and the incursion into Manchuria in 1931 was undoubtedly stimulated if not impelled among other considerations by the desire of the army to recover its former influence and prestige. What has happened before can happen again. Throughout Japanese history the pendulum has swung to and fro between aggressive and peace-seeking policies and action.

Furthermore, ever since the Manchuria venture, and especially since the commencement of the China War in 1937, the Japanese people have suffered acutely. Living conditions have become harder; the standard of living has steadily deteriorated, and periodically Japanese families have received from overseas in ever-increasing numbers the little white boxes containing the ashes of their loved ones. They are taught the glories of such sacrifice, but human nature and human sorrow are fundamentally much the same everywhere. Weariness of war is just as current among the Japanese as among any other people.

It is my belief that when Japan's war with the United Nations is over, even in their defeat, the great majority of the Japanese people will give a sigh of profound relief and will welcome a new orientation and outlook

so long as they are not deprived of the hope of better things to come.

Just as we must not deny to ourselves hope of better things to come, so we must not deny them, or anyone else, that hope. I have no sympathy whatever with those who hold, as some people do hold, that before we can find permanent peace in the Orient, the Japanese common people will have to be decimated. Man for man, the Japanese people at home in their own land are not inherently the wolves in human form which some of our own people who do not know them believe. Once caught in the military machine they are taught brutality, cruelty, trickery, and ruthlessness as a matter of high strategy—in the mistaken belief of their leaders that these things will break the morale of their enemies and lead to victory. Little do those Japanese leaders seem to realize that such methods of warfare have an effect precisely the reverse of that intended. The Japanese people are going to learn to their sorrow that crime and brutality do not pay, and once they have learned that lesson, the finer qualities which I know that many of them possess will have opportunity to come to the fore. The Japanese in their own Japan are naturally a thrifty, hard-working, progressive people with great recuperative powers. Throughout their history they have become inured to and have surmounted great disasters—disasters wreaked by fire and flood, by earthquake and typhoon. Given the opportunity, they will likewise overcome the ravages of war, even with their substance spent and their cities destroyed. Those recuperative powers must be wisely directed into the healthy channels of peaceful economic and cultural pursuits and away, forever, from military enterprise.

But many difficult problems will confront us in the post-war settlement with Japan, problems of industry, commerce, agriculture and finance, of education and government. We are already preparing against the day when those problems will arise but the time has not yet come when their solution can be decided upon in detail. As a fundamental conception I personally believe that the healthy growth, wisely guided in its initial stages, will have to come, through re-education, from within. If an ancient tree is torn up by the roots and remodeled, it will not live, but if the healthy trunk and roots remain, the branches and foliage can, with care achieve regeneration. Whatever is found to be healthy in the Japanese body politic should be preserved; the rotten branches must be ruthlessly cut away.

Only skilled hands should be permitted to deal with that eventual problem upon the happy solution of which so very much in the shaping of our post-war world will depend.

But first of all, let us get on with the war, in the winning of which every one of us has his or her part to play. It is a hard war; it may be a long war. But it is our war—yours and mine—and the maximum effort of all of us is needed for ultimate victory. In this War-bond drive let us show our own fighting spirit.

Put Professors in the Right Place

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Chronicle:

PUT RIGHT PROFESSORS IN THE RIGHT PLACES

(By Chester Rowell)

There has been so much howl against professors that it is perhaps time for somebody who once suffered under that stigma himself to put in a word for them.

To be sure, I was starved out of the profession 45 years ago, as my father had been some 40 years earlier, and I have spent much of my life since then where I had to meet pay rolls (and did, with some success), so perhaps I can qualify by the now proclaimed standard. After all, what else need a man know, especially about the governmental responsibility entrusted to him, provided his pay rolls have been met!

The trouble, after all, is not so much that the victims of the prevalent grillings are professors, as that they are the wrong professors, or in the wrong places. It is not even that they are theorists. Theorists are exactly what their critics want—but theorists on their side.

There are no more theory-minded men on earth than some of our business ultra-conservatives. They do not even need to study their subjects, as the professor unfortunately has to do. They know their creed to begin with and use facts, arguments, and slogans to put it across. Is not that the most direct way to get what you want? And is not getting what you want the supreme end of endeavor? Certainly it meets the pay-roll test.

A lot of these professors, to be sure, are experts in one thing and have been put in charge of another. Or they are professors of the right thing but are precisely the last ones that the other professors would have chosen. Some of them are charged with a wicked conspiracy to undermine the whole system of private business and property. To the end that Government shall own and operate everything socialistically, but with them. Put in others whose sole purpose is to get the Government out of business and leave it wholly to private owners.

There must be practical exceptions, to be sure, for each particular group which wants the Government to go, are the way in helping it. And there must be hands off her competitive system, except that each particular group shall be free to combine to squeeze out competitors in its own line. But that is theory. The trouble with the professors is that sometimes they annoyingly point out such things, which is not good for the confidence of the people, so desirable to business.

Of course, this is only the most extreme attitude of theoretical preaching of business, just as the contrary theory, of which it accuses the brain trusters, is also a minority one. Neither is practical, and there should be a clearing out of both from Government. Probably there won't be, and this is a justified complaint.

However, we see veteran business executives going to the Stanford School of Business Administration, there to learn from professors (some of whom have met pay rolls themselves in business) the things they need to know for the enlarged business responsibilities to which they are being called. We see universities being transformed everywhere, to train for administrative service in the Army, in Government, and in a multitude of the most practical arts, from buying and delivering food to devising the weapons that are winning the war, saving the lives and health of soldiers and equipping administrators for the sure emergencies of peace.

These are the most "practical" things we are doing to win the war, and we are conscripting for professors to do it—we are even finding that the most recondite subjects, higher mathematics, subatomic physics, and the harnessing of the mysteries of radiation are the most urgently "practical" subjects of all.

We even accept this dependence on professors in all subjects but one. Physicists who talk a language we cannot understand are trusted with our physical problems. The research that has revolutionized the care of health is welcomed, provided it does not touch the taboo of how the physician in civil practice gets his pay, and so on.

But had not the economist to face economic problems—he might be a "theorist" who knows that we cannot sell to those from whom we will not buy. Not the "theorist" who knows that you cannot prevent inflation by more money to your particular group. Not anybody with a scientific knowledge of her sciences of life and society. They might floor us with some facts which our slogans could not undo.

They have, to be sure, too many of the wrong sort of professors. Also, too many of the wrong sort of dollar-a-year "practical" men.

The remedy is to get rid of these.

The other is to bring in the right sort—a lot of them professors.

Foreign Affairs

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. FULBRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the American Bar Association on Thursday, August 26, 1943, at Chicago, Ill.:

Mr. Chairman and gentlemen, I deem it an honor and a great privilege to be invited to address this distinguished gathering of the leaders of the American bar. I cannot deny that it was with considerable trepidation that I accepted the invitation to come here today, realizing as I do that I am exposing to you and to the world how very limited is the knowledge and the wisdom of a freshman Congressman.

Your president requested in his invitation that I present to you this morning some of my thoughts concerning the proper relations of this Nation with the other nations of the world. I do not have the temerity to express these thoughts as being those of an experienced international lawyer. I thought, however, that coming from a Representative of an agricultural district, of which there are many in Congress, they might be of interest to you as an indication of what the common citizens of this country are thinking about the war and what we should do about it.

Many of us feel in our bones, so to speak, if not in our heads, that if we are to survive in this world as a republic of freemen, we must do something about recurrent total wars. We feel that we are sacrificing our finest boys and expending our material wealth and resources for something we do not quite understand. We know that we must do it, yet we want so very much to understand why we must do it, and what is to be gained by our sacrifices and how we may avoid in the future the necessity of such senseless destruction and suffering.

The obvious answer to why we must fight now is that we were attacked and must defend ourselves. But why were we attacked at this particular time? Many abstruse and

learned volumes have been written on the causes of the war, but if any single circumstance can be said to have caused this war, I think that Hitler's belief that his opponents would follow the "one by one" road to destruction would head the list. In spite of all the alleged social, ideological, or economic causes of war, I think the decisive cause is the conviction of the aggressor that he can win. The principal consideration in the German mind in arriving at this conviction in 1939 was, I am sure, the each-for-himself, the one-by-one, isolationist philosophy of the United States and the other non-Axis countries. These sovereign nations attempted to deny the essential interdependence of nations. Hitler, relying upon our Neutrality Act and a pact with Russia, sought to apply the old principle that "Ten men can overcome a thousand if each of the thousand says: 'I will fight for myself alone; I will not cooperate with the others,'" in which case the 10 do not face a thousand, but face only 1—1 at a time. It makes one shudder to think how close to complete success Hitler came after the fall of France. From such a demonstration surely we now recognize that individual defense is in the long run a physical impossibility and, therefore, that our only hope for security is in collective action.

If it is true that the decisive cause of this war was Hitler's belief that the United Nations would not unite as they have done, but would go down to defeat one by one, then the answer to what we may gain from this war should be clear. We shall have acquired the experience and knowledge by which we may prevent, or at least make less frequent, the recurrence of these appalling tragedies. The immediate fruit of our victory will be the prevention of our enslavement by the Nazi and the Japs, a vastly important, but somewhat negative benefit. Since, however, we do not desire the conquest of large territories, the only great and positive good that we can hope to achieve from our victory is the assurance of a peaceful world in which man's energy and genius may be devoted to creative and beneficial, rather than to destructive and savage, enterprises.

I believe that our recent experiences and the history of government over the centuries, which is largely the chronicle of man's efforts to achieve freedom by the control of arbitrary force, indicate that only by the collective action of a dominant group can security be attained. It was in this belief that I introduced House Concurrent Resolution 25, which is, as a matter of fact, the real reason why I am here today. Before I read the resolution, may I say that perhaps the most significant thing about it is the fact that it originated in the House of Representatives and is, at the moment, a nonpartisan measure. Both are important. Our foreign policy must be consistent, and must not be a partisan affair shifting with every election. Further, since the House of Representatives is at all times more nearly reflective of the will of the people than any other body, it should play a part in the formation of fundamental policy. Only with congressional sanction can the other nations of the world rely with assurance upon commitments of our Executive. The adoption of this resolution by the House and the Senate will create a precedent for the further participation by the House of Representatives in the matter of foreign policy, and give that policy stability and force.

This resolution reads as follows:

"Resolved by the House of Representatives (the Senate concurring), That the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and to maintain a just and lasting peace among the nations of the world, and as favoring the participation by the United States therein."

This simple statement is, I believe, the first step in the development of a foreign policy which should enable us to achieve a greater degree of security than we have hitherto had. It tells the world that the United States recognizes that any organization for peace must be based upon power adequate to enforce peace, and that the United States will share both in supplying that power and in the responsibility for the exercise of that power. One may say that this is a commitment that this Nation undertakes to participate with the other nations of the world in a genuine and bona fide effort to find some reasonable means to solve the international disputes by methods other than by war.

Much has been said about a provision for the use of force. The words "power adequate to establish and to maintain a just and lasting peace" not only envisage the use of some kind of force, but may also include the power, if necessary, to control the productive capacity of instruments of aggressive warfare. The traditional "police force" which disturbs so many people may not be nearly so important as control of strategic materials and productive capacity.

A FIRST STEP

This commitment to participate is, of course, only the first small step in the process of creating a system of international relations that makes sense. Some people have been misled by the false impression that our own Constitution was suddenly, as if by magic, produced from the minds of our founding fathers. Nothing could be further from the truth. Rather than being a document of original principles or ideas, it was more in the nature of a codification of principles and institutions of human freedom which had been evolving through countless centuries. Millions of brave men and women, of many lands, had sacrificed their fortunes and their lives in the struggle for human freedom which that instrument so beautifully and so perfectly described and established in this great continent. It is important to remember that institutions and principles for the government of men, whether they be of morals, economics, or politics, do not spring full-blown from the minds of mortals. They evolve, and all too slowly, but in the evolutionary process they acquire validity and stability. With this in mind, it seems to me that, in venturing into the uncharted realm of international controls, it would be a mistake to attempt a complete blueprint which, I am confident, would sooner or later prove too restrictive and perhaps fatally so. The first step, therefore, should be the adoption of broad and basic principles. After that step is taken, then may we consider the succeeding moves to be made.

It might be more helpful to our purpose to discuss some of the things this resolution does not contemplate. Many opponents of collective security seek to confuse the issues by proclaiming at length that we do not want an international W. P. A. The question of relief and rehabilitation has little to do with the formulation of a foreign policy or the creation of machinery to keep the peace. It may be that relief in the form of food or other goods has a place in military operations in occupied countries or in the settlement of this particular war. But this war is but a tragic and horrible episode which one of these days must end. A proper foreign policy, together with the machinery to keep the peace, is continuing in its nature; it does not consist of sporadic instances of emotional altruism or niggardly selfishness. To be successful it will require the assiduous daily attention of the best brains of our country. It is brains and leadership that we must supply and not gifts of bread and milk and money and oil. It is not contemplated that we, the people of the United States, are to give our goods to others, that we are to raise the standards of living of the peoples of the world, or even to give them all a free and democratic government. If we can contribute leadership and our fair share of the force found necessary to make an international system of control effective, that is all the world can or should expect. As a matter of fact, if these total wars can be prevented for a reasonable length of time, most of the peoples of the world probably can work out their own economic and political salvation.

Participation by this Nation in a system designed to prevent war is inspired and justified primarily by the desire to preserve that integrity and freedom of the individual which is the great distinction of our Nation. It is, of course, true that in saving our own freedom we will inevitably benefit other peoples of the world. But surely we will not refuse to save ourselves simply because in doing so we may help save others.

SOVEREIGNTY

Another shrewd, but no less false and emotional, flank attack on the proposal for collective security is the cry that we must never sacrifice our sovereignty. The professional patriots beat their breasts and wave the flag and shout "sovereignty," hoping thereby to frighten us, like sheep, back into the corral of isolationism. In the minds of many the word "sovereignty" has some mystical connotation in some way associated with divinity. In days gone by when men were slaves, their masters imposed their will by an appeal to the divine right of kings. "Your sovereign by appointment from the all highest" was the doctrine. By some peculiar quirk, today in this Republic men talk as if the Federal Government, even if it is made up of bureaucrats, is a sovereign body, above and apart from the people. Of course it is not. If sovereignty means anything and resides anywhere, it means control over our own affairs and resides in the people. The people, according to our republican principles, are sovereign. They may delegate all, or any part, of the power to manage their affairs to any agency they please. So far they have delegated part to their city government, part to the county, part to the State, and part to the Federal Government. We may recall that, under the Articles of Confederation, in 1781, our people delegated certain limited powers to the central government. When these powers proved inadequate, for the purpose of preserving order and tranquillity, further powers were delegated under the Constitution in 1787. Does it make sense to say that in creating the Constitution and establishing order our people sacrificed their sovereignty? On the contrary, they acquired through that delegation the means of preserving order and their individual freedom.

Certainly it cannot be denied that twice within 25 years we have been forced, against our will, into wars which have seriously threatened our free existence. To this extent the supreme control over our affairs—over our destiny—is at present incomplete. Our sovereignty is imperfect. Therefore, if we can remedy this defect, by a delegation of limited power to an agency designed to prevent war, in which we participate fully and equally with others, how can this be called a sacrifice—a giving up of anything? Rather, I should say, it is the acquisition of something infinitely precious to civilized man.

I realize, of course, that international lawyers and professional diplomats may be shocked by this unorthodox and perhaps rustic conception of sovereignty. I know that the textbooks and the authorities say that a nation must be legally free to determine its relations with other countries to be sovereign and independent. But these academic concepts have lost much of their force in the light of present circumstances. France, Poland, Belgium, and Holland, according to the books, were, and still may be,

sovereign nations, but I wonder how much comfort that is to the starving citizens of those nations. To argue about or to insist upon the preservation of sovereignty in its strict legalistic sense is reminiscent of the medieval treatises of the monks on how many angels can sit upon the point of a needle. Bitter experience has shown us that traditional national sovereignty as a foundation for international relations is a death trap. Nations, as well as men, in this modern world of swift transportation and instantaneous communication, are interdependent; their fate is inextricably interwoven, whether we like it or not. Until we recognize this basic fact of the modern world, we can make no progress toward the prevention of war—the greatest affliction of our civilization.

In an appeal to prejudice and emotion, the devotees of the status quo attempt to scare us by saying we would be turning over the control of our country to the Communists or, as some would say, to those clever British. This is, of course, rank nonsense. We will have our own representatives who can be relied upon to safeguard our interests. It may have been excusable during the youth of our country to assume that these "furriners," as Gene Talmadge might say, would outsmart us. But surely today, having proved our capacity in so many ways, we are not going to insist that we are too stupid to participate with the other civilized peoples of the earth in a common undertaking. It is true, of course, that since this Nation has outgrown its swaddling clothes and must now play a man's part in the world, it should find the means to induce its men of wisdom and understanding into its public service, for too long already have we looked upon public service as a place for the unscrupulous or the incompetent. The rewards of wealth, power, and especially honor have been reserved for our successful industrialists, scientists, movie actors, and entertainers. How many times have we all heard our best citizens say, "I simply cannot afford to give up my practice or my business to run for Congress, or to go to Washington in a department at eight to ten thousand a year"? The plain fact is that we can no longer afford not to have our wisest men in, for all of us, the most important business in the world. Not even the Germans, with all their ingenuity in developing ersatz food, clothing, and fuel, have been able to find a substitute for brains and judgment. I think it is safe to say that it is this shortage that will account for the destruction of that country.

Many of our people, both in and out of Congress, have a natural fear of the unfamiliar. Having had little to do with the other peoples of the world, they cannot believe that most of them, especially those of the United Nations, are quite like us in their instincts, their desires, their hopes and their fears. We have built up, through the years of our isolation from the world, a suspicion and distrust of practically all the peoples of Europe and Asia; and we cannot believe that those peoples want peace and security as much as we do.

It is only natural, therefore, that, before accepting even a simple declaration of policy, such as this resolution embodies, our people insist upon asking, "Where do we go from here?" They want to know exactly what is to be done, what kind of organization we are to have, how the power is to be distributed, how much it will cost us, what all the risks are. In a few words they want a blueprint of the whole thing before making any commitment at all.

Upon reflection it is clear that this cannot be done. This is not a unilateral undertaking for us alone to plan. In its essence it is cooperative, and no man or nation alone can say exactly what shall be done. To describe how or where we go after we decide to assume our share of the responsibility for the solution of international problems should not and cannot be the specification of plans and blueprints. It is rather the description of a course of action, a continuing, day-to-day process of working with other peoples—peoples, it is true, who differ from us superficially, and who may compete with us for the goods of this earth, but who, basically, do not desire war any more than we do. No man can say at this time what can or what cannot be done in cooperation with other nations because we have never tried it. On the other hand, we do know, only too well, the cost of noncooperation.

In the absence of a definite congressional declaration, it is probably premature and unwise to attempt a further description of where we go from here or of the process of building a peace. Nevertheless, I shall venture a few suggestions.

The creation of machinery to maintain order should not be burdened with the difficult, controversial problems arising from this war. In other words, the peace treaty concluding this war should not undertake to provide for the development of cooperative security. The failure of the Versailles Treaty is a case in point. We should not permit such questions as the Russian-Polish border, or the fate of Latvia, of Tripoli to endanger the primary and essential goal, which is the prevention of war in the future by collective action. I think, therefore, that, as soon as we accept the principle of participation, immediately we should proceed to participate by direct negotiations with our principal allies in an effort to find a basis and method of permanent united action. As soon as any methods or procedures are tentatively agreed upon, they should then be submitted to the Congress for approval. It is probable that a series of agreements will evolve in the course of the development of a workable system. The scope of these agreements should not be restricted by an inflexible blueprint hastily adopted at the peace table.

As a matter of fact, where we go from here depends upon how intelligent we are, and how successful we are in getting wise men to lead us. Our leaders must have vigor and they must have confidence in our power and in the fundamental rightness of our democratic principles. For 10 years—yes, for 25 years—we have been timid, cautious, compromising, and undecided in our attitude toward the rest of the world. We have not stood for anything positively and affirmatively. We have had a negative fearfulness that we might become involved in a struggle in which our very freedom was at stake, and for years we shrank from lending a hand. We can thank the Japs for making the decision for us; otherwise, even yet, we might be hesitating while freedom and the dignity of man were eliminated from this earth.

We must have a policy, and we must have leaders who make decisions according to principles in which we believe and not according to volatile and transitory emotions or nearsighted expediency. One of the principal values of a clear-cut policy is that it enables us to distinguish our friends from our enemies, to determine which course of action is for our own self-interest, and to avoid the indecision which led many of our people to believe that we could do business with Hitler, or that we could exist as a free people in a Nazi-dominated world. Charity, prejudice, sympathy, or expediency should not be the basis of a foreign policy. It must be built upon a profound evaluation of self-interest, of economics, of physical power, of geographic relations, and of fundamental human desires. These matters cannot be blueprinted, but surely men exist who understand their significance.

Such men are the principal contribution we can, and must, make to the future welfare of this Nation. Such men, I believe, are to be found in this body of trained lawyers. You who understand the evolutionary process of democratic constitutional government, you must help this Nation assume its proper role in the world and you must lend your talents so that this process may be fruitful. You men who understand the art of government and appreciate the psychology of human relations must take the lead in building the peace. I have heard the analogy of an architect, of an engineer used with regard to the building of a peace. But lawyers know that in dealing with human relations that analogy is not applicable. Men are not stones or brick or steel to be handled with precision and finality. We cannot build a peace like we do an Empire State building and go off and admire it, sure that it will be there on the morrow. Political institutions, like human beings or growing plants, must be constantly cultivated or they will wither and die. They are living organisms, not structures of steel and stone.

We read much about the danger of socialism and communism in this country. But why should we be so frightened. Have we no faith in the inherent merit of our republican, capitalistic system? I think our system can hold its own with any in its ability to bring the greatest good to the greatest number, which is the final justification for any government. But no system is automatic. It can be no better in the long run than the men who direct it. Too often do we criticize it and too seldom are we willing to participate in it. While I have little faith in blueprints, I do have great faith in the ability of our people to rise to great emergencies. The fundamental superiority of democracy is that it is fluid, that great men can in a crisis rise to the top, that from the lower strata a revivifying surge of new and virile blood can, like cream in a separator, flow out the top when the body is sufficiently agitated.

In spite of the numerous objections to participation by this country in a system of mutual security, I believe that our chances of success now are excellent. The very fact that our failure to participate in 1919 has resulted in this present war is in itself reason to hope that we may be wiser this time. Having tried and found wanting the policy of isolation during these last 25 years, I cannot believe that our people will make the same mistake a second time.

Further, I think we may find cause for hope in the long-time history of man's effort to bring order into his turbulent life. The history of government tells us that through the centuries there has been a gradual growth in the size of the unit of government. From the early family and tribal units we have progressed through the various stages of cities, states, and nations. Probably the most compelling reason for this development was the desire of the peoples to substitute law and order for the physical strife that so often occurred among these groups. This development has decreased the number of disputes and battles but, on the other hand, has vastly increased the intensity and destruction of the wars. With the tremendous increase in power and mobility resulting from modern science, we have created a force that threatens to destroy us. The art of government has not kept pace with the physical sciences. But the lesson of history is that the unit of government will in time proceed to the international level. The question is: Do we have the intelligence to do it now or must we wait one hundred or five hundred years to achieve that goal?

In conclusion, I think this war has definitely demonstrated the futility of Maginot lines and defensive armaments, as well as neutrality acts and isolation as methods of discouraging aggression. With modern weapons of warfare, the advantage is always with the aggressor who has the initiative in the first instance. This being true, the

only alternative I can think of as a means to physical security is concerted or cooperative action by a dominant group. We recognized centuries ago that an individual can have no security of person no matter how heavily armed he might be and, therefore, we created a Government with power to give us cooperative protection. Nations, as well as individuals, are inescapably interdependent for security, as well as for many the other values which constitute a civilized way of life. The rapid progress of the war toward victory presses us for a decision. Already we have shown indecision in our political strategy in Africa and Italy, and Russia within the week gives evidence of dissatisfaction. I can think of nothing that would do more to strengthen the determination of our allies and insure the fruits of victory than a positive declaration by the United States and by all the United Nations that this time we intend to work together, in peace as well as in war, to destroy the ruthless and savage forces of aggression.

In 1919, honorable, but misguided men, jealous of their personal prerogatives and distrustful of a new idea, defeated our first opportunity to create order in the world. It is obvious that similar men will oppose our efforts now; not directly, but just as they did in 1919, by indirection and pretense, by reservations and restrictions, but largely by an appeal to the emotions and prejudices which all too often overcome our intelligence. Nevertheless, I am confident that we now have a Senate and a House of Representatives of intelligence and understanding, determined to rise above personal or party interests in their consideration of this vital question. In this, our second opportunity, may God grant us wisdom.

The Colorado River

EXTENSION OF REMARKS

OF

HON. RICHARD M. KLEBERG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. KLEBERG. Mr. Speaker, under leave to extend my remarks, I include an address delivered by Mr. E. O. Taulbee of Bay City, Tex., president of the Lower Colorado River Flood Control Association, at a conference of the Intracoastal Canal Association of Louisiana and Texas, held at Houston, Tex., August 26, 1943:

President Holland, Colonel Miller, and members of the association: Many years ago officials and members of the Texas-Louisiana Intracoastal Canal Association, proposed in connection with the great waterway which has now been completed to Corpus Christi, that the larger streams in Texas, and the bayous in Louisiana, be developed for flood control, soil conservation, and navigation.

In line with this proposal, at the suggestion of our fine Congressman, the Honorable J. J. MANSFIELD, we started a movement to develop for these purposes the lower Colorado River in Texas. Surveys were made by the State Reclamation Department of Texas, by the United States Bureau of Reclamation, and later, the final studies were made by the engineers of the War Department.

The status of this project today is that the Mansfield Dam above Austin has been completed at a cost of $26,000,000. This will satisfactorily control floodwaters originating in the Concho, the Pedernales, and Llano Rivers. Many destructive floods have originated below the site of the Mansfield Dam. The engineers proposed special flood works at La Grange, Columbus, Wharton, and Matagorda. They recommended also a parallel levee system near the town of Eagle Lake in Colorado County to the town of Matagorda. The project has been authorized by Congress and would no doubt have been under construction had it not been for the World War.

In addition to these works, and important, Congressman MANSFIELD has had the War Department assume the maintenance of the delta section between Matagorda and the Gulf of Mexico. The cost of this congressionally adopted project for levee protection and special flood works is estimated at $6,700,000. Work will shortly begin on redredging the channel through the Delta, and the guard locks at Matagorda are nearing completion. Both will facilitate the movement of flood waters into the Gulf of Mexico. It is the considered opinion of competent engineers, and waterway proponents, that the lower Colorado River will have the most efficient system of floor control of any stream in America.

The Colorado River, a 900-mile stream originating in New Mexico, is one of the most destructive streams in America; and for the period of time for which the War Department has kept a record, the annual damage has been more than $5,000,000. The estimated cost, as against benefits, completely justify the construction which has now been adopted by Congress.

Congressman MANSFIELD also proposed navigation projects for the lower section of the Colorado River, because of the enormous quantities of heavy, bulky freight which would naturally move through such waterway. There are more than 30 producing oil fields in the three lower counties on the river, and the potential production is enormous. Oil naturally seeks water transportation. Agricultural products would provide important commerce.

Navigation has been authorized by Congress to a point near Bay City, at an estimated cost of $540,000, and a project is being studied to continue the navigation to the city of Wharton. A navigation project on the Bernard River is now under construction, which will serve an enormous production of oil and sulfur. Navigation on the major streams of Texas will serve as important feeders to the Intracoastal Waterway, which is already being widened and deepened to accommodate the indicated traffic.

We are indeed proud of the part the War Department engineers have had in the study of these projects. This organization, more than a hundred years old, has never been We are assured that when they make a recomjustly criticized in any of their activities. mendation that it is fully justified, and when they construct a project we have the same assurance that it will be constructed in the most capable and efficient manner. We are glad indeed that the construction of the important projects on the lower Colorado River will be under their supervision and constructed with their usual efficiency. Possibly this and more money could have been spent on the flood-control and navigation projects on the lower river, by political and bureaucratic engineers, on flood control which possibly would not control, and on navigation which would not permit of navigation.

We are greatly pleased with the progress on the lower Colorado River projects, and must say frankly that this accomplishment has been due to the fine service of one of the greatest statesmen in America, the Hon. J. J. MANSFIELD. He it was who made possible the great dam above Austin which in appreciation of his services was named the Mansfield Dam. His honesty, his ability, and the high regard in which he is held in Washington, have no doubt made possible this constructive effort for the improvement of the lower Colorado River.

I have on many occasions been permitted to learn of the regard, and almost reverent affection, his colleagues in Washington have for this good man. A few years ago I stood in the lobby of the Naval Hospital in Washington, in which Congressmen MANSFIELD was confined, and heard one of his colleagues pay a great tribute to him. He expressed the opinion that we in Texas probably did not appreciate the services of our Congressman as we should. A contributing factor to the love and affection which Congressman MANSFIELD'S fellow Congressmen have for him, he stated, was the known fact that when Judge MANSFIELD gave a promise he always kept it, and that he was America's Congressman as well as a representative of the State of Texas.

Undoubtedly the effectiveness of a Member of Congress is regulated to a great extent by the regard other Members have for him, and Congressman MANSFIELD'S successful acomplishments in the past 27 years are no doubt due in part to the regard in which he is held by other Members of Congress.

We are encouraged by the hope that Judge MANSFIELD will continue to serve us until the great projects such as ours, which he instituted, have become a constructed fact.

Only Then We Shall Be Able to Say: "Our Hands Have Not Shed This Blood"

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of September 7, 1943:

ONLY THEN WE SHALL BE ABLE TO SAY: "OUR HANDS HAVE NOT SHED THIS BLOOD."—DEUTERONOMY 21: 7

AN OPEN LETTER TO THE PRESIDENT AND THE BRITISH PRIME MINISTER

EMERGENCY COMMITTEE TO SAVE THE JEWISH PEOPLE OF EUROPE,
New York, N. Y., September 5, 1943.

To His Excellency Franklin D. Roosevelt, President of the United States of America, and to the Right Honorable Winston S. Churchill, Prime Minister of Great Britain.

The White House, Washington, D. C.

SIRS: Seven months have gone by since I addressed "An appeal to the conscience of Humanity" on the occasion of your historic meeting in Casablanca, where the era of offensive warfare of the United Nations was inaugurated. If I venture to write again on the same subject, I do so by order of a high command that comes from the death agony of a people. As then, 7 months ago, Jewish human beings, men, women, and children, are being massacred day in, day out, in those somber regions of eastern Europe where the Germans are seeking to wipe out the name of humanity with its own blood.

Your words, sirs, that the wrongs suffered by the Jewish people will be set aright and that their tormentors will be punished after

the war, have not made the least impression on the brown marauders. The Germans go on with the killing of Jews relentlessly, and with no sign of remorse or fear of reprisal. It is as if you had not spoken at all. Hitler's gruesome decision to make Europe Judenrein, whether Germany wins or loses the war, is carried out with unflinching resolution.

A few weeks ago, in the ghetto of Warsaw, where 35,000 Jews remained out of a population of half a million, the survivors fought with bare hands against the steel engines of war of the Gestapo and the Schutz Staffeln. For 10 days the battle raged in the alleys, in the cellars and on the roofs; starving, ragged, unarmed men, women, and children against the brutes of the "new order" equipped with every deadly weapon devised by modern science. When the cobblestones of that walled-in enclosure ran red with the blood of the slain, a last handful of Jews sought shelter in a synagogue against a detachment of Elite Guards of 500 which had been detailed to wipe out the last pocket of Jewish resistance.

Artillery was brought to bear on the doors of the place of worship and soon the butchers streamed in through the breach in the wall. Inside, we know from the one man who came through the frightful carnage that followed, but who, unable to bear the memory of the spectacle, committed suicide subsequently, inside a strange sight met the eyes of the Germans: grouped around the rabbi in the sanctuary stood 50 or 60 Jews, old men and young, women, boys, and girls.

It was the hour of sunset, when the Jews since time immemorial recite the Schma Israel: Hear, O Israel, the Lord Our God, the Lord is One. From outside came the cries of anguish and the moans of the wounded who were being finished off by the daggers of the heroes of Lidice and Rotterdam.

For an instant the Storm Troopers hesitated as the small group repeated the eternal words. Then a volley of hand grenades burst in the midst of the worshipers. The Jews fell as if a volcano had erupted under their feet. Only the rabbi, a venerable patriarch of 87, still stood erect. In his hands he held the Scroll of the law with those Ten Commandments to which the President made reference in his address the other day before the Parliament of Canada. Another bomb was flung. It set the rabbi's clothing on fire. The law of God flamed in his hands as he fell.

That night there was peace in the ghetto: the last Jews of Warsaw had been killed. Nazis went around with torches in the streets and burned the faces of the slain to make sure they were dead.

The killing continues! Each day new batches of Jews are slaughtered. Only recently we learned of a group of Netherlands Jews having been sent to the human abattoirs which the Nazis have set up in Poland. A group of French Jews numbering several thousands followed. Now, apparently, the turn has come for the Jews of Denmark.

If that evil man in Berlin should tomorrow announce that he is going to make Europe Bulgarenrein as he once promised to make Europe Judenrein and if he began carrying the blood purge of the Bulgarians into effect, and if the Governments of Great Britain and America warned him then that for every Bulgarian slain they would exact the lives of 10 Germans, the Nazis, I venture to say, would desist at once.

The Bulgarians are not our allies, but the Jews are. In the interest of saving Jewish lives no such definite and specific warning has ever been given to Germany. No other people of Europe has suffered as the Jews. Against no other people a decree of extermination was issued and on no other people so high a percentage has been slain. The Jews have 2,000,000 dead.

His Grace the Archbishop of Canterbury asked in the House of Lords recently if "nothing then, really nothing" could be done by the United Nations about this the greatest and most fiendish crime of history and the Most Reverend Primate warned with solemn and prophetic gravity that in the matter of the persecution of the Jews Great Britain stands before the bar of history, of humanity, and of God.

Indeed, the universal conscience has an open eye. These things are not done with impunity.

The more one admires Britain and the British people, the more one feels his heart shrink when it is seen that, precisely in the hour when the Jewish people are systematically exterminated, the ancient homeland of the Jews which is under British mandate is closed even to those men and women who by almost superhuman efforts succeed in escaping from the Nazi hell. The immigration policy of Palestine operates even now in accordance with the terms of that White Paper of which Mr. Churchill said at the time of its forced passage through Parliament that it was "a plain breach of promise" and "a repudiation of the mandate." * * * He asked if the British Government was "too weak to carry out its obligations and wish to file a petition in moral and physical bankruptcy."

That was in 1939. Since that time Germany's design to cut the British Empire in twain by the drive on the Suez Canal has been foiled by the brilliant victories of General Montgomery and the Eighth Army. In this triumph Jewish Palestine played a not insignificant part by its amazing industrial development and its fighting manpower. The threat to the Near East has been removed. Yet still the doors of Palestine remain shut. Foreign princes, who stood cautiously aside while the Empire's fate hung in the balance and while Jews fought in their tens of thousands on Britain's side, are now allowed to broadcast to the world from Cairo that they oppose the opening of the doors of the national homeland to Jewish men and women.

Sirs, this is an injustice the gravity of which is not diminished by the greatest of the nation which commits it. To cover this cruelty with silence is to condone it and to share in the responsibility.

Your exalted mission is not one of destruction alone. It is also one of civilization. You are to blot out the evil past and to regenerate the present. You are worthy, as the leaders of the two great Anglo-Saxon peoples, to make the voice of humanity heard. Great solutions are near. We are passing through one of those epochs when history advances with the stride of giants. In Europe the heavens are beginning to glow. Light comes after the long nights of darkness and horror.

Do not turn your eyes away in this hour from the agony of Israel.

We hear it said on all sides that nothing can be done for the Jewish people until after the war.

This is not true.

Our present silence is growing audible in Berlin. For us to say that we will do our best to find a solution for the Jewish question after the war is a mockery and only evokes laughter in hell.

Are the United Nations so weak that they cannot even now make one effort to save the remnants of that harassed and tortured nation? Must we give in and resign ourselves to an irreparable disaster without at least accepting battle? This has not been the practice of Anglo-Saxons in other fields.

In the hour of victory that is surely coming, the grandeur of the United Nations will be for each to be crowned with the freedom of others. Is the Jewish people to be excluded by reason of it having ceased to exist?

One word, sirs, from you, especially to the leaders of some of Germany's satellite powers, at this time when the fortunes of the Axis are in rapid decline, would be sufficient to stop the horrible deportations which they carry out at Germany's demands.

For every conceivable purpose agencies and commissions are appointed and created. Only last week an agency was set up whose task it is to safeguard and preserve the art treasures in the occupied countries of Europe which are soon to be turned into battlefields.

There is no agency to establish, investigate, and devise means to remedy the condition of the four or five million Jewish Europeans who are still alive. There is, in fact, not one single official appointed to look into that problem.

After so long and strange an inactivity what less could be done for a whole people in agony and torture than to appoint a few men, with compassion in their hearts and knowledge and experience, for the task of saving countless human lives.

Set up an Anglo-American intergovernmental agency with powers and prerogatives to act immediately and on a large scale for the rescue of the Jewish people of Europe.

I am sure that such an agency will bring humanity nearer to a solution that will forever end the scandal of Christendom of an ancient and great people being driven forth to haunt the corridors of time as ghosts and beggars and to wander about as waifs in every storm that blows.

Open the doors of the Holy Land to its children!

In this exalted hour, when the victorious American and British Armies are battling on the Continent of Europe and the onslaught of the United Nations is proving irresistible, I appeal to you, Mr. President and Mr. Prime Minister, to lead the moral offensive against this cold-blooded massacre as you have led the military offensive against brutal aggression.

Only then we shall be able to say "Our hands have not shed this blood."

PIERRE VAN PAASSEN.

Congress' War Job

EXTENSION OF REMARKS

OF

HON. ED ROWE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. ROWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Akron Beacon-Journal of September 14, 1943:

CONGRESS' WAR JOB

Congress returns to work today to tackle the greatest and most important assignments ever handed the legislative bodies.

On the war front the representatives of the people must maintain the supply of men and materials necessary to win the war, and must also levy taxes to pay for it.

On the home front they are confronted with the problems of manpower, inflation, domestic shortages, price control, labor legislation, and a dozen other issues that are all political blockbusters.

Theirs is the task, too, of laying the groundwork for peace, of charting, at least in preliminary stages, the future course of the Nation in world affairs. They must look forward to post-war reconversion of industries, rehabilitation of soldiers and civilians.

As each of these issues is brought into the spotlight of discussion it will be analyzed and evaluated. But until the individual merits of the various programs have been thoroughly aired pro and con it is premature to praise or to criticize them.

The important fact that every Congressman should realize is—

This is your war job. The Nation—the soldier abroad and the workers at home—expect you to deliver the goods. The same rules that apply to every war factory also apply to Congress.

Absenteeism cuts production in war plants. It also will impair production in Congress. It's your job to be at your desk, at your committee meetings. The vacation is over.

There isn't time for demagogery and political harangues. The people are more interested in production than in politics. Speeches may look good in the CONGRESSIONAL RECORD, but unless they contribute materially to the topic under discussion, constituents are likely to regard them as wasted effort.

Cooperation is necessary. Compromise may prevent needless delay. The 4-month battle over pay-as-you-go legislation in the last session is an example of refusal of either side to concede. But the ultimate result was a compromise. Meanwhile, other important legislation was postponed.

The administration has given some indication that it will submit proposals to Congress for approval, abandoning, perhaps, its former tactics of demanding enactment of its programs intact or not at all. If the administration is willing to cooperate, Congress can reciprocate to the advantage of the country.

The responsibility resting upon this Congress cannot be minimized. It must keep pace with our fighting armies. The successes abroad must be matched by victories in Washington.

Religion, Labor, and the Common Good

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by A. F. Whitney, president, Brotherhood of Railroad Trainmen, entitled "Religion, Labor, and the Common Good," at mass meeting of religion and labor council, Dayton, Ohio, September 5, 1943:

I want to begin my remarks today with a personal confession. When I received your invitation to address you on this occasion and on this subject, I accepted it with a great deal of humility. When you asked me to talk on religion, labor, and the common good, you were giving a layman a very large order indeed. This triple subject calls for a discussion of theology, economics and their relationship to ethics, subjects upon which wiser men than I have written thousands of books and delivered millions of sermons and lectures. By combining the three in the scope of a single discussion, it seems that you required that I point out, I find, the principle of unity among them; add religion to labor and obtain a sum which we call the common good.

That I possess no high academic degrees in economics and philosophy and have not been ordained to preach, is, however, not the sole reason for my timidity. Every man, whatever his training or vocation in life, is a philosopher and an economist by intellectual and physical necessity, and every man must acquire an idea of the final cause and the ultimate meaning of human existence, whether he be a doctor of philosophy or of divinity, or only a labor skate. Even my circuit-rider father, other-worldly as he was, in the course of providing for a family of five children, had to be an economist of a sort between his sermons.

Humility and doubt are the beginning of wisdom, for the arrogant and the smug learn nothing. These are disquieting times for those who are proud and complacent in their opinions. These are days of uncertainty for even the wisest of us. Civilization seems to have reached in the years of our generation one of those epochal points in its development where many formerly accepted truths and values seem no longer to meet, if you please, the requirements of the common good.

Within the life span of all of us who are in this room, Christians have murdered each other wholesale in two world wars, and we have experienced an interim of a precarious peace, where Christians permitted their brothers to suffer agonies of mass unemployment, to waste and to rot in hunger and disease.

Our generation has lived under economic institutions justified by economic and social theories which just didn't work out for the common good—at least for any sane, common-sense conception of the common good. Through these irrational years we have held formally to an ethical religious system which has had too little practical effect upon a physical environment wherein the masses of mankind have endured lives of terror and suffering and privation.

The universally accepted idea of the common good, the good life, has somehow been divorced from practice in human society; we invoke Deity and call upon human beings to act like human beings and Christians—yet we tolerate, aye, we construct and defend economic and social institutions which seem to require that men must practice deceit and swindle, robbery and pillage, persecution and wholesale murder as a condition of their physical existence.

Do not infer that I am denouncing religion, my friends. What I say is not new, and the situation I describe is not new. If this be an attack upon religion and its concept of the common good, then we might as well expurgate the first chapter of Isaiah from the Old Testament and the Sermon on the Mount from the New.

All over the world the masses of the people are revolting against this insanity, against these cruel and inexplicable contradictions, which deny them not only food but deprives them also of that peace of mind and spirit, which is also necessary to the good life. This revolt has taken numerous forms. There is the revolt against private property and the profit system itself, which occurred in Russia. In Italy and Germany under totalitarian leadership the middle classes and capitalists revolted against the republic and sought solution in a world war of conquest. In this country, among others, we have seen this revolt against this intolerable situation in the New Deal and the tremendous growth of the organized labor movement during the last 10 years. In those countries where social upheavals came, they have in notable instances been attended by antireligious demonstrations, with violence against religious leaders and church property. In our own country, as the labor movement grew, churchmen have been moved to complain of a waning popular interest in religion and its activities.

Although what I have said implies a criticism of our religious leadership and institutions, I am not one of those who in recoiling from the sorry mess society is in, deny God and disavow the basic faith and ethics of Christianity. There are those who assert that religious ideals are nothing and material things are all, and argue that to make man and his society better, we must change the society, alter the environment, and do less preaching. While I agree that religious ideals of progress will not acquire vitality in a social framework of a pig sty, these materialists have never been able to explain whence and how came their ideas which inspire and move them to change the material world for the better. That is a question they cannot answer.

But there is another equally pertinent question that those of us who profess these ideals must answer, and it is this, my friends: Why have not we and our religious institutions been moved to take practical measures to correct this physical environment in which men must sin to avoid starvation? Is there anything in the confession of a faith and an ideal of a better world, the common good, that would disqualify us to work and act to attain it? Can an ideal be so lofty, so fine, so pure, that it would be defiled if we used a spade or a shovel or cast a ballot, or even seized a bayonet to effectuate or defend it? Is religious contemplation only an escape from the sordid, burdensome, and sometimes sacrificial responsibilities of the world?

I know that you of this group here have given an emphatic answer to this question which I have stated in a number of ways. You have answered it just as Jesus Christ answered it, when He drove the moneychangers from the temple, when He healed the bodies of those who were sick as well as preached to them, when He fed the hungry with bread and fish. That is why I feel honored to be with you today.

The common people of the industrialized countries have found in the organized labor movement an instrument for the attainment of this ideal of the common good. While organized labor is a lay movement, the Christian ideal of the common good is implicit in its aim. I do not think that the great body of organized labor in the democracies is atheistic or antireligious in its philosophy. Organized labor merely seeks to be effective in a field of practical material affairs where religious influence as such has not been found adequate. Labor feels that there is no contradiction between a full life for living people and God's fullest blessing, but as a matter of fact, that the first is part of the second.

Labor unions have neglected the religious aspect of their program, I think, for two reasons, because religious leadership has neglected labor's interests, and many workers reciprocate with a similar lack of interest in religious affairs. The average union membership cuts across many sects and creeds. Hence the schooling in religious tolerance which a man receives in the labor movement works against religious education within the unions. Very seldom will a member or officer discuss religious problems in connection with union work and program. This is because none feels qualified to attempt such discussion, fearing he may arouse disruptive sectarian controversy.

A movement such as yours should go far toward bringing the labor movement and religion closer together, laying the basis for cooperation. If religious leaders lend assistance to labor, workers will inevitably take a more lively interest in the churches; if a preacher, a priest, a rabbi, and a Christian Scientist reader can sit down together and work out a nonsectarian religious appeal to labor, there is no reason to believe that religiously inclined laymen in the ranks of labor will not respond.

In both domains of thinking and activity we have much to gain by a closer unity between organized religion and organized labor. The basis of such a unity, which I have mentioned but not described, is not artificial. We find it in a common ethical goal. That goal is described as simple justice among men, and the assertion of the worth and dignity of the individual. Any religion which looks to this goal and teaches this credo is a natural friend and ally of labor.

In claiming this high ethical aim for labor, I do not mean to assert that a man is inherently virtuous because he works for wages and belongs to a union, that he is nobler than other men. Labor as a social movement, its philosophy and its program, is the greatest historical force for progress toward the common good, because by circumstance of the worker's position in the economic scheme of things, it must be so. Historically it is labor, the workers, who have been the unique victims of exploitation and oppression and injustice and wars. It is natural that a class which suffers most from economic exploitation will strive to remove the system of the exploiter; it is inevitable that the oppressed will attain a first conception of freedom and feel an impulse to fight for it, that those who suffer injustice will dream of justice and pursue it, and that those who must fight the wars and pay for them will lead in the fight for decent and a durable peace.

One needs be no romantic friend of the underdog or emotional sympathizer with labor to comprehend the natural logic which allots to the labor movement the leading role in this epochal battle for democracy, of which the vast military operations throughout the world today are but a phase. Labor's social position thrusts upon it the necessity, and out of this necessity has been born the determination and the courage, to win this fight. Any social or political group who may think so superficially as to believe that the Fascist movement, which has spread its blight throughout civilization, can be beaten back and that a democratic peace can be won without fullest utilization of the free labor movements of the world, is making a fatal mistake. Without the democratic participation of labor, physical and moral, the fight to defend and extend democracy will be lost. The statesmen and diplomats of the Allies must not forget that. Our appeasers and compromisers—and there are still many in high places in the democracies—before they undertake to erase labor from the blueprints of victory and the post-war world, will do well to remember that they can't have democracy without democrats.

As I jotted down these thoughts for this Labor Sunday address, I recalled a similar statement as to labor's place in society's design for progress uttered 40 years ago last July 4th by one who was perhaps the greatest humanitarian America has produced in our time, the late Clarence S. Darrow. I knew Mr. Darrow intimately for a great many years, and he sent me a copy of that speech, the rough draft edited in his own handwriting. I was a young man then, but I have cherished that manuscript through all these years. What Darrow said in Youngstown on that Fourth of July is as applicable today as it was 40 years ago, because it expressed with such moving eloquence that spirit of mankind which has been the mainspring of all progress toward the ideal of "liberty, equality, and fraternity," a spirit as young as the great heart and soul of Darrow.

Mr. Darrow professed no religion, but I have a personal, though perhaps unorthodox, faith that when the immortal Darrow comes face to face with a just God, there will be a mutual recognition. I just want to quote you some lines of that Youngstown address:

"The natural resources of the United States may pass into the hands of a few men without altering a line of the written Declaration of Independence or the Constitution that our fathers meant should protect and guarantee liberty and equality to all citizens of the land," Mr. Darrow said, "because with greater liberty has come greater opportunity to amass wealth and exploit the poor and to subjugate the land.

"Against this great centralized power the labor unions have offered almost the only organized resistance, the only substantial protection against the monopolization of the earth.

"Labor has learned that while capital is organized in every branch of activity, while it has taken to itself in a constantly larger way all the natural opportunities from which wealth is created and all the machines by which wealth is made, there is no way to protest its rights except by countercombinations in return.

"Apprehensive people too often forget that excepting for the labor combination there would be no powerful force against wealth and greed. They overlook the fact that the history of trade-unionism has taught that without the organization of the craft, the great body of workmen, divorced from the soil, divorced from their tools, would be the helpless prey of that class of men who recognize no God but gold.

"These great combinations of labor stand for the right of mankind against the power of wealth; they stand for the claim that individuals are more than dollars, that combinations of men are more sacred than volumes of figures representing the clearing houses and the banks."

My friends, we meet here on the eve of the sixty-second annual Labor Day observance in America. We are gathered here at the close of a quarter of a century of democratic frustration and defeat. While democracy, as represented by the labor movement and people of good will, has made important gains in the two great English-speaking nations during this period, these gains must be appraised for what they are: merely local democratic victories in a world-wide counter revolution against democracy.

This is a time when we must look history straight in the eye. We must recognize the fact that the democratic revolution which began in the eighteenth century was stopped in its tracks in the decades following the Napoleonic wars. More than a century has passed and still democracy and its benefits are unknown to a vast majority of the peoples who inhabit the earth.

We must recognize that the First World War was not a war for democracy but essentially one to defend the status quo, which, even in the countries of the so-called Allied democracies, was by no means satisfactory. The peace treaty after the war, and the economic dislocations which resulted from it, aroused the democratic protest of peoples throughout the world. The great democracies did not accept the Christian responsibilities which victory had thrust upon them and go to the defense of oppressed peoples. We stood aside; we maneuvered for advantage in a system of power politics, and permitted large sections of the masses to turn in confusion and desperation to false prophets of fascism. They were betrayed by the faltering representatives of the ideal of the common good. They did not stop with denouncing merely its representatives: They denied democracy itself; they abandoned the ideal; they cursed both God and man—in fact, they went berserk.

On October 22, 1922, just 21 years ago, Mussolini marched on Rome and set the torch to western democracy. In the next decade, while diplomats of the democracies mouthed pious platitudes and cartelized the world, the fire spread to Germany. This anarchy in the west gave the rising power of a feudal barbarism its advantage in the Orient. In 1931 the Japanese war lords invaded Manchuria, and 2 years later their armies had marched into the Province of Jehol, and the conquest and murder of the Chinese people had begun. The democracies stood by.

Two years later, in 1933, Hitler ascended to power in Germany and began his plans for world conquest. On March 7, 1935, he broke the Locarno Pact and marched his legions into the Rhineland. Within less than 2 years the Rome and Berlin Axis was formed. The democracies stood by.

In 1936 Mussolini invaded and overran Ethiopia, while Hitler prepared for the next move in his world-wide program of plunder. The spring of 1938 saw the Nazi invasion of Austria; and in the autumn the world witnessed the rape of Czechoslovakia. The democracies again stood by. They not only stood by—they signed the Munich pact, assenting to their own execution.

September 1, 1939, brought the Nazi invasion of Poland, when, at long last, the scales fell from the eyes of the blind men of Munich.

The World War followed, and in the course of the next 2 years, democracy paid, in defeat after defeat, for the blindness of that pre-Munich leadership. On April 9, 1940, the Nazi war machine rolled over Denmark and Norway, encountering little more than token resistance. In May, the Nazi hordes overran Belgium and Holland and on June 17 invaded France. By June 26, the French armistice had been signed, and the greatest European democracy lay prostrate under the iron heel of the German dictator.

The democracies stood by once again because they had to stand by. Left unprepared both in a military way and ideologically, they were helpless. So 1 year later on June 22, 1941, Hitler marched into Russia, after the invasion of Greece and Yugoslavia, and his successful infiltration into the Balkan countries. The conquest of western Europe was complete. The democracies were helpless because still unprepared.

On December 7, 1941, the Japanese bombed Pearl Harbor, and the United States, which had had its share in this war guilt by default, was at war.

So completely unprepared was our own Nation that during the first year of the war, the Japanese accomplished the conquest of all the Pacific coast lands of Asia and the entire island area south of that continent.

This was the situation toward the close of 1942, and when I said, my friends, that we are now nearing the close of a 25-year period of world-wide democratic retreat I did not exaggerate.

So ineffective were the democracies in their efforts to dam the onrushing current of totalitarian aggression, that the Nazi and Fascist propaganda agencies were able to spread defeatism among us with the very plausible argument that something in the ideolcgical core of democracy itself had destroyed democratic desire for freedom and the ability to fight for it. Democracy as a principle, a way of life, was ridiculed as a decadent ideal, as no longer valid in a modern world.

Events of the last year, however, have given the lie to that charge. In the southwest Pacific the Japanese are in slow retreat, having suffered defeat after defeat, before Australian and American forces. On the Russian front the Nazis are fleeing before the armed might of an aroused Russian people. The last totalitarian soldier has been pushed from the shores of Africa and Sicily, and the democratic invasion of totalitarian Europe is imminent. Mussolini, the first dictator, is out.

When Herr Goebbels and the recent Virginio Gayda challenged the democratic ideal and questioned democracy's vitality and will to survive, and when the Axis Powers put in

motion their scheme of world conquest with this belief, they committed for all the world a tragic, and for themselves a fatal error. They made their false conclusion on the performance of our diplomats, and the appeasers in high places, with whom they had been dealing. But they forgot the people. They forgot the people, because they did not understand the nature of the democratic ideal. They underrated certain powerful factors in their calculations.

They forgot that the desire for freedom, evidenced even in the conduct of lower animals, is instinctive in the human race, as instinctive as the will to live. They forgot that man's intellectual nature demands it for its own intrinsic good, and by the logic of its conception, that one man must demand it for another. They forgot that this great truth had for nearly two milleniums been enshrined in the religious and moral beliefs of Christian-Hebraic civilization, that it was a heritage too old and too sacred to be destroyed by military conquest. They forgot that the far-flung labor movements in the great industrial democracies were a powerful and significant manifestation of democracy in the economic life of the United Nations, and hence a major factor in a machine-made war production, which would in last analysis be the decisive element in the repulse of this mechanized assault they had unleashed upon civilization. They forgot that the population of the earth was too numerous for them to kill, that you could not conquer the human heart as long as it beats. In their frenzied determination they preferred to discount that which they despised.

Is it for these reasons that wherever you have seen Fascist dictatorships in power, you have seen them in their true character, as the sworn enemies of both organized religion and organized labor?

They have tried to destroy both religion and labor because, with a certain madman's cunning they recognized in the institutions and principles of both, this hand-and-glove identity of purpose, with which fascism by its very character is at war. They had to declare war on free labor and free worship because theirs was a war to enslave the body of man and destoy the sovereignty of the human soul.

So we here and all over the free world are aroused and resolved—millions of us, with other millions who now chained in prisons and choked to silence by this new unhuman tyranny, will rise to join us on the day of their deliverance.

Today we are able to stand up against the Axis Powers, gathering strength as we fight and as we learn the nature of the issue that confronts us. We challenge with a new confidence the Axis governments. We say to the Nazis and the Junkers of Germany, to the Fascist blackshirts of Italy, and to the war clique of imperial Japan:

"You have declared war on mankind, hence there is no justification for your existence. Your existence, moreover, threatens ours. You threaten our very lives and all that life means: Our liberty, our peace, and the pursuit of happiness. We intend to destroy you.

"You have glorified war and conquest and constructed robot governments designated especially and solely for these ends. You have surprised, stabbed in the back, and murdered peaceful peoples, who were not prepared to oppose you because, too late, they understood your criminal purpose. But the hour of your day of destiny is now getting late. Your sun is still up but the shadows lengthen. Your sun is setting. The night will come, when that dream of world mastery you had will be transformed to become the nightmare of your own disaster.

"We, not you, will face the dawn."

Address of Judge J. F. T. O'Connor

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address of Judge J. F. T. O'Connor on the fourth anniversary of German entry into Poland, over Station KPAS, Pasadena, Calif., Wednesday, September 1, 1943.

Four years ago today, September 1, 1939, Hitler's Nazi troops invaded Poland, while Russia struck from the west and the unsympathetic Balkans to the south, friendly to Russia, were claiming neutrality. This small country, less in area than the State of California but with five times the population, found itself in an iron vise, closing upon it, between the two greatest mechanized armies ever assembled on this earth. Two enemy countries with a combined population of approximately 280,000,000 people and a combined area of over 9,000,000 square miles—against a small country with 35,000,000 people and 150,000 square miles in area. Never in all history was there such an unequal conflict, not even the historic battle of the courageous Belgians in August 1914 could compare with Poland's plight. Poland's defenseless cities were bombed from the air, her homes destroyed, her people machine-gunned in the streets, on the roads, and in the fields because they dared to resist—dared to defend their homes and the honor of their women. For 27 days the Poles refused to surrender even in the face of such overwhelming odds. Twenty-seven days—never-to-be-forgotten days, which will live forever in the Polish history!

Russia, by a treaty signed with Poland on July 30, 1941, yielded the territory taken from Poland by the treaty between Russia and Germany on September 30, 1939. This was the fourth partition of Poland in her long, glorious, yet tragic history. The Nazi occupied territory of Poland spells one of the greatest tales of horror, destruction, persecution, mass murder, torture, and personal violations worse than death, ever written in any language by any people. The civilized world thrilled when the pronouncement came from Quebec last week by authority of President Roosevelt and Prime Minister Churchill that the perpetrators of the crimes against Poland and the other invaded countries would be punished and that reliable and authenticated evidence had been secured naming the criminals.

Some Poles fortunately escaped from the Nazi reign of terror, deported from Russian Poland to Siberia in February 1940, to join their husbands, fathers, and male relatives, mostly Polish officers taken prisoners by the Russians. These Polish fighting men joined the Allies, comprising a valuable unit of 75,000 men in the Middle East under General Anders. The story of their gallantry and heroism will rank with those of Poland's greatest heroes. The Russian Government permitted the refugees to leave Siberia when the soldiers went to the front. The long journey was commenced in October 1941. The tired refugees walked until exhausted, but they never lost faith and each night thanked God for their deliverance. Now and then a few carts and, infrequently, a train helped to carry their belongings. Finally they reached Astrakhan on the shores of the Caspian Sea, where, after weeks of waiting they sailed for Enzeli, and then, in trucks provided by the British Army, to Tehran, the capital.

The refugees, tired, sick, and despondent, yet gratified for their deliverance, found food, rest, and comfort, the first in many weeks, furnished by the American and British Red Cross. The scarcity of food, the lack of medical supplies, made temporary residence in Iran impossible. Where to go in a war-torn world? No European country had an abundance of food whether at war or not. To live in a subjugated country meant not only starvation but invited death from Nazi guns. The Republic of Mexico invited the refugees to their country. The problem of transportation seemed not only difficult but impossible to solve—the land of peace and plenty was thousands of miles away. It was at the end of the rainbow. The British Army came to the rescue again, and trucks were provided. The refugees, after much suffering and sickness and weeks of travel, reached Karachi, India, then on to Bombay, where endless days of waiting made many despondent. No words can express the joy of these homeless people when the news came that an American transport would take 703 of them to New Zealand. A delay of three weeks was not unwelcome amid the friendly and hospitable New Zealanders, where good food, warm clothing, and medicine for the sick were supplied. Again came the news that an American transport carrying wounded soldiers could take the little colony to America. The transport steamed into the harbor of San Pedro after a stormy voyage. Arrival time was a military secret, and day after day passed with only a limitless horizon surrounding the lonely and fearful passengers. At night the transport was darkened—Japanese submarines lurked in her pathway—a transport with wounded heroes of the war, helpless to strike back, old men, women, and children, was a most desired prize for the fighting men of Nippon to sink and report another great victory to their emperor. Then the command rang out: "Make ready to leave ship!" Confusion and terror, children crying and women screaming while the wounded men, unafraid of death, clenched their fists, gnashed their teeth and muttered for just one more chance to fight as they had done, before they died. But wait, they had not heard the full command.

"We are at San Pedro, Calif." Never such rejoicing, never such prayers of thankfulness, while the wounded heroes of the American fighting forces just said quietly, but with determination: "We'll get another chance to even the score for the men who were murdered at Pearl Harbor."

Temporary quarters were provided in Griffith Park and Juneau camp for the Polish refugees while in Los Angeles. Food, clothing, books, and entertainment were provided by the Polish womens' relief committee. Fear vanished from their faces, the gentle breeze from the Pacific made nights agreeable for sleep—the warm California sun brought memories of harvest days when Poland was free and the memories brought back the folk songs of happier hours. They were in the land of the free.

During the passage one of the stewards noticed some of the children, when the meal was finished, hiding bread. He convinced the little ones there would be bread every day. Countess Zamoiski-Soskievitch, whose husband, a distinguished Polish soldier, was among the 10,000 Polish officers massacred by the Germans—was among the refugee group. Another was a Jewish woman with her daughter, every member of whose large family had been murdered by the Germans. A little fellow asked if they would be put behind

barbed wires in Mexico and was assured they would not, and ran among the refugees shouting, "No barbed wire in Mexico."

The 703 refugee Poles arrived in Mexico in June of the present year—the longest journey for so large a group of refugees ever recorded. It took 3½ years to cover the many thousands of miles from Siberia to Mexico.

Last Saturday I returned from a brief visit to Mexico—our friends will be interested in the present condition of these refugees. The facts were secured from Vice President Weissblatt of the Polish Federation of Mexico, and I am also indebted to Dan Lundberg of the Columbia Broadcasting System in Mexico City, formerly of Los Angeles.

The 703 refugee Poles are living in Santa Rosa, Mexico, as a free people, subject to no restrictions other than that they may not go to the capital and cannot accept employment except on their own hacienda. The Polish Government in exile, in London, by means of lease-lend money obtained from the United States of America, was able to finance the immigration to Mexico of these 703 Poles under a plan providing for the rescue of some 23,000 persons. These Poles are at present in Teheran, Iran, awaiting their turn. At the moment they are almost at the point of starvation in Iran because of food shortages. The Poles are in Mexico only for the duration of the present war. When victory comes to the United Nations, they will be given transportation back to Poland. They cannot optimistically answer for their fate in the event that Poland is never restored; they have no answer to that.

At present the United States and Mexican Governments are together supervising the lives of the Poles in Mexico, preparing for the arrival of more, setting up primary schools, preparing to make arrangements to send the older boys to the University of Mexico. Means have been provided for them to work the hacienda for food and profit, and many of the Poles have their own fortunes available to them and are allowed to, and do, buy commodities and even available luxuries. They have no doctors, but the members of the old Polish colony in Mexico City provide them with every care. The people on the hacienda have, in true democratic spirit, set up their own legislative body and rule themselves and appoint disciplinarians according to a democratic system. The Catholics, the Protestants, and the Jews among the refugees attend their respective services. In Santa Rosa they have all privileges and attend movies and fiestas with the people of Mexico. No children have been born in the colony as yet, but when they are born they will be Polish citizens enjoying Mexican citizenship rights. They may intermarry with Mexicans now and thereby gain Mexican citizenship. The flag of Poland flies over the hacienda, and the people think of themselves as Polish colonists. When it was raised, the refugees cheered, the children sang, and the women wept. Many of them would like to come to the United States and live here permanently. Here they believe is security and peace; while others think only of getting back to their beloved Poland to rebuild it and restore it to its ancient beauty, power, and glory.

In 8 weeks the Poles have done wonders with the rich, Mexican soil. The Mexicans in the neighborhood are real friends, sympathizing with their lot in life, and have helped them in every way. Much credit is due to the sympathetic attitude of Professor Pelly of the United States Embassy, who is the refugees' chief supervisor. Mexico City is beautiful—the main thoroughfares, Paseo de la Reforma and Juarez, are wide and adorned with statues of Mexican heroes and statesmen. Modern business blocks and ultramodern apartments at once attract attention, and new buildings, new homes, are being constructed on nearly every street. The building activity is remarkable. Religious freedom has been restored and the cathedrals and churches are crowded. The Metropolitan movie theater, costing over a million dollars, will be formally opened on Independence Day, September 15. It has no rival in beauty and size in Los Angeles. The Basilica de Guadalupe and the cathedral towering above the Plaza de la Constitucion look back through the centuries proving the civilization and high culture of an ancient race, while our own land was still a forest. The hospitality of our neighbors south of the border is of unforgettable memory. May the boundary become less and less distinct in the years to come—may the friendship prevailing grow, and two great republics with common aspirations live side by side in peace as an example to the world—each coveting only the affection of the other.

Improvement of the Guadalupe River

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. MANSFIELD of Texas. Mr. Speaker, under leave to extend my remarks, I include an address by Mr. Dewey L. Granberry, manager of the Chamber of Commerce, Victoria, Tex., in reference to the proposed improvement of the Guadalupe River, delivered at a conference of the Intracoastal Canal Association of Louisiana and Texas held at Houston, Tex., August 26, 1943:

Mr. Chairman, ladies, and gentlemen, I am sure that all of you must have grown tired being reminded at each and every meeting, for the past 38 years and 21 days, of the more or less useless fact that this association had its beginning in Victoria. As a matter of fact, the birthplace of the idea is not important at all—the only really important thing about the beginning of this association is the fact that the idea was so challenging, and so sound, and so in keeping with the progressive spirit of the Southwest, that it very soon became the most influential, powerful, and wide-awake waterway organization in America. It still holds that enviable position in the Nation and will continue to do so until the ambitious program laid out at its very first meeting is accomplished. Thanks to the masterful leadership of men like J. J. Mansfield, Roy Miller, and C. S. E. Holland, and others too numerous to mention, the ultimate goal is beginning to take shape in the form of miles upon miles of safe and useful waterway along the Gulf coast from New Orleans to Brownsville, Tex.

According to the best information I can obtain, it seems that a great many of our citizenship did not fully realize, in the beginning, just how dependent our cause, that is, the navigation of the Guadalupe River, was to the larger program, or the Intracoastal Canal proper. They did not fuly realize how utterly useles a 6- or even a 9-foot barge canal would have been from Victoria out into the open Gulf—and for obvious reasons our cause could not be justified on economic grounds. In the face of this sort of a seemingly hopeless condition extending over a period of 37 years, there has, quite naturally, grown up something of a feeling that Victoria has been left out of the picture entirely. We know now that this is not a fact; we know now that the completion of the Intracoastal Canal to Corpus Christi marked the beginning or our opportunity to become a part of the great Intracoastal Canal system in a much more practical way than that of simply being the birthplace of the idea.

A 9-foot barge canal from a point on the Intracoastal Canal a few miles below Seadrift in San Antonio Bay up the Guadalupe Valley to mile 52 above Victoria was officially approved by the War Department engineers in 1938 or early 1939, as a direct result of the brief submitted by us covering this subject at a public hearing held by the engineers at Seguin, Tex., on July 7, 1938.

This important branch or feeder canal was a part of that ill-fated rivers and harbors bill passed by the Congress, only to be vetoed by the President in the dark and uncertain days of 1940.

It seems to us that there are many good reasons why this feeder canal up the Guadalupe Valley to Victoria should, by all means, be a part of the next rivers and harbors bill. We sincerely hope that the powers that be will take into consideration the fact that this comparatively inexpensive project will, when completed, be the deepest penetration into the interior of Texas of any waterway with a depth of 9 feet, and, more than that, it will be made at a point almost exactly midway between the two great deep-water ports and terminal cities of Galveston and Corpus Christi. What is more important still is the fact that this deep inland penetration of a 9-foot channel at this midpoint will be made at the right place to serve the largest, richest, and most rapidly developing section of the upper Gulf coast between these two points. I realize that this statement sounds strangely like a chamber of commerce manager might be expected to talk—I sincerely hope all of you will doubt this statement so sincerely that you will feel compelled to make a determined personal investigation.

Here's another interesting fact. We are told that there is a very definite relationship between population figures and tonnage—if this is a fact, the completion of this channel up to Victoria should increase, by at least a hundred percent, the total tonnage now originating or destined to points between Galveston and Corpus Christi, since the addition of Victoria would increase the urban population served by at least 100 percent. I'd like for you to check me on that one too, if you will, please.

A little careful study of the Texas coast between Galveston and Corpus Christi will reveal how important this 50-mile penetration of a 9-foot channel up to the Guadalupe Valley will actually be. Such a study will reveal, beyond a doubt, that this great waterway will be compelled to extend its feeding fingers as far as possible into the interior, if its ultimate goal is to extend the blessing of water transportation to the greatest number of people.

On its way up the Guadalupe Valley to milepost 52 at Victoria this channel will cross five great pipe lines—go under two great trunk-line railroads, two branch-line railroads, and intersect a network of Texas' great highway system at Victoria, and, in addition, gentlemen, it will have tapped the rich farming and ranching section of the upper coast, and be in position at the same time, to take on real tonnage from the great oil-producing area extending in every direction. Just to illustrate, there are 8 separate fields in Victoria County and more than 2,300 producing wells within a radius of 45 miles of that city. These items constitute only the beginning of tonnage possibilities at this point. Every city, small and large, on the Texas coast is desperately in need of Victoria sand and gravel. Even now, these growing cities

are either using inferior sand and gravel or, they are paying excessive prices for Victoria, or some other similar product, being shipped in by rail. In spite of these transportation difficulties two of our three producing companies shipped upward of 13,000 carloads during 1942. Barge-rate savings on this one product alone, used by the Government in construction jobs up and down the Texas coast during the past 3 years, would doubtless have paid for a big part, if not all, the 9-foot channel to mile 52 at Victoria.

A reduction of 34 miles in the short-line rail haul to the city of San Antonio would be affected by a 9-foot channel to mile 52. The saving thus achieved would pay for the project over the period of years customarily used in determining economic justification. With this beginning the channel could very well be carried on up the river to Seguin, Tex., from which point San Antonio and Austin could both be served.

There is so much to be said, Mr. Chairman, in support of this first great feeder canal toward the rich and populous interior of Texas, one cannot begin to even touch upon the highlights in the time allowed.

It is our sincere hope that when the next rivers and harbors bill is passed, our little project to mile 52 on the Guadalupe will be a part of it. You will note that I said the next rivers and harbors bill. I emphasized the word "next" because we, in Victoria, suspect that by the time this next bill comes up a lot of people on the Atlantic seaboard will be able to recall most vividly how they shivered through the winter of 1942 and 1943. We believe a great many will remember, that long, how their automobiles gathered dust in garages when they needed them most. We hope somebody will tell them about the $400,000,000 a year in good old taxpayers' money being paid now in subsidies to the railroads in order that they might have half enough fuel instead of absolutely none at all.

Their Representatives in Congress will surely know these things, and so, Mr. Chairman, we have high hopes for the next rivers and harbors bill.

Federal and State Governments Should Become Partners in Airport Construction: Stanton Advocates Highway Formula Be Used

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following illuminating address, delivered by Charles I. Stanton before some 500 persons attending the Midwest Global Air Conference:

ADDRESS BY CHARLES I. STANTON, ADMINISTRATOR OF CIVIL AERONAUTICS, BEFORE THE MIDWEST GLOBAL AIR CONFERENCE, FRIDAY EVENING, AUGUST 20, 1943, HOTEL SAINT PAUL, ST. PAUL, MINN.

This is an important anniversary year in the history of flying.

As I look around this large gathering brought together by their interest in aviation, I think of a very different scene not quite 40 years ago. It was in December 1903, on a North Carolina beach, and just five persons were sufficiently interested to watch the Wright brothers make their first successful powered flight. The audience on that occasion consisted of a boy of 16, three members of the crew of the local life-saving station, and a lumber buyer of the vicinity.

A little later, in Dayton, an editor who had steadily ignored the flying experiments of the Wrights, asked Orville if it were true that he and his brother had been flying all around a local field. Orville acknowledged that they had, and then changed the subject. The editor did not follow up his query. Leaving, he said: "If you ever do something unusual, Orville, be sure and let us know."

We have come a long way in 40 years. We no longer ignore or underestimate the potentialities of the airplane. In fact, we tend to go too far, or fast, in the other direction, expecting it to oust other forms of transportation almost overnight. Our progress in aviation has not taken place that way, however. A quick review of aviation history high lights will show a steady forward movement, not in sudden leaps, but by the accumulation, year after year, of knowledge gained through painstaking, persistent experimentation.

We can expect the same type of progress in the period immediately ahead, accelerated by reason of the fact that more people than ever before are concentrating their energies in the aviation field.

Let us see what we can project for the future by recalling how we have advanced in the past. Taking arbitrary intervals of 5 years for our anniversaries, this is what we find:

Thirty-five years ago, 1908, the Wright brothers received the first substantial recognition of their achievement, when Wilbur sold French rights for $35,000 in cash and $65,000 in stock. This preceded by 6 months the award of $25,000 for building a plane which met United States Army specifications, one that could carry a pilot and passengers 10 miles across country at a speed of 40 miles an hour.

Thirty years ago, 1913, Roland Garros flew from southern France to Bizerte, then to Sicily and Rome, unwittingly pioneering routes for the application of United Nations airpower in 1943.

Twenty-five years ago, 1918, United States air-mail service started between New York and Washington. From this beginning stemmed the world-wide scheduled commercial flying of today. 1918 is truly a date to be cherished by civil aviation.

Twenty years ago, 1923, the first nonstop flight across the United States was made by Lieutenants Macready and Kelly. The same year saw a successful 4-day trail of night flying as part of a 28-hour transcontinental air-mail schedule by the Post Office Department. In 1923, I might add, the National Aeronautic Association was founded, and held its first national convention at St. Louis.

Fifteen years ago, 1928, the number of passengers carried in scheduled service increased more than 4 times over 1927, totaling 52,934. Air lines turned to the development of passenger traffic as a main source of revenue, and aircraft manufacturers concentrated on the development of planes suitable for passenger service. C. A. A. began installing the system of radio range stations which now blanket the United States and Alaska, and tie in with an identical Canadian system.

Ten years ago, 1933, the fleet of 60 new transport planes for the United Air Lines was delivered by the Boeing Co. The Boeing 247. An all-metal, low-wing, twin-engine transport carrying 10 passengers at a cruising speed of 155 miles an hour, set the type for efficient air-line operations. The later, larger, and faster commercial airlines, including many yet to come, have faithfully adhered to type. And most of these 10-year-old 247's are still flying daily.

Five years ago—1938—the millionth passenger was carried by Pan-American Airways, which had grown until it was serving an air route system of 53,166 miles, including trans-Pacific and Alaskan routes and a great extension of the original South and Central American networks. The first Boeing 314, better known as the Yankee Clipper, was launched in May in preparation for scheduled trans-Atlantic service the following year.

1943—Today no place in the world is more than 60 hours by plane from any other. We are now making 500 trans-Atlantic flights a week. The Army Air Transport Command routes alone are several times the combined length of all the pre-war commercial air-line routes in the world.

The aviation industry today is—temporarily—far and away the largest in the country.

From $280,000,000 in 1939, aviation production jumped to $6,400,000,000 in 1942, and for the current year our schedule calls for the huge sum of $20,100,000,000—more than five times automobile production at its peak, a fourth of our war budget for the year, almost a seventh of our estimated national income. And the President has announced that 1944 production, calculated upon a basis of tonnage, will top 1943's by more than half—by 55 percent, to be exact. As for employment, about 2,500,000 men and women of various skills are at work in our aviation plants and now dependent upon them for a livelihood.

We shall soon have some 3,000,000 men in the air forces of the Army and Navy. More than 300,000 will be trained pilots. Many more will be skilled as navigators, mechanics, radiomen, meteorologists, dispatchers, airport and maintenance engineers. All will be familiar with one phase or another of flying. And most of those not trained as pilots will have an urge to try their wings.

It is my belief, based on recollection of the aviation-trained boys who came out of the last war, that hundreds of thousands will continue to follow aviation either as a vocation or as an avocation, provided (and it is an important proviso) that it is not made too difficult for them to do this.

This means, among other things, all kinds of air navigation facilities and a vast network of airports.

What is our progress in those two respects? Before the war, and at the direction of the Congress, the Civil Aeronautics Administration made a Nation-wide survey of airports and with this as a base developed a tentative plan for a network of 4,000 ports to serve the more or less immediate needs of the country.

If these airports were evenly distributed over the country, they would form a checkerboard of 27-mile squares. If the number of airports were increased from 4,000 to 6,000 and these were evenly distributed, the checkerboard squares would be reduced to 22 miles. Mountain and desert areas would need relatively fewer airports, of course, and these would therefore be allocated to more thickly populated zones.

Census figures reveal that there are in this country 6,669 communities with a population of 1,000 or more. Of these, 3,464 have 2,500 or more; 2,042 have 5,000 or more; and only 1,077 exceed 10,000. It seems reasonable to suppose that all communities of a thousand people or more will desire to be accessible by airplane. Therefore, if we disregard those which are so close together that they can make joint use of an airport and consider the fact that larger cities will require several airports, we arrive at a national total of 6,000 airports as a reasonable target to shoot at in the early post-war years.

The war, of course, has caused many shifts in our original airport plan. To date, approximately $400,000,000 has been appropriated by the Congress for the national defense airport development program, which is limited to the development and improvement of sites designated as essential to the war effort and approved by the Secretaries of War, Navy, and Commerce. All of this

appropriation is now either expended or specifically allocated.

At the present time there are almost 3,000 classified airports in the country—1,000 short of the pre-war plan. Altogether, these airports could probably handle 300,000 airplanes, but an immense amount of construction will be required for housing and servicing facilities. Recent development has necessarily been concentrated upon the larger fields. As a result, there has been an elevenfold increase in the number of our major civil airports—with paved runways at least 3,500 feet long and capable of handling the largest transport craft. Whereas we had only 76 such fields 2 years ago, we shall have 865 by the end of this year. Nor does this number include many large airdromes built solely for military use by the armed forces.

The situation in regard to smaller airports is this. We have 1,213 class I airports, the lowest category, which are those having landing areas 1,800 to 2,500 feet long. We have 905 class II ports, each with paved runways from 2,500 to 3,500 feet long. These are situated, for the most part, near smaller cities and larger towns. In my opinion we shall have to have many more of this class for future commercial flying. Nor can it be said that we have enough larger ports, for those in many of our major cities are already overcrowded.

How are we going to obtain the airports we shall certainly need? Should they be provided by the Federal Government? Or by the various States? Or by municipalities and other local government units? Or by a combination of all three?

A major question of policy is involved here, one that will ultimately be decided by the citizens of the Nation speaking through their duly elected Representatives, two of whom—your own JOSEPH P. O'HARA and West Virginia's JENNINGS RANDOLPH—I am so happy to see participating in this conference.

The airport problem can be solved in many ways, and I make bold to suggest one possibility here—a plan based upon the wide experience and careful study of veterans in the Civil Aeronautics Administration. I offer it not as a finished proposal but rather as a basis for discussion, as something we can all mull over in our minds, for there is no easy and automatic solution to the airport problem.

After the war civil aviation will be of three major types: (1) Scheduled air-line transport; (2) general commercial transport of goods and passengers by chartered planes, and other commercial services—crop dusting, aerial photography, forest patrol, etc.; and (3) private flying for pleasure or business purposes. Scheduled air-line routes, it appears, are likely to stop at approximately 1,000 points, each of which will require one or more major airports. Local or feeder lines will radiate from these points to smaller airports within each larger city's sphere of influence.

In addition to airports required for this transport network there must be thousands of inexpensive fields to serve the large number—literally hundreds of thousands, I believe—who will be flying their own planes or rented aircraft.

Since about 3,000 of the 4,000 sites in the original national airport plan are primarily local in their significance, it is our view that State agencies can wisely determine which locations should first be improved, and when. And since a tributary wheel of "feeder" airports is useless without an adequate trunk airport at its hub, we are willing to entrust the order of priority on major airports to State authorities.

I suggest that the Federal Government and the State governments become partners in building the Nation's post-war civil airport system in general accord with principles worked out in building our national highway system—admittedly the best in the world. If the President and Congress authorize a Federal-aid airport program, the funds appropriated could be apportioned to the States by the C. A. A. upon the basis of some accepted formula. Such a formula, we believe, should take account of four factors: (1) The area of the State; (2) its population; (3) number of registered aircraft in the State; and (4) the existing number of accredited airports. Under this plan, as in the Federal highway system, each State would have to match a specified percentage of its quota of Federal funds.

Decentralization of Federal operation and delegation of more responsibility to State aviation agencies should be beneficial. Airport improvements or construction projects within each State would then be selected and carried out by the State's aviation agency. Only projects included within the C. A. A. national airport plan would be eligible for Federal aid, of course, and C. A. A. standards of location, lay-out, and construction for the class of airport proposed would have to be met.

There has long been need of a clarification of the relationship between the Federal and State governments with respect to aviation. Many have feared that the States would seek to regulate individual aircraft and airmen without regard to the problem as a whole, thus creating a mass of conflicting rules and standards, such as are found in the motor trucking and divorce laws. This would be peculiarly disconcerting in the case of a flyer who passes from State to State in midair, often being unaware of State boundaries as he passes over them. State officials, on the other hand, have lived in fear that local needs and wishes would be inadequately considered by Federal officials.

The field of airport development offers a splendid chance for the Federal Government to work in partnership with the State authorities by establishing a policy which for more than 20 years has proved its practicability in the field of highways. Federal airport authorities would retain control of national planning and of minimum standards, just as Federal highway authorities have done. Yet local problems would be decided at the State level where such decisions should be made. And the sincerity with which State authorities advocated specific projects would be demonstrated by the dollars they put up to match Federal funds.

It may be contended that Federal aid should be extended only to airports having at least interstate significance. But the very nature of the airplane makes even the smallest airport a base for interstate operations. Moreover, the experience of Public Roads officials with Federal highway aid provides a valuable lesson. At the outset, Federal highway aid was limited largely to trunk routes. But local and Federal traffic has become such an important factor in the whole highway picture that there is steadily growing demand for Federal aid on other classes of roads. There should be no strait jacket on Federal airport aid. It should be kept as fluid as possible.

We are not yet ready to suggest the specific formula upon which the allotments to States should be based. But we have progressed sufficiently in our studies on the subject to be confident that we can put forward an equitable and satisfactory prescription.

Events are moving so rapidly, particularly in the field of aviation, that we must be forehanded if we, as individuals, as local communities, as a nation, are to take full advantage of them.

Nothing as clearly reveals the recent phenomenal development of aviation as the growth and operation of the Federal airways, which now totals 35,000 miles within our continental boundaries, a 700-percent increase since 1927. Their length has almost doubled since 1932. Traffic along the airways is increasing at an astonishing rate. Recorded movements along the Federal skyways were 6,000,000 during 1942. For the current year we estimate that they will reach 13 or 14 million and we believe they will continue upward despite a probable slight dip immediately following the close of hostilities. We expect that by 1950 we shall have in this country at least a half million private, commercial, and military aircraft in active service. You will appreciate the significance of that when I remind you that at the end of 1941 we had in the entire country less than 25,000 licensed civil aircraft, and probably less than half that number of military planes.

I believe I am not too optimistic in looking forward to having 300,000 civil aircraft within 3 years of the war's end. Those civil aircraft will naturally be distributed in general accord with the distribution of population. The Twin Cities share of the 300,000 planes would be about 1,700, or almost 3 times the 600 aircraft registered for the entire State of Minnesota in 1942.

On the assumption of 500,000 airplanes in 1950, we might look for something like this in Minnesota and neighboring States:

State	Population	Planes
Minnesota	2,792,300	9,972
Wisconsin	3,137,587	11,205
North Dakota	641,938	2,215
South Dakota	642,961	2,215
Nebraska	1,315,834	4,699
Iowa	2,538,628	9,066
Illinois	7,897,628	28,204
Total	18,966,498	67,576
Twin Cities	780,106	2,785

Fortunately, our air-navigation facilities, unlike those of Europe, have been designed for mass traffic. Our radio and traffic control equipment is of the best, and we can count on our scientists and inventors to keep our lead in this respect. After a study of all other airways systems, Canada and Australia chose to build theirs on the American model. The Canadian airways are so closely integrated with our own continental and Alaskan systems that the three virtually form a vast continental system, covering all territory north of the Rio Grande. General Salinas Carranza, Director of Civil Aviation of Mexico, visited us a few weeks ago and declared his intention of extending a similar system throughout Mexico. He expressed the belief that the Central American countries might do likewise, and that we could well contemplate a continental airways system extending from the Arctic to the Canal Zone. Radio men and airways engineers of the C. A. A. are not only improving and extending our domestic skyways, but are cooperating with the armed forces in establishing routes across the seas to all the other continents.

We have, in recent years, installed four intercontinental super-radio stations which in their combined range blanket the world, providing direct communication from our shores to an American plane in flight almost anywhere on the globe. The major units are located at New York, New Orleans, San Francisco, and Honolulu with supplementary stations at Seattle, Anchorage, and many of the Pacific islands. Such are the unseen aids upon which air transport is built.

The intercontinental flying I cited as already taking place is just a beginning. Every day new routes are being pioneered, and with the coming of peace many more will be opened up for the transport of cargo and passengers. According to a recent conservative estimate by the Civil Aeronautics Board—and it may well be too conservative—there will be an eightfold increase in intercontinental air passenger traffic by 1947, and

an eightfold increase in mail and express hauls. The Board estimates that the operations of the domestic air lines will increase fivefold within the same period.

Someone, in the Board of Economic Warfare I think, figured that to carry all the nonsteerage passengers crossing the oceans throughout the world, all the passengers now riding in Pullmans in the United States, all the first-class domestic and foreign mail of the United States, about 25 percent of the express matter normally carried by express companies, as well as the existing normal airline traffic, would require a fleet of aircraft which would be equal to about 1 month's output of our multi-engined bomber and cargo aircraft manufacturers at the 1943–44 rate of production. Someone facetiously remarked that he should start looking for an outlet for the second month's output.

But the greatest boon is going to come in the field of private flying for business or pleasure purposes. This has to be if aviation is going to do for our economy after this war something of what the automobile did after the last war. I, for one, do not hope to see aviation production continue at war-time rates. We cannot expect the plants to continue at forced draft for 24 hours a day. Thanks to someone, a substantial portion of our present production is coming out of automobile, furniture, refrigerator, piano—even pickle—factories. And we should devoutly hope they will revert to more and better pianos and pickles after the war. Surely there will be shortages in these and many more commodities crying for fulfilment. Bear in mind that commercial vehicles—trucks, busses, ambulances, hearses—constituted only about 20 percent of our automotive output in normal times. We must create a similar situation in aviation. Cargo and passenger airliners will never make full use of our net production potential.

The family plane of the future is not very far away. Manufacturers now assure us—and we can accept their assurances, I think—that after the war we shall have small, safe, and inexpensive private planes costing no more to buy and operate than a medium-priced car. The most revolutionary development in this field is the new Sikorsky helicopter. It is peculiarly fitted for getting to the wilder recreation spots of the country—or the continent. Its inventor predicts that hundreds of these will be performing short-run cab-or-bus-type services within a few years of the signing of peace, and that many hundreds of thousands of them will be carrying individuals and their families wherever they wish to go. The helicopter may well take over the collection and distribution function now performed by the mail-pick-up operation. It seems to me that the pick-up scheme can serve best as a forerunner of a service of wider scope. It is all very well to yank a sack of mail or an express package off the ground at flying speed and wind it up into the plane as one reels in a big trout or bass. But what if a passenger wants to go?

There is going to be a phenomenal growth in private flying—as phenomenal as the growth in automobiling after the last war. Every thoughtful man has long been aware of the profound influence which the motor-car has had upon every part of America and every phase of our lives—upon all of our institutions, traditional points of view, modes of recreation, business habits, industrial technology, marketing practices, city planning—and the general pattern of living. The airplane is likely to have a similar influence. It will intensify some of our present problems and create new ones of its own. These problems will not automatically solve themselves. They can be solved only by clear foresight and intelligent anticipation of the difficulties to be met and overcome.

Commercial air transport will continue to grow steadily. Between 1927 and 1942 the number of passengers riding the air lines increased from 8,700 to more than 4,000,000 a year. In the same period, air mail jumped from 1,270,000 to 44,600,000 pounds annually, and air express and freight from 46,000 to 22,300,000 pounds. Remarkable as it is, this rate of growth, in my opinion, will be considerably accelerated during the next decade. The day is not far distant, I believe, in which all first-class mail will go by air, that is, whenever delivery can be advanced thereby, with pick-up or feeder services tying the smaller communities to the great trunk air lines. Pick-up services have been thoroughly tested during the past 3 years on routes totaling almost 1,500 miles, and the equipment has been so successful that the Civil Aeronautics Board has before it 23 applications for the establishment of similar routes in all parts of the country. So far we have no more than scratched the surface of air transport potential. If you consider the flying done in Alaska on the basis of the ratio of its population to that of continental United States you will find that Alaska has 100 times as many airplanes, flies 20 times as many passenger miles, 75 times as much mail, and about 1,000 times as much express and freight. Of course, Alaska's lack of roads and railroads is an important factor.

Recent growth has been most marked in the field of air express—that is, in carrying of small packaged goods of high intrinsic value such as films, radios, precious metals, women's clothes, spare machine parts, and similar articles needed right now at some distant place. In October 1942 air express was up almost 125 percent from the same month in the previous year, and it is certain to go on increasing.

Here let me add one word of caution. Some aviation enthusiasts are predicting that the airplane is about to make our railroads, steamships, and trucks quite obsolete. Maybe so, but I for one doubt the probability of the airplane carrying any large amounts of heavy bulk freight except where surface transport is nonexistent as in some parts of Alaska and Canada. Extravagant claims along this line merely confuse and mislead the public about the real values of aviation.

The question here, as in all commercial air operations, is relative cost compared to other forms of transportation. Traffic tends to flow, other things being equal, along the cheapest medium of transportation. Higher rates will only be paid when some compensatory advantage can be gained by greater speed of delivery, convenience of service, flexibility of operation, or similar factors. Air transport service does offer exceptional speed, convenience, and flexibility in many instances. But so far as the general run of freight is concerned, the differential between plane rates per ton-mile and those offered by railroad, truck, and steamship is still very large. I see no present possibility of flying our wheat, iron ore, coal, petroleum products, and such things to their destinations.

The airplane has an essential job to perform, and it will do this by supplementing—and not by supplanting—other forms of transportation. In its own proper field, however, the future of the plane is practically boundless.

The Trinity River

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include an address delivered by Mr. John M. Fouts, of Fort Worth, Tex., general manager of the Trinity Improvement Association, at a conference of the Intracoastal Canal Association of Louisiana and Texas held at Houston, Tex., August 26, 1943:

Mr. Chairman, honored guests, ladies and gentlemen, I am happy to see such a large and representative audience on this occasion. Every stream flowing into the Gulf of Mexico, from Texas and Louisiana, is represented in this audience and we are all indebted, deeply, to the Intracoastal Canal Association of Louisiana and Texas for furnishing the leadership in the development of our soil and water resources in the Southwestern States.

The Texas-Louisiana Intracoastal Canal will soon be completed and enlarged and I am again thankful that this great organization has announced to us today, through its vice president and general manager, Mr. Roy Miller, that it is going to endorse and sponsor, in a militant manner, the improvement of all streams leading into the Intracoastal Canal, both for flood-control purposes and navigation.

TRINITY RIVER

The Trinity River lies wholly within the State of Texas and has a watershed of approximately 17,500 square miles, which represents only about one-twelfth of the total area of the State of Texas. Yet, it contains approximately one-fourth of the wealth of the State. Therefore, you can see at a glance, that here is a great region with enormous wealth already developed and still greater wealth in natural resources still entirely undeveloped.

Two of our greatest natural resources are soil and water, and we are energetically endeavoring to conserve these two valuable resources and use them for all beneficial purposes.

The people of the Trinity River watershed have spent some $50,000,000 developing plans and building structures to conserve and utilize our surface waters. As evidence, we now can point to over 450 miles of levees and six great lakes, already built, at a total cost of over $500,000,000, without 1 cent of State or Federal aid. There is not, in these United States, a case parallel to this.

THE OMNIBUS FLOOD CONTROL BILL OF 1936 MAKES FEDERAL AID POSSIBLE

After the passage, in 1936, of the omnibus flood control bill, which placed the War Department in charge of all improvements on the main stem and main tributaries of our rivers, and the Department of Agriculture in charge of all measures for run-off and water-flow retardation and soil-erosion prevention, we immediately grasped the opportunity and had the Congress authorize surveys by both departments, of the Trinity River and its watershed. The preliminary reports were favorable and Congress then ordered actual surveys and preparation of plans. These actual surveys further showed the engineering feasibility and economic justification for the great regional plans prepared by these two strong departments of our Federal Government.

I am happy to announce to you today that this is the first great watershed in the United States to have a recommended plan prepared by the Federal Government under the provisions of the Omnibus Flood Control Act.

THE DEPARTMENT OF AGRICULTURE'S PLAN FOR TRINITY WATERSHED

The Department of Agriculture, in developing its plan for the Trinity watershed, had two thoughts in mind: First, to hold each drop of rainwater on each piece of land where it fell, thus enlarging and increasing the productivity of that land, and at the

same time withholding the water from the main stream of the river. So, it is readily seen that the Department of Agriculture's program will stop the waste of valuable top soil and at the same time utilize to the fullest extent the surface waters, and second by withholding these waters from the main stem of the river, their program will materially benefit a flood-control program for the river.

The landowners in the Trinity watershed are enthusiastically supporting this program of the Department of Agriculture and have already voted for the creation of 13 soil-conservation districts which embrace practically all of the Trinity watershed, and they are now carrying out this program in a limited way because of the emergencies of the war. But here is a place where Federal moneys can most profitably be spent in a properly planned post-war program. The experts of the Department of Agriculture estimate that the cost to the Federal Government in carrying out this program will be approximately $31,000,000.

THE WAR DEPARTMENT'S PLAN FOR TRINITY RIVER AS PREPARED BY THE UNITED STATES CORPS OF ENGINEERS

The United States Corps of Engineers have developed plans and recommended these plans to Congress, first, for flood control of the Trinity; second, for water conservation, and third, for navigation for the Trinity River.

Flood control

The Army engineers propose to take the six great reservoirs and 450 miles of levees already built by local interests and add to them six more great reservoirs and then the upper reaches of the Trinity will have ample facilities for a genuine flood-control program. All flood-control structures will then be operated by the United States Corps of Engineers. They recommend other lakes to be added in a second program to be carried out at a later date which will give flood protection to the landowners in the lower reaches. The estimated cost to the Federal Government for its part of this great flood-control program will be approximately $19,000,000.

Water conservation

One of the most valuable assets in the Trinity watershed is our surface water. When the Federal Government builds six more great lakes, we will have impounded more than 3,500,000 acre-feet of water. This water should be, and will be, used for every beneficial purpose for which we can show economic justification. The Army engineers recommended the following: First, municipal and industrial uses; second, navigation; third, irrigation; and fourth, reclamation.

Navigation

The proposed Trinity Canal conforms to the standards of the modern waterways of the Mississippi and Gulf coastal systems, so as to permit the ready interchange of barge traffic. It is to be 9 feet deep and 150 feet wide at the bottom with some 26 navigation locks, 75 x 400 feet. All sharp bends are to be eliminated by long, sweeping cut-offs, reducing by practically one-third the length of the river below Fort Worth. The principal intent of this improvement is to permit the practical operation on the Trinity River of a unit of 6 barges, moved by a pusher-type towboat. The Army engineers say that their Trinity plans would permit the movement of such a unit with 9,000 tons pay load from Beaumont or any Galveston Bay port to Fort Worth in 5 days—allowing for eight stops en route to load and unload. The district engineer further stated in his report, completed 2 years ago, that the direct savings in transportation costs of the freight, reasonably to be expected to move on the Trinity Canal, would more than warrant the expenditure of the $96,000,000, the first cost of his plan.

The Army engineers recommend that the Federal Government spend, as their part of this great navigation improvement, approximately $90,000,000.

CONCLUSION

The plan prepared by the Department of Agriculture to conserve our soil and water resources in the watershed of the Trinity River was developed by the Soil Conservation Service, Forest Service, and the Bureau of Agricultural Economics, while the plan for the conservation and use of waters stored behind dams on the main tributaries of the river was developed by the War Department, through their United States Corps of Engineers. Thus, today, the Trinity River has a great regional plan already prepared by the experts of the Federal Government, and approved by all of them. These plans have been sent to Congress and Congress has had them printed and they are now ready for incorporation in the great post-war plan for development of the soil and water resources of the Nation. The total cost to the Federal Government of this great plan is approximately $150,000,000, and the local interests have already spent approximately $50,000,000, and will be asked to spend approximately forty millions more. The Corps of Engineers has wisely stated that this is such a huge undertaking that it should be carried out by sections at a time, and they have recommended for immediate expenditure approximately $15,000,000, to be spent mostly in building the six new lakes that are needed to complete the flood-control program. They also recommend the rebuilding at this time of the navigation channel from Houston ship channel up to Liberty, Tex. The balance of the program will be carried out as, if, and when conditions justify.

A THOUGHT-PROVOKING FACT

Three billion five hundred million barrels of oil have been produced within 75 miles of the Trinity River, and that's just one-half of the known reserves. If the Trinity River had been improved for practicable navigation when our first oil well came in, the general public would have saved $500,000,000 in transportation costs, that is moving oil and refined products out, and oil well supplies in.

The Trinity River should be improved at the very earliest date.

Michigan Food Conference

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. CRAWFORD. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I herewith submit recommendations of the Michigan Food Conference of Farmers, Processors, and Distributors, August 9, 1943, at Lansing, Mich.:

PREAMBLE

Ill-advised activities and propaganda by various agencies, public and private, are resulting in programs that are adversely affecting production, distribution, and processing of food. Producers, processors, and distributors of food are experiencing unnecessary costs and hindrances as the result of unwarranted and destructive machinations and bungling. All of this is resulting in higher prices to and less food for the consumer.

The situation has reached a stage where all food industry groups are being obstructed seriously with resulting discouragements in their efforts to grow, process, and distribute food for our armed forces, our allies, and for civilian needs. The entire food program will be defeated if these matters are not corrected soon. It may even result in serious food shortage with accompanying hunger in this country and the starving of millions in foreign lands. In the light of the above, the recommendations of the conference are:

1. Unification of the whole food production, processing, and distribution program under one Government agency.

2. Recognition of all branches of the food industry as essential to the war effort to the same respect and to the same degree as is the production and handling of armaments.

3. Administration of a price program on the basis of encouraging production, and elimination of price ceilings which tend to have the opposite effect.

4. Solution of the inflation problem on a constructive basis by encouraging production and siphoning off the ever-increasing purchasing power of the American people through taxes and enforced savings by additional purchases of War bonds.

5. Elimination of subsidies and discontinuing their use as a means of controlling inflation and prices.

6. Requirement that Government agencies making announcements affecting the food program do so in conformance with the terms of the 1942 Price Control Act, and only after consulting with those familiar with the practical phases of food production, processing, and distribution, and sincerely receive their suggestions.

7. A return to constitutional government with the Congress, the elected representatives of the people, functioning as the policy-making, legislative branch of Government, as opposed to government by directives from the administrative branch.

8. Approval for all essential expenditures by Government for the prosecution of the war. Elimination of the waste of money and duplication of effort by Government agencies, or permitted by them in the war effort.

Michigan Food Conference of Farmers, Processors, and Distributors: C. L. Brody, Lansing, chairman; American Dairy Association of Michigan; Michigan Allied Dairy Association; Michigan Bean Shippers Association; Michigan Canners Association; Michigan Elevator Exchange; Michigan Feed Manufacturers Association; Michigan Independent Packers Association; Michigan Live Stock Exchange; Michigan Milk Producers Association; Michigan Retail Grocers Association; Michigan State Farm Bureau; Midwest Producers Creameries, Inc., Michigan District.

Unfair Wheat Prices

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. HOPE. Mr. Speaker, the War Food Administration has asked the wheat farmers of this country to plant 26 percent more wheat for the 1944 harvest than was planted for the harvest this year. This means an increase of about 14,000,000 acres. The greater part

of this increased acreage must come from Kansas and other Great Plains States if the goal is to be met. Farmers are expected to plant and harvest this greatly increased acreage with less machinery and far less labor than have been available in normal times.

In addition to this, wheat farmers find themselves the victims of serious and wholly unwarranted price discrimination. The price of wheat today is 11 percent below parity. The price of agricultural products as a whole is 14 percent above parity, and wheat is the only important farm commodity which is selling at substantially less than parity at the present time.

The sole reason that wheat is selling at less than parity is the ceiling on flour prices. This ceiling has been imposed in direct violation of the Price Control Act which says that no price ceiling shall be imposed upon any agricultural commodity or any product manufactured therefrom which does not reflect parity to the producer.

The sole excuse given for the wholly illegal and arbitrary price ceiling on flour is that it is necessary in order to keep the price of bread at its present level. Just why the price of bread should be maintained at depression levels when practically every other item entering into the cost of living has advanced substantially during the war period is a question for which I have up to date found no satisfactory answer, although I have made diligent inquiry of those in charge of the determination of ceiling prices. It would take an increase of 16 cents per bushel to bring wheat prices up to parity today. That would mean very little in the cost of a loaf of bread because 62 one-pound loaves of bread can be manufactured from a bushel of wheat. Thus, a 16-cent increase in wheat price would mean about one-fourth cent increase in the cost of a loaf of bread, assuming that all of the increase had to be passed on. Even if we assume for the sake of argument that it might be necessary to increase the retail cost of bread as much as one-half cent per loaf, it would still be by far the cheapest food we have. It would be less than the price in 1926 when both wages and employment were far below what they are now.

As a matter of fact, the wheat producers of this country have been subsidizing the consumers of bread for many years by furnishing wheat at less than parity prices which means at less than fair prices. Whatever excuse there might have been for this when we had millions of unemployed, there is no excuse for it now when everybody who wants work can secure it, when wages are the highest ever known, and when the American people generally are spending the smallest percentage of their income for food in all of our history. The wheat producers of this country are not going to strike for higher prices or shorter hours or better working conditions. They are going to work harder during the coming year than they have ever worked before. They are going to do everything possible to overcome the handicaps of inadequate supplies of machinery and labor.

Should farmers be expected, however, to do all this and still receive a price for their product below what everyone concedes to be a fair price? Is it not time that this administration gave the wheat farmer a fair break? I do not believe that the consumers of this country want farmers to subsidize the cost of their bread and yet that is exactly what this administration is asking of the farmer when it imposes ceilings on flour which result in wheat prices substantially less than parity. I consider this situation as nothing less than a scandal and a disgrace. The present wholly illegal, inequitable, and discriminatory price ceiling on flour should be at once increased to parity level.

Overtime Pay

EXTENSION OF REMARKS

OF

HON. ED ROWE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. ROWE. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD, together with the contents of a brochure received by me from a constituent of mine.

Mr. Speaker, the foundation of this great Nation is founded upon the principle that there be provided opportunity for the individual to develop according to his ability, to make him a free and individual man, not part of a mass. This principle was imposed upon our founding fathers by the very nature of their circumstances. The revolutionary rebellion came into being because of the individuals collectively revolting against the attempt to stifle individualism by despotic and tyrannical oppression. Today, as then, there are tendencies to submerge that same individualism by regimentation and the creation of masses within our great Nation. This tendency, emanating from a strong centralized bureaucracy, will bring about the deterioration of a nation that in the short time of 160 years afforded greater economic and social benefits to a larger number of people than any other nation in the history of man. It has been said that any society which cannot prevent the development of masses is irrevocably doomed. Certainly, then, any society which encourages the development of masses writes its own death warrant. The following will clearly indicate that we are not only permitting the development of masses but permitting the bureaucrats to effect rulings and edicts that tend toward classes as well. This message shows the hatreds that are being engendered between our citizens by treating our people as pawns instead of people.

The brochure follows:

Because our sons need greater production for victory and to save the American way of life, the War Manpower Commission lengthened the workweek for all industry in manpower shortage areas, changing the hours from 40 to 48 per week. When this necessary and patriotic step was taken, promptly the Communists and fellow travellers in this bureaucratic Government of ours used the event to make a vicious underhanded attack on the very way of life the longer workweek was designed to help protect. They did it, these unelected and unauthorized masters of our prosperity, by making "class" the criterion by which it was decided how much pay a worker was to get for those extra 8 hours that were added to the workweek. And by "class-angling" the decisions concerning the pay questions, they are destroying the worker's will to work, his desire to produce, his native urge to improve his status; they have made these qualities penalties upon the worker's material progress. Almost every worker wants to become a foreman or a superintendent; once such a promotion carried with it a substantial material reward, but now the case is different. Many a young man wants to become an engineer, for example; once that too, meant material progress, but now it means that he actually decreases his chance of prosperity.

Let's take a laborer, a mechanic, a foreman, a superintendent, and an engineer in a war plant, to illustrate the way this tinkering with the American way of life is done. Let's assume that the plant changes from a schedule of 40 hours per week to one of 48 hours, and then see what happens to the pay rates of each of them.

The laborer and the mechanic get time and one-half for 8 hours of that 48; for the week they get the equivalent of 52 hours' pay for 48 hours of work, a 30 percent increase in pay. Why? Because a "class-angled" Federal law so specifies, for the laborer and the mechanic. But that Federal law specifically excludes from its provisions the foreman and the superintendent and the engineer (but the bureaucrats call it the Fair Labor Standards Act).

The Federal law specifies nothing as to how the foreman and the superintendent and the engineer shall be paid for their extra hours. Here's where the communistic bureaucrat steps in and starts his work of changing our American system. The scheme is outlined in Press Service No. 37-31 of the Treasury Department, Bureau of Internal Revenue, dated Thursday, July 1, 1943. This verbose and vaguely worded statement says in part, in speaking of increased pay for this 8 hours of additionnal work, "The Commissioner stated that no set rule may be established for determining such amounts, because of the variations of differentials between wage and salary levels within plants and industries. However, the amounts allowed will be proportionately less in the higher levels. The amount allowable to the highest rated hourly employee will then be progressively reduced for the several intervening pay levels in such manner that each succeeding higher level receives a proportionately lesser amount * * *." As an illustration of how this works out in practice, in one company the highest paid man covered by the so-called Fair Labor Standards Act gets about $15.30 for that additional 8 hours' work; the foreman, handling about five to seven men, gets about $13.85 for this 8 hours; and the superintendent, who handles about 100 to 150 men, gets about $10.85 for working that extra day. The general superintendent and the manager get nothing—except the 8 hours to work; that, too, is a ruling of the Treasury Department, so I am told.

And the engineer, what about him? He isn't a foreman or a superintendent but he

is discriminated against in the same way. He doesn't get time and one-half, either; in their rulings in individual cases in the same company mentioned, his increased pay has almost invariably amounted to about straight time (20 percent) or less.

That isn't all. The foreman and the superintendent usually are paid a flat salary, and they work whatever hours are in the scheduled workweek plus any overtime that's necessary. The Treasury Department says that they cannot be paid for this overtime, but the laborer and the mechanic get paid, at time and one-half, for every hour of overtime they work. The foreman and the superintendent work those same overtime hours, too, but they get no additional pay for it, so the result is that many a time the mechanic draws more pay each week than his foreman or his superintendent. Where's any incentive to become a foreman? A workman would be foolish indeed to accept what was once a promotion.

The bureaucrats carry this "class" idea to even further extremes than those cited. For instance, the United States Civil Service Commission issued, on July 9, 1943, a bulletin headed "Applications accepted for technical aid, quartz crystals (trainee), $1,620 a year (plus overtime pay)." It further states, "Overtime pay. The standard Federal workweek of the 48 hours includes 8 hours of overtime. The increase in compensation for overtime amounts on an annual basis to approximately 21 percent of the basic salary." Notice that 21 percent, and remember that the Fair (?) Labor Standards Act says that the laborer and the mechanic in the war plant, under the same conditions, get 30 percent "increase in compensation for overtime." These Communists reach far afield.

The only explanation ever given me to account for these discrepancies is the claim that to pay the foreman and the superintendent and the engineer time-and-one-half for these additional 8 hours is "inflationary," but to pay it to the laborer and the mechanic is not. That's utter nonsense. Reduced to figures the statement means that to pay the technical aid about $6.54 for his extra 8 hours, on top of a salary of about $31 for his 40-hour week, is inflationary; to pay the mechanic $15.30 for his extra 8 hours, on top of a pay of $51 for his 40-hour week, is not inflationary. That's utter rot.

What has happened to American justice, when a man's pay rate is based on what "class" he belongs to? Who give these bureaucrats the right and power to change the American way of life? Why shouldn't pay rates for overtime, whether they are time-and-one-half or straight time or no pay at all, be applied equally to all men?

It seems to me that this is a drive by the bureaucrats to put into practice the theory (long since abandoned by the Russians, who couldn't make it work, by the way) that every man should get the same dollars pay regardless of his work-contribution to society. We are being herded into an unwanted "class" system by these self-appointed messiahs and are being robbed of our American system by insolent bureaucrats convinced of their own all-embracing knowledge, but who are too sly to put their ideas to the test of the people's vote. If we want to retain the American way for ourselves and our children and to strike off the chains these men are rapidly fastening on us all, we must act and act soon, else our "class" will be wiped out. Write your ideas on this subject to your Congressmen, your Senators, your newspapers and magazines, your radio commentators, in fact to anyone who can in any way influence our system of government. And when the time comes, get to the voting booth and throw these bureaucratic Communists out of power by voting out of office those elected officials who are responsible for them and their acts.

A Poet Speaks From the Visitors' Gallery

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Archibald MacLeish:

A POET SPEAKS FROM THE VISITORS' GALLERY

Have Gentlemen perhaps forgotten this?—
We write the histories.
Do Gentlemen who snigger at the poets,
Who speak the word professor with guffaws—
Do Gentlemen expect their fame to flourish
When we, not they, distribute the applause?
Or do they trust their hope of long remembrance
To those they name with such respectful care—
To those who write the titles in the papers,
To those who tell the tattle on the air?
Do Gentlemen expect the generation
That counts the loser out when tolls the bell
To take some gossip-caster's estimation,
Some junior voice of fame with fish to sell?
Do Gentlemen believe time's hard-boiled jury,
Judging the sober truth, will trust again
The words some copperhead who owned a paper
Ordered one Friday from the hired men?
Have Gentlemen forgotten Mr. Lincoln?
A poet wrote that story, not a newspaper,
Not the New Yorker of the nameless name
Who spat with hatred like some others later
And left, as they will, in his hate his shame.
History's not written in the kind of ink
The richest man of most ambitious mind
Who hates a president enough to print
A daily paper can afford or find.
Gentlemen have power now and know it,
But even the greatest and most famous kings
Feared and with reason to offend the poets
Whose songs are marble and whose marble sings.

—*Archibald MacLeish.*

Drafting of Fathers

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted on September 9, 1943, by the executive committee, Department of Massachusetts, the American Legion:

Whereas over 50,000 members of the American Legion in Massachusetts, individually and through their department executive committee, have watched for the past year the operation of the Selective Service System in Massachusetts and throughout the entire country; and

Whereas as far back as October 1942 the department executive committee went on record as opposed to undeserved deferments from military service for young inexperienced men of selective sevice age in industry, having in mind that if such a practice was not stopped that the civilian status of married men and fathers would soon be jeopardized; and

Whereas the time has now come when the single manpower of selective service age in Massachusetts is no longer available for service in the armed forces save that single manpower in industry and in the service of the Government; and

Whereas this conclusion is so universal throughout the Commonwealth that various Selective Service boards and groups of boards have openly in the public press protested against the situation and certain Members of Congress have suggested three concrete plans whereby the single manpower for the armed forces can be supplied, thus protecting the civilian status of married men and fathers, namely: (1) That industry be first drained of its selective-service age single men; (2) That Federal bureaus throughout the land, especially in Washington, be forced to release its single men of selective-service age; (3) That those single men of selective-service age now classified as 4-F be rehabilitated at once and put into active service as rehabilitated: Therefore be it

Resolved, That the State Department of the American Legion in Massachusetts does hereby go on record as unalterably opposed to the inefficient, expensive, and un-American plan to draft married men and fathers before every single man of selective-service age is taken from industry and Federal bureaus, having in mind that those single men for the most part can be replaced by married men or fathers, or by women; and be it further

Resolved, That a copy of this resolution be sent to each and every member of Congress from Massachusetts urging each member to actively work for the accomplishment of this result so that the basis bulwark of American life, the family, may not be undermined at least not until such time as such an emergency has been more definitely proven necessary.

Rationing in Worcester County, Mass.

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and newspaper clipping:

WORCESTER COUNTY WAR PRICE
AND RATION BOARDS ASSOCIATION,
Worcester, Mass., September 11, 1943.

Representative PEHR G. HOLMES,
Worcester, Mass.

DEAR SIR: Enclosed please find newspaper clipping on report of association meeting here September 10. This is for your information.

Yours very truly,
C. M. DEARING, *President.*

RATION BOARDS HERE ASK O. P. A. REFORMS—WORCESTER COUNTY GROUP OFFERS 14-POINT PRICE-CONTROL PLAN

A 14-point program, designed to secure more uniform administration of O. P. A. rationing regulations, was adopted by the Worcester County War Price and Ration Boards Association last night at a meeting in Hotel Bancroft.

The group, comprising nearly 50 representatives of local boards, also voted to assume

responsibility for the rationing program in Worcester County when the O. P. A. district office ceases to function September 30.

Centralization of O. P. A. powers within Massachusetts under one State head, abolition of needless reports and surveys, less frequent changes on O. P. A. regulations and broader discretionary powers to local boards were included in the program. It will be forwarded to Regional O. P. A. Administrator Kenneth B. Backman, State Director Lawrence J. Bresnahan, and Worcester County's Representatives in Congress.

14-POINT PROGRAM

The 14-point program provides:

1. Centralization of O. P. A. powers in Massachusetts in one State head.
2. Broader discretionary powers to local boards.
3. An increase in enforcement personnel.
4. Greater cooperation among individual boards and less harassment from Federal, State, and district officials.
5. Greater distribution of O. P. A. funds for clerical assistance for local boards.
6. Consideration of Worcester County men, experienced in rationing problems, for any supervisory appointments in this area.
7. Abolishment of needless reports and surveys.
8. A central distribution center in each county to provide speedy distribution of supplies.
9. Abolition of Gestapo methods in enforcing rationing rules.
10. Use of educational methods in seeking cooperation of public.
11. More uniform and simpler application blanks, preferably printed on one side of paper.
12. Release of information direct to local boards rather than conflicting announcements from national and regional offices.
13. Less frequent changes in O. P. A. regulations.
14. Closer cooperation with business for price control.

NO ACTION ON PROTEST

The association discussed the recent protest of the O. P A. District Labor Advisory Committee against closing the district office but no action resulted.

It was also voted to draft a set of by-laws for presentation to the October meeting and increase the number of executive committee members to nine.

Officers are Carroll M. Dearing of Westboro, president; Edward B. Conroy, of North Brookfield, vice president; Harry E. Howard, of Northboro, treasurer; and M. Lawrence Price, of Paxton, secretary.

Members of the executive committee are Michael J. Fitzgerald, of Worcester, Thomas J. Barry, of Northbridge, Palmer J. Lord, of Petersham, Hugh F. Ruane, of Clinton, and Leo F. Brown, of Millbury.

Address by Stuart A. Seelye, President, New Orleans Association of Commerce, at a Conference With Louisiana Senators and New Orleans Congressmen, Tuesday, August 24, 1943

EXTENSION OF REMARKS

OF

HON. PAUL H. MALONEY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. MALONEY. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include an address by Mr. Stuart A. Seelye, president of the New Orleans Association of Commerce, at a conference with our Louisiana Senators and myself on August 24, 1943.

I wish to express to our guests tonight our genuine appreciation of the opportunity of meeting with them before their return to their arduous duties in Washington.

As our elected Representatives in Congress, you are desirous of having our honest views on the difficult problems which confront our Nation. Business, generally, may be blamed for not vigorously stressing its views on the basic principles of our economic system. Business has been, to some extent, intimidated by the tirades of demagogs who have attacked it and have attempted to create an impression that businessmen do not represent the true spirit of America.

The Association of Commerce is an organization representing business. I do not mean business in the sense of big business, but small business, since the vast majority of our membership represents small business.

As businessmen, we have the responsibility to assist Congress in every way possible and the best way to do this, as good Americans, is to state what is in our minds plainly and frankly and, in this way, contribute to sound conclusions in vital issues.

RESUME CONGRESSIONAL RESPONSIBILITY

This Nation was created on the principle of a government for and by the people. This ideal which has stood the test of more than 150 years, must be maintained and I feel confident that I speak not only for ourselves, but for the Nation as a whole, in complimenting you and all of those in the Congress who have clearly shown an intention to regain its rightful position as the legislative branch of our Government. This has had a heartening and reassuring reaction from all the people. We urge that you do not relax in your efforts so that we will again have legislation by representation and not by edict.

As a consequence of war, certain methods contrary to peacetime procedure are necessary and the people must relinquish some of the freedoms they have regarded as inviolate. We can say with pride in all business that it has cooperated wholeheartedly in the war effort and has made all necessary sacrifices, as its contribution. It is the opinion of all of us here that the actual conduct of the war is in competent hands and that victory, so far as the world conflict is concerned, is a foregone conclusion. It would be very fortunate indeed if our internal affairs were handled with the same efficiency.

We hear our internal affairs described in various terms, the least of which is "confusion" or "organized chaos." There are many reasons for this opinion when we consider the multitude of bureaus which have taken over, to much too great an extent, functions which should be handled by the Congress.

TOO MANY BUREAUS

The creation of one bureau leads to another and further subdivisions of authority and overlapping of functions. As a result of this, there surely arises in the public mind great confusion as to the authority, scope, and activity of governmental bureaus. I would like to cite just one example of overlapping, and there are hundreds like it, which is found in the handling of just one problem—labor. There are 13 existing boards or divisions all concerned with labor, wages, and salaries. This condition is equally true with every other bureau activity. It is not conceivable that, with this set-up handling the important phases of our domestic economy, anything but confusion should result.

We are convinced that there are opportunities to abolish many existing bureaus. We feel that this should be done in the interest of both efficiency and economy, and we urge you to do all you can to accomplish this, in our interest.

We cannot help but feel that Congress, to some extent, is to blame for the conditions. All of the bureaus were created by congressional action. They are creatures of the Congress which, when it created them, set up the limits of their authority and their functions. It is fair to expect that Congress will not forget its responsibility, but will hold them within the limits of their authority and to strict accountability to Congress for their performance.

When peace comes, there will arise from the four corners of the Nation a demand that bureaus created for wartime emergency shall be promptly terminated. Certainly that is our opinion. It is a well known and accepted fact that bureaus do not readily relinquish their powers. We have several examples of that in the W. P. A., C. C. C., and N. Y. A., all of which were created to meet conditions of unemployment and which would still be in operation at this time, when an extreme shortage of manpower exists, if it had not been that Congress wisely cancelled out appropriations to these agencies.

Congress will face a difficult job when the day comes when bureaus which have served their purpose should be terminated. Bureaus will endeavor, by every means, to keep their places on the taxpayers' pay roll, but we tell you now that the people will demand, in no uncertain terms, the prompt ending of bureaucratic government.

It has been said that many of those now serving our Government in the various bureaus are endeavoring to create, under the guise of war necessity, new situations, new ideas, and perhaps a new economy which they do not intend shall terminate with the war. Surely we know that you agree that no such plan should be permitted to develop into accomplishment and all such planning and effort should be fought to a finish.

While the American people are perfectly willing to be guided by legislation enacted by Congress, they will, in peacetime, strenuously object to be governed or in any wise controlled by bureaucrats or by executive directives. Such government would be entirely contrary to our traditions and the spirit of the Constitution and the Bill of Rights.

POLITICAL EXPEDIENCY

Another matter in which we have very strong convictions is that neither in the prosecution of the war, nor in any other matter concerning the Nation, should the question of political expediency have any part. If there ever was a time in the history of the Nation during which the first consideration should be "the greatest good to the greatest number," it is now. While American citizens may be Democrats or Republicans, they are first, last, and always Americans. In our country, the citizen is the sovereign and he recognizes public officials not as masters, but fellow citizens whom he has chosen by election to administer the affairs of his country.

In one of the reports which reached our office, the statement was made that in a poll of Congress conducted by the New York Herald-Tribune the lawmakers rate as first in importance the preservation of free enterprise. No one who has thought much about the source of the growth and prosperity of our Nation could question the wisdom of this decision.

A "FIFTH FREEDOM"

President Roosevelt and Mr. Churchill formulated the Atlantic Charter, in which were outlined "four freedoms" they hoped might be attained throughout the world. The first two of these—freedom of speech and freedom of worship—are a heritage from the founders of the Nation and are guaranteed to us under the Constitution. Nobody can question freedom from fear and freedom from want for all the peoples of the world, as a noble aspiration, but one for which it is only

possible to vaguely hope. There is, however, another freedom, a "fifth freedom," far more possible of attainment. That is freedom of opportunity—freedom of individual enterprise and initiative—freedom for every individual to improve his condition, limited only by his willingness to work for it.

This freedom, we must have for ourselves. We are fighting a war now for the preservation of this "fifth freedom." If it could be had by all peoples, it would, alone, go far toward attaining freedom from fear and freedom from want.

FREE ENTERPRISE

There is a tendency with some public officials of the demagogue type to picture free enterprise as something to be feared. That hardly makes sense when we know that every dollar spent for anything that people buy or pay taxes, has its source from the pay roll or from the earnings of free enterprise.

In its simple analysis, every business is simply an enterprise, big or little, in which people invest their dollars, their faith, and their energies in the hope of earning a reasonable profit. Our biggest corporations merely represent the combined risking of dollars by thousands of stockholders in an enterprise in which they have faith. Every man who endeavors to sell something for a fair return is a unit in the system called free enterprise, whether he be stockholder in the biggest corporation, a man who operates his own business, or a man who sells the labor and skill of his hands.

There certainly can be no division of opinion as to the necessity of maintaining a system by which every man may, under his own power and limited only by his own ambition and ability, improve his standard of living. If it were possible to consult with every man in our armed forces, the vast majority of them would say that they are fighting for a chance, when they get back from the war, to resume their peacetime activities and an opportunity to build a future for themselves under the free-enterprise system. Certainly they do not expect to become part of a regimented economy or to be the wards of the Nation under some paternalistic set-up.

The system of free enterprise has made America. Its continuance is equally necessary in the future. If, when the peace comes, the system of free enterprise is not permitted to function we will have lost a most vital source of employment and progress.

An interesting comment on free enterprise was made at a meeting in New York City on April 28 by Mr. Matthew Woll, vice president of the American Federation of Labor, from which I quote:

"When the war ends we shall have the largest productive plant in the history of the world. We will have a larger, better balanced and more flexible force of skilled workers. We will have management steeped in the experience and engineering knowledge of the intensive war-production effort. Let us now meet the issue squarely. Let us recognize frankly that efficient production backed by the solvent financial position of private enterprise is just as essential to win the peace as it is to win the war."

Many of the bureaus now in existence have to do with the fate of the free enterprise system. We urge you, therefore, to be ever watchful and to safeguard the hundreds of thousands of enterprises—85 percent of them small business—from which flow every dollar that circulates throughout the Nation.

GOVERNMENTAL ECONOMY

We urge you also to do everything within your power to produce in government those measures of economy which are expected by the people who are footing the bill. The civilian population is urged to economize in its expenditures to counteract inflation. Such sacrifices and economies are necessary in our war effort, but certainly it seems reasonable to demand that all bureaus, departments, and branches of our Government, which are not directly concerned in the war effort, should be required to follow the same economy demanded of the civilian population, who produce the tax revenue with which Government expenditures are paid.

TAXATION

We could spend hours discussing the matter of taxation and still not cover the subject. We should, however, bear in mind that Government is not a producer of revenue, but is solely and entirely a spender. The money that it spends comes mainly from taxes of many forms paid from their earnings by the people of the country, and the Government, as a spender, is simply acting as the agent of the people. If this could be kept clearly in mind at all times, it would seem that there would be greater efforts toward economy and perhaps more reasonable and fair decisions in legislation which impose taxes.

I would like to touch upon one tax proposition which directly concerns business. It has been stated by Senator GEORGE, chairman of the Senate Finance Committee, that he has the conviction that business has now been taxed up to its maximum capacity to pay. There seems to be little doubt but that this is true. Yet, of course, business realizes that the cost of the war must be paid and can only be paid by taxes.

BUSINESS RESERVES

However, in the levying of taxes on corporations, there is one consideration which has not received proper attention. That is the fundamental that business be permitted to accumulate reserves from earnings without paying the heavy tax penalty on these reserves. It doesn't seem reasonable that dollars from business earnings set aside to meet needs for replacement, expansion, or transition to peacetime production should be taxed to the extent of 80 cents on every dollar of reserve. It would seem fair to limit such reserves to a percentage of gross or net income and make these reserves, on such a basis, tax free. If this is not done, many peacetime and wartime enterprises may be entirely lost as a part of the post-war industrial transition and reconstruction.

It is very clearly indicated that labor organizations have a very intelligent appreciation of the necessity of permitting free enterprise, which gives them employment, to create such reserves as will be necessary to transform business, as a whole, from wartime activity to normal, peacetime economy.

We, therefore, urge you that when tax legislation comes before you, that the creation of proper reserves by free enterprise should not only be permitted but should be encouraged, if we are to provide employment to the maximum number of men released from the armed forces and from war industries.

RENEGOTIATION OF CONTRACTS

There is another matter of vital concern to many businesses normally engaged in peacetime activities, but which at present are producing a large volume of goods for the war. That is the matter of renegotiation of contracts. There seems to be no doubt that drastic changes and improvements should be made in the methods of renegotiation.

Renegotiators will do well to consider what will be left over after both they and the income tax collector have finished. As you know, renegotiations are based on profit "before" taxes. On the face of it, this is wrong. Many of our local small business concerns have government material contracts. Apparently the amount of profit which the renegotiators seem to regard as fair and reasonable is 10 percent. When such business concerns, as is generally the case, because of the unusually large volume of business resulting from these war contracts, get into the excess-profit tax bracket, they pay 80 percent of the remaining 10 percent, and have left only 2 percent from which to meet demands for reconversion to post-war operations and dividends.

There must be developed some fair and more reasonable basis for renegotiation. If the present basis continues in renegotiating contracts, it is easy to see that when these industries return to their normal pre-war activities, and Government contracts are no longer to be had, that few, if any, of them will be in position to absorb their share of men who will be seeking employment at that time.

The whole matter of renegotiation leaves the seller or producer of goods in a position of doubt as to what, in the final analysis, will be the result in profit of a contract into which he entered in good faith, and in the performance of which he assumed all of the risks. Renegotiation should be based on profits "after" instead of "before" taxes.

SURPLUS WAR MATERIALS

Another matter about which business interests of many kinds are deeply concerned is the disposition of surplus war materials which will be in the hands of the Government or for which there may be uncompleted contracts. When the war ends, particularly should it end sooner than expected, we will find the Government with hundreds of millions of dollars of foodstuffs and other materials for which some disposition must be found. The quantity of these materials will be large enough to seriously disturb the market and we are convinced that their sale and disposition should be handled through those businessess experienced in the handling of such commodities, and that such disposition should be made gradually so as not to destroy the normal markets for the various commodities.

AMERICAN MERCHANT MARINE

A fundamental to the peacetime prosperity of the Nation is the maintenance of its foreign and domestic commerce by means of an adequate merchant marine under our flag. This requirement is fully recognized in the Merchant Marine Act of 1936 which outlines reasons which make necessary a merchant marine, and from which I quote:

"A merchant marine sufficient to carry its domestic water-borne commerce and a substantial portion of the water-borne export and import foreign commerce of the United States and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign water-borne commerce at all times;

"Capable of serving as a naval and military auxiliary in time of war or national emergency;

"Composed of the best-equipped, safest, and most suitable types of vessels, constructed in the United States and manned with a trained and efficient citizen personnel.

"It is hereby declared to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine."

We are in position to have, in peacetime, a merchant marine which will provide all of the requirements outlined above. Before Pearl Harbor the United States had only 1,150 ships of slightly over 7,000,000 gross tons operating under its flag. The Maritime Commission has reported delivery, during the first 7 months of 1943, of 1,046 vessels of almost ten and a half million gross tons, and it is estimated that the United States will have in operation at least 30,000,000 gross tons of shipping at the end of 1943, and under the present construction rate, by the end of 1944, should have a merchant ship tonnage almost equal to the total world tonnage.

All American vessels of all types have been taken over by the Government by bare ship charters or, to a large extent, by outright purchase from the owners. The ships operate under the direction and control of the War Shipping Administration. In the prosecution of the war, normal services, schedules, and sailings were necessarily abandoned. As soon after the termination of the war as possible, these services and sailings should be resumed, to provide for the movement of freight in coastwise and foreign trade. This can only be done by providing a sufficient number of vessels of the most suitable types available, to merchant shipping companies, operating under the free-enterprise system. It should also be borne in mind that local shipping companies which in the pre-war days were given rights and privileges to serve certain trade routes from Gulf ports, must have, in full, these same rights when the war is ended. Consideration must also be given to building, to replace war losses, of special types of vessels, mainly tankers, passenger vessels, and vessels specifically designed for specific services or trade routes, under the provisions of the Merchant Marine Act of 1936.

We urge that you gentlemen be insistent, upon the termination of the war, that this vast fleet of merchant vessels operating under our flag be provided and used to serve world trade routes, all of which should be maintained and further developed. Any plan which would include the operation of merchant vessels engaged in either domestic or foreign trade by the Government through any bureau or agency, is definitely undesirable and an intrusion into a business normally and successfully handled by free enterprise.

We should be ever watchful for plans which may develop after the war and be presented by other nations, even those friendly to us, to utilize our merchant marine, created as a result of the war, in competition with our own shipping interests.

It is equally important that our interests in industry, agriculture, and shipping should be completely protected in international trade agreements which will follow the war.

New Orleans is tremendously interested in these particular matters because of its port and our interest is shared by all the other Gulf ports as well as the entire Mississippi Valley, which is mainly served in its export and import commerce through these ports.

DISPOSITION OF WAR PLANTS

Another matter which concerns business is the disposition of the many industrial plants built with taxpayers' funds and provided through the War Plant Corporation. We understand there are more than 1,500 of these plants, many of gigantic size, producing many products. Billions of dollars of taxpayers' money are invested in these plants created solely for the production of war materials. Utilization of these plants by private industry should be the aim and purpose of our Government on a basis which will make this utilization possible.

Perhaps many of these war plants, for which there is no peacetime use, should be dismantled and written off as a part of the cost of the war. It would be unfortunate, indeed, if there should be any intent, as has been frequently indicated as a possibility, that the Government itself may operate some of these plants as yardsticks of industrial operation. It is certain that business of every kind, big and little, and the individual citizen will vigorously oppose the entrance of the Government into business in the post-war period.

LABOR

There has been no subject of public interest about which there has been more discussion than labor. The elements necessary to the continued progress of the Nation, the happiness of its people, and the maintenance of our high standard of living, include labor, capital, energy, and ambition. Since all of these are ingredients of prosperity for all the people, there seems to be no fair and reasonable reason why there should be any serious difference of opinion. Of course, there will always be some business concerns who will endeavor to take advantage of those who are employed by them in the way of inadequate wages, unfair treatment or bad working conditions. On the other hand, there will also always be leaders of labor who are not disposed to be fair and cooperative, but who endeavor to take advantage of situations to make unreasonable demands for the workers they represent.

In the conduct of this war there certainly can be no difference of opinion as to the necessity of utilizing to the greatest extent the full productive capacity of industries essential to war production. Labor and industry both should recognize their obligation to maintain full efficiency and production. We believe that industry, on its part, should afford all possible cooperation to maintain full operation. On the other hand, labor should put an end to strikes, boycotts, slowdowns, and jurisdictional disputes. We believe that labor also should use the power of its organization to curb absenteeism. Just as business is expected to carry out its obligations and contracts, labor should also be expected to do the same.

As our Representatives in Congress, we hope you feel that way about the matter. We think, also, that in fulfilling your obligation as lawmakers for the Nation, you should resist coercion from labor, capital, agriculture, or any other bloc, and, by sound reasoning and consideration of the greatest good for the greatest number, arrive at your decisions. The people will have confidence in a Congress which has the courage of its convictions and resists any effort to sway it from its honest conclusions.

PRICE CONTROL EFFORTS

Certainly we cannot omit mention of the matter of price control, nor the confusion which has resulted from the constantly changing regulations of prices and production, and the apparent lack of decision of bureaus charged with handling the matter. It has been stated in the House of Representatives that one of the difficulties results from the type of persons who are handling price control, production, and rationing. A statement made on the 3d of July by the Congressman from Missouri, in which he mentioned practically every important commodity used or consumed by business and the public, pointed out that the price executives or administrators were all men with no previous experience in the business they seek to regulate.

The net result of this situation has been a state of confusion which has not only made it impossible for business to understand what is expected but practically impossible for it to avoid violating conflicting regulations. This situation has created conditions favorable to the black market and has been the source of general disorganization not only to business but to the 130,000,000 citizens.

There is a willingness on the part of both business and the consumer to observe such regulations as will provide the maximum quantity of the things we need and at prices which are fair and proper, and yet the confidence of the public has been almost entirely destroyed by the methods used by various bureaus to attain this result.

"ROLL-BACKS"

A question particularly alive at this moment is the subject of food subsidies and "roll-backs," and a very recent suggestion of legislation to come up in the next session of Congress by which the Government will purchase, for one price, all of the meat produced, as well as other food products, and sell them to the public at a lower price. The announced purpose of such plans is to reduce the cost of living, yet, a simple analysis of the result would show that quite the contrary would ensue.

If the Government buys meat at a price and sells it to the public at a lower price than it pays, a loss to the Government will result. Not a loss to the Government, but to the taxpayer who must, by means of some tax, make up this loss.

This burden of taxation will probably not be paid by the present generation, who may benefit in a very small way by this scheme, but by generations to come, so that the net result would be a burden placed on our children to offset lower prices to us for certain foods at this time.

It would seem that instead of subsidies or "roll-backs" preventing inflation, they would have the contrary effect. A lower price for any commodity would leave more spending money in the hands of the consumer, thereby tending to produce inflation. Price "roll-backs," by subsidy in any form are, at best, a most undesirable makeshift.

EXPERIENCED EXECUTIVES

We urge that you gentlemen consider, in connection with the operation of the Office of Price Administration, that it be made to comply with that portion of the law under which the Administration was created, which requires that they shall consult with the people in the industries affected by price fixing or rationing.

It is a matter of report that this is not done, except as window dressing, and the failure of these administrators to avail themselves of the information and experience of those engaged in business, multiplies the confusion and error. It is clearly indicated that bureaucrats look with disdain upon business and consider their judgment, based on theory, as being superior to the judgment of business, based on practical experience.

WHOLESALER AND JOBBER

We would also urge that in the consideration of rationing, distribution, and price fixing that there should not be neglected that element of the business world which has played an important role in the distribution and sale of goods. I refer to the jobber and wholesaler. As a result of the rapid expansion of governmental agencies, there has been, to a very large extent, a failure to utilize the experience and knowledge of the various local distributing organizations as procurement agencies for the Government. This is not in the best interest of the war effort or our national welfare, as it causes unnecessary loss of time in procurement and needless duplication of effort.

We urge that you keep the situation of the wholesaler and jobber in mind so that the valuable asset represented by this type of business may be recognized and utilized and given its fullest opportunity in our domestic economy.

GRADE LABELING

Another matter which deserves your serious consideration is the proposed grade labeling. No more vicious suggestion has originated in the Office of Price Administration than this idea which is a definite step toward regimentation and will kill the competitive spirit necessary in any and all business. American producers and manufacturers who have spent millions of dollars in research in continuing efforts to improve the quality of merchandise sold under their brands or trade

name, certainly could not be expected to continue those efforts. The hundreds of products known by their trade names as an accepted mark of quality, deserve to maintain a position of preference with the discriminating buying public.

Not only is this a measure of regimentation but it might also be taken as an indication of Government intent to participate to an entirely unnecessary and unjustifiable extent in the operation of free enterprise.

It also has the effect of damaging or even destroying distributors, since the classification of distributor is based on sales volume. That is, the greater the volume the lower the basic figure in establishing ceiling prices. Such procedure will eventually mean the elimination of the small independent concern. It can have no other result. The little man is the one who knew how and did build America. He should not be threatened with damage or destruction by the suggestion of grade labeling or any other regimentation.

SELECTIVE SERVICE AND MANPOWER

There is just one more matter we would like to bring to your attention—that is the confusion which has resulted from the apparent lack of ability for decision by the Selective Service and the War Manpower Commission. From what we have read in the newspapers regarding the activities of both of these bureaus, it would appear that they change their minds and their policies almost every week. This has had a naturally disturbing effect on married men and others who, while they are perfectly willing to assume their full part in the war effort, are uncertain as to what they should do.

It may be that it would prove desirable or even necessary, that the Congress enact specific legislation covering selective service as well as necessary provisions for manpower in industry. We believe that such legislation will be brought up for consideration by Congress when it resumes its session and we regard both of these matters as of serious importance not only to business interests but to the individual citizens who are affected.

In further connection with the matter of the armed forces and the problem of manpower, we feel it is safe to assume that at the termination of the war it will be necessary to maintain a very much larger Army and Navy than we have had in the past, for the policing and protection of areas involved in the war. Policing of some sort probably will be necessary over a considerable length of time in order to see that the new governments set up, observe the terms of peace.

It is natural to assume, however, that a great many men now in the armed forces will be returned to civilian life following the close of hostilities. We urge that this not be done all at one time, but very gradually and only as fast as it can be demonstrated that employment is available for them.

FREEDOM OF PRESS AND RADIO

The principle of free speech which is set forth in our Constitution should at all times be fully and completely protected. The press and radio should not be restricted in their use of news, views, or criticisms of any individuals or groups of individuals which are not seditious.

All citizens will agree that no bureau or method used by the Government in the dissemination of news or propaganda should be used to advance the interests of any individual, group of individuals, or political party. Also, there should be stopped immediately any indication or suspicion of indication of any use of Government bureaus or individuals on the public pay rolls, to create a political machine, or to advance the political interests of any political party. Our fellow citizens on our pay rolls must have the same freedom of opinion as we enjoy.

PREPARING FOR PEACE

We could spend hours discussing matters of vital importance at the present time and in the years to follow the war. I have necessarily been able to talk only in terms of generalities. I am confident that you feel that our Association, with its membership of approximately 4,500, represents a very complete cross section of American free enterprise. We know that you recognize us as honest and sincere Americans who have no desire to place any selfish interest above the welfare of the Nation. New Orleans and its business interests have responded to every call made upon them in connection with the war effort. Even as we make our contribution in every way possible toward the war effort, we know that war is an abnormal condition and that peace is normal. For that reason, as businessmen accustomed to thinking and planning ahead, we urge you to bear in mind that when the day of victory comes, it must not find us as poorly prepared for peace as we found ourselves prepared for war on December 7, 1941. Failure now to prepare for peace will surely spell confusion and perhaps disaster.

The principles of freedom, as laid down by the founding fathers in 1776 in the Declaration of Independence, were passed on to us as a form of government under which all of the people could live and prosper. The 167 years which have elapsed have demonstrated the soundness of those principles.

It is the obligation of our generation, and those that will follow, to preserve, protect and maintain our form of government. It is our obligation to resist any effort from any source to change it in any way. In these difficult days while we wage war against powerful enemies, it may seem expedient or desirable to some group or groups in our country to wander from the path which, experience has indicated, alone leads to the greatest good for the greatest number. We look to you, as our elected Representatives in the Congress, to be ever watchful that nothing is done to violate the principles of self-government which date back to the greatest day in the history of the Nation—July 4, 1776.

How Can the United States Best Procure Ample Food Production?

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. CRAWFORD. Mr. Speaker, under permission granted me by the House, I submit as an extension of my remarks the address given by Hon. Tom Linder, commissioner of agriculture, Georgia, at the recent annual meeting of the North Central Association of Commissioners, Secretaries, and Directors of Agriculture at Detroit Lakes, Minn. His address follows:

How can the United States best procure ample food production?

The very fact that such a question is asked is ample evidence that our economy is out of balance, for if it pertained to any other commodity, the answer would be the same as it is in the matter of food production.

The best way—the only way, in fact—to encourage ample production of a commodity is to pay a price for that commodity which will enable the producer to increase his output at a profit.

How can we encourage the farmers to produce ample supplies? is not the basic issue; How can we free the farmer from being hamstrung by governmental agencies long enough so that he can produce? is the real problem of food production.

A man, with his hands tied behind him, is thrown into a river; he cannot swim ashore. While he is struggling in the water, let us ask, "How can we best induce this man to swim ashore?" and we have a condition quite similar to the present food situation. It is not a question of inducing the man who is struggling in the water to swim ashore; it is simply a matter of untying his hands so that he can swim ashore.

Today the American farmer is struggling in the water; his hands are tied behind him. He starts out to plant a crop, but ur Government threatens dire penalties against him if he under- or over-plants the acreage which the triple A has allotted to him for various crops. Much of the valuable time he should spend in his field is used in visiting the triple-A office at the county seat.

The farmer needs these supplies to carry on his operations; his crops are neglected and we follow him as he endeavors to comply with regulations:

1. Fuel for tractor or truck. He must wait his turn to secure an allotment, then locate a source of supply.

2. Farm equipment. He must go to the United States Department of Agriculture War Board at still another location, try to obtain priority enabling him to make the purchase, and, if successful, find a merchant who has it for sale.

Since large manufacturers of agricultural machinery and equipment now are canceling their contracts with many small business houses, the farmer must buy direct from the manufacturer, giving him the profit that heretofore has gone to the local dealer.

After considerable delay, the farmer makes arrangements to purchase the machinery direct from the manufacturer, but, under orders of the Office of Defense Transportation, the manufacturer cannot make delivery to the farmer unless he can have 75 percent of a load on his return trip.

What happens? The manufacturer, in many instances, finds that it is impossible for him to make delivery to the farmer; the order is canceled and the farmer's efforts are for nil.

3. Transportation. In a great many cases, farmers of my State are dependent upon truckers to transport their produce to market when it is gathered.

The truckers find themselves hemmed in by so many limitations of O. P. A., O. D. T., U. S. D. A., and I. C. C. that many of them have gone out of business and consequently their trucks no longer are available to haul the farmer's crops to market.

Handicapped on all sides, the farmer has struggled through the year and produced a crop, only to find that the O. P. A. has fixed a ceiling on it that is below the cost of production.

Occasionally the Government does place a support price under a crop, that price is so low that it has a demoralizing effect on prices rather than being a support.

In many instances there is no relationship between the support price and the ceiling price.

As an illustration, compare these prices for snap beans, per bushel hamper, at the Atlanta market this spring:

Ceiling	$7.50
Support	1.50

The ceiling price on Irish potatoes, an essential crop, at the farm was fixed at $2.50 per hundredweight, or $750 for a 15-ton car. On the other hand, watermelons, a nonessential crop, brought as high as $1,000 to $1,100 for a 15-ton car.

Some months ago the United States Department of Agriculture called a meeting at the Biltmore Hotel in Atlanta to discuss the shortage of protein feeds. I, as well as a number of others, took it for granted that such a meeting likewise would be interested in taking steps to counteract this shortage by encouraging production of more protein crops.

After the better part of the day had been spent outlining the shortage of protein feeds and its cause, it was proposed that farmers be encouraged to grow more crops carrying protein contents. We were amazed to find that Government representatives present at the meeting were very much opposed to any increase in crops; their prime interest was in having all control officials agree to a reduction in the protein content of mixed feed.

Often I have seen some shiftless Negro farmer who had a mule but no feed; by some means he would get a sack of corn and then would try to force the old mule to eat dry grass, corn stalks, or whatever else Nature provided, to finish out his rations. In each instance, however, the old mule finally died from starvation.

This is the Government's present procedure—cutting down protein and grain content in feed and then selling the feed to poultry raisers, dairymen and others; and, like the shiftless Negro farmer, the Government is expecting some miracle to produce chickens and milk after the protein and grain has been eliminated from the feed.

Last year the O. P. A. fixed a ceiling price on cotton goods and yarns, based on the farmer receiving 21.47 cents for cotton.

The United States Department of Agriculture, on the other hand by use of its fake parity on cotton, held down Government loans to force the farmers' cotton on the market at around $10 a bale less than the ceiling price upon which mill products were based. Further, the United States Department of Agriculture continually threatened the cotton market by dumping Government stocks whenever the price of cotton showed a tendency to rise.

It is my opinion that the shortage of agricultural products is a direct result of the Administration's fixed policies:

1. The policy of scarcity and reduced production.

I do not see how any reasonable man could expect anything but a shortage of agricultural crops under a policy of burning wheat in the field, throwing hogs in the river and plowing cotton into the ground.

Personally, I do not believe that the shortage of food and other farm products surprised Washington. To the contrary, I think it was planned that way. From the beginning, I think the intention of the policy of scarcity was to create this very shortage. But I do not think the Administration foresaw the shortage of ships to bring into the United States foreign farm products in tremendous quantities.

2. The policy of low prices for farm products.

This fixed policy of the Administration reasonably would be expected to bring about the shortage of production.

The control officials in Washington are not as crazy as their acts would indicate; their acts are strictly in line with the fixed policies of the administration.

3. The policy of reciprocal trade agreements, so-called.

This is another fixed policy of the administration which demonstrates the determination to liquidate the American farmer.

Under these agreements, if continued, the American farmer cannot produce or compete with agricultural products flooding this country, produced by peon labor at 20 to 40 cents a day. It is impossible to operate a farm in the United States under the American standard of living and with protected industrial commodities and then compete with foreign crops.

To undertake to force the American farmer to produce on a peacetime basis, with all the world at war and with all other business on a war footing, would be undertaken only on a theory of forcing the American farmer out of business.

There is but one policy to be followed to secure the necessary food and clothing for our civilian population and our armed forces, to say nothing of our allies and the people of occupied countries:

Take the shackles off the farmers.

Supply the farmers with equipment, seed, and fertilizer in abundance.

Permit the farmers to obtain a price for their products that will represent at least the cost of production, after allowing them to compete with other industry in the labor market.

We hear a daily chant, "Hold the line against inflation," which would be fine if those who sing this chant were not the principal offenders against their own doctrine.

Does any responsible man believe you can spend a hundred billion dollars in a year on cost-plus basis without creating inflation?

Does any sane man believe that the Government can employ one-half of the citizens at the present wage level without creating inflation?

At a time when most processors are making more money than at any time in history, does any man in his right sense believe you can pay subsidies to processors without accelerating inflation?

Does any rational man believe that you can reduce prices of commodities without reducing wages and still hold the line against inflation?

Until the present fixed policies of the national administration are changed, it is impossible to produce adequate food and clothing. Whether that change is brought about by the Congress this year, or whether it will be brought about by the voters themselves next year, I do not know.

One thing I believe I do know; in fact I am convinced—that so long as the present policy of scarcity, the present policy of low prices on farm products, and the present policy of hamstringing the farmers is continued, we may expect to see a growing shortage of food.

We may expect to see "a measure of wheat for a penny," "a measure of barley for a penny," and "see thou hurt not the oil and wine."

When a country is geared to import food and fiber in peacetimes, how can we expect that country to be self-supporting as to food and fiber in wartimes?

How can you get a prisoner in a dungeon out into the open air?

Simply unlock the door.

Open the bars.

Give him the opportunity.

And he will walk out all too gladly.

How can we get farm production?

Simply take shackles off the farmer.

Return to him the freedom which he is guaranteed under the Constitution and the Declaration of Independence.

Give him equality before the law.

Give him equality of economy.

Give him an opportunity to serve his country in its time of need.

And he will come through.

The farmer will feed and clothe all of us if we only give him a chance.

Address by Frank E. Bourgeois, Chairman, Waterway Transportation and Development Committee, New Orleans Association of Commerce, and Chairman, Waterways Committee, Young Men's Business Club of New Orleans

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. MANSFIELD of Texas. Mr. Speaker, under leave to extend my remarks, I include an address delivered by Mr. Frank E. Bourgeois, chairman of the Waterway Transportation and Development Committee of the Association of Commerce of New Orleans, at a conference of the Intracoastal Canal Association of Louisiana and Texas held at Houston, Tex., August 26, 1943:

It is always a great pleasure for me to attend a meeting of the Intracoastal Canal Association of Louisiana and Texas and listen to those stalwart fighters for inland-waterway development, Clarence Holland, and Roy Miller, tell of the wonderful work that the association is doing.

Texas and Louisiana have far more in common than some local rivalries might suggest. They both produce petroleum, gas, and sulfur, and agricultural products. They both have ports on the Gulf. The Intracoastal Canal passes through the entire width of each of them. Thus, anything that affects petroleum, gas, and sulfur, and agricultural products affects them both. They have a common interest in Gulf shipping. The beneficial effects of the Intracoastal Canal are enjoyed by both.

These are large interests and have an important bearing on the development of new economic impulses and on trade and commerce in the post-war period.

In such a situation there is no place for local rivalries, but there is a real place for cooperation. It is well to remember the words of a wise statesman, "Either we hang together or we will hang separately."

Louisiana advocates the early extension of the Intracoastal Canal to the Rio Grande, just as Texas does. Louisiana and Texas both advocate the opening of the Florida barge canal and the completion of the Atlantic deep waterway all the way to Boston. When these improvements shall have been made, there will be a protected barge canal from Boston to the Rio Grande, and there need never again be a petroleum shortage in the Northeastern States.

But there is something far more important than this. Coastal commerce in general may then move between the densely populated north Atlantic States and the Gulf ports at the lowest possible cost.

The Mississippi River navigation system, which extends from Pittsburgh, Chicago, Minneapolis, St. Paul, Kansas City, Omaha and St. Louis to the Gulf, crosses the Intracoastal Canal at New Orleans, and through that canal is now available to the ports of Texas. In advocating the opening of the Intracoastal Canal, some people think that New Orleans has divested itself of an advantage, but I feel that the advantage gained by New Orleans from the canal more than offsets the loss. The greater the drift of commerce by way of the Gulf ports, the great-

er will be the power of all Gulf ports to draw commerce and enterprise.

Then there is the advantage of low-cost water transportation to large sections of Louisiana, Texas, Mississippi, Alabama, and Florida which the Intracoastal Canal makes possible. All bayous and rivers flowing into the Gulf, and therefore connecting with the Intracoastal Canal, should be improved and made navigable and thus extend the benefits of low-cost water transportation as far inland as possible.

Old-fashioned railroad men might feel that such an extension of inland waterways will adversely affect their interests but I think just to the contrary, because the movement of basic commodities at the lowest cost cannot fail to promote enterprise on a large scale, and such enterprise will generate higher paying freight for the railroads to move in large volume.

It seems to me that the key to success in the post-war period will be the elimination of waste and unnecessary expense.

Louisiana expects to more than hold its own through improvements which will prove more efficient and reduce costs to commerce handlers. The Texas ports will of course do the same thing. The general result will be increased commerce for all.

New frontiers will be opened when the war shall end. The Intracoastal Canal will help us all to take advantage of those new frontiers. Let's combine our force and influence in promoting the early completion of the Corpus Christi section and the Florida barge canal at the earliest possible time. In other words, let's be ready when new opportunities knock at our doors.

Incontrovertible Reasons for Not Drafting Fathers

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks I insert a letter which I addressed to Gen. Lewis B. Hershey, Director of the Selective Service System, and a letter addressed to me by Mr. Harry Alexander Ash, former chairman of a selective-service draft board in Chicago, which throws much light on the draft situation with respect to occupational deferments.

The letters are as follows:

SEPTEMBER 17, 1943.

Maj. Gen. LEWIS B. HERSHEY,
Director, Selective Service System,
Washington, D. C.

DEAR GENERAL HERSHEY: The enclosed is a copy of a letter directed to me by Mr. Harry Alexander Ash, of Chicago, and I feel that it is entitled to consideration, especially in view of his experience as a former chairman of a draft board.

I have been very much impressed with his statement relative to the deferment of single young men of draft age engaged in work necessary to national defense. I called attention over a year ago to the fact that there were abuses with respect to such deferments, as well as the unnecessary deferment of farmers, especially the latter, when I observed that deferments were made of men employed in the skinning of rabbits. These and similar ridiculous deferments I feel have not come to your attention.

I am of the opinion that if the suggestions contained in Mr. Ash's letter are carried out and if the drafting of those unmarried men who shun work and who are found in pool rooms, barrel houses, and on the highways and byways, and of all the young men between the ages of 18 and 25, it will not be necessary to draft fathers.

With personal regards, I am,

Sincerely yours,

A. J. SABATH.

SEPTEMBER 13, 1943.

Hon. ADOLPH J. SABATH,
Congressman from Illinois,
Washington, D. C.

MY DEAR CONGRESSMAN SABATH: As former chairman of a selective service draft board, I am taking the liberty of addressing you.

At the outset of selective service, draft boards were ordered to recognize these two basic principles:

1. Be mindful of the harm that will result in separating a father from his children.

2. The maintenance of the family unit is of paramount importance to the national well-being.

The order drafting fathers with children scraps these two fundamental principles. Thousands of family units will be broken up and untold harm will result.

My letter, however, deals with the subject of occupational deferments. The selective service lists are saturated with hundreds of thousands of doubtful occupational deferments granted to single men who should have been in the Army months ago. The entire system of granting deferments to men, allegedly engaged in work necessary to national defense is wrong and is conducive to fraud and deceit.

Congress should abolish the present system whereby an employer is given the power to request a deferment in behalf of employees and where, on the statement of an employer, thousands of single men have been deferred as being engaged in work necessary to national defense.

The present system rewards the selfish employer who asks for the deferment of employees irrespective of the work they are engaged in, and penalizes the patriotic unselfish employer who often refuses to request the deferment of any employee.

Congress should write into the Selective Service Act a provision making it mandatory for Army and Navy ordnance officers to be assigned to draft boards.

Congress should revoke every present occupational deferment unless it bears the approval of an assigned ordnance officer who should be required to certify that the deferred registrant is engaged in necessary war work.

Each day we see able-bodied single men working at their usual civilian tasks, and we wonder how they stay out of the Army. Check on such cases and invariably they have an occupational deferment. Draft boards do not have the time, the help, the facilities or the inclination to check upon such requests for deferment in order to determine whether or not they are justified.

If, however, these deferments were based on a statement by a qualified ordnance officer, in whose opinion the registrant was actually engaged in war work, thousands of single men would be subjected to immediate induction. As a result, instead of the need for inducting fathers with children, every State in the Union would add thousands of able-bodied single men to its lists of available inductees who are now coasting along on an occupational deferment that never should have been granted.

If military exigencies demand the induction of fathers, well and good.

But first purge the list of selective service of occupational deferments. They need it.

I will appreciate hearing from you on this subject.

Respectfully submitted.

HARRY A. ASH.

How the Servicemen Feel About Amending the Soldier Vote Act To Enable Overseas Soldiers, Sailors, and Civilians To Vote

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a letter which I received from a member of the Fleet Marine Force who is stationed at San Diego, Calif. He is in active service and therefore I shall not divulge his name. His letter is as follows:

SEPTEMBER 6, 1943.

Congressman ADOLPH J. SABATH,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SABATH: I harbor a deep respect for an elected Representative of the people from my home State who had the foresight as far back as 1940 to champion the idea of closer collaboration and cooperation with our present ally—the Soviet Union. It was during this year that I was granted the honor of discussing current events with you aside from the political newspaper advertisement I had come to solicit.

Your attempts to lift the veils of suspicion obstructing the American-Russian view were not in vain, Mr. SABATH. Our country's people can well thank public officeholders of your understanding for the better relationship existing between two nations figuring in the leadership of the United Nations' camp today. Your addresses and releases to the press did much to clarify the political issues of 3 years ago when I was in civilian circulation.

Now you plan to introduce a bill enabling us to vote for our governmental officials when we are overseas fighting the enemy.

Congressman SABATH, I salute you and wish to congratulate you upon your initiative in this important undertaking. Realizing that we are fighting military battles overseas while other battles are being fought at home, I sincerely believe that the two—foreign and domestic melees—are not separate engegements but are part and parcel of the same struggle for a speedy victory over German nazi-ism, Japanese militaristic imperialism, and Italian fascism, a lasting people's peace through progressive legislation directed toward international understanding between democratically elected representatives.

You buy bonds, donate blood, work long hours, and attend meetings so that you can aid us in our country's battles overseas. With the passage of your bill, Congressman SABATH, we will help you civilians elect representatives of the people's wishes for the continuance of vast domestic contributions so compulsory for the successful prosecution of this global war, and the construction of an eternal peace which must follow so that men everywhere, forever, shall know the true

meaning of "life, liberty, and the pursuit of happiness."

A toast to the timely passage of your important bill calling for an amendment of the Soldier Vote Act of 1942.

Respectfully yours,

———— ————,

Fleet Marine Force.

A Soldier Thinks of Home and This Fair Land of Ours

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter written by a marine now stationed at Quantico to his loved ones in California. The letter is beautifully written and reflects the young man's full appreciation of home and all that it means to him. The sentiment expressed in this letter is the same sentiment that animates all of the fighting men of America. It is home for which they are fighting; and when men are inspired by a love of home and all that it means to our national life and welfare, all the Hitlers and Tojos in the world cannot stop them in their onward march to victory.

I call this letter to the attention of the Members of Congress to the end that they may know some of the thoughts of the men in uniform who have given up their homes and firesides, their loved ones, and all in our fight for the preservation of the altars of freedom.

The letter follows:

AUGUST 6, 1943.

DEAREST ONES: Well, here it is Friday already, and another week is almost at an end. This one seems to have crawled by, and it seems as though tomorrow will never come. Guess the reason it has passed so slowly is because I'm anxious to get into Washington tomorrow night, and because I know that you'll be leaving next week to come East.

I went to the show last night, and it did nothing but make me very low and blue. It was an all Warner Bros. bill, the feature being Background to Danger, which I enjoyed very much. However, it was the short that hit me right between the eyes. It was a little job called Horses, Horses, Horses, and it had to do with the training of circus horses and the schooling of bareback riders. As the short opened, the foreground was all cluttered up with horses, pretty girls, and people doing all kinds of acrobatic stunts—but the point that really murdered me was the background. You see, it was all shot at Uncle Harry's ranch, and everything was done from the riding ring up by the house. As the camera panned around in a circle I could see the house, the racing stables, the valley full of alfalfa, the riding stables, the tennis court and pool, the chicken coops, and all the other landmarks that I loved so very much. While everyone else was remarking about the gals and the action, it seemed as though everything I ever loved passed in review before me. It never hit me quite so hard before. I could easily recognize all the hills that I used to tramp looking for quail, and could even recognize the cut-out on the very top of one mountain where Sid and I had our first shots at a coyote. Then, the slope behind the corral where Doc MacWilliams and I had gone off on that coon hunt one night with the kids. Then on the other side where Marv and I used to sit by the hour shooting squirrels, and the long steep draw, where Doc and I used to go after dove. It seemed as though, in that short few minutes watching the picture unfold, everything I really loved to do was contained in the one pan shot of the whole ranch. Guess that a guy never realizes just how lucky he is until you've been cooped up in a barracks for 8 months. To think that I never appreciated all of that, and how I'd often fight to be able to stay in the city and fool around instead of going out there for a week end.

I guess that one panorama is really what we are fighting this war about, and it never hit quite so close until last night. I still like to think that this whole mess hasn't been brought about by power politics, and by intrigue, but rather by a few people who are jealous of what we have, and don't want to allow us to live our lives in the way we'd like to. I think that the reason why I'm sitting here in Quantico, so many miles from home, is because I want to have that right and that privilege after this war is over. I want to be able to go home, and find that scenery just like it was when I left. I want to get up early one morning, step off the front porch, and start up into those hills and valleys with my shotgun over one arm, a package of cigarettes, a close friend to "shoot the breeze with" and most of all, no one to tell me how long I should stay out there, nor when I have to come back. I couldn't help but think of all the other kids that might have seen the same thing in a picture that played here—a shot of the wheat fields of Kansas, the cliffs of Maine, or the desert of Texas. Yes, I'm beginning to understand now the real reason why I'm here, and in spite of what anyone else might say, I can truthfully say that I've suddenly come to the realization just what makes this country so precious, and why we can't lose this war or any other. Guess that it's rather silly to say that trudging some hill in California with a shotgun looking for quail is why we are all engaged in this bloody mess, but that is the way I see it, and I wouldn't want to give that up for anything in the world. It means too much to me. And I'll be doing it again, too, folks—you can bet your last bottom dollar on that. I know that I'll be out there early one morning, on that same hill, and that I'll hear the blast of Doc's gun, and hear him swear when a covey goes up and he draws a roach. Yes, and I'll hear Marv say "J——, how could I miss the b——" when a squirrel goes running along and he empties his gun. Or I'll be able to hear Sid give a yell when he pulls down a long shot on a crow and see him fold up over some haystack. Yes; we'll be doing it again, and if I've learned nothing else out of this war, I certainly have got a much greater appreciation for what I've got and what a lucky guy I've been. It's indeed an ill wind that blows no one no good.

Looks as though I've gone terribly philosophical here in this letter, folks, but there really isn't much else to write about. I know that you'll understand that I've been shooting off my mouth here, and that I really feel fine, and that there isn't any cause for you to worry. I get this way every so often, but I always snap out of it, just as I will out of this.

So you tell Harry to keep that place just the way it is, and Dad, you keep ours the same way, and then when this mess is all untangled, we'll be together again, doing the things that we've always wanted to and that I've dreamed of so often here. It won't be long now, and when it is finished, we'll still be able to get up in the morning and smell the orange blossoms and be able to walk back by the barn to see how the berries are coming—and that, in spite of rising prices, labor, inflation, power politics, and world orders. Just keep it that way until I get home.

I love you, and enjoyed your two letters that I received yesterday. Be good, and I'll speak to you tomorrow—Sunday—I mean.

All my love, as always,

SAMMY.

Senator Capper's Farm Conference

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my own remarks I am placing in the RECORD a newspaper account of the meeting of Kansas farmers in Topeka on August 31 called by Senator Capper, senior Senator from Kansas. This was a remarkably interesting and large gathering of farmers, who came together very seriously to discuss their problems and those of agriculture in the country generally. This story was written by Clif Stratton and Virgil Hill, of the Topeka Daily Capital staff. I present it for insertion in the RECORD because I know that it will be of interest to a great many people:

THOUSAND KANSAS FARMERS TELL ALL AT CAPPER FORUM—NO SUBSIDIES; NO BONUSES; PRICES TO GET PRODUCTION; CONGRESS TO TAKE BACK POWERS FROM EXECUTIVE

(By Clif Stratton and Virg Hill)

Senator CAPPER asked farmers of Kansas to come to Topeka and tell himself and other Members of Congress what Congress ought to do.

About 1,000 of them came to the municipal auditorium yesterday afternoon—and told them. They came from as far as Morton County in the southwest; from Smith County to the northwest.

And apparently the farmers who stayed at home are back of those who came. Willard Mayberry, who headed the southwest delegation (others were Rice Davies and Al Smith of Liberal) reported that their rationing board had allowed them gasoline for the trip.

"They said it couldn't be used for a better purpose," Willard explained in what he fondly believed to be a whisper, but which could be heard as far south as Pauline and well toward Holton on the north.

SUMMING IT UP

Summing up what was told the Kansas congressional delegation would take some space, but here is part of the summary:

Congress is expected by Kansas farmers to—

Do everything necessary to win the war.

Take back the powers it has delegated (some like to say abdicated) to the Executive.

Insure a return to constitutional government and a free enterprise system when the war is over.

Repeal the A. A. A. (don't repeal the A. A. A.—there was some division among the thousand attending the Capper Farm Forum yesterday).

Cut down extravagant Government expenditures.

Compel the O. P. A. and other agencies concerned to recognize that production is neces-

sary to get things to distribute for consumption.

Get labor, machinery, and necessary gasoline for farm production.

End the confusion over livestock and meat prices, and take the bugs out of rationing and price fixing generally, or face a meat famine next year.

Senator CAPPER was presented to the forum by Ray Gilkeson, editor of the Kansas Farmer, a few minutes after 1 o'clock, with some 800 farmers present; another 200 came in during the first 20 minutes of the meeting.

SENATOR SPOKE BRIEFLY

The Kansas Senator spoke briefly in opening the meeting. He explained that in the 6 weeks he has been at home he was unable to get over the State as he had wished, so had asked the farmers to come in and tell himself and the House Members present (Congressmen W. P. LAMBERTSON, of the first, and FRANK CARLSON, of the sixth) what their principal troubles are, and what they want the National Government to do in the coming session of Congress.

"I feel that you people here can give us the information and the inspiration needed," said Senator CAPPER. He read several letters from farmers unable to attend the meeting—the letters read much like the talks that followed from farmers present; and then proceeded to introduce his colleagues and others seated on the platform.

A VOTE OF THANKS

Nearly 4 hours later John Peck, of Tecumseh, moved a vote of thanks to the Senator for calling the meeting, and giving those in agreement, as well as those in disagreement, with governmental farm policies their chance to tell the Congressmen.

"I think the meeting has been well worth while, and that good will come out of it," said Senator CAPPER in closing the session. "I know that I have received valuable information and inspiration from these frank and well-founded statements of conditions and expressions of opinion."

Speaking as a member of the House Appropriations Committee, Congressman W. P. LAMBERTSON said, "The only thing we can do is to curtail funds," having reference to New Deal blunders and extravagance. This, he said, was done with respect to O. P. A., and he added that its chief, Prentiss Brown, is trying to improve the situation by placing more competent men in control.

HITS AT WAGE SCALE

"The blackest crime of the pre-war and war effort" the First District Representative went on, "Is the wage scale Madame Perkins and Franklin Roosevelt placed in war plants—we have it as a social gain." He charged the New Deal with raising labor wages sky high, and then freezing them there. "Labor," he went on, "is getting twice as much now as in the other war, and agriculture about half." The Manpower Commission, he said, is floundering without a plan. There was applause when LAMBERTSON declared he does not intend to vote for another adjournment or recess of Congress, but will instead insist on it remaining in session during the war period.

WANTED TO KNOW

Representative FRANK CARLSON, then introduced by Senator CAPPER, informed the 1,000 farmers present that if they could do a better job of telling what was wrong and what ought to be done than his Sixth District farmers had told him in the past 6 weeks they would be going some—but he'd like to see and hear them attempt the job.

"We want you to tell us, your Representatives in Congress, what your needs and wishes are," said CARLSON. "If we don't represent you properly, we know we won't be returned to Congress—and ought not to be.

"We in the United States face grave problems after the war. I am gravely concerned over the unrest brewing in our industrial centers. If we have riots in Detroit, Harlem, Birmingham, on the Pacific coast, during a period of high wages, and when we are united in the war effort, what may we expect when the urge for unity against the enemy is over, and millions are on compensation payments instead of high wages?

"We have a real job ahead of us—you at home, we in Congress, to protect the heritage our forefathers left to us and intended us to keep intact—and the basis of this heritage is constitutional government."

SCHOEPPEL ENDORSED FORUM

Attired in his shirt sleeves, and presented by Senator CAPPER as a Governor sympathetic to agriculture, Gov. Andy Schoeppel hit a few hard blows at bureaucracy, endorsed the farm forum idea, and said he hoped the people of the State would also let his administration know what they want. "Don't stop with the Senators and Congressmen," he suggested. "Let us in the State know your wants."

What the country needs, said Schoeppel, is "more practical, sensible views by those in authority and administrative capacity. What we desire is a decent place to live and an opportunity for advancement after the war is over."

Bert Culp, of Beloit, who has probably marketed more sheep than any man in Kansas, spoke of his work as chairman of the Farm Labor Commission appointed by Governor Schoeppel and said that the group anticipates more work in the fall. He is a former State senator.

WANT FAIR MARKETS

"I am tickled to death to get this chance to tell our Congressmen what we want," Lee Cowden of Lyon County opened up. "First I'll tell you what we don't want. We don't want bonuses; we don't want subsidies. We want fair markets; ceiling prices when needed, and I think they are needed. But we want those ceilings fixed equitably and for the purpose of obtaining production, not to stifle production. Something has to be done about these thousands of cattle in Kansas; I believe it will have to be done by the Congress."

He recommended a gradual increase in ceiling prices through the coming months, as needed to keep a constant flow of livestock to market.

"It is dumb," declared Cowden, "to have the coolers full, the shops empty, of meat, and the pastures full of cattle. If we don't get feed and fair prices, the cattlemen lose money, the cattle lose weight, and the consumers lose meat. That's foolish."

"NATURAL-BORN RABBLE ROUSER"

Leaving his 10-gallon hat at his seat, Willard Mayberry vaulted to the stage, presented himself as "a natural-born rabble rouser," and tore into what he called "not the black market—but the blind market."

The former secretary of Governor Landon, now farming and raising stock in the vicinity of Liberal, described an experience with sheep, declaring he spoke "from the heart and from my pants pocket." He had to sell 26,000 pounds of wool to the Commodity Credit Corporation without knowing the price in advance, although a pair of "experts" were sent out by the Government to advise him. They forecast a price of 37 cents. Sent to Denver, the wool brought 30 cents.

To Mayberry, the three most significant happenings of the summer are: Editor Gene Howe, down in Amarillo, spending his own money to advertise in other newspapers the truth about the black market; Senator CAPPER'S farm forum; and the livestock meeting tomorrow at Kansas City.

"THERE ARE LIMITS"

"Unless you Congressmen bring about some changes in the Washington controls," warned Cal Floyd, veteran Sedan cattleman, "you'll wake up without meat, and later without wheat.

"We farmers can take it. We have taken a lot, always. We'll keep on taking it. But there are limits.

"For the first time in my life I can't buy cake, and I have been feeding cattle 50 years. We cannot see why. And neither can those dumbbells in Washington. We want you to get results. There is a man in Washington who has promised the rest of the world everything, and is trying to deliver. Anyone can see where we are heading. And if we keep heading there, the Floyds are not going to handle 8,000 head of cattle next year. We just cannot do it."

SHOOTS AT F. S. A.

Victor E. Hawkinson, Riley County, long a foe of the A. A. A., did some shooting at the F. S. A. as well and concluded: "While our boys are fighting for freedom across the seas, it is our duty to keep farming a free institution at home to await their return." He characterized the A. A. A. as: "No compliance—no shirt."

As a preview of the Constitutional Government which his committee is sponsoring in Topeka today, Dr. P. P. Womer declared there is "too much arbitrary government by officials thoroughly inexperienced and entirely unfitted for governing—back-stage men never elected to office but exercising tremendous authority, with no responsibility to the Nation. We must formulate public opinion to sweep out forever this thing which has been going on in Washington."

DEFENDS ADMINISTRATION

Maurice Copt, of Osage County, who followed Dr. Womer, came to the defense of the administration and made a plea for more consideration for other peoples in the world.

"I came here from Switzerland," said Copt, who is considerable of an orator as well as a first-class farmer. "Three years ago I was in a bad way. I allowed the A. A. A. to help me, and the A. A. A. did help me. Today I have 35 cattle to sell, and am not crying because they may not bring as high a price as I would like. There is no reason why any farmer in Kansas cannot make a good living today, and contribute also to winning the war.

"We ought to get above our own immediate selfish interests. We are a part of our State; we are a part of the Nation; we are a part of the world. We cannot shut ourselves up and feed our own bellies and let the rest of the world starve."

Mr. Copt pointed out that the people of Switzerland, with a little thin soil on top of the rocks, feed themselves and also bring in 1,500 starving children from outside every 3 months and feed them back to health.

DISTRIBUTED LITERATURE

V. A. Kear, of Colby, who distributed a sheet, the Busy Tomcat, throughout the audience, is off the New Deal, off F. D. R., generally off of what is being done in Washington.

"The roll-back of meat prices amounted to sabotage of the meat supply," declared Kear. "The 40-hour week in wartime is sabotage of industrial production. We ought not have sabotage from high officials, of all people, while we are bending every effort to win the war. The 40-hour week was good news for the Japs."

And Kear closed with an appeal against authorizing him to retread his rubber stamps in the 1944 election, and urged the Congressmen to abolish one-half to two-thirds of the Washington bureaus and help the manpower shortage to that extent. George L. McCarthy, Farm Security head in Kansas, jumped as

if a pin had been injected when Keai declared, almost venemously, that "F. S. A. stands for farm slavery administration."

A veterinarian's view of wartime farm difficulties was presented by Dr. Ben Shambaugh, Burlington, who said a shortage of proteins and minerals is resulting in livestock being starved for want of a proper balanced ration. Complimenting Kansas farmers, he said they are willing to work 24 hours a day, if necessary, to produce food, and would work 36 hours a day if days were that long. But labor, he believes, is letting the country down.

WHY NOT RAISE THE CEILING?

Shortage of food might easily lose the war, according to Robert White, Osage County. "Inasmuch as 20 percent of our meat is being sold through the black market and the consumer is showing his willingness to pay more for meat, why not raise the ceiling on both meat and grain so that feed grains will move and livestock feeders will continue to operate?" he asked. "There is nothing like a good profit to insure maximum production and utilization of land."

FEELS THE WORLD IS GOING CRAZY

A colored man in Clay Center, in a fit of pessimism and misery, declared he felt "The whole world's going crazy and so am I," and sometimes M. L. Beckman almost feels that way, too. If the whole world is to be fed by Uncle Sam, why didn't the planners think of it when they stuck on that 49-cent wheat penalty in order to cut down production, Beckman demanded to know.

Mr. Beckman made three specific suggestions to the Members of Congress—says we want them to get Government programs to—

1. Maintain an adequate food supply;
2. Maintain our own people first;
3. Maintain our form of government.

"You might tell them in Washington," he warned significantly in closing, "that if it comes to that, the farmer will be the last man to starve."

READS LETTERS FROM O. D. T.

W. G. Carlile, of Auburn, brought down the house as he read two letters from the O. D. T. outlining what questions he had to answer and what trips he had to make to the county seat to get a renewal of the certificate allowing him to operate his farm truck. What irked him particularly was the repeated insistence that after filling out all the forms—the information had been given out last year, he pointed out—and assuring him the granting of the renewal was only a matter of form; take less than 5 minutes—

"The letter still insisted that I drive in and talk it over with somebody," protested Carlile.

"I needed two tractor tires," he went on. "I came in to get a priority or something for them, and the girl in the office insisted I bring in the two good tires for inspection. Those tires weigh from 500 to 600 pounds, and if they weren't in good enough shape to use I would know it."

RUGGED INDIVIDUALIST

A. B. Armstrong, of Smith County, admitted with pride that he is one of those rugged individualists who made this country. "We started with only our shirts and worked," he said. "We want our children to have the same opportunity, and to want to work their own way."

"Senator CAPPER," he said, "you asked some months ago if we wanted the A. A. A. repealed. You told us that of the first 500 letters you got only 20 wanted to keep the A. A. A. You wrote me you couldn't understand that 20-to-1 opposition, when the A. A. A. votes taken showed more than two-thirds in favor of the A. A. A.

"I'll tell you why. When they elected A. A. A. committeemen they put us in opposition off to one side and told us we were not to vote for committeemen. They had their own judges and clerks when referendums were held, and most of us didn't consider it worth while to try to vote."

HIT AT BIG APPROPRIATIONS

"We want you in Congress to stop some of these big appropriations," he continued. "That is the way to get started on the way back to sound government and sound people. Just answer this question: Who furnishes all this money? We will have to. Think of that when you are voting it away so generously.

"Some of us are called rugged individualists. Well, I'd rather be a rugged individualist than one of these efficient experts. Do you know what an efficient expert is? I'll tell you. He is one who cannot make a living himself but wants to be paid a salary for telling us rugged individualists how to make a living.

"And the way they swarm. They come out to my place and say they want to measure my land. My land doesn't need measuring. I tell them to take themselves down the highway—it was built for them to get away from my place on. Ah-h-h—these efficient experts.

"Tell me, who's going to pay the salaries and expenses of all these experts, boards, bureaus, commissions, when us rugged individualists have all been wiped out and have passed on?"

DEFENDS A. A. A.

John Peck, Tecumseh, raising one of the few voices heard in defense of the A. A. A., said of himself and fellow farmers: "We're the dumbest bunch of all—we won't stick together." Labor, bankers, politicians, doctors—all others unite, he declared and demanded: "Is it necessary for farmers to live a life of serfdom when labor has increased its income three or four times?" His idea is that something should be done to stabilize farm prices "so we won't go back to 10-cent corn and 17-cent wheat after the war." And until the A. A. A. came along, he asserted in the face of protests from the audience, the farmer had no protection against low prices.

LOOKS LIKE FARLEY

Chester Dunn, of Cowley County, who looks like Jim Farley and admits it no longer makes him mad to have the resemblance noted, said he just had one question this year:

"How are we to fill out the blank for this productable income tax?" he wanted to know, referring to the Ruml-Carlson September estimate to be filed the 15th.

Dunn repeated his request three times; got no answer from the platform. He got some from the crowd:

"Call in a college professor."

"Get an efficiency expert."

"Remember there's a penalty if you guess wrong."

Chester sat down, apparently satisfied. It seems he had not expected an answer to his question; he just wanted to state it.

"Run your own business and lay off the fellows who skin you too much," advised R. J. Ackley, Garden City. "People who couldn't run a wheelbarrow and keep it right side up are running the Government in some departments. Congress should take the bit in its teeth and regain control."

Ackley believes better distribution and less waste of vital products and materials must be brought about. Gasoline distribution in particular, he said, is in "an awful muddle," and mentioned how pleasure driving is again permitted in the East, although at times this summer Ackley did not have sufficient gasoline on his farm to take care of harvest.

WOULD REPEAL A. A. A.

Roy Stevens of Geary, who supported the A. A. A. when it was started, had been a supervisor, made a heated demand that the act itself be repealed.

"There is no justice when one of my neighbors with 65 acres gets an allotment of ½ acre for wheat," declared Stevens, "while a neighbor friendly to the A. A. A. gets an allotment of two-thirds of his acreage."

Stevens was greeted with cheers from the rugged individualists when he got through—hailed as a returning sinner to the ranks of believers.

Bert Anderson of Dodge City made a plea for labor, machinery, and repair parts for the western farmers—and for tractor fuel.

"Can you promise us these things, and especially repair parts and gasoline?" he asked of the platform. "We squeezed through this year, but are hesitating about planting for next year's harvest unless we are sure of these necessities."

Senator CAPPER assured him that the Kansas delegation is doing all it can, but that the O. P. A. and W. P. B. have not seen the light clearly enough.

"We'll keep on trying," the Senator promised.

COGSWELL DRAWS APPLAUSE

C. C. Cogswell, for years master of the Grange in Kansas, provoked applauding approval when he said, "We farmers have no objection to necessary rationing. But we will fight to the last ditch any rationing as a means of discipline or as toy balloons from Washington to see how much the people will stand."

During the last week, Cogswell said, he has talked to more than 500 farmers in Kansas and Oklahoma, asking questions about what's wrong with agriculture. Testing the audience before him, Cogswell asked a number of questions, and by a showing of hands demonstrated that Kansas farmers expect to raise fewer cattle, fewer hogs, and less grain. In some cases, the demonstration indicated, cuts will be from 25 to 50 percent, because of the inability to obtain farm supplies and market conditions.

Cogswell got a laugh when he reminded that the sale of coffee fell off 8 to 12 percent after rationing restrictions were removed.

A. E. Gunnerson, of Wamego, who has some manufacturing interests in Kansas City, just dropped in on the way to Wamego after a 2 days' struggle with labor difficulties.

"The farmers are so much better off these times than the manufacturing industry that there is no comparison," he assured the farm audience. "I am selling out all my other interests and going back to farming. When the war is over I think I'll sell my farm and retire."

J. D. Fowler, of Butler, warned that unless the Congress quits appropriating all this money without any check on its spending pretty soon the taxpayers are going to ask "Where is all this bond money going?" and when that time comes, the bond sales will fall off. He also urged that the 10,000,000 who he said eat all the meat they want in restaurants, be required to pay in points, the same as the less well-to-do who eat at home.

Nazi Blitzkrieg Stopped

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by

the Honorable JOHN W. MCCORMACK, Wednesday, September 8, 1943, before the Boston Building Congress at the Architectural Club, Somerset Street, Boston, Mass.:

The war that Nazi Germany thought would be over in 1 year has now entered its fifth year. As we look back over the past 10 years, and the past 4 years in particular, we see things more clearly. The old saying, "Hind thought is better than foresight," applies.

We now know that as long as 10 years ago, in the case of Nazi Germany, and longer, in the case of Japan, they were preparing for war. When it would happen, the exact time and place, the events that would lead it about, they probably did not know but they were preparing for war.

Years of preparation by forces determined to conquer and control the world, intense preparation which peaceful nations ignored, closed their eyes, failed to grasp the real significance, stuck their heads in the sand, and failed to make the preparations necessary for self-defense and to meet the impending danger.

And just prior to the move the softening-up process, the appeals to selfish ambitions of powerful individuals or groups within the country to be attacked, the appeal to hate within such country, the war of propaganda prior to attack designed to divide, to soften up, as I have said, so that the actual attack, the blitzkrieg, could be made suddenly, and with swift and destructive success.

The preliminary softening-up process and the swift attack, and the conquering of one country at a time before other countries on the list could awaken or prepare to resist—that was the blitzkrieg.

The apparently peaceful taking over of Austria was brought about as a result of a conspiracy with certain elements within that country; the attack on Czechoslovakia, on Poland, the awakening then of the democracies to the world danger; the declaration of war by England and France; Belgium, Holland, Denmark, Norway; the break-through of the Maginot line; Dunkerque, France conquered; later Yugoslavia, Greece, the dark days that followed; the blitzkrieg was on the march.

Well might Hitler, his military leaders, and the people of Germany, at that time have felt that the war would be over in a year—and that victory would be theirs.

Nazi Germany on the offensive. Confident, cruel, flushed with victory; a powerful people and military machine responding to the commands of an individual, with no opportunity for divided public opinion interfering with his commands. The monster modern Nazi machine of war, the blitzkrieg, was on the march. Its progress to victory after victory, and its ultimate success seemed to most persons to be irresistible.

A nation powerfully armed, its people indoctrinated with a fanaticism to conquer and bend the world to its will, even challenging the civilization of God itself, its people willingly responding to the voice and the orders of one man.

And all this time public opinion, so powerful in democracies, divided through fear, hate, or selfish ambitions, or other human emotions that obscured sound reason and judgment, with the demagog, false prophet, and hypocrite operating full blast. England and France up to the invasion of Poland, and our country prior to Pearl Harbor, compelled to hesitate and delay in the taking of necessary steps to meet the impending danger, months of delay, and many times doing by indirection what a divided public opinion would not permit to be done by direction.

The difficulty in the passing of vitally important legislation prior to Pearl Harbor, the extension of the Selective Service Act in the House of Representatives by the dangerous margin of one vote, the defeat on two occasions of a $5,000,000 appropriation to improve Guam Island for defense for fear the Japs would be offended are illustrations of the dangerous results of a divided public opinion in the pre-Pearl Harbor days.

The blitzkrieg was the means by which Hitler and his powerful military machine, backed up by the indoctrinated-minded people of Nazi Germany, hoped and intended to accomplish his and their diabolical end.

Fortunately for us, the blitzkrieg is now over.

The nations opposed, opposed to Germany and Japan, have developed their armed forces and their manpower and productive capacity to such an extent that they cannot be attacked, defeated, and conquered one by one.

There are three underlying factors as I see it that stopped the Nazi blitzkrieg.

1. The failure of Hitler to follow up Dunkerque by a land invasion of England, and thereafter the failure of his air blitzkrieg.

2. His attack on Soviet Russia with the expectation of an easy and early victory, resulting in failure, an attack made to remove Russia as a threat to his rear or flank when he undertook the land invasion of England, necessary for the victory he sought. After the failure of the air blitzkrieg on England a land invasion was necessary to win the battle of the Atlantic. No matter how many battles he won or territory conquered, Hitler was not ultimately victorious in Europe, which meant Africa and a powerful sphere of influence in Asia, until he had won the battle of the Atlantic.

And as we were not in the war at that time, winning the battle of the Atlantic meant invading and conquering the British Isles. He, therefore, turned on Russia (and we are fortunate that he did) to remove that country as a possible threat, fearing for some reasons unknown to most of us then and now, that with his delay after Dunkerque and England's recovery during that period, that an invasion of England, even if successful, would be long and costly; that he could not afford to let Russia stand by in a position to enter the war while his forces were heavily engaged in the invasion of England.

Underestimating Russia's military strength, its productive capacity, as well as the devotion and the bravery of its people, he attacked, expecting easy and an early victory.

As you well remember, even our own military experts expected an easy victory for the Nazi, predicting that Russia would be defeated in a period of from 6 weeks to 3 months.

His failure in Russia is the second in sequence and undoubtedly the major contributing factor to the Nazi blitzkrieg being stopped.

The third one was the attack of the Japs at Pearl Harbor. History will probably record the fact that Germany made a major mistake when it exercised its influence on Japan to make the attack at Pearl Harbor, thereby bringing us actively into the war, devoting all of our full resources to winning the war.

Slow and uncertain, as we were in our realization of the impending danger, and in the making of preparations for our national defense, divided as public opinion and our people were, Pearl Harbor in a flash brought to our people a complete realization of the danger. The response was immediate. It brought forth in splendid manner the greatness and strength of our beloved country.

Diabolical and destructive as Pearl Harbor was in man and ships, it brought us out of our emotional reactions, of our lethargy, of our division, and from that day on America was on the march.

We realized that our liberties, our Government—fought for, established, and transmitted to us by the fathers of the country—were threatened.

Our manhood and womanhood responded to the call. The devotion of our youth to a free government quickly evidenced itself. With all of the mistakes that have been made our people and our Government have performed a wonderful job since Pearl Harbor.

Free men and women were fighting to preserve for themselves and for future generations of Americans, freedom under a Government they loved.

In the early stages of our entry into the war, supplying with weapons of war the nations united with us in fighting the common enemy was our primary contribution. But that meant a great deal to them in those trying days.

The building of a two-ocean Navy, of our merchant marine, of our Army, Air Forces, are now well under way. We are now in a position to contribute a powerfully trained Army, Navy, Air Force, in addition to the products of our factories, the weapons of war.

Yes; the Nazi blitzkrieg is over. It was over in September of 1942. Hitler, Goebbels, and Goering admitted it at that time. But that does not mean that the enemy is licked.

The combined strength of the United States, Great Britain, and Soviet Russia is approaching their maximum. China, our other great and brave ally, will increase its strength tremendously when we are able to get necessary supplies and weapons of war in large quantities into that country.

From the best information I can obtain, that will be dependent upon the recapture of Burma, and the opening up of the Burma Road.

If Burma is recaptured, it would not be difficult to go forward on land, sea, and in the air, toward Malaya, Thailand, and Indochina.

The difficulty in getting supplies and weapons of war into China—particularly tanks and heavy weapons of war, such as artillery—in large quantities, is one of transportation. What we get now into China must be flown in by planes. It is essential that a land route of transportation be opened up. That is one of the great values of the Burma Road. In addition, the recapture of Burma would give a base from which further operations against the Japs can be carried out, such as Malaya, Thailand, and Indochina, as well as the effective and telling blows that a well-equipped and trained Chinese Army can administer, and which powerful air forces can make from China proper.

The stopping of the blitzkrieg was necessary. It has, thank God, been accomplished. Following that, the gloom of a year ago and more has changed. Africa cleared, Sicily conquered, Italy invaded, and for all practical purposes out of the war. After the successful resistance of the Russians to the Nazi blitzkrieg, their counterattacks and extraordinary successes now taking place, all followed the stopping of the Nazi blitzkrieg.

Not only on the war front, but on the propaganda front, our position has changed for the better.

For nearly 4 years the Nazi propaganda operated with telling effect. In this field we were also on the defensive. We are no longer on the receiving end, with its jittery effects on our nerves. The Germans and the Japs are receiving some of that punishment now. Effective propaganda plays an important part in modern warfare.

Where and when our armies and our Navy will strike is a matter for the military and naval leaders to decide. We do know what has happened to date, and what is taking place now in Europe and the Far East.

What happens in one area, as President Roosevelt has so well said on many occassions, has its effect upon another area of the far-flung battle fronts.

Take, for example, Italy. The removal of Italy from the war will play an important part in the Far East, as well as in Europe. It will enable the release of naval units of

our Navy and of the British Navy, now necessary to watch the remaining Italian Navy, to be assigned for duty against the Japs.

Among the favorable results from the unconditional surrender of Italy will be:

1. The bad effect it will have upon the people of Germany and its satellite nations.

2. The removal from the Balkans—some of which has already taken place—of about 25 Italian divisions and their replacement by German divisions, drawing upon their reserves.

3. Placing our forces in a position on the flank of the Balkans, as well as in a pivotal position for future action in France.

4. Ability to help those brave forces resisting the Germans in the conquered Balkan nations and in France.

5. Complete control of the Mediterranean, shortening our transportation routes to Europe, to Russia, and to parts of the Far East.

6. A stepping place for other operations in the future.

7. Obtaining air fields and bases enabling the bombing of industrial parts of German-controlled areas heretofore immune or practically immune from attack.

8. The powerful influence it will have on countries, like Bulgaria and Rumania, to withdraw from the war.

9. A favorable effect on Turkey, important in the event of an invasion and attack through the Balkans.

There is no question but that other operations in Europe on land will take place in the future. We should leave that matter to the judgment of our military and naval leaders. But there is no question but operations other than that being carried on now in Italy will take place.

In Europe, the blitzkrieg having been stopped, the offensive has been taken by our forces, and on land, on sea, and in the air, will be vigorously prosecuted to final victory.

It seems apparent that Germany is now seeking to bring about a stalemate. Such a condition, resulting in a compromise peace, would be adverse to our best interests. It would mean a temporary cessation of hostilities. It would be a partial victory for Hitler and nazi-ism, and from a short-range or long-range angle harmful to the peace-loving nations of the world.

It will be only by unconditional surrender of the enemy that we can destroy another attempt of world control, and a repetition of the viciousness we are now undergoing. President Roosevelt and Prime Minister Churchill see that clearly.

It is only by unconditional surrender that the foundations can be laid for future permanent peace.

Unconditional surrender of our enemies means the opportunity, with statesmen and diplomats of vision and courage sitting at the peace table, and a courageous United States Senate, to establish a peace of permanency.

A compromise peace means the continuation of the present inhuman, unreasoning, and destructive road of war.

In this great struggle that will come after victory, you and I and all other Americans, as well as the decent people of all countries, where public opinion can express itself, can play an important part in helping to form a vigorous, affirmative, sound, and realistic public opinion that will demand that this war shall truly and in fact be "the war to end wars."

Without such a healthy public opinion, the road to a peace which will have the elements of permanency will be difficult. Such a peace cannot ignore the moral law and be enduring.

It will be the battle of reason and of sound interest against hate, other baser human emotions, and of selfish interest. At best it will be a hard fight, but you and I can help substantially if we think and talk clearly, and resist successfully the forces of division that will exist. Already, they are sending out their little feelers to see what the public reaction will be.

Too much loose thinking and talking will be injurious to the next great step of mankind—the step towards permanent peace; the journey away from the horrors and destruction of war.

In the Far East, where we have been on the defensive, that situation is rapidly changing. We are no longer on purely a defensive basis.

We are changing rapidly from defensive to offensive action against the Japs. The foundation is being laid in the Far East for a general offensive.

The Quebec conference, as we know, dealt largely with that area of the war. It was the most complete of conferences held to date between President Roosevelt and Prime Minister Churchill.

The course agreed upon properly cannot be made public before the various parts of the plans are carried out. But one thing is certain—that due to our miraculous recovery after Pearl Harbor, and our increased strength in that area, our military and naval leaders are in a position to go forward—to go at the enemy instead of being compelled to try and hold the enemy back.

This does not mean that we can feel overconfident.

This is not the time to underestimate the military strength of the enemy, or to overestimate our own strength. If "eternal vigilance is the price of liberty" eternal vigilance is also the price of victory in this war.

Instead of overconfidence, this is the time for grim determination to exist among our people and among the United Nations—the knowledge that while the tide has turned—that victory has not yet been won. We must appreciate the fact that the enemy is powerful from a military angle—and that overconfidence will cause us to make mistakes that will unintentionally and unknowingly aid and assist the enemy. Overconfidence might cause mistakes to be made that would place us on the defensive again—fighting for our very existence with our backs against the wall. While the blitzkrieg has been stopped, and the tide has changed—it is not the time for a feeling of overconfidence to exist—but it is the time for a feeling of grim determination to exist to bring about an early victory. This is the time to break the morale of the enemy—and there are signs of that occurring in Germany. To hit harder and harder and to make every sacrifice on the civilian front willingly and without murmur in order to make our maximum contribution toward ultimate victory—that is demanded of all of us.

This is a crucial period in this war. This is the time with the opportunity of going forward with grim determination to remove for all time those vicious elements that are mainly responsible for the last war, and for the present war, and to destroy for all time this constant threat to the peace-loving nations of the world—and this dastardly challenge to the civilization of God.

Views of Indiana Bankers

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. LUDLOW. Mr. Speaker, the bankers of the city of Indianapolis rank high in the banking fraternity of the United States in respect to public esteem, advanced thinking, and constructive leadership.

I have just returned from a brief trip to my home city and while I was there, getting in touch with the home front and receiving various committees and delegations, I met by invitation a fine group of our representative bankers who wanted to tell me what the bankers are thinking about. At the head of this group, presiding as chairman of the meeting, was Mr. Ludwig G. Burck of the Indiana National Bank of Indianapolis.

I think it would be of interest to the readers of the CONGRESSIONAL RECORD to know what is uppermost at this time on the minds of these leaders of banking and finance in Indiana, and by unanimous consent granted by the House I submit for publication in the RECORD a memorandum which they presented to me, as follows:

OUTLINE FOR CONGRESSIONAL ACTION

I. Banks object to the following in regard to the internal economic policy of the United States:

(A) The subsidization of 19 farm-lending agencies by the United States Department of Agriculture, which agencies make farm loans in direct competition with rural banks.

1. The federally subsidized lending agencies are able to charge a lower rate of interest than banks simply because they are supported by public moneys which make up their deficits.

(B) The representatives of the 19 Federal farm-lending agencies soliciting good bankable loans away from banks and in many instances attempting to dissuade farmers from borrowing from the banks.

(C) The highly paid publicity men who propagandize the benefits accruing from the 19 Federal lending agencies, spending much more money for publicity purposes than banks individually or collectively can afford.

II. Why the banks object to these practices:

(A) Because the Federal lending agencies are not self-supporting and their deficits must be made up through public money partially provided by the banks themselves through taxes and the purchase of Government securities.

1. The whole situation is one in which the banks are supporting their chief competitors.

(B) Bankers object to the principle of the Federal Government entering in direct competition with private enterprise.

III. What the banks want their Representatives in Congress to do:

(A) Refuse to vote appropriations to the United States Department of Agriculture to subsidize any of these 19 lending agencies excepting in the case of floods, droughts, and situations and conditions which represent grave emergencies, and stipulate that at the end of such emergency, Federal credit will be withdrawn.

(B) Withdraw congressional support of subsidy from the Federal land banks, the Federal intermediate credit banks, and the production credit associations.

(C) Refuse to grant appropriations for salaries to be paid to officials in any projected lending agency such as occurred with the revival of the R. A. C. C. or to renew appropriations for salaried officials in the agencies now in operation.

(D) Eliminate all appropriations for propaganda purposes as exemplified by highly paid publicity men, advertising agencies (note extensive advertising carried on by the Federal intermediate credit banks), newspapermen, radio programs, and movie shorts.

(E) Refuse appropriations for money to pay men to solicit loans personally from the farmers.

DUPLICATE ASSESSMENTS ON PUBLIC DEPOSITS

Another matter of interest to the banks is a bill introduced by United States Senator ELMER THOMAS of Oklahoma on April 6, 1943, known as S. 986, to eliminate Federal Deposit Insurance Corporation assessments on public deposits in insured banks where such public funds are secured by the bonds and other obligations of the United States. This bill has been referred to the Senate Banking and Currency Committee and provides that section 12 B of the Federal Reserve Act be amended.

All bankers in Indiana who are managing banks which are members of the Federal Deposit Insurance Corporation find themselves in the position of paying a duplicate insurance assessment in relation to their public funds. In 1932 the General Assembly of Indiana passed a law known as the public-depository law, which law provides by statute a fund called a State depository fund. This fund is administered by a board of five members, consisting of the Governor, treasurer of State, auditor, the chief examiner of the State board of accounts, and the chairman of the commission for the Indiana Department of Financial Institutions.

All of the public funds in Indiana are protected insofar as the State of Indiana and its subdivisions are concerned by the total resources of the Indiana State depository fund. Then, in addition, the State depository fund has the power to issue anticipatory warrants for the purpose of satisfying any liabilities defined within the statute governing the administration of such fund. However, please realize that public funds in Indiana, insofar as the F. D. I. C. is concerned, are only insured up to but not exceeding $5,000.

Therefore, we would like to have the bill which has been introduced by Senator THOMAS amended to include public funds which are protected by the State depository funds such as we have in Indiana. Over the years we have appealed time and time again to the Federal Deposit Insurance Corporation for relief from this duplicate assessment but the F. D. I. C. chairman, Mr. Leo T. Crowley, has always been against our petition for relief.

We urge you to support the principles of Senator THOMAS' measure as we believe it is sound and will give the banks some relief from the F. D. I. C. assessments which are becoming an increasingly painful burden in view of the pyramiding of deposits.

A Bed for Buddy

EXTENSION OF REMARKS

OF

HON. JOHN H. TOLAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. TOLAN. Mr. Speaker, yesterday, Sunday morning, September 19, at 4 o'clock a. m., I visited the Union Station here and was surprised at what I saw. Hundreds, and yes, close to a thousand, of Army, Navy, and marine boys, sitting, if they could find seats, fast asleep. Others were stretched out on the cement floor, on counters, and on the outside, and in every telephone booth was one of our boys.

The Arlington Recreation Center was filled and hundreds were turned back from there and there was no other place for them to go but the Union Station. These boys were not waiting for trains; they came to see the Nation's Capital on furlough so they could take with them to the battle fronts a picture of the American Capital. They may forget the monuments and the public buildings, but they will never forget how they were treated here.

There is no use talking about this situation unless we attempt to correct it. Accordingly I am introducing today a house concurrent resolution to vacate the Senate garage now used for the automobiles of the Senators and Representatives, and make the same available for temporary sleeping quarters for our armed forces. This garage is a block long, well ventilated, heated, with lavatories, and approximately 250,000 cubic feet of space. The resolution is as follows:

Resolved by the House of Representatives (the Senate concurring), That, notwithstanding any existing public law or resolution, the Architect of the Capitol, subject to the joint direction of the Vice President of the United States and the Speaker of the House of Representatives, shall suspend all permits for the parking of privately owned vehicles in the legislative garage, situated under the Senate Terrace, for the duration of the present national emergency, and offer the floor space therein released to the armed forces of the United States as temporary sleeping quarters for military personnel on furlough or traveling under orders or temporarily sojourning in the Nation's Capital. The armed forces of the United States, or such public agencies as they may designate, shall install suitable facilities and accommodations to carry out the purposes of this resolution and shall be responsible to the Architect of the Capitol for the orderly operation of these quarters. It is hereby authorized a joint payment of expenses incidental to carrying out the purpose of this resolution to be paid out of the contingent fund of the House of Representatives and of the Senate of the United States.

Mr. Speaker, I am informed that at least 1,000 cots or double-decker bunks can be placed in the Senate garage and the expenses to convert the garage into temporary sleeping quarters for our Army, Navy, and marine boys would be insignificant. The Union Station is only one block away from the garage, and there is no other housing available in Washington. I am anticipating no single objection from any holder of space in the garage, but it requires legislation. All expenses to be met by the contingent fund of the House of Representatives and of the Senate of the United States. I am sure the cars of the garage can stand the cold weather, the rain, and sleet far better than our boys, and if they go into battle they will remember, I am quite sure, that they had a good, warm bed provided for them in Washington. Similar deplorable conditions exist in railroad stations in other sections and cities in our country. "A Bed for a buddy" is a slogan wending its way across the Nation, and we must not fail them here.

Puerto Rican People Ask for Immediate Independence

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. MARCANTONIO. Mr. Speaker, under leave to revise and extend my remarks, I include herewith the text of a resolution adopted unanimously by the General Assembly of the Puerto Rico Pro-Independence Congress, held in San Juan, P. R., on August 15, 1943. This congress, convened after the holding of a number of regional congresses, was truly representative of the Puerto Rican people. More than 1,800 delegates from 77 municipalities and other communities in the island were present.

The resolution follows:

The Puerto Rico Pro Independence Congress, composed of delegates from all the communities of the island, declares that it is the right and the will of the people of Puerto Rico to constitute itself in a free and sovereign nation, in close economic and political collaboration with all the other nations of the Americas, and in peace and fraternity with all the democratic countries of the world.

In the course of four centuries under the sway of Spain—mother country, discoverer, missionary, and colonizer—Puerto Rico succeeded in forming its own personality as a nation endowed with its own culture, its own faith, its own tradition, and its own history. During 45 years of relationship with the United States of America, Puerto Rico has vigorously maintained its historical personality and its culture and has strengthened them under the influence of democratic ideals; it has also made progress in its ability for self-government, its administrative capacity, its social understandings, and its eagerness for human betterment.

Now, in this transcendental moment of its history, Puerto Rico lays its claim to freedom and bases its hope and its faith upon natural law, upon incontrovertible reasons of justice and morality, upon Bolivar's concept of inter-American equality, upon the principle of American international law that no American nation can have colonies in America, upon the guaranties of the Atlantic Charter and of the good-neighbor policy, and, finally, upon the basis of democracy itself.

The Treaty of Paris, which, on December 10, 1898, put an end to the Spanish-American War, imposed upon the Congress of the United States the obligation of determining the political status of the people of Puerto Rico in accordance with the democratic practices and the free institutions of the Americas. The final political status of Puerto Rico has not yet been determined. The sovereignty of our people has not yet been recognized, and there still subsists in the island a governmental regime that does not derive from the will and consent of our people. Under the prevailing system of political and economic subjection, the people of Puerto Rico lack authority to face and solve their fundamental problems.

Puerto Rico eagerly desires to constitute itself as a nation under a democratic system of government; Puerto Rico desires to preserve its historical personality, to develop its culture, to orient its economy, to promote its production, to foster its industry, to raise the working and living standards of labor, to enforce policies of true social justice, and to provide security and welfare for all its citizens. For these reasons the people of Puerto Rico throughout all sectors of public opinion, categorically repudiate the colonial regime. To accomplish its destiny as a nation and to direct ably and conscientiously its collective aspirations, Puerto Rico must, without further delay, be organized as a free and independent republic in the family of nations of the world. The enjoyment of our own sovereignty is absolutely necessary to the progressive development of the culture, the economy, and the welfare of our people, and to the national dignity of our country.

We have rejected in the past, and we now reject once again, through this congress which represents Puerto Rican public opinion, any form of political status that does not recognize the international personality of Puerto Rico, and we therefore firmly refuse any measure of annexationists or absorptive character, since that would unavoidably lead to the disappearance of the Puerto Rican nationality and to the annulment of our right to freedom and sovereignty.

The people of Puerto Rico claims its right to sovereignty on terms of friendship and brotherhood with the people of the United States of America. In the case of Puerto Rico, the traditional devotion of the American people to free institutions and to democratic ways of living coincides with their moral duty to help us institute our own Republic in the family of the free countries of the Americas. The people of Puerto Rico trust that the United States Congress, which has already fulfilled the responsibilities imposed upon it by the Treaty of Paris in 1898 in regard to Cuba and the Philippines, will again act upon the principle that democracy should be creative of democracies, and will recognize without further delay the independence of Puerto Rico.

This Congress Pro Puerto Rican Independence at once proclaim the right of Puerto Rico to its independence, and demands from the people and the Government of the United States the immediate recognition of the full political sovereignty of our people.

In order that this right and this will of Puerto Rico be taken into full account and as a hearty message and a sincere claim to justice from the people of Puerto Rico to the friendly people of the United States, we, with faith in God, and with consciousness of the supreme destiny of our people, hereby sign this declaration in behalf of independence for Puerto Rico on this 15th day of the month of August in the year of our Lord 1943, in the city of San Juan, capital of Puerto Rico.

A Slap on the Wrist

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SHAFER. Mr. Speaker, the following editorial from the Adrian (Mich.) Telegram bespeaks the feelings of millions of Americans regarding the decision of the court martial of Col. William T. Colman, former commandant of Selfridge Field. I have asked to include this editorial in an extension of remarks in order to bring it to the attention of the Secretary of War and others who have been called upon to thoroughly review the case:

A SLAP ON THE WRIST

For repeated instances of being drunk on duty in time of war and for shooting and seriously wounding an enlisted man, Col. William T. Colman, former commandant of Selfridge Field, has been sentenced by a court martial to demotion to the rank of captain—the rank he held before the war. He was not sentenced to a term in military prison; he merely was reduced in rank. He was given only a slap on the wrist, and a very mild slap at that.

Actually the court's verdict amounts to an acquittal. The colonel was acquitted of 23 charges against him and he was found guilty on 5 minor counts of reduced charges. He was convicted of being drunk on duty in wartime while in charge of an important air base and training center, but the court held that such instances of drunkenness did not constitute "conduct unbecoming an officer and a gentleman" but was only conduct that worked against proper military discipline.

He shot and wounded a Negro private who was his chauffeur. The original count charged the shooting was an assault with intent to do bodily harm. But the court modified that charge and found him guilty of only careless use of firearms. Careless, indeed. Does the Army want to retain officers who are careless with firearms?

Colonel Colman testified that his mind was a complete blank prior to and at the time of the shooting. The court apparently believed that statement. And by its verdict it is on record as believing it is wrong for the Army to retain a man as a colonel who is subject to mental blackouts but all right to keep a captain afflicted that way.

The verdict was thoroughly bad. The punishment was too lenient even for the reduced counts on which it is based. It inspires the suspicion that military justice is tempered toward officers and reaches its full severity only when applied to men in the ranks.

That is not true. Military justice, as a rule, is just and even-handed. The Colman case is a glaring exception. But it gives rise to that suspicion just the same, and such a suspicion is bad for Army discipline and also has a very bad effect on public opinion.

The court martial constituted a military investigation of a train of unwholesome charges of laxity and worse in the operation of the Selfridge Field base. They cannot be dismissed by shrugs of the shoulders. The court's verdict is subject to review by the War Department in Washington and the sentence cannot take effect until given final approval. That review should be so searching that even the court martial is investigated. If the War Department won't do it, then let Congress get into the picture.

Should the United States Repeal the Chinese Exclusion Act?

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over the radio on September 17, 1943:

Some time ago, there appeared in the CONGRESSIONAL RECORD, as an extension of remarks, a statement by Senator HOLMAN, of Oregon, claiming, among other things, that I, as chairman of the Immigration Committee of the House of Representatives, introduced a far-reaching bill for the repeal of Chinese exclusion. From his statement, I do not believe Senator HOLMAN even read my bill.

In spite of the fact that I am more than in favor of any legislation which seeks to put an end to Chinese exclusion, it so happens that the bill which I introduced not only was not far reaching but was wholly inadequate. I considered it of such little importance that I myself saw fit to withdraw it.

My bill, unfortunately, did not go far enough. But there are other bills before the Committee on Immigration which should receive the support of every fair-minded American. I wish to speak, at this time, in favor of the enactment of proper legislation to settle this problem of Chinese exclusion.

The Chinese exclusion law was passed at a time when this country was very much afraid of being flooded by cheap labor. In a sense, it was a measure to restrict immigration which at that time would have resulted in the lowering of the American standard of living. Since this act was passed, however, the entire structure of our country and our immigration laws have undergone a rapid change.

Today cheap labor cannot come into the United States. We have on our statute books very stringent immigration laws, forbidding the entry into the United States of any person who cannot qualify mentally, physically and financially. Under the proposed repeal of the Chinese exclusion law, not more than 105 Chinese could enter the United States in any one year. The admission of 105 Chinese to the United States, in any one year, will therefore not break down our immigration bars. It will not make any appreciable difference on the United States as a whole. But it will make a great difference to the people of China.

Men and women of prominence, who have spent years of their lives in China, came before the Committee on Immigration and told us of the fine character and great achievements of the people of China. Pearl S. Buck, the noted author, who spent the greater part of her life in China, said, and I quote, "The standards of living are high. I mean the moral standards. Her people have high standards of ethics, of business ethics; we know that in our country. What really hurts them is not this lack of material help, which they can excuse because of the many demands on us, so much as our continued attitude toward them expressed in total-exclusion acts, which, until this war broke out, made it actually harder for a Chinese to enter this country than a Japanese."

Members of the House of Representatives and the Senate of the United States had the unique privilege of hearing and seeing a great person, Mme. Chiang Kai-shek, the wife of the great Chinese leader. She came to us and made a very eloquent plea for assistance to the people of China, to be given by the people of the United States. No one who witnessed this wonderful scene in Congress, when the first lady of China appeared before that body, will ever forget the splendid impression made by her.

Opposition to the repeal of the Chinese Exclusion Act came from sources which, to say the least, were misinformed, either as to the purposes of the act or as to the significance of any action which might be taken. The opposition is centered on the theory that Chinese workmen will compete with American labor, destroying our standard of living.

Again the opposition fails to take cognizance of the fact that these arguments might have been all right in 1882, but they surely do not apply to conditions as they exist today. What possible effect can there be on American labor, even if 105 workers should enter these shores annually from China? But even this is impossible because, as I pointed out before, immigration to the United States will not consist of workers and laborers but of persons who will never enter into competition with American labor.

It is important that public opinion of this country be fully acquainted with the fact that there is not the slightest intention or intimation on the part of any of the sponsors of the repeal of the Chinese Exclusion Act that our immigration laws should in any way be curtailed or done away with. We wish to keep in force all of the restrictions and provisions applicable to all aliens. I am sure that if the opposition to the measure will bear this important fact clearly in mind a great deal of misunderstanding and useless criticism will be avoided.

By granting the Chinese equal rights with other aliens, who come to the United States, we will put the Chinese people on a standing of equality, and once and for all give the lie to Japanese propaganda that the American people have only prejudice and contempt for the people of eastern Asia. Such is not and never was the fact. We respect the people of the Philippine Islands, who have so valiantly fought side by side with us in defense of their own independence. We likewise have a deep respect and gratitude for the people of China for everything they have done in their fight against Japanese imperialism and aggression.

An important consideration, perhaps the most important consideration under the present circumstances, is the effect our action will have on the war effort.

As you all know, China carried the burden of Japanese aggression for 7 years. She is still in the war, undefeated, although considerable portions of Chinese territory have been seized by the enemy. China is ready and willing to continue in the war. Chinese manpower and her determination to preserve her liberties have been, thus far, the only barrier between Japan and the Western Hemisphere. Chinese hatred for the Japanese was the only thing which saved many Americans at the time of the Japanese invasion.

Mr. William P. Hunt, American vice consul at Tientsin, from 1925 to 1927, who remained in China until the present time, appeared before the Committee on Immigration and said, "I was interned by the Japanese at Hong Kong and I was chairman of the American community in the Japanese Hong Kong prison camp. We did not have sufficient food. Three hundred and fifty packages twice a week were later allowed to come into camp and these were all sent in by Chinese, the Chinese in a city which did not have much money; Chinese who had to put their return address and their names on these parcels." As you can easily see, these brave Chinese people endangered their own lives by aiding the Americans.

We all know what importance morale plays in the war, and there is an opportunity for us to bolster up Chinese morale by an act of kindness, which is only an act of justice, and which will cost us nothing, but will give us a higher standing in China and will insure here cooperation throughout the duration of the war and the ensuing peace.

Admiral Yarnell, who is perhaps the best known naval strategist in the Pacific area, told the Committee on Immigration how important it is to pass this Chinese exclusion repeal, in order to destroy any vestige to Japanese influence in China. He added that he believed we would not have to send many American soldiers to fight on Chinese soil, that China had the manpower available for a tremendous army. All they needed was munitions and technical advisers. From his testimony we can surmise that China is willing to do our actual fighting in the Pacific; but would you, as an American be willing to fight for China, if you knew that the Chinese did not consider you as their equal, and had barred you from their country? Of course you would not.

Many Americans are laboring under the delusion that only a very few of the millions of Chinese people are aware of the Exclusion Act. Marion Dudley, of the International Young Women's Christian Association, who was interned by the Japanese at the outbreak of the war, and who spent many years of her life in China, said, "The Chinese have never clamored for the end of the Exclusion Act. They are too proud. But the Japanese have kept the question before them. People ask, 'Do the Chinese know about the Exclusion Act?' Of course they know. The Japanese see that they know."

If we are preaching democracy, let us act as a democracy, whether it be toward an individual or a nation. We cannot slap a friendly nation in the face by telling her that her people are not wanted. Until we, as a nation, repeal this Exclusion Act, we cannot counteract the insistent propaganda of the Japanese, who day after day repeat the fact that we are only using China as means to our own ends. If this propaganda continues we will find the Chinese people turning against us and we will see the Pacific war dragged out for many years to come.

Now is the time to show China that we respect her, and now is the time to lay the basic foundation for future peace in the Pacific area.

Furloughs for Married Servicemen on Duty Overseas

EXTENSION OF REMARKS

OF

HON. HARRY SAUTHOFF

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SAUTHOFF. Mr. Speaker, I am today introducing the following resolution. The resolution speaks for itself and it is not necessary to elaborate on its contents to any great extent.

On my visit back home during our recent recess I found that mothers, wives, and sweethearts of soldiers abroad could not understand why their loved ones were kept on the other side of the world while company after company was held in camp long after the training period was over.

We have several camps in my State, and I found dissatisfaction among some of the men who are held there as they felt that they should have been shipped months ago. Many of them are anxious to get into the fight, and cannot understand why they are kept inactive in camp when they might be overseas.

On the other hand there are wives whose husbands have been gone for a year and a half and more with no opportunity to get back to their families. Some of these young mothers have given birth to babies which their fathers have never seen, and it would be only fair to give these men an opportunity to get home to visit their wives and children and mothers and all their relatives and friends. I think such a move would strengthen the morale of the soldiers as well as the families and help to preserve the tie that binds, keep up the courage and the standards of everyone.

Of course, we cannot take any action that will hinder or disrupt the war effort, but it seems to me that many cases could be found where men could be shipped back without interfering with the program of the war. Transportation need in nowise be affected if proper care and management is used in granting furloughs in these cases.

I trust that the committee will give this matter serious consideration, and at least hear the views of those who are most interested so that we might find some way whereby we could work out a satisfactory solution to this problem.

The resolution referred to follows:

Whereas many married servicemen in the armed forces of our country have been overseas for 18 months or more and have been unable to return to their homes on furlough; and

Whereas many of these men have become fathers while overseas; and

Whereas there are servicemen who have been in training in the United States for over a year who are available to replace such married men overseas: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that, wherever feasible, married servicemen, and especially fathers, who have served overseas for 18 months or more should be granted furloughs to visit their families in the United States.

Customs Division Cooperating With New Foreign Funds Control Division Kept Busy Preventing and Prosecuting Attempts To Defraud Government and Citizens

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mr. COCHRAN. Mr. Speaker, many new duties burden Government agencies as a result of the war. Among them are the activities of the Customs Division of the Treasury Department working with the new Foreign Funds Control Division. An interesting statement recently issued is well worth reading. I include it as part of my remarks. It follows:

Treasury officers, maintaining an intensive vigil over channels of trade and ports and borders in the war against the Axis on the economic front, have dealt a substantial blow against a budding black market in United States currency.

During the fiscal year just closed, the Bureau of Customs and the Foreign Funds Control Division made numerous investigations of cases involving attempts to smuggle into this country currency suspected as being Axis loot from occupied countries of Europe.

The most important such case was a $30,000 deal in currency promoted by three South

American seamen, who were sentenced to jail terms.

The two Treasury agencies have major enforcement responsibilities under the Trading with the Enemy Act, and the Bureau of Customs enforces directives of Government agencies such as the Board of Economic Warfare, the Office of Price Administration, and the Department of State.

Other Treasury enforcement divisions frequently assisted in these investigations under the unified administrative arrangement headed by Elmer L. Irey, Chief Coordinator.

Customs and Foreign Funds officers, acting on information that crew members of Chilean vessels were engaging in forbidden operations in United States currency, struck at this traffic with the arrest at New Orleans of Ernesto F. Allu, Jose Manuel Solas, and Oscar Luna. They were indicted, and on pleas of nolle contendere, were given substantial jail sentences. Forfeiture of their funds is being sought.

Treasury officers said the men were engaged in purchasing, at fractions of its value, United States currency from black-market sources. The seamen were alleged to have conspired to smuggle the currency into the United States when they touched port, exchange it for negotiable paper, which was to be returned to South America where it would command the highest rate of exchange.

Treasury officers also attack a ransom racket victimizing European war refugees or their friends in this country. It was learned that large sums of money were being demanded of persons in this country for the purchase of exit permits for friends and relatives in enemy-occupied countries. Frequently these requests were for transfer of funds to agents in neutral countries, often unknown to the persons solicited. It was believed that such requests for funds, if not actually a shake-down racket, were a means used by enemy agents to obtain foreign exchange credits in the neutral countries.

A three-way agreement between the Netherlands Government, Great Britain, and the United States was put into effect which sought to ban the transfer of money for this purpose. The Foreign Funds Control, working with the State Department, was designated as this enforcement authority for this Government. Investigations by the Treasury agency identified seven individuals in Switzerland as engaged in this organized ransom traffic. These persons were put on the proclaimed list of blocked nationals, thus shutting off financial dealings with them, and since this action there has been a marked decline in the volume of such requests for funds reaching this country.

The field investigative staff of the Foreign Funds Control, under Theodore H. Ball, compliance chief, made some 1,000 investigations during the fiscal year. As a result, assets of enemy nationals of substantial value in this country were brought under control through the blocking of accounts. Numerous violations of the "freezing" regulations of the Trading with the Enemy Act relating to enemy-owned property were discovered and administrative sanctions applied or criminal prosecutions instituted.

A typical case involved a company incorporated in the United States, which reported that its ownership was vested in a Swiss corporation. Investigation disclosed that there was no such Swiss corporation, and that actually the United States company was beneficially owned by a German company.

In another case an attorney practicing in the United States, representing clients in Germany, attempted to conceal the true ownership of securities that had been transferred to him as custodian.

Customs officers, in cooperation with the United States Secret Service and Canadian authorities continued to wage war on smugglers of stolen gold. The most spectacular incident in a series of such cases saw an under-cover customs officer obtain the essential evidence by posing as a buyer for the contraband. Eighty-three ounces of gold were seized at the tunnel entrance between Detroit and Windsor, Ontario, and three persons were arrested.

Collins Sterling Smith of Detroit, whose arrest in New York late in 1942 set off the latest serious of investigations into border traffic in "high-graded gold," was sentenced to a year in jail and fined $10,000. More than 300 ounces of gold were seized in the case involving Smith and several associates.

Severe prison terms were meted out in Federal Court in Seattle to two Japanese convicted of conspiring to violate export control regulations in an attempt to ship steel oil storage tanks to Japan. The offense occurred prior to the attack on Pearl Harbor, but at a time when exportation of critical materials to Japan was banned. The case was developed jointly by Customs and the Foreign Funds Control, and in cooperation with the Board of Economic Warfare. Charles T. Takahashi and Edward Y. Ozuma were sentenced to 3 years' imprisonment initially, but subsequently the terms were extended to 5 years after the court was informed of activities of the pair in an enemy internment camp.

Customs made numerous seizures of merchandise attempted to be exported in violation of office of exports regulations, but fewer of these involved critical war materials than in the 1942 fiscal year.

Seizures of all types of smuggled commodities totaled 10,800, an increase over the previous year. There were 3,920 seizures of liquor.

Searches of vessels, vehicles, cargo, baggage, and persons entering and leaving the United States were of necessity much more strict than during peacetimes, and this and other wartime functions were welded into normal operations of the Customs Service and accomplished effectively despite a slightly decreased personnel.

Acting on behalf of the Department of State, customs officers maintained unusual scrutiny of transit papers of persons entering and leaving the country. In addition, censorship of all communications outside the regular mails was a customs function. With the Navy Department and the Coast Guard, customs shared the protection of piers, docks, and other waterfront facilities.

Secretary Ickes' Speech on Gasoline Shortage

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. PATMAN. Mr. Speaker, I am inserting herewith an address delivered by the Honorable Harold L. Ickes, Petroleum Administrator for War, over the National Broadcasting Co.'s network, on September 1, 1943, on the subject Oil Is Scarce.

The address is as follows:

I come before you tonight with one of the most serious, one of the most urgent, one of the most important messages that I have given to you since this war began. I come before you to ask you—to plead with you in the utmost earnestness—to help us to avoid running out of gasoline. I come before you tonight to try to make it just as clear as I possibly can that we are faced with just that probability, if we continue any longer in the direction that we are traveling now. We are faced with just that probability, not only in the Eastern States, but in the entire Nation.

This statement will not be believed—tonight—on the Pacific coast and in the Rocky Mountain area, except by the oil men who know in their hearts that it is true. The stock position in those regions is comfortable now, but if the people there could know of the military demands that lie ahead, when the war in the Pacific really gets under way, they would know that there is anything but comfort ahead for them, so far as sufficiency of gasoline is concerned.

My statement will not be generally believed—tonight—in the Middle West or the Southwest, either, because the people there have been deceived into believing that they dwell in a land of oil plenty. But these sections, too, are living on borrowed time, so far as gasoline is concerned, as the physical facts will prove in the not very distant future.

My statement will not be accepted tonight—incredible though it may seem—even by some people in the East. But, to the motorists of the East, I want to give this unequivocal warning:

If there is any appreciable increase in gasoline consumption in the Eastern States, above the present rate, we will be out of gasoline in a matter of days.

Now, I realize that these are strong statements; that they are alarming. They probably call for clarification in view of the revocation today of the ban on nonessential driving—the so-called pleasure-driving ban. But there should be no confusion to those who read that statement carefully. It has been emphasized that the revocation of the ban did not mean that the gasoline supply situation had improved. It meant simply a change in administrative policy. The O. P. A. has emphasized that it did not like the pleasure-driving ban. The public had made it plain that it resented this system. I did not like it, nor did I invent it. The ban was invoked to meet a very critical situation at a time when filling stations were out of gasoline and when our entire east coast transportation system was threatened with disruption. It was a crisis measure, designed to meet a crisis, and it did meet it. But, it was recognized by all concerned that the enforcement technique was not practicable nor desirable for a long-range operation, and so it has been abandoned.

The point that I want to make—the point that must be made—is that while there is no law to prevent pleasure driving, neither is there at this time any gasoline to permit it. My purpose here is to show you why there isn't more gasoline than there is and what you can do about it if you want to be able to continue using your car for even the most needful driving.

I can let it be known that we had figured upon September 1 as the date on which we could provide for a reasonably substantial increase in the gasoline available for east coast civilian use. But today is September 1. And why has no such increase for the east coast materialized? Is the Petroleum Administration plugging up the spigot to keep the public from having gasoline which is there to be had? Some people have suggested that, but it is so absurd that it isn't worthy of an answer. We are supplying and always have supplied all of the oil to the east coast that we could. Each month we certify to the O. D. T. the amount of gasoline that will be available for civilian use. The amount so certified is not just a figure that we decide upon arbitrarily as all that we think that the public ought to have. It represents all that we can count safely upon supplying, in the light of available transportation and in the light of war requirements.

And in spite of the fact that local shortages have developed, as they inevitably will if the over-all inventories are tight, we have supplied to the Eastern States what we said that we would supply to that region.

Remember that all of our pipe lines, tank cars, barges, and tank trucks cannot be used to haul automotive gasoline for civilian consumption. They have to be used also to haul aviation gasoline in an ever-mounting volume, toluene for TNT, butadiene for synthetic rubber, heavy oil for the Navy, for the rapidly growing merchant marine, and for our war industries—yes; and furnace oil to keep America warm next winter. We have therefore refused to shift from our policy of using whatever transportation is necessary to increase the supply of furnace oil. We simply must not and will not provide for nonessential motoring at the risk of public health.

When we certified on June 26, that we could supply 342,000 barrels of automotive gasoline daily for civilian motor vehicles during the months of July, August, and September, we meant that this was all that we could supply in the face of these other obligations.

Out of this had to come the requirements for nonhighway use. The balance is what we are able to supply for civilian use—both commercial and private vehicles. The determination of how much shall be allotted to commercial vehicles and how much to passenger cars is made by the O. D. T. After O. D. T. has taken out what it decides should be allocated to commercial vehicles, the remainder is what is available for passenger automobiles.

Our calculations indicated that, if everything progressed according to plan, we would be able, by today, to certify an additional amount—perhaps about 50,000 barrels per day—for civilian consumption.

But, although we have supplied 342,000 barrels per day, consumption has not come within that figure. It has been exceeding that amount consistently for weeks, and is now out-pacing it by 30,000 to 35,000 barrels per day. This has caused a drain to that extent upon our already depleted inventories.

To this you may say: "But I have used only what my coupons entitled me to use; how then have I overconsumed?" The answer to this is: More coupons have been issued than we have gasoline with which to redeem them. Whatever restrictions upon motorcar use may be removed right now, this physical fact remains a physical fact, and unless the public will—ban or no ban—exercise greater restraint in the use of gasoline for the time being we shall inevitably run out of gasoline—that is, if we continue to supply the full military requirements—and who would want us to do otherwise?

Rationing is the responsibility of the Office of Price Administration. Restricting my remarks to my own field, I will simply state the supply facts. Since there are more coupons out than can be redeemed by the 342,000 barrels per day that we are able to supply, it follows that, although you have coupons, you should not use them at this time for other than really necessitous driving. I ask this urgently so that no war worker will be kept from his job, so that no farmer will be prevented from running his tractor, and so that there shall be no break-down in any activity essential to the prosecution of the war or to the maintenance of our civilian economy.

Now, perhaps 35,000 barrels per day does not sound like a particularly large amount of gasoline, although it is 1,470,000 gallons. But consider that over a month it amounts to more than a million barrels, or 42,000,000 gallons, which is a lot of gasoline. This overdraft on gasoline, plus the very large amount of supply that was cut off by the damage to Gulf coast refineries in the August hurricane, has meant that, instead of being able to build up our inventories, we have been forced to draw further upon them. It has meant that, instead of being able to announce, as we had hoped, that more liberal gasoline allotments could now be furnished for the East, we are going to have to struggle to maintain allotments at even their present level.

Of course, there is another reason why we were not able today to make more gasoline available in the East. To do this calls for a reduced consumption in other areas. Our recent certification that 620,000 barrels of gasoline daily would be available in the Middle West and Southwest represented a reduction of about 15 percent in consumption. For several days after the curtailment order was issued reports to us indicated that sales had been reduced slightly, and that still greater reductions are now being achieved.

About 2 weeks ago, we called upon middle western refineries to increase immediately their eastward shipments by 50,000 barrels per day, and upon southwestern refineries to increase their shipments by 25,000 barrels per day. These additional shipments are being made, but only at the expense of an additional drain upon inventories which already were falling off at an alarming rate. And why has it been necessary to draw upon inventories? The answer to that question is the answer to those in the West who ask: What reason, if any, is there for cutting gasoline allowances here?

Well, there is not just one reason. There are several.

First, the amounts of oil needed for war are perfectly enormous—and growing.

Second, in the face of this huge war demand, crude oil productive capacity is falling off seriously throughout the important midwestern oil-producing States, and is susceptible of a substantial increase only in west Texas. On the basis of known military requirements, let alone whatever unexpected demands may develop, we will not be able, by next year, to produce enough oil in the United States to meet the needs of the military, of war industry, of agriculture and for essential civilian purposes unless we cut down on consumption now. That is not my opinion. It is a fact, recognized by the practical oil men who have formally endorsed the gasoline curtailment in the Middle West and Southwest.

But not only do we face a shortage of crude oil; we are now getting 5 fewer gallons of automotive gasoline out of each 42-gallon barrel of crude oil than we did before the war. The reason is that more and more of that part of each barrel of crude oil that used to go into automotive gasoline is now going into the petroleum war products that I have mentioned—aviation gasoline and lubricants, toluene, butadiene, and fuel oils. And this shrunken output has to be shared with the armed forces. Of all of the gasoline of all kinds produced east of the Rocky Mountains for the last half of this year, the military requirement will be more than 30½ percent; and, by next year, more than 37½ percent. Here is a figure which has never before been made public: The armed forces are now using, in round numbers, 600,000 barrels of all kinds of gasoline every day. There is where the gasoline is going. That is approximately the same amount of gasoline that was used by the entire 17 eastern States in the unrestricted days of peacetime. It is as much as all of the oil of all kinds produced in Russia. And, it has to come from the same source that our civilian oil comes from. So, if someone tells you that there is plenty of gasoline, and that there is no reason for curtailment, ask him to explain how—if there is plenty of gasoline—it happened that stocks of automotive gasoline east of the Rocky Mountains declined 130,000 barrels per day—or 5,460,000 gallons each 24 hours—between April and August.

Yet, to me, the idea of spreading this limited supply as equitably as possible throughout all sections cannot be questioned. It is purely a case of misunderstanding when people in the West ask: "Why should we have our necessary driving cut down so that the East can go pleasure driving?"

That answer is: First, no necessary use of gasoline is going to be restricted in the West so far as we can foresee today. Farmers are already assured, by order of the Petroleum Administration, the same treatment as the Army and Navy as to the gasoline that they need for their essential operation. There will be enough gasoline, so far as we can foresee today, for all essential driving.

Second, you in the West are not giving up gasoline to permit the East to go pleasure driving. You are giving it up because you believe in the American principle of fair play and equality under the law. You know that, up to now, civilians on the east coast have had to supply a disproportionate share of the military demand. Now, with the transportation that we have provided, you are able to share equitably that war burden. And so, to the people of the West, I say: Why in the world would we curtail your use of gasoline if it were not necessary?

To the people of the East, I say: Why in the world would we not supply you with more gasoline if it were possible? We may be crazy, as some people are that I know, but we are not so crazy that we would invite people to throw brickbats at us if it were not necessary.

To both the East and the West, I say, please believe me when I tell you that the reason for both of your troubles is that oil has gone to war. Oh, I know that there are those who will tell you that this is just a pretext to cover up a bungling bureaucracy. But, just consider a few pointed facts:

It takes 12,500 gallons of gasoline to train one pilot.

The tanks of an armored division use more than 10,000 gallons in traveling 100 miles.

A thousand flying fortresses will use 2,500,000 or more gallons in a single 6-hour mission.

So, there isn't as much left any more for you and for me. We can't burn gasoline over Berlin and Rome and New Guinea and still have all that we want to consume here at home. And we cannot consume what we do not have.

What Does It Mean To Support and Defend the Constitution?

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. MURDOCK. Mr. Speaker, as we celebrate Constitution Day this year, new emphasis attaches to it, and to me a greater meaning is added because of tragic war. All the Members of this body have taken an oath to support and defend the Constitution of the United States. Some have taken it on assuming membership in this body, or in some other legislative body, and some have taken the oath of allegiance on joining the armed forces of our country.

There are various ways in which we are solemnly bound to observe that oath. As the veteran William Tyler Page said to me in this Chamber on June 14, 1940:

The soldier observes the oath, or fails to observe it, by his conduct on the field of battle. Each Member of this Chamber observes his oath of office, or fails to observe it, by the way he votes on measures presented here.

Quite true, but let me add that along with the Nation's defenders and lawmakers, teachers of the Constitution take the same oath and are under the same binding obligations as are the soldiers and lawmakers. The burden of this obligation on teachers is not only to instruct but to inspire in the young a devotion to that Constitution.

The Constitution is very powerful both to give and to take away, to protect and to require. In normal times we think of its protective power. In times of war we are impressed with what it requires. But what it requires may be of a few for the protection of all.

Early in the spring of 1917 in a teacher-training college at Tempe, Ariz., a young man—by name Howard Draper, of Wickenburg—wrote on an examination:

> The Constitution is the supreme law of the land. All State constitutions and laws enacted by Congress or State law-making bodies must conform to it. All officials take an oath to protect and defend it. All citizens between certain ages are expected to uphold it even to the extent of giving up their lives.

Only a few months later Howard Draper lost his life in the First World War in the service of his country. The following inscription might well have been written over that first foreign cemetery for Americans: "Stranger, go tell the American people that we lie here in obedience to their command, as expressed in the Constitution of the United States and in the Constitution of the State in which we lived."

Never during the past quarter century have I taken that oath to "support and defend the Constitution" but that my thoughts turned back to Howard Draper. Henceforth when I take the oath new thoughts and emotions will crowd upon me for other young men who have "kept the soldier's faith" in the present most critical conflict. First among these is my own son—our first-born son, Lt. David Nathaniel Murdock—who gave his life in battle only last month. He, too, was a product of the great open spaces of the West, where human and eternal values can be so easily studied. He had spent the first 28 years of his life in quiet ways in Arizona, but in good preparation for 2 hard years preceding a soldier's death.

David Murdock took the oath "to support and defend the Constitution" as a teacher long before he took it as a soldier. His parents have ample reason to know he realized and appreciated its ultimate meaning. From north Africa he sent home his foot locker before embarking on another great convoy to make a second beach landing on enemy shores. In this foot locker were his uniforms, probably no longer needed, pictures of loved ones, prized newspaper clippings, treasured programs as mementos of athletic or musical accomplishments, and souvenirs of home and friends and peace. As his mother and I turn through his personal belongings we know he understood his sacred obligations and our own understanding is going through a refining fire.

During the years I taught constitutional government at the Tempe Teachers College in Arizona my educational colleague, Prof. A. C. Peterson, taught the same at a sister school, the State Teachers College at Flagstaff. Many teachers in Arizona have come under our instruction in this important subject as required by State law. Of the many friends expressing sympathy to us on the loss of our boy, one of the first and most understanding was my fellow worker, Professor Peterson, who said, in part, as follows:

> Little did we think when but a short time ago, you were so kind and helpful at the time of the loss of our son, that we would be extending our sympathy to you under similar circumstances, but let us say our hearts go out to you in a full realization of what has happened to you in the loss of your brilliant and talented son, Lt. David N. Murdock. He paid the full sacrifice for us all that we and countless millions may enjoy the things we prize so highly. His reward is certain. As we look at his picture which is before us as we write these poor feeble lines, we also look around and see the picture of Arman, who like your David paid the full price, we fully realize what the war is costing our Nation. Let us pour out our souls to God that he may aid us in bringing this carnage to a more speedy close than is generally held to be possible.

This understanding sympathy grows out of the fact that only a few weeks ago this frantic father phoned me from Flagstaff seeking any further information concerning his first-born son reportedly shot down over enemy territory. His son, too, was a gifted young man, signally honored and highly trusted. Yes, Professor Peterson, Arman paid the same full sacrifice for us all. I can only say to you, my educational colleague, that whatever dim perception you and I may have had concerning the solemn obligation of that oath to support and defend, it has been more than made good by the soldier deaths of our heroic sons.

In spite of all the present turmoil of conflicting interpretations of the meaning of the Constitution and the American way of life the same inscription suggested for the cemetery in France 25 years ago could still be used over that new cemetery in Sicily or elsewhere on the Continent:

> Stranger, go tell the American people that we lie here in obedience to their command, as expressed in the Constitution of the United States and in the constitution of the State in which we lived.

Present and Post-War Policy

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 14, 1943

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of policy of the New England Council, made up of Representatives from the six New England States:

"1. A foreign policy frankly based upon realism and national interest, implemented by adequate force committed to maintain peace, instituted and ratified by constitutional procedure, depending for support upon the general approval of the enlightened and the complete silence of the ignorant.

"2. A definition of the functions and fields of free enterprise, and of the scope and purpose of business regulation; a restriction upon the expansion of Government into the field of business without clear showing of necessity and without express legal authority; a declaration of intention regarding the responsibility of industry for post-war reemployment, and an indication of the measure of Government support of post-war construction and production; with legislation designed to make possible the accomplishment by the business organism of the tasks assigned.

"3. A thorough overhauling of the system of Federal taxation, to simplify procedure and computation and promote the established policy of free enterprise by substituting incentives for handicaps.

"4. A declaration of the right of individual security expressly conditioned by the obligation to work to the extent of capacity, fixing the responsibility for providing the opportunity, and stimulating the production to a level where a guarantee of security can be made good by stressing the obligation to work, rather than by providing the population with spending money.

"5. Legislation fixing the maximum amount of currency to be outstanding and drastic measures to bring back into circulation the hoarded currency."

Members of New England's congressional delegation heard the above program presented by Mr. Chase at the New England Council's seventy-second quarterly meeting in Boston last week end. And they heard the council president declare:

"You are our representatives—the repositories of our confidence—the trustees of our political fortunes. It is necessary to trust someone, even at the risk of occasional betrayal. We shall trust Congress. We affirm our faith in representative government as the only hope of a free people in a world of infinite complexity."

International Alliances

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. FISH. Mr. Speaker, under leave to extend my remarks, I include an editorial from the New York Journal-American of Wednesday, February 15, 1943, regarding international alliances. It is well worth-while reading before reaching a conclusion as to the need or value of entering into military alliances which may be the direct road to continuous wars:

> The Republican Party in its assemblies is wasting a lot of time in trying to decide what kind of international alliances the United States should enter into now or after the war.
>
> There are two burning questions involved in this situation.
>
> One question is whether the United States wants any kind of international alliance whatsoever.

The second question is whether the United States can get the kind of international alliance it wants, even if it wants one.

To begin with, any permanent international alliance means a complete departure from the tried and proven policy of the United States for 150 years.

It is not likely that the present crop of erratic, fanatic, irresponsible, and experimental statesmen who have messed up matters, political and financial, in this country during their brief tenure of office are wiser and sounder than the statesmen who founded the Nation and conducted it more successfully than any other Nation on earth for a century and a half.

Yet, even assuming that an international alliance is permissible as one of the inspired innovations of the New Deal—why is it necessary?

What will it accomplish that we have not been able to accomplish without an alliance?

We wished to save England from destruction in 1917.

We did it—and then came home and attended to our business.

Our business was building up our industries—our best occupation in peace and our best protection in war.

We did some foolish things, like sinking a good part of our fine defensive Navy.

But we were hoodwinked into that.

And even that did not matter so much as long as we developed the industries which could (and promptly did) build our Navy up again when the need came.

In the broadest sense we did eminently the right thing.

We expanded the industries which are the Nation's source of supply for conveniences and advantages in time of peace and for necessities in time of war.

In 1941, England having got herself into another complication by declaring war before she was prepared, we decided to save her again.

We had no international alliance.

We did not have to save her if we had not wanted to.

We were a free agent, and as a free agent we did what we conceived to be our duty.

And there is no doubt that up to the present moment we have succeeded thoroughly in accomplishing our object.

Would we have accomplished it any better if we had had a hard and fast alliance?

Certainly not.

And is it not conceivable that impelled by the confidence—the overconfidence—which an unbreakable alliance might create—England could possibly get into complications and wars into which we would not feel it our moral duty to follow her?

Wherefore, the alliance would not do any good to us or to England, and might do both nations a great deal of harm.

It might easily become a cause of war rather than a creator of peace.

But let us suppose that an international alliance could be desirable and could in someway be beneficial.

What kind of an alliance would we have and with what nations?

Would we have an alliance with all the Allies?

Could we make an alliance which would satisfy all of them—and how long would it satisfy them?

Should we rather have an alliance between the leading Allies—Russia, England, and the United States?

These three nations are hardly united now, during the war, on the same objectives.

England and the United States are moving to crush Germany and the other Axis Powers as they are crushing Italy.

Russia is moving to drive the Axis out of Russia, to be sure, but is even now negotiating for peace with Germany and Austria, and has already come to a partial understanding with Poland and Czechoslovakia.

Russia, moreover, quite irrespective of England and the United States, has a peace treaty with Japan—and might easily come to have a military alliance with Japan if Stalin fails to get what he wants from the industrial democracies.

What kind of an alliance can we have with that kind of an ally unless we give him all of Europe for bolshevism and give Japan all of the Pacific for imperialism?

This we may be prepared to do.

But what a price to pay for an alliance which we do not need—and which probably would not hold for our advantage if we did need it.

Is it not better to continue to let our conscience be our guide in every individual complication which shall arise, rather than be bound by contract and compact to a course which might be not only against our welfare but contrary to our moral convictions?

Would it not be a good thing to retain the freedoms we are fighting for and to add to the "four freedoms"—freedom of action and freedom of choice?

Would it not be well for the Republican Party or any true American party to declare against any commitment to any international policy until after this war is won, and until Americans are able to see what international policies are practicable and what are desirable in view of the conditions and the international relations which shall exist after this war?

It is always possible to make an alliance with some nation or nations if we want an alliance.

But it might be very difficult to get out of an alliance if we had one and did not want it.

Furthermore, this war is far from over yet.

We do not know how long it will last, and we do not know what phase it will take.

Let us keep free to do whatever we believe to be our duty.

Let us keep free to protect the welfare of the American people as well as of other peoples.

Let us keep free from compact and commitments.

We have done very well while we have been free.

Indeed, this is—as our National Anthem says—"the land of the free and the home of the brave."

Let us keep it free.

War Food Administrator—Marvin Jones Best Man for Place

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. PATMAN. Mr. Speaker, permission having been granted, I am inserting herewith a radio address delivered by the Honorable Marvin Jones, War Food Administrator, on Friday, August 27, 1943, on the subject of agriculture's attack for 1944.

To my mind, the President could not have made a better selection for the place of War Food Administrator than our former colleague here in the House of Representatives, Judge Marvin Jones. He is not only an able man, but he has plenty of good, common, horse sense, which is manifesting itself rapidly in connection with the administration of this high and very important office. Judge Jones is further to be commended for surrounding himself with good men like our former colleague here in the House, the Honorable W. L. Nelson, who served on the Committee on Agriculture of the House when Judge Jones was chairman of that committee, and the Honorable Grover C. Hill, Assistant Secretary of Agriculture.

The address is as follows:

I am going to talk this evening about food—about our food prospects and our food problem. Life begins with food. It cannot be sustained without it. Powerful in time of peace, it is even more powerful in time of war.

Food is as important to an army as guns, as important to our home front as steel or oil.

Food is not a political issue. It is a critical war material, and I respect it accordingly. Tonight, I want to give the full facts and then rely on the common sense of the American people to know what to do.

Our duty here on the home front is to produce the food and then to distribute it—not just to please those who want a lot of food and can afford to pay for it—but according to one rule: How will it best serve the whole Nation in the emergency?

Our armed forces come first. They must be supplied. Next, there must be food for our civilians. Then we must supply food for our allies who are helping to fight our common enemies. Then, too, helping to supply food to the hungry people in the liberated countries has been shown to be of great help to our fighting forces.

The more efficiently we produce and distribute food, the better it is for us and for our soldiers, and the quicker they can come home.

First, a brief summary of the actual food situation as it now exists. When the war began, our food and agricultural situation could hardly have been better if we had known when the war was coming.

The morning of Pearl Harbor found our bins and warehouses piled high with the biggest stock piles of basic farm commodities we had ever had. Our stocks of corn, wheat, and cotton, and our livestock numbers were all at record levels or near.

The productive capacity of our soil was at an all-time high. Partly because of the conservation programs of the preceding years, our yields per acre for the past 5 years have averaged over 20 percent higher than the average for the 20 years just preceding.

Then, there was a trained and experienced farmer organization at the county and community level, all ready to mobilize agriculture to win the war. The beginning of the war found agriculture prepared.

The man who criticizes American agriculture has not studied the facts. The American farmer, each year for the last 5 years has broken the all-time food-production record which he had set the year before. Each year he has set a new record, and broken it the next year.

Nineteen hundred and forty-one was a great production year, but in 1942, in spite of the increasing shortages of farm labor and machinery, the American farmer continued to work and set another all-time record.

But the critics are hard to silence. They say that the situation is so muddled and hopeless that famine is just around the corner. Yet we now have the largest livestock

population in our history—more cattle, more hogs, more dairy cows, and more poultry than we have ever had before. In spite of the late and unfavorable spring, in spite of the disastrous floods in the Farm Belt, in spite of other obstacles—the present outlook is for a total food production for this year which will closely approach the record of 1942, and surpass any other year in our history.

I give you this record to think about. The American farmer has a war record to match even the war record of his sons at the battle fronts, and no greater tribute can be paid.

The critics, who talk about muddle and famine, cannot smear that great record. It will stand inspection.

The August crop report indicates a total crop production for the year about 5 percent higher than any year in our history except last year. And because of our greater livestock production, the total food output this year, given favorable weather, may break all records again, even last year's.

Now what about food consumption?

Our civilians ate more food per capita in 1941 and 1942 than ever before in our history. They ate it partly because of our huge supply and partly because they could afford to buy it, with their present record-buying power.

For this year, present estimates indicate that our civilian food consumption—per capita—will be slightly less than during the last 3 feast years—but higher than for any year in the twenties or the thirties.

But this is only a part of the story. This does not mean that every housewife can have all the choice she wants, or all the food she wants. Those who have always had an unlimited supply will eat somewhat less—and many who in peacetimes could not afford so much will now eat somewhat more. Since this is in keeping with the wisdom of distributing our food supply so it will do the most good, I know that those who have always had all they wanted will not object now to sharing with our soldiers and our workers who must eat more now than before.

I want to repeat that in spite of our enormous production and in spite of our high total level of consumption, there will continue to be short supplies of various foods at various times. And there will be continuing short supplies of some foods. No matter how much we increase production, the needs of our civilian workers, our allies and our soldiers will outrun the supply.

Our responsibility in the food field includes two major problems. First, to produce as much as possible. Second, to distribute this food to best advantage.

We are announcing step by step a program for the greatest production in our history for 1944. Fortunately this can be done in conformity with good soil conservation practice, thus avoiding the tragic blunder of the other war when land was plowed up without regard to its fitness and the soil was allowed to wash and blow away without any adequate means to prevent it. That blunder will not be repeated.

It takes hard work to produce food. There is no other way. It cannot be produced by directives. What we can do here is to remove obstacles to production and to assist in getting supplies and labor to meet the farmer's needs. He knows full well that in wartime this cannot be done perfectly by anyone and that there will always be shortages of various kinds.

I know that the Nation's farmers and ranchmen will produce an abundance if they have the necessary tools, equipment, and repairs, fertilizer, credit, labor, and a price that is adequate to cover the extra costs and hazards of increased production.

We shall continue the drive for a full allotment of all these, but I am sure the producers will understand that war makes many demands for critical materials, and although we will do all we can, there will be shortages and they will, I am sure, continue to make these limited supplies go just as far as possible.

We will continue to help solve the farmer's labor problem by cooperating with the local labor people in the counties and communities where the problem is best solved. We have brought in thousands of workers from Mexico and the Caribbean. We have arranged for the use of thousands of war prisoners on farms. There has been deferment of some millions of essential farm operators and workers. We have helped organize the United States Crop Corps which has hundreds of thousands of workers on farms. We will keep on doing these things, although the real solution has been found out in the country by the farmer and the communities themselves.

In addition to equipment and labor, the farmer needs prices that will allow him to produce. Farmers don't want to get rich out of the war; they merely want adequate price protection. This should be given to them.

In my judgment the best way to get production is to have a definite support price that will last throughout the season. It should be high enough to cover the added risks and hazards that go with increased production. And it should be announced early.

That means the Government would stand ready to buy any surplus of a commodity that might not flow into the regular channels at that price. In some cases it might be necessary for the Government to absorb a loss.

I can't give a single formula here for all commodities, because no single formula would work for all crops. In the case of some commodities it might be necessary to license processors and handlers. I think it is very desirable that existing processor and wholesale and retail facilities be utilized.

There will be no restriction on food production. All-out production is needed. We hope to give the farmers the information as to the needs well in advance of planting time and then rely on a voluntary program, with no written contracts, for the farmers' response.

We already have the local organizations throughout the country at State, county, and community levels, with the committeemen selected by the farmers themselves. They know how to administer this program, and we can depend on them in this emergency. The State and county war boards have been doing fine work and they will be continued.

I expect to consult the Congress, the farmers, and the farm groups and seek their advice and help. If a better way can be found, I am willing and anxious to have it. I served more than 20 years in the House of Representatives and 10 years as the chairman of the House Committee on Agriculture, and during those years I worked with the representatives of the farm groups and expect to stay in close contact with these producers. No program can succeed without the support of the people throughout the whole country.

In our effort for production of food, in our effort to prevent waste of food, and in our effort for the best distribution of food, we hope that producers and consumers, throughout the whole country, will be willing to work together in the common cause.

Ever since that day in 1775 when the embattled farmers stood at Lexington, no group has ever played a more important part in our country's history than the producers. When the farmer joins hands with the worker and the businessman, and they join hands with him, victory will be assured on the home front. And with victory on the home front, our armed forces and our allies will make certain of victory.

What the Home Folks Are Thinking About Post-War Plans

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. HOFFMAN. Mr. Speaker, from Mr. Don F. Cochrane, long editor of the Hartford Day Spring, published in Van Buren County, Mich., comes the following editorial clipped from the Coloma Courier, which accurately expresses the views of many of the Nation's patriotic citizens:

WHO WILL SPEAK FOR AMERICA?

Who, however obscure, but still possessing some semblance of administration authorization, will speak for post-war America?

Our Government spokesmen seem profuse in their rhetorically gorgeous word pictures of dreamy Utopias they propose to establish in Europe's conquered countries and in those still unconquered, with Uncle Sam as the beneficient manager and principal bagholder in a conglomerate earthly paradise in which people of conflicting racial instincts and irreconcilable ideals are expected to dwell in peace and happiness forevermore, according to a formula for which mankind sought for centuries in vain until the latterly created seething pool of super brains in Washington discovered it with the greatest of ease, like the agile man on the flying trapeze.

Quite smug in their belief that our mode of life is best for all men, irrespective of the racial soil in which their customs are rooted, our self appointed world reformers propose to mold the appetites of foreign nationals to a typical American bill of fare, array them in our type of toggery, and send our school teachers and disciplinarians to instruct their offspring in the wizardry of our newer economic theories and the niceties of our social code; albeit, in our own country such economic theories have backfired while juvenile delinquency is increasing here at a rate alarming to the puritanically inclined.

ALLIES DO NOT SHARE OUR DREAMS

Our allies, let alone the conquered and the unconquered, do not share the idealisms that our dreamers would impose. Englanders raise their eyebrows in recognition of the incompatibility of such utopianism with the preservation of the English Empire for which they are fighting.

The French, being Frenchmen and proud of it, are not keen to be Americanized. The Italians still love their spaghetti and their rhythmic folk songs and demand a change in menu even when brought over here as prisoners of war.

Joe Stalin remains eloquently silent, which in the light of his previous silences means only that he is uncompromisingly opposed. The Poles, the Czechs, the Dutchmen dream, not our dreams, but of the restorations of their own normal ways of life. The Japs want none of our proven unsophistication in international intrigue. The Chinese, who have yielded slowly to the Christianizing influence of our missionaries, want to get back to their rice fields and the mode of their fathers in the material phases of their existence.

As for the Germans, they are still convinced that they, not Americans, are the supermen. Their ambitious plans may have misfired, but

that does not mean that they will not fire again.

WE ARE WORLD'S PHILANTHROPISTS

Americans have ever felt the philanthropic urge and have evidenced open-hearted willingness to share their abundance with less fortunate peoples of other lands. We have been the most unselfish givers in the world.

Often have we fed the starving hordes of Europe. The solicitation of American dollars for the relief of distress in all quarters of the globe has become an organized business in this country. Many of our own people, capitalizing upon generosity, make it their vocation. In a few instances such alms seeking has been exposed as a racket.

We have loaned our money in fabulous amounts to poor debtors abroad, and such loans remain not only unpaid but repudiated. We unsuspectingly furnished our enemies in advance the materials with which they are fighting us now, and we sent our best engineers and technicians abroad to teach them the efficient methods of American industrial production, methods that are now making enemy fighting forces more efficient in taking a heavy death toll of American boys.

Our Red Cross has carried mercy to stricken peoples in many lands, and we are proud of the work of that organization as one of America's outstanding humanitarianisms.

We are also proud of the fact that the hat has never been passed in any foreign country for the relief of distress in America. It is our good fortune that we have never stood in need of foreign charity. We have never borrowed from foreign governments to replenish our own National Treasury nor failed to pay our international obligations. To revive a homely expression, America has paddled its own cance.

AMERICA FACES THE FUTURE, TOO

These facts are not recalled deprecatingly, nor bemoanfully, but they should serve to remind us that the proposed super gratuities of our do-gooders will meet with no more appreciation than have some of our past philanthropies; that they may be no more appreciated than our current colossal contribution to the defeat of the common enemies seems to be in some foreign quarters.

Our allies are very definitely looking to the future—to the future of their own countries and their places in the post-war world.

The United States faces the future, too. Most of us expect to live our allotted days in post-war America. We are justifiably concerned as to what sort of America it is to be. We are particularly solicitous of the America to which our millions of fighting men will return after winning the victory for us and for our allies.

We expect it to be a self-reliant America in which we must work out our own destiny, exactly as successive generation of Americans have done since the colonists revolted against English rule.

It is time that we and our national leaders gave more though to our own post-war weal and less to grandiose theories of world-wide social and economic supervision that may make us only despised as international meddlers. We should harbor no delusions that the world at large will concern itself with America's domestic welfare save as we prove a help or a hindrance to them in international trade, in which they will, as always, take the better of the bargain if they are more clever than we.

To think in terms of America first is not selfishness. Neither is it isolationism, a misconstrued term to which much undeserved odium has been imputed. It is plain common sense, plus observance of the law of self-preservation as the first law of nature.

It is time that we took steps to prevent visionary wasters of our national resources from approaching the inevitable peace table bearing unwanted idealisms that hard-headed allies will promptly throw in the ash can. America should not be elbowed out of the peace parley, as it was following the First World War.

We are not fighting for more territory nor for the privilege of plundering any nation. We are fighting in defense of our right to live our national life and pursue our ideals unmolested by foreign tyrants. But we shall miss whatever we are fighting for unless we begin to face the facts realistically and make America's post-war security a matter of first concern.

It will avail little if we peddle the "four freedoms" abroad and lose them at home. A little coterie of starry-eyed visionaries temporarily in control of America's official megaphone should not be permitted to convert Uncle Sam into Uncle Sap.

Let's Treat the Red Man White

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. MUNDT. Mr. Speaker, by leave of the House, I am attaching hereto a copy of a magazine article written by me and appearing in the September issue of The Nation's Schools. It is entitled "Let's Treat the Red Man White," and in six short words this title expresses what to my mind is the obligation of the United States to the American Indian. It is an obligation which has never been met, and it is an obligation which I propose to do my best to fulfill as a Member of the House Committee on Indian Affairs.

I now have before the Rules Committee of the House an investigatory resolution which has had the unanimous approval of the House Committee on Indian Affairs. This legislation is known as House Resolution 166, and it is my hope that the Rules Committee will permit the House to have an early vote on its adoption. It is high time, in my opinion, when this body made a complete and careful survey of Indian conditions in this country and then took steps to give to the American Indian the white man's chance, to which he is so richly entitled.

The article follows:

LET'S TREAT THE RED MAN WHITE

(By KARL E. MUNDT, Congressman, First District, South Dakota)

Our "four freedoms" are faltering badly on every Indian reservation and in every State in which Indians live in substantial numbers.

On March 15 of this year, after having served for more than 4 years as a member of the House Committee on Indian Affairs, I introduced a resolution (H. Res. 166) calling for a complete investigation of Indian conditions throughout the United States.

WE CANNOT DENY OUR RESPONSIBILITY

Rich in its native culture and in its potential capacities, the Indian population of America in many areas still lives in conditions of poverty and backwardness so startling as to indict us before the world. Improvement of the status of the American Indian is a responsibility that we cannot and must not longer dodge. It is a responsibility that cannot be met simply by a continuation of our policy of making substantial annual appropriations to the Indian Bureau. We must take time to develop a continuing and constructive program for gearing the Indian into the white man's economy in North America. In 1924, the Indian was belatedly given full citizenship rights in this country, but his elevated legislative status has done little to improve his standards of living. It came, instead, as a tardy recognition of the fact that during World War No. 1, the Indians furnished more men per capita than any other race and likewise furnished more money per capita for the support of the war than any other race. Every general with the Allied forces in that war commended the American Indian for his heroism.

Again in the present war, the Indian is duplicating his record of leading all other races in men reporting to the colors. In time of war we find ample use for the talents and courage of the Indian, but in times of peace we shamefully revert to attitudes of indifference which for more than a century and a half have recognized the Indian as an American problem without working out an American solution to the situation.

It is hoped that this time Congress will act intelligently and sympathetically to develop a long-view program destined to solve once and for all a problem that could well have been eliminated in its entirety years ago.

In writing to a friend of his under date of February 18, 1803, Thomas Jefferson outlined what in my opinion is a sound approach to make in dealing with the Indian problem.

Said Jefferson: "In truth, the ultimate point of rest for them (the Indians) is to let our settlement and theirs meet and blend together, to intermix and become one people, incorporating themselves with us as citizens of the United States. This is the natural progress of things and it will, of course, be better to promote than to retard it. Surely it will be better for them to be identified with us and preserved in the occupation of their lands than to be exposed to the many casualties that may endanger them while a separate people."

The policy set up in contradiction of the Jeffersonian principle has proved a dismal and disturbing failure.

Today, in many areas, Indians are living in homes and huts and tepees inadequate to keep out the weather and to protect either health or happiness. Sanitary conditions on many reservations are deplorable. The Indian Service has constructed admirable hospitals in some communities, but in others the natives lack suitable medical care, especially for the younger children.

Educational conditions among the Indians vary greatly. We have some excellent Indian schools, but many Indian children are bundled off to boarding schools at early ages and family life is disrupted.

A start, but a very inadequate one, has been made in the proper training of the Indian children in vocational schools where they can be fully prepared in the handicraft arts and in the handling of the tools of trade in which they have a tendency to show excellent capacities.

Needed badly is adequate opportunity for training Indians above the high-school level so that they may attain both greater maturity and greater skills before being turned out to battle with a society all too likely to be skeptical of the Indian's ability and, in addition, unsympathetic with his problems.

SEGREGATION SHOULD BE DISCOURAGED

The present Indian Administration appears to place much hope in separate Indian schools and to discourage the attendance of Indian pupils in schools enrolling whites. In some areas, however, Indians have displayed a marked capacity to adapt themselves to educational programs in which both white and red children attend the same institutions. It is indicated that perhaps greater headway can be made toward the goals outlined by Thomas Jefferson if the segregation of Indians is discouraged wherever feasible, whether it be in private life or in public education.

Indians take well to farming, especially to the management of livestock. Under proper guidance to nurture their appreciation of property rights and the importance of ownership, Indians have demonstrated their ability to earn an independent livelihood on the farm either in competition with one another or as part of the white man's agricultural economy.

One criticism of the present administration of Indian affairs may be a tendency to treat the Indians too much as a race apart rather than to direct their destiny toward that of an assimilated race.

Our Government may be charged with being negligent in showing a true appreciation of the Indian's needs, but it cannot be indicted for being niggardly. During the last 20 years, it has spent more than $643,000,000 on the American Indian and we are presently employing more than 8,000 persons in the Indian Service. The latest statistics show 332,969 Indians living in the United States; thus, we find one Government worker for about every 40 Indians; 1 for every 8 Indian families on the average. In their early days of savage fighting, it scarcely took more white soldiers with good rifles to patrol the Indians than are now being employed in the Indian Service.

What is needed, therefore, is not larger appropriations necessarily, or more employees under the Indian Bureau, but a constructive and continuing program.

As late as 1934 the present Commissioner of Indian Affairs, John Collier, said at an Indian council in Rapid City, S. Dak., "The guardianship maintained by the United States is carried out under bad laws which are wicked and stupid and which make slaves even of the Government employees hired to enforce the law."

Mr. Collier's criticism is stern and drastic. Unfortunately, the progress he has made in the correction of the conditions he criticizes has not kept pace with the energetic indictments he has leveled at the Indian Service, both before and since it has come under his control.

An apathetic Congress and an indifferent public must share the responsibility for this snail-like progress, but it is also true that Mr. Collier has not provided a long-term program that gives promise of meeting satisfactorily the Indian's fundamental need for an economic or educational background and experience that will make him an independent, self-supporting citizen.

It is my conviction that any governmental Indian policy must be measured for its efficacy by the simple yardstick, "Does it hasten the day when the Indian can become an independent citizen and take his rightful place in our American economic and political activities?" Any program that helps to answer this question in the affirmative should merit the support and encouragement of the Congress and the country.

Education has a vital role to play in the attainment of the goals defined by Thomas Jefferson. We are making the Indian literate, but we are not making him self-supporting and independent. More vocational training for students of mature age is required and all Indian education should be slanted at helping the Indian to fit himself into the national life, rather than at perpetuating for him a separate culture, a separate status, and a segregated reservation life.

Under careful planning a forward-looking Indian policy on the part of the Government should be able within less than 50 years to obviate the necessity of maintaining a separate Indian Bureau which is no more necessary than a bureau to handle problems for Italians, French, Irish, Negroes, Russians, or any other racial group.

More and more the separate States may well be entrusted to assume greater responsibility for Indian health, work, education, and vocational guidance. The Federal Government for some time will have to supplement State funds with Federal appropriations, but just as the general American educational program is best developed when its direction is localized, it follows that too much Federal direction of the Indian's destiny has, over the years, retarded his progress.

It is to be hoped that the investigation which I have proposed will help to shape a permanent Indian policy destined to release and reenforce the splendid native characteristics so abundant in our first Americans.

Newsprint and the Quislings

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 17, 1943

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following editorial from the Chicago Tribune:

NEWSPRINT AND THE QUISLINGS

The War Production Board is considering a further cut in newsprint use of at least 5 percent. It announced that the 5-percent cut had been recommended by the newspaper industry advisory committee meeting in Washington. This reduction, if put into effect, would result in slashing American newspapers 15 percent in size or in circulation or in a combination of both during 1943.

The newsprint mess presents the same old story of Quisling bureaucracy that has characterized the management of food, gasoline, fuel oil, and all the other civilian commodities since the New Dealers assumed control of our economy. They divide up what we have because they do not believe in producing more and do not know how to produce more if they believed in doing it. They promote crises in order to find the excuse for seizing more power.

Newsprint production could be expanded to meet any need if private enterprise were free to do it and if the Washington planners had not created a deliberate scarcity of workingmen by their sly mismanagement of manpower.

Limitations placed on newspapers by the so-called newsprint shortage are deliberate blows at the free press of America, which the New Dealers know they must destroy before they can assume the complete, tyrannical control over this country toward which they have been building.

Renegotiation

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my own remarks and print a letter, I am submitting a comprehensive legal discussion of the renegotiation of war contracts by M. F. Cosgrove, of Topeka, Kans., one of its leading attorneys. It is a criticism with suggested remedies, which are all illuminating:

DORAN, KLINE, COSGROVE,
JEFFREY & RUSSELL,
Topeka, Kans., September 15, 1943.

Hon. W. P. LAMBERTSON,
House of Representatives,
Washington, D. C.

DEAR MR. LAMBERTSON: I have been consulted by clients with reference to the renegotiation of war contracts which I find set forth in section 403 of the Sixth Supplemental National Defense Appropriation Act, 1942, approved April 28, 1942, as amended by section 801 of the Revenue Act of 1942, approved October 21, 1942; section 1 of the Military Appropriation Act, 1944, Public Law 108, Seventy-eighth Congress, approved July 1, 1943; and Public Law 149, Seventy-eighth Congress, approved July 14, 1943.

I find that there is nothing in the law so enacted by the Congress which necessitates the advice by a lawyer to his client. It is the province of a lawyer, after a careful study of the law, to advise his client what his rights are under the law and what procedure he shall follow if those rights have been infringed. This act of the Congress has done away with property rights entirely. It has no counterpart in any other act of Congress with which I am familiar except those of the same general nature passed in recent years. I have found it necessary to turn to the laws of Russia to find anything comparable. If you will turn to the laws of Russia under the heading of "Property," you will find the following:

"Private property in the sense of ownership of the means of production has disappeared. The economic basis of the U. S. S. R. is the socialist system of economics and socialist property in the means of production, which has been established as a result of the abolishment of capitalism, private property, and the exploitation of man by his fellows." (Constitution of 1936, sec. 4.)

The Congress, in setting up the machinery for renegotiation of contracts, has set up another bureau with power to legislate and to issue regulations and directives with all the force and effect of law. Again turning to the law of Russia under the heading "Legislation," we find the following:

"The only legislative organ is the SuprS. But ordinances and decrees are being issued also by the Presidium of the SuprS and by the CouncPC. The most important decrees issued by the CouncPC are often signed by the central committee of the Communist Party as well, although that is not required by the constitution. All these decrees have practically the same importance as the acts of legislation, and may be counteracted only by the SuprS, acting on its own initiative or on the protest of the Attorney General."

I will now attempt to point out the reasons why I have made the foregoing accusations and will suggest the remedies. I will quote some pertinent sections in the law passed by

you for the government of the people by whom you were elected:

"(c) (1) Whenever, in the opinion of the secretary of a department, the profits realized or likely to be realized from any contract with such department, or from any subcontract thereunder, whether or not made by the contractor, may be excessive, the Secretary is authorized and directed to require the contractor or subcontractor to renegotiate the contract price. When the contractor or subcontractor holds two or more contracts or subcontracts, the secretary, in his discretion, may renegotiate to eliminate excessive profits on some or all of such contracts and subcontracts as a group without separately renegotiating the contract price of each contract or subcontract.

"(2) Upon renegotiation, the secretary is authorized and directed to eliminate any excessive profits under such contract or subcontract (i) by reductions in the contract price of the contract or subcontract, or by other revision in its terms; or (ii) by withholding, from amounts otherwise due to the contractor or subcontractor, any amount of such excessive profits; or (iii) by directing a contractor to withhold for the account of the United States, from amounts otherwise due to the subcontractor, any amount of such excessive profits under the subcontract; or (iv) by recovery from the contractor or subcontractor, through repayment, credit, or suit of any amount of such excessive profits actually paid to him; or (v) by any combination of these methods, as the secretary deems desirable. * * *

"(4) Upon renegotiation pursuant to this section, the Secretary may make such final or other agreements with a contractor or subcontractor for the elimination of excessive profits and for the discharge of any liability for excessive profits under this section as the Secretary deems desirable. Such agreements may cover such past and future period or periods, may apply to such contract or contracts of the contractor or subcontractor, and may contain such terms and conditions as the Secretary deems advisable. Any such agreement shall be final and conclusive according to the terms, and except upon a showing of fraud or malfeasance or a willful misrepresentation of a material fact, (i) such agreement shall not be reopened as to the matters agreed upon, and shall not be modified by any officer, employee, or agent of the United States; and (ii) such agreement and any determination made in accordance therewith shall not be annulled, modified, set aside, or disregarded in any suit, action, or proceeding. * * *

"(6) This subsection (c) shall be applicable to all contracts and subcontracts hereafter made and to all contracts and subcontracts heretofore made, whether or not such contracts or subcontracts contain a renegotiation or recapture clause. * * *

"(f) Subject to any regulations which the President may prescribe for the protection of the interests of the Government, the authority and discretion herein conferred upon the Secretary of each Department may be delegated in whole or in part by him to such individuals or agencies as he may designate in his Department or in any other Department with the consent of the Secretary of that Department, and he may authorize such individuals or agencies to make further delegations of such authority and discretion."

I do not contend, and no one will contend, that anyone is entitled to profiteer as a result of the war. I still have sufficient faith in my fellow man to believe that when this piece of legislation was enacted into law, it was the belief and intent of all Members of the Congress, by this means, to check profiteering and to return to the Treasury of the United States any moneys which may have been taken from it wrongfully. If such was the intent, the results obtained fall far short of producing the results desired.

Just as the Supreme Court has defined what constitutes interstate commerce within the meaning of the National Labor Relations Act, so could it be held that practically everyone is a subcontractor within the meaning of the renegotiation of war contracts. Practically everyone in the United States has performed some service or sold some material to a contractor, and thus has become a subcontractor within the meaning of the act. Thus you have enacted into law a means by which the powers vested in you by the Constitution have been delegated and permitted to be redelegated without end so that under its provisions there can be set up a gestapo with powers more far reaching than those delegated to revenue agents to inquire into the profits of all, whether such profits be in the form of wages, salaries, fees paid, commissions paid, amounts received from the sale of merchandise, or from the combination of these various things.

No yardstick is provided by you for the measuring of excessive profits as you have set up for the revenue agents. What constitutes excessive profits is an amount within the sound discretion of each member of the gestapo thus created by you. No right of appeal to a court of competent jurisdiction was given by you. You did except from the finality of the decision of the gestapo "fraud or malfeasance or a wilful misrepresentation of a material fact." Of course you need not have made that exception. The law, if such a thing still remains, gave to the party affected that right.

The persons to whom the act applies were defined by you as follows:

"The term 'subcontract' means (i) any purchase order or agreement to perform all or any part of the work, or to make or furnish any article, required for the performance of any other contract or subcontract."

From the foregoing, it will be seen what I meant when I stated above that practically everyone in the United States could be said to be a subcontractor.

The term "renegotiation" would ordinarily mean that two people would get together and have a meeting of the minds—in other words, reach a new agreement. You changed the meaning of that. Here is the way you defined it:

"The terms 'renegotiate' and 'renegotiation' include the refixing by the Secretary of the Department of the contract price."

This means that the Secretary of the Department can go back and refix the price that anyone has received for any article furnished or required for the performance of any contract or subcontract or for any service rendered for that purpose.

You have failed to fix a yardstick by reason of the definition which you have given to the term "excessive profits." Your definition is as follows:

"The term 'excessive profits' means any amount of a contract or subcontract price which is found as a result of renegotiation to represent excessive profits."

Since renegotiation means refixing by the Secretary of the Department and since the Secretary of the Department can delegate and redelegate his authority, this means refixing without rule or regulation the price received for all services performed, for all work done, or the price received for any article required for the performance of any contract or subcontract.

REMEDY

Ordinarily, a piece of legislation which is bad may be remedied by an amendment here and there. The plan for renegotiation which you have given to your country is not susceptible to amendment. There is only one thing to do, and that is to repeal it and start over again. And in the consideration of new legislation on this subject, there is no necessity to create another bureau as you have attempted to do. It should be handled in its entirety by the Treasury Department, which already has competent employees entirely capable of handling the matter in conjunction with the collection of income taxes. An adequate provision has heretofore been made for review by the courts of all decisions of the Treasury Department.

An identical letter to this is being written to each Member of Congress from Kansas. Most of you attended a meeting of cattlemen recently held in Kansas City. The things which were said by the livestock men from the stage of the Music Hall on that day were mild in comparison to what was being said by the men attending that meeting. I was there as a livestock producer. I sat through the entire meeting and visited with many of them during the noon hour and in the evening. I am deadly in earnest in what I have said to you in this letter. If you want to preserve the form of government which we once enjoyed, if you want to prevent a revolution in this country, Congress must not only cease the establishment of additional bureaus, but must abolish a great majority of the bureaus which have been established and must discontinue the Russian practice of attempting to govern by executive order, directives, and regulations. You have already departed so far from the traditional path of legislators that property rights in this country have now scarcely more meaning than they have in Russia, as defined by the Russian law which I have quoted herein. I know that I speak the will of the majority of the people of the United States, should all of the people make a careful study of the subject matter of legislation which we have here had under consideration, when I say that it is your solemn duty to at once repeal all statutes and parts of statutes pertaining to the renegotiation of war contracts, and, in the drafting of new legislation to cover this subject, to consult with and be governed by men who are familiar with war contracts from a practical standpoint and not with crackpot theorists who are working to overthrow our form of government.

Yours very truly,

M. F. COSGROVE.

A Lesson in Arithmetic in Connection With the Purchase of Bonds To Back the Attack

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a very interesting and timely poem written by one of my constituents, Mr. Thomas H. Williamson, Aiken, S. C., which I am sure will prove to be interesting reading not only to Congressmen, but the many readers of the CONGRESSIONAL RECORD.

With the real answer given in this example in arithmetic, it should be very encouraging to all of us in buying bonds to the limit.

The poem follows:

A LESSON IN ARITHMETIC

Arithmetic will do the trick,
Buy a bond and do it quick;
Buy and buy, and what you lend,
By and by—goodbye Berlin.

Thirteen dollars twenty dimes,
Multiplied a billion times;
Add these figures at the end,
And it will divide Berlin.

Cancel zero's from the world,
Then Old Glory can be furled;
Subtract the Axis, square the rest,
Then your taxes will be less.

—*Thomas H. Williamson.*

Address by Senator O'Daniel at National Food Conference

EXTENSION OF REMARKS

OF

HON. W. LEE O'DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "What America Needs Most Is a House Cleaning in Washington," delivered by me at the National Food Conference at Chicago, Ill., on September 16, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT AMERICA NEEDS MOST IS A HOUSE-CLEANING IN WASHINGTON

I appreciate the invitation to attend this food conference here in Chicago because it gives me an opportunity to speak to this splendid group of citizens who are here from all over the Nation, also by radio to the rank and file of the good people of America. I am no politician, but instead I am just an ordinary common citizen who has rubbed shoulders with the rank and file of thousands of other common citizens for many years, until the good people of Texas became sick and tired of the way the pussyfooting professional politicians had bungled the affairs of the State and neglected the rights of the people, so they picked me out of the ranks and elected me Governor of Texas for two terms, and then sent me to Washington as their United States Senator. During my 2 years in Washington I have discovered that the gang of professional politicians in my home State of Texas were pikers compared with that gang of professional politicians at Washington who constitute the dynasty club which has taken over the affairs of this Nation and is operating the United States of America for the personal benefit of themselves, their relatives, and cohorts, and with practically no attention being given to the welfare of the great rank and file of our good people throughout this Nation. During the recess of Congress I have been staying on my little ranch, near Aledo, in Parker County, Texas, and from the front room of that little ranch house away out in the wide open spaces, I broadcast a report to the people of Texas concerning what I had found out in Washington. In those broadcasts I simply told the plain, unvarnished truth about what is being done to the people of this Nation by that gang of bungling bureaucrats in Washington. Of course, time on this radio will not permit me to tell you the whole story today, but if any of you folks now listening would like to have the full story of what I reported to my people in Texas, just drop me a card or letter and I will be glad to send you copies of those broadcasts. Address your card or letter to Senator W. LEE O'DANIEL, Washington, D. C.

Let me also say that I do not believe that it does a great deal of good to criticize the bungling bureaucrats in Washington, and complain of the demoralizing conditions on the home front which have been caused by their twisted thinking and crackpot edicts unless at the same time I can offer suggestions that will remedy the situation. Therefore, in the copies of broadcasts which I will mail to you, you will find 15 suggestions which I have made for your consideration. I say they are for your consideration because I am old-fashioned enough to still believe whole-heartedly in our American form of democracy, and in our Constitution, and I believe that when our wise forefathers wrote that Constitution of the United States they had in mind that the people of this Nation should be the masters, and the public officials should be the servants. Exactly the opposite condition prevails now and your public officials in Washington are the masters, and the people are the servants. Each and every one of you must make application to, and get a permit from, some bureaucrat in Washington before you can plant, harvest, or sell your crops, or before you can buy the food for your family's meal, or before you can make a dress, buy a suit of clothes, kill your own turkey for your own use, or get a new diaper for the baby. Therefore, these 15 suggestions for correcting these deplorable conditions are for your consideration, and I as your servant, am ready to respond to your wishes after you have considered them. After reading the 25,000 letters which poured in to me from people who heard those broadcasts, and which represented a cross-section of public opinion from people in almost every walk of life, I have reached the very definite conclusion that there is no division in the minds of our people insofar as problems of winning the war are concerned. The American people are willing to make any sacrifice necessary to see that this war is fought to a successful conclusion and terminated by the unconditional surrender of the Axis Powers. Let me add that the same determination prevails practically 100 percent in the Congress of the United States, and never before in our history has a President had more unanimous support of the Congress than our present Chief Executive has had in all matters essential to the war effort. The people of America are satisfied with the way the generals are running the war, and, thank God, the war is being run by the generals, and not by the bungling bureaucrats in Washington.

This war is a terrible thing and has reached into almost every home in America and touched the tenderest heartstrings which bind our homes together, and while my profound sympathy goes to each aching heart, my eyes cannot be blinded, my ears deafened, nor my voice silenced regarding the attempt that is being made by the dynasty in Washington to use this war emergency as a means of destroying our true and tried American system of representative democracy and substituting in its place, communism, socialism, or some other form of foreign "ism," which means dictatorship in America. The people of America are tremendously concerned about our domestic affairs. The people of America are concerned because they know that during the past 10 years the glad hand of welcome has been held out in Washington for the Communists and fellow travelers and those theorists and star-gazers who would make America over according to the European pattern. The people of America realize that the chief troubles which we face today did not originate with the war, but that they had their origin during the past 10 years—during peacetime. For 10 years the prevailing philosophy of government in the United States has been that we can have more by producing less. It has been a philosophy predicated on the idea that it is the function of the Government to support the people, and not the function of the people to support the Government. It has been a philosophy which has offered a reward for indolence and has placed a badge of honor on shiftlessness. It has been the philosophy which has led the people to believe that they were serving their own personal welfare and the welfare of the country when they spent every dollar they made. It has been a philosophy that has pointed the finger of scorn at those who believed it was a responsibility of every citizen to save a part of that which he made. It has been a philosophy which classified the man who had a bank account as an economic royalist and the man who was living off of public charity as the Nation's No. 1 citizen.

These philosophers and theorists who want to do away with our American system of democracy, individual initiative, and our system of private enterprise in this country; these people who want the Government to take over and operate all lines of business; these people who want to use the war as an excuse to try out their pet socialistic philosophies on the people of this Nation, have caused the great rank and file of our people to realize that unless something is done in the near future to stop this communistic movement and get back to our old-fashioned system of American democracy, we may find to our sorrow that while our brave sons are fighting, bleeding, and dying on foreign battlefields to destroy dictatorship abroad, that dictatorship has been established right here at home. During the time I have been away from Washington I have talked with farmers, dairymen, and cattle raisers throughout the United States, and every day dairymen in this country are being forced to sell their herds, and the reason they are being forced to sell their herds comes primarily from two causes. One is a shortage of labor which has been created largely by governmental blundering, and the other is the fact that the O. P. A. has fixed the price of milk, but has not at the same time fixed the price of all the commodities that go into the production of milk. Labor which the dairymen must pay costs him twice what it did a year ago and the feed which he uses has, in many cases, gone up 50 or 60 percent. These bureaucratic bunglers in the face of a serious transportation shortage in this country have tried to work out schemes to ship cottonseed meal from Texas up here to Illinois to feed the Illinois cows, then ship soybean meal down to Texas to feed the Texas cows. These bunglers destroy the source of production of milk and then offer the American people as a remedy, the rationing of condensed milk. With more livestock on the ranges of America than there has ever been before, Government edicts have prevented it from getting into meat markets where people can buy it, and many of our honest working people are going hungry for meat in a land of over-populated cattle, sheep, and hogs. Thus O. P. A. proves its uselessness and its own actions bear testimony that it should be abolished immediately.

There are many disturbing factors which are causing our trouble on the home front today, but two of these factors stand out prominently. One is the way our labor con-

ditions have been bungled by the professional politicians who have petted and pampered the labor leader racketeers of this Nation, in hopes of getting their financial support in their campaigns for reelection. This unsound labor policy has created a manpower shortage which is threatening our whole domestic economy, and is seriously impeding our war effort. The other factor is the disgraceful bungling of our whole agricultural problem, which has brought on a serious food shortage in this Nation, and threatens to become dangerously worse, with the possibility of impeding our war effort. In discussing these labor conditions, I want to make it perfectly clear that I am a true and sincere friend of the laboring people of this Nation. I am the son of hard-working parents, and I have performed hard manual labor much of my life. I am strongly in favor of organized labor. I believe in unions and in their right to organize, and to bargain collectively, and in their right to strike and picket peacefully in peacetime. My fight is not against the honest working people, but it is against the designing labor leader racketeers who work not, but live in luxury from the exorbitant fees they extract from the pockets of the honest hard-working people, and in their unholy alliance with the unscrupulous professional politicians who work hand-in-glove with them. This detestable combination determined in Washington that this war should be fought on a basis of the 40-hour-workweek, with penalty for overtime, which has resulted in war plants of this Nation being operated with three shifts instead of two.

It means that during this period of no unemployment we are operating under the same law that was enacted several years ago to help correct a serious unemployment situation and that in most cases three men are working at jobs which could better be done by two men. Honest, patriotic working people who would like to work longer hours per week during this war crisis, and thus help to hasten the end of this horrible war and at the same time make more money to lay aside for that rainy day which is sure to come after the war, are prevented from doing so because their racketeering labor leaders prefer to keep three men on every two-man job because it means three fees paid in to them instead of two, and that means more money which they may contribute to help reelect the professional politicians who make the laws that permit this disgraceful racket. Well-informed people know that there would be no manpower shortage in this Nation if all restrictions were removed and our honest, patriotic men and women were permitted to work as many hours as they desire, to help build the implements of war that their brave sons on far-flung battlefields need to fight this war. The manpower shortage has been created by the bungling bureaucrats in Washington. It could be corrected overnight if you had enough men in the right positions in Washington who wanted to correct it. Right here let me say for the benefit of our radio listeners that radio time for my full speech was not available, but if any of you folks in radioland desire a copy of my full speech I will be glad to send it to you if you will drop me a card or letter addressed to Senator W. LEE O'DANIEL, Washington, D. C. Now to the food shortage, which has also been created by the bungling bureaucrats in Washington. Due to the fact that the farms of this Nation have been absolutely stripped of labor to put in our war plants, due to the bungling of the O. P. A. and other governmental agencies, this Nation faces the grave danger of a serious food shortage. But, my friends, this again is not something that has happened since the war started; if you will refer to the record, you will find that there were only 1 or 2 years during the past 10 years when we did not import more food in America than we exported. The policy of this Government to limit production and to regiment every activity of agriculture had, prior to the beginning of the war, reduced the efficiency of the operation of agriculture to a very low level.

Another thing, if during the last 10 or 15 years we had set up in this country a system that was fair and equitable to agriculture, we would not have started this war with agriculture in the impoverished condition which it is in today. I do not have time to go into a detailed discussion of this matter, but one thing is very obvious and all of the figures compiled by the United States Government itself reflect this fact: the agricultural program which we have had in effect in America during the past 10 years has been an absolute failure. The nonagricultural classes in this country are today earning $3 where those employed in the field of agriculture are earning only $1. The average earnings of the farmer during the past 10 years have been less than they ever were in a similar 10-year period during the past 30 years, even after you included all of the Government checks which have been sent to the farmers throughout this Nation for not raising food and for not growing livestock. You find that these checks received for what they did not do, plus the checks received for what they did, when totaled, would not represent a living wage for agriculture. And furthermore you find that the average earning of agriculture during this 10-year period has not been raised over what it was during the previous 10-year period. My belief is that the plan generally referred to as the domestic allotment plan which gives to American agriculture a priority to the American market, at American prices, will accomplish two things: First, give to agricultural classes a fair break with the nonagricultural classes; and, second, accomplish the purpose without regimenting the farmers into a socialistic society. I do not believe there is any thinking person who knows America, who does not realize that we are capable in America of producing enough food, not only to feed all of our people, but probably enough to feed the world, but it cannot be done under the directions of these bungling bureaucrats who are trying to solve the problems of agriculture sitting behind mahogany desks in the big office buildings on the banks of the Potomac. Please bear in mind that this labor policy and this agricultural policy which I am discussing were not adopted after we got into war. These policies were adopted about 10 years ago during peacetime, so let nobody say they are war measures. The trouble with our Government today is that prior to the time we entered the war we had built up a Government which is composed of a vast bureaucratic system; prior to the time we entered the war we had discarded government as set up under the Constitution with three separate departments: the legislative, the executive, and the judicial. And since we entered the war all of the fellow travelers who had already located themselves in key positions in Washington, are using the war emergency as a means to further regiment, control, and dictate to the citizens of this country.

Now, my friends, these things that I have mentioned as problems peculiar to agriculture are, after all, only typical of the situation which faces American business throughout this Nation, and if there is one thought which I should like to leave with those who are listening to me, above every other thought, it is this: You cannot solve the problems of agriculture, or the problems of any other one industry, alone—the trouble which we face in this Nation today is too general. We are going to have to solve the problems of all industry and the way we are going to have to solve them is by electing men to the United States Senate and men to the House of Representatives who will reestablish the dignity of the legislative department of this Government; men who will cease to be the craven slaves to do what they are told to do by the executive department of government and by the bureaucratic bosses. The Constitution of the United States is the foundation upon which we have built our whole system of free enterprise in America. It is the system which has at all times maintained an open road down which the youth of this country could travel with the knowledge that through perseverance and effort success could be achieved. It is this system of constitutional government that has formed the mainspring of American business. It is this which has caused individual citizens to go out and fight battles of life and to build American industry on the gigantic basis upon which it has been built. The biggest trouble which we face in Washington today is that all questions are decided with an eye set on the election in 1944, in order to satisfy the blocks of votes which the politicians in Washington who have headed this Government for the past 10 years, believe it is necessary to satisfy. You know and I know that so far as the executive department of government is concerned and so far as the bureaus set up in Washington are concerned and so far as many Members of Congress are concerned, before you proceed with any plan it must be O. K.'d by the "fellow travelers" in the big bureaus and by the leaders of organized labor who have sought to use the war to set up a dictatorship of labor over business in America.

One thing we must realize if we expect to maintain free government is that a free democratic system of government cannot be maintained when all of the decisions are made in Washington and when all of the power of government is vested in a strong centralized bunch of boards and bureaus and most of these boards and bureaus presided over by those who have distinct communistic leanings. True democracy, as provided for in the Constitution of the United States, means most definitely the rule of the people; it does not mean a rule by blocs, classes, and groups. You simply cannot have democracy and dictatorship at the same time. If there is any right on earth that is fundamental and should be guaranteed by the Government, it is the right to work. When laboring people of this Nation are forced to pay $25, $50, or $100, for their God-given right to work, freedom and liberty in this land of the free are only empty, meaningless words. That condition in industries here in America financed by taxpayers' money, now exists and bears the stamp of approval of your own Federal Government. So I say it is high time that we take off our rose-colored glasses, call a spade a spade, and proceed to the task of a general house cleaning in Washington. Right now while we are engaged in this horrible war, our American soldiers who worked in New Jersey canneries during the tomato canning crisis, had money taken out of their pay envelopes to pay for their right to work, according to recent news dispatches. That, my friends, is an indication of what our brave soldiers may expect after they return from winning this war and try to get jobs here in America. Yes, I say it is high time that we who are left at home conduct a thorough house cleaning in Washington while our sons are cleaning house in other parts of the world. The Constitution of the United States should be so amended as to protect the rights of all our citizens either to join labor unions or to stay out of labor unions. And this constitutional amendment should provide that no employer in America would

be allowed to enter into any contract which would either require or prevent a man from belonging to a labor union as a prerequisite to the right to hold a job. It must be obvious to all thinking people that if the time ever comes in this country when the mass of our people cannot hold jobs unless they belong to labor unions, then you have placed in the hands of the bosses of organized labor more power than the Government itself has, because the right to work means the right to live. If we expect to continue democratic government in this country, then the three departments of government—the legislative, executive, and judicial—must function as independent departments of government as provided in the Constitution.

The power of the executive department of government to control the legislative department of government through patronage must be broken. The Constitution of the United States should be so amended as to prevent any Member of the House of Representatives or of the Senate from being appointed to any Federal job by the President during such Member's term of office or for 5 years after he leaves office. When you consider the enormous public debt which we have built up in this country, it is obvious to every thinking man that taxes in this country upon all lines of business and individuals must not only be high during the remainder of this war, but they must remain high for a long period after the war. Private business simply cannot pay from 40 to 80 percent of its earnings in taxes and at the same time compete with Government-owned business which is tax free. We face a very different situation now from that which we faced in the past, before we incurred this enormous public debt, and established this unprecedented high tax rate. If we expect to pay this debt, if we expect to maintain free enterprise, then the Government should go out of business in competition with its taxpayers. The idea that the Government must go into the railroad business in order to regulate the railroads, or the idea that the Government must go into the public-utility business in order that it may have a yardstick to enable it to regulate the public-utility business, is absolutely unsound from every standpoint. But if we allow these fellow travelers and communistic theorists in Washington to have their way, they are going to use the high tax rate as a means of subsidizing Government-owned business and they are going to drive private business, not only the railroads and the public utilities, but every other line of endeavor, completely out of the field of business. Be not misled. These things are definitely planned for the future. I have already made reference to the vast public debt we are accumulating and the absolute necessity for the continuation of high tax rates. It is inevitable that in the future taxes on individuals must remain high and that taxes on corporations must remain high, but I want to make this most emphatic statement: Taxes should be levied with equity and fairness and taxes should be levied for the purpose of raising revenue to operate the Government and they should not be levied for the purpose of changing our form of government. Great aggregations of wealth as represented by our corporations should be required to pay their fair share of taxes, but we should realize that the American people have used the corporation as a vehicle to bring together necessary capital from both large and small investors to provide mass production and thereby provide cheap prices on manufactured goods, and a high standard of living, and we should not let these fellow travelers and Socialists in Washington tax corporations out of existence for the express purpose of substituting Government ownership for corporation ownership.

Now, then, let me come to the final matter which I want to talk about today. I have pointed out to you some of the things which I think it is imperative we have done in this country if we are to preserve our American way of life. Now let me tell you how I think we can accomplish this; and let me tell you, furthermore, that I think it is the only way we can accomplish it. We have got to elect to the United States Senate and to the House of Representatives men who believe sincerely in our American form of government and our system of free enterprise; men who will have the courage to fight to maintain this system; and then after we have done this, we must not let them stay in Washington too long, because I will tell you now that when a man stays in the atmosphere of Washington too long, he forgets that he is the servant of the people, and he adopts the attitude that he is the master of the people. The first thing I think we ought to do is to try to elect in our next election just as many good, responsible men as we can to membership in the House of Representatives and in the United States Senate. Then, the next thing we ought to do is to amend the Constitution of the United States to provide that hereafter no Member of Congress could serve for a period of more than 6 years. When a man has been in Washington 6 years, the welfare of the people will be better served if he goes back home. And in this same amendment, I would provide that the President of the United States and the Vice President could serve only 6 years. We have 130,000,000 people in the United States. If, out of that number, we cannot select new men to go to the House of Representatives and to the Senate and to fill the President's office at least once every 6 years, then we should simply admit that we are not capable of operating a democratic government. I would provide in that same amendment that one-third of the House of Representatives would be elected every 2 years the same as Senators are now elected, but when the 6-year period was up, I would send these Representatives and Senators back home and let them try to live and to make a living under the laws they had passed. Now, folks, we can get this amendment to the Constitution of the United States adopted if the people want it, and you can do it in one of two ways: You can do it by electing men to Congress who will vote for it or you can do it by having your State legislatures propose the amendment.

One thing I am certain of, if you do not amend the Constitution of the United States so as to stop keeping men in the House of Representatives and in the Senate for life, and if you do not stop keeping one man in the President's office until his grandchildren get old enough to succeed him, our constitutional form of American government will be lost. Generally speaking when you leave a man in Washington too long in either the House or the Senate, he loses his contact with the people, he gets to wondering if he were returned to private life if he could make a living; he becomes a coward; he begins to dodge every time some high-powered block of voters puts on the pressure; he becomes the slave of the executive department of government as he pleads for patronage; he does the bidding of the bureaucrats because the bureaucrats have lots of jobs at their command, or they can control the spending of money in his district. Let us stop all this, let us get back to the theory of government upon which the Constitution was originally developed, and that was the rule of the people and not the rule of the bureaucrats. Let us stop the practice of keeping one man in the President's office so long that he begins to completely ignore the duly constituted representatives of the people. Let us stop the practice of building up the power of the executive department of government in order that that department may through this power and through patronage secure a continuation in office from year to year, or from decade to decade. And in conclusion let me say that the problem of maintaining a land of free opportunity and free enterprise in America is the biggest task which faces the citizens of this country at this time and I mean all of our citizens, whether they be day laborers, merchants, public-utility executives, or great industrialists. All that we have and all that we may hope for in the future is dependent upon maintaining in America a government where the people are the masters and the public officials are the servants. Without democratic government, we sink to the level of the beasts of the field that think only of food and water, a place to eat and a place to sleep. The greatest need of this Nation today is a thorough house cleaning in Washington.

T. V. A. Yardstick Rates

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. RANKIN. Mr. Speaker, if we are to preserve democracy in America; if we are to maintain our American way of life; if we are to perpetuate our system of free enterprise and make it possible for every human being in America to live comfortably and peacefully, and to enjoy the blessings to which they are entitled, we must give them the benefits of cheap electricity by extending the T. V. A. yardstick to every consumer of electric energy throughout the country, and then extending that service to every farm home in America.

That yardstick which you will find in the fourth annual report of the Electric Power Board of the City of Chattanooga, Tenn., is as follows:

ELECTRIC POWER BOARD RATE SCHEDULES

RESIDENTIAL

Alternating-current service at approximately 60 cycles, 110 or 220 volts, either single-phase, two-wire or three-wire; or, three-phase, three-wire, or four-wire, as may be required by board.

Rate: First 50 kilowatt-hours consumed per month at 3 cents per kilowatt-hour; next 150 kilowatt-hours consumed per month at 2 cents per kilowatt-hour; next 200 kilowatt-hours consumed per month at 1 cent per kilowatt-hour; next 1,000 kilowatt-hours consumed per month at 0.4 cent per kilowatt-hour; excess over 1,400 kilowatt-hours consumed per month at 0.75 cent per kilowatt-hour.

Minimum monthly bill: $0.75 per meter.

COMMERCIAL

Alternating-current service from the local distribution system at approximately 60 cycles, 110 or 220 volts; either single-phase, two-wire or three-wire; or, three-phase, three-wire or four-wire, as may be required by board. (Customers with demands of over 20

kilowatts and/or using over 4,000 kilowatt-hours per month billed on industrial rate.)

Rate: First 250 kilowatt-hours per month at 3 cents per kilowatt-hour; next 750 kilowatt-hours per month at 2 cents per kilowatt-hour; next 1,000 kilowatt-hours per month at 1 cent per kilowatt-hour; excess over 2,000 kilowatt-hours per month at 0.8 cents per kilowatt-hour.

INDUSTRIAL—CHARACTER OF SERVICE

Alternating current, three-phase, 60 cycles. Voltage supplied will be at the discretion of board and will be determined by the voltage available from distribution lines in the vicinity and/or other conditions.

Rate: Demand charge (based on 30-minimum demand), $1 per kilowatt of demand per month—first 1,000 kilowatts; 90 cents per kilowatt of demand per month—over 1,000 kilowatts.

Energy charge: First 10,000 kilowatt-hours consumed per month at 10 mills per kilowatt-hour; next 25,000 kilowatt-hours consumed per month at 6 mills per kilowatt-hour; next 65,000 kilowatt-hours consumed per month at 4 mills per kilowatt-hour; next 400,000 kilowatt-hours consumed per month at 3 mills per kilowatt-hour; over 500,000 kilowatt-hours consumed per month at 2.5 mills per kilowatt-hour.

Charge for energy in excess of 360 times the demand shall be subject to a reduction of 0.5 mill per kilowatt-hour from the otherwise applicable rate.

Note the rates for the three classes of consumers—residential, commercial, and industrial.

If everyone who used electricity last year had got the benefit of these rates, the residential consumers of the Nation would have saved $433,355,112; the commercial consumers would have saved $394,871,206; the industrial consumers would have saved $357,007,356, making a grand total of $1,185,233,674 the electric light and power consumers of America would have saved last year if they had all enjoyed the benefits of these T. V. A. yardstick rates.

The electric light and power consumers in Chattanooga alone saved $3,249,216 on their light and power bills last year, as the following statement from this annual report shows:

CUSTOMER SAVINGS—RATES

Based on the average rate per kilowatt-hour charged for service in 1938 by the former privately owned company, from which the board acquired the electric distribution system, the customers of the board saved in the fiscal year ending June 30, 1943, an amount of $3,249,216, as follows:

Residential customers	$881,167
Commercial customers	245,786
Industrial customers	2,103,144
Street lighting	19,119
Total year's savings	3,249,216

These, added to previous years' savings of $6,736,990, bring the total savings in electric service costs to Chattanooga users, since August 15, 1939, to $9,987,216—almost equal, in only 4 years, to the $10,850,000 paid for the system.

I know it will be contended by the advocates of the private power monopoly that these publicly owned systems pay no taxes, and that they do not have to meet other expenses that private power companies have to bear. But the following statements from this report of the public power system of Chattanooga refutes every one of these contentions:

DEPRECIATION; TAXES; BOND INTEREST; BOND RETIREMENT; ADDITIONS TO PROPERTY; SURPLUS

Charges against income from depreciation (replacement of worn-out property) during the year totaled $377,339.14 and such equipment and property as needed replacement was replaced (except where new equipment was unobtainable, due to war conditions). Much of the board's system requires copper and steel, which are highly critical war materials, and only priorities for those replacements made necessary by total failure are being asked for from the War Production Board.

In accordance with the board's legislative act, tax replacements were paid to the city, Hamilton County, and other taxing units in an amount of $276,500—the amount being paid upon property acquired by the board at the time of acquisition by the city of the former privately owned system.

Interest charges, due semiannually, upon the board's revenue bond issue were paid in an amount of $357,923.95. These bond interest charges, after provision for depreciation and taxes, were earned three and two-tenths times.

Cash payments, amounting to $321,170, were made into the board's bond fund during the year. On July 1 an amount of $260,000 in bonds, which became due, were retired. The board has outstanding $12,440,000 in revenue bonds and $100,000 in general obligation bonds.

Only those extensions and additions made necessary by service required in connection with the war program were built during the year. As over 75 percent of the kilowatt-hours sold by the board go almost directly into war material, these were of considerable size. Likewise, provision was made during the year to extend the board's lines to serve 870 homes adjacent to the board's present lines when the war is over and materials are available.

The unappropriated net income (surplus) of the board, as of the end of the fiscal year, was $381,932.13. This is not all a cash surplus but represents an accumulation of assets over liabilities since August 15, 1939. Since that date the expenses of furnishing electric service by the board have required 97.4 percent of all the income received by the board from its charges for electricity. Thus, it can be seen that the rates charged have been just slightly more than the income required for furnishing the necessary service. The principles of publicly owned electric power are based upon having rates that will just cover the cost of the service. As rates cannot, from a practicable standpoint, be put up and down according to economic conditions, it is good business to accumulate, when possible, a reasonable surplus to guard against having to raise the rates when sales of electricity may fall off. Undoubtedly electric sales will fall off following the war for a time, and this small surplus will be a safeguard against having to raise rates.

If there are any Doubting Thomases in Congress whose constituents are paying these enormous overcharges for their electric energy who question the wisdom of a public power system, or who oppose municipal ownership for electric facilities, let them read the following excerpt from the report of the Electric Power Board of Chattanooga of August 28, 1943:

In accordance with the requirements of chapter 455, section 12, Private Acts of 1935, amending the charter of the city of Chattanooga, the Electric Power Board of Chattanooga is submitting herewith a statement showing the operations and financial conditions of the electric distribution system for the fiscal year ended June 30, 1943. This statement has been prepared by Arthur Andersen & Co., a nationally recognized auditing firm.

During its fourth fiscal year, the board had a total income of $4,900,415.36 (100 percent); expended in furnishing electricity to its customers $4,824,120.62 (98.5 percent); had a balance left for future use of $76,294.74 (1.5 percent).

This annual audit of the board's financial condition showed that at the end of the fiscal year it had total assets of $13,444,503.67, including current cash assets of $438,069.34. The board's liabilities consisted principally of $12,540,000 in bonds, due and payable at regular yearly periods up through 1969. An amount of $260,000 of bonds was retired on July 1, 1943, making a total of $760,000 of the board's bonds which has been retired to date.

In this, its fourth fiscal year of operation, the board continued as the largest municipal contractor of T. V. A., from which it purchased the 617,870,212 kilowatt-hours for the use of its 45,264 customers. The basic T. V. A. rates, without surcharge, that have been preserved for the board's customers, brought electricity to Chattanooga at an average cost of 0.87-cent per kilowatt-hour for all users. This is in contrast to the average cost of 1.70 cents per kilowatt-hour for all users in 1938, the last full year of private ownership of the electric distribution system.

Savings in electricity costs, based on the average rate charged in 1938, during the last fiscal year, amounted to approximately $3,249,216. Since August 15, 1939, on which date the board acquired the local distribution system, these savings, by the board's customers, totaled approximately $9,987,216. It is interesting to note that these savings in cost of electricity for the 4 years almost equal the $10,850,000 paid for the system by the board.

What is being done in Chattanooga is being done likewise in every other municipality and by every cooperative power association within the T. V. A. area. It can be done throughout the entire Nation, and it must be done if the American people are to prosper and enjoy the great benefits which this modern electric age afford.

In order that everyone who reads this RECORD may know what it would mean to him or her and what it would mean to every other individual in America to have these rates applied throughout the Nation, I am inserting below the tables which I have had compiled showing the overcharges for all classes of consumers in every State in the Union, including the District of Columbia, for the year 1942.

Here are the overcharges, by States, paid by the residential users of electricity in 1942:

TABLE 1.—*Residential electric service, 1942*

State	Estimated sales data for 1942			Estimated revenues and consumer savings under rates in effect in—							
				Tennessee Valley Authority		Tacoma, Wash.		Bonneville Administration		Ontario, Canada

Keep the Record Straight—O. P. A. Is Necessary To Prevent Inflation and Generally Has Done a Good Job

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. PATMAN. Mr. Speaker, it has become a favorite pastime to criticize and censure the Office of Price Administration. I agree that this organization has made a lot of mistakes. I, too, believe that the organization in the past has taken too long to correct known, obvious errors. However, I believe it can truthfully be said that improvements have been made all along and are now being made in the direction of correcting a lot of mistakes that have been made and causing the administration of the law to be less irritating and less annoying to the people generally.

INFLATION WILL WIPE OUT MIDDLE CLASS

Without the Office of Price Administration, we would already be suffering from ruinous and run-away inflation. Run-away inflation will wipe out the middle class of people very quickly—the ones who depend upon fixed wages and fixed salaries for a livelihood. It is this class or group that has principally built our country in time of peace and who furnish the young men to save our country in time of war. High prices destroy this group first. The only way high prices can be met is with high wages; then, with high wages and high salaries, higher prices will be caused. In the end, if we permit inflation to get out of hand, it is not unreasonable to suppose that it will soon require a wheelbarrow load of printing-press money to buy a loaf of bread.

EIGHT MILLION DIFFERENT COMMODITIES

O. P. A. has not succeeded in keeping down all prices, and doubtless will not succeed entirely. Possibly too much is expected of this organization. It is dealing with 8,000,000 different commodities, including grades, classes, styles, fashions, and designs. I suspect if all the regulations and orders that have been issued involving these 8,000,000 commodities were stacked up they would possibly be as high as a five-story building. On the other hand, if we were to stack up the rules and regulations about which there is serious controversy and just complaints, this stack would be very small—possibly not an inch high. This is not to justify mistakes that have been made or to encourage the continuance of any existing mistakes but for the purpose of suggesting that the number of rules and regulations that have caused trouble are very small compared with the total business done by this enormous organization.

BILLIONS SAVED BY O. P. A. IN COST OF WAR

The cost of the war has been tens of billions of dollars less so far by reason of the O. P. A. The prices of steel, aluminum, copper, brass, and other principal, critical, and strategic materials going into the cost of the war have not increased 1 penny since we have become involved in the war. Therefore the O. P. A., having held down the cost of the things going into the war, has saved the taxpayers tens of billions of dollars already.

In the Appendix of the CONGRESSIONAL RECORD, page A3798, there was a statement by the distinguished gentleman from Minnesota, the Honorable WILLIAM A. PITTENGER, relative to the O. P. A. I will quote excerpts from this statement as follows:

Just before leaving northern Minnesota, I talked with a man who told me that he had

to work evenings in order to make out forms showing how many miles his truck traveled a day, how much oil it used, etc. He was engaged in a small business enterprise, but told me frankly that the conduct of his business was seriously hampered by the numerous Government regulations and reports, which had to be studied, filled out, and sent in to Washington. I talked with other businessmen who told me they had to have extra help in order to comply with all of these foolish regulations and in order to fill out all of the foolish forms that are pouring out of the Government bureaus in Washington and which have the effect of hampering anyone engaged in ordinary business.

Of course, the Office of Price Administration has been the champion offender. Evidently they have a lot of men in that bureau who can think up more forms and more questionnaires, and most of them pure trash, than any other agency ever devised by the hand of man. On other occasions I have stated that this outfit was doing more harm than good to the country, and that, instead of helping our war effort, so far as domestic affairs are concerned, that the Office of Price Administration was retarding our war effort. I reaffirm that sentiment here and now; however, I do not want to refuse to give honorable mention to dozens of other Government bureaus that are doing the same and doing their best to make a bad job of the whole situation.

Congress should abolish the Office of Price Administration and consolidate it with the War Production Board, which appears to have some businessmen in charge of most of its activities.

WHAT IS THE ALTERNATIVE?

I thoroughly agree with my colleague that the rules and regulations of the O. P. A. are causing businessmen much concern—in fact, causing them a lot of trouble—and annoying and irritating them very much. But what is the answer? Shall we repeal O. P. A.? What would be the consequence if we did not have the Office of Price Administration? How would it affect these people, these businessmen, if there was no control on prices? Would it not be better for these very same businessmen to be annoyed and irritated rather than have their businesses destroyed by inflation? The fact is in wartime drastic measures must be resorted to—things that we would not think about approving in time of peace.

Let me answer my colleague on the one point that he suggests that the Office of Price Administration has been the champion offender on sending out forms to be filled out by businessmen. Under an existing law which was sponsored in Congress by the Senate and House Committees on Small Business, the Bureau of the Budget must approve the forms that are sent out by the different Federal agencies. It is my understanding that the month of March 1943, the last month for which the information is available to me, is typical of the other months. During the month of March the Office of Price Administration submitted to the Bureau of the Budget for approval 69 different forms, whereas the War Production Board submitted 259 forms for approval. This is not to criticize the War Production Board. I consider Mr. Donald Nelson, its Chairman, one of the ablest and best men in our Government, and I know that I am correct in assuming that all these forms were necessary or they would not have been submitted by W. P. B. to the Budget for approval. The information is given in order to suggest to my colleague that possibly the 69 forms of O. P. A. were just as necessary and vital as the 259 forms of the W. P. B. In other words, in order for the War Production Board and the Office of Price Administration to properly do the big job that they are doing, a certain number of forms and plans are absolutely necessary. The statement of all forms and plans submitted to the Bureau of the Budget for March 1943 is inserted herewith:

Agency:	Number
War Production Board	259
Office of Price Administration	69
Department of Agriculture	53
Federal Security Agency	32
Department of Commerce	29
War Manpower Commission	19
War Department	11
Office of War Information	8
Department of Labor	8
National Housing Agency	7
Railroad Retirement Board	7
Department of the Interior	5
Office of Defense Transportation	5
Board of Economic Warfare	4
Navy Department	4
Petroleum Administration for War	4
Federal Reserve Board	3
Civil Service Commission	3
Maritime Commission	2
Federal Communications Commission	1
Office of Civilian Defense	1
Board of Transportation	1
Federal Power Commission	1
Interstate Commerce Commission	1
United States Employment Compensation Commission	1
Total	538

It is obvious that Congress cannot execute laws and give consideration to all details, plans, and specifications that are necessary in the enforcement of the law. It is not even the duty of Congress to enforce laws. Under our Constitution we make the laws and Congress did exactly the right thing by passing the law to control prices, wages, salaries, and the cost of living. It is perfectly proper that the execution of this law be left to the department concerned with it.

It is easy to criticize or condemn price fixing and other arbitrary rules and regimentation methods that are tolerated in wartime only, and we should stop and consider what the alternative would be in the event these laws were repealed.

Attacks on Secretary Hull

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Frank R. Kent, in his column "The Great Game of Politics," in which he discusses criticisms of and attacks on Secretary Hull. The article is a very admirable one.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREAT GAME OF POLITICS

(By Frank R. Kent)

The campaign to belittle Secretary of State Cordell Hull is not going very well, and that, perhaps, is why those engaged in it are becoming more violent and unrestrained. In such an effort nothing is so infuriating as futility. This one comes as near being completely futile as it well can be.

Among Mr. Hull's friends the campaign is referred to as the "polecat attack." And the feeling is that when it finally dies out, as it will, Mr. Hull will emerge stronger than ever with the people of the country. Meanwhile the State Department detractors continue to hurl missiles at the Secretary and to be resentful at their failure to get results, either in the way of a retort from him or a reaction from the public.

The most virulent and persistent of the Hull critics are to be found mainly in the little group of professional "liberals" and in the radical publications. Actually, the hostility toward Mr. Hull of the "advanced thinkers" within the administration dates pretty far back to the beginning of the New Deal. They had then—and probably rightly—the idea that Mr. Hull "is not one of us."

WON PLACE OF ESTEEM

In the sense that Mr. Hull was unsympathetic toward a lot of the "crackpot" ideas developed by the star-gazing experimenters who are bent on the socialization of the country, he certainly was not one of them. However, he was—and is—entirely loyal to Mr. Roosevelt and no critical or unsympathetic word concerning the President's policies ever passed his lips. By the dignity, determination, and competency with which he conducted his Department, stood by his convictions, and minded his own business, he won for himself a place in the esteem of the country not occupied by any other member of the administration.

The frequent tributes to Mr. Hull and his work paid by anti-New Deal newspapers, antiadministration public men, and private citizens "whose eyes," as the late General Johnson in his N. R. A. days once said, "have not seen the light" never endeared him to the "liberals," who feel that any commendation from a businessman is more or less of a stigma.

But the open attack upon Mr. Hull did not start until after we had gotten into the war. So far as can be gathered, the original grievance held against Mr. Hull by the liberals, aside from his lack of enthusiasm over the New Deal dreamers, was his refusal, more than a year ago, to take a course toward Spain which, in his opinion and that of military authorities, both British and American, would have been very harmful, indeed.

Some of these liberals went so far as personally to call on Mr. Hull and insist upon his adopting their views. When he declined they became greatly inflamed. His policies in north Africa, though approved by the President, wholly satisfactory to the military chiefs, and obviously working well, were even more bitterly assailed.

MARTYR ATTEMPT FAILED

And then came the resignation of Mr. Sumner Welles, of whom the liberals attempted to make a martyr, which was bad judgment, and to picture as the one able man in the Department, which is absurd. It was charged

that Mr. Hull forced Mr. Welles out because of personal dislike and jealousy and that the President yielded to Mr. Hull because of his fear of the southern Democrats, with whom Mr. Hull is strong.

Neither of these things is true. Mr. Welles was not forced out by Mr. Hull for any such reasons, and Mr. Roosevelt did not entertain any such fear. Every person really informed about this incident knows better on both counts. However, there is no way of convincing those who do not want to be convinced and the hammering continues unabated.

Nothing Mr. Hull now says or does escapes censure. To hear or read these anti-Hullites one might think that the Secretary of State is not only an ignorant and decrepit reactionary, whose policies have proven foolish and wicked, but a small, jealous old man, capable of any form of vindictive meanness, vicious as well as idiotic. Mr. Hull can well afford to be serene.

The sort of attack to which he is being subjected reacts not upon him but upon those who make it. If the kind of record the Secretary of State has made not only in his present office but in the others he has held in his long and honorable career can be damaged by the sort of attack now being made upon him, then honor and courage, character and capacity count for so little in the public life of this country that it hardly pays to have them.

New Approaches to Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, September 17 (legislative day of Wednesday, September 15), 1943

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "New Approaches to Peace" delivered by the Honorable Herbert Hoover before the joint session of the St. Paul-Minneapolis branches of the Foreign Policy Association and the University of Minnesota, at Minneapolis, Minn., September 3, 1943.

I consider that Mr. Hoover, in collaboration with Mr. Hugh Gibson, has made an outstanding contribution to a possible solution of the problems of peace which will confront us when the war is won. As Mr. Hoover stated, the nations of the world have become adept at waging war, but they have proved themselves very inept in preserving peace.

I suggest that Senators as well as people throughout the Nation will find it worthwhile to give careful study and thought to the proposals made by Mr. Hoover and by Mr. Gibson as set forth in plain and understandable language in the address to which I have referred.

I have received an estimate from the Government Printing Office indicating that to print the address will cost $105.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Victory is now inevitable. There will be many more hard months. But every month brings us nearer to the problems of peace.

The American people are alive to the need and determined that we must have a lasting peace this time. From coast to coast you are thinking and discussing the ways to peace. You want to make your lives again free from war hardships. You want your sons, husbands, and fathers home.

The method of making peace is being hourly discussed in books, in the press, over the radio. Congressional resolutions and political offensives are in motion all along the front of peace ideas.

We have two schools of discussion. In the first are those people who are striving to distill from the world's experience something definite and positive. Several notable contributions have been put forward which merit great consideration.

In the second school are those who live in the indefinite or the infinite. Their aims are magnificent; their phrases are sonorous; their slogans are impelling. But when we sift them down, they are mostly nebular words to the effect that we must cooperate or collaborate with the world to preserve peace and restore prosperity. They are a long way from how to do it. Often enough these phrases are doors to political escape. Or alternatively, they are the pavement of good intentions. Theirs is an unreal world of perfect words.

I do not underestimate the usefulness of inspiring words. But most of this is exactly the same verbal road which led to Versailles. When we got there we had high ideals, high aims, and great eloquence. Unless we arrive at the end of this war far more realistically prepared we will have little chance of lasting peace. We must have something far more specific and definite than high aims, high ideals, $64 words, good intentions, political avoidance, or recriminations. Worse than this, we may out of such material have done no more than lay the kindling for World War No. 3.

On this whole problem I am daily more and more impressed with the fact that nations have often enough been successful in making war. But nations have never yet been successful in making lasting peace. More and mor over the centuries the world has developed the art and method of making war. But the world has never developed an art and method of making peace. More and more the methods of peace have resulted in a wider spread of catastrophe.

Surely it is time we have a new approach to peacemaking. And that path must leave the century-old bright lights of eloquence and nebular words and explore the hard road of experience.

Hugh Gibson and I, from considerable participation in these problems over the last 25 years, have suggested for public consideration some ideas of a new approach. Several of the ideas which we originally put forward have now been adopted by powerful voices.

I propose to explore these ideas further with you. The principles and the program are at least realistic and positive. And they suggest common ground over which those of even divergent views on particular questions can travel with unity toward our common purpose of a lasting peace.

I had a teacher once who said, in effect, that wisdom does not consist so much of $64 words about the ultimates as in knowing what to do next. And the next thing after that.

Therefore, I am going to examine with you what to do next. I may state the principles and program first and the reasons afterward. The program consists of 4 steps and there are 11 reasons.

Before we start on this exploration I may assure you that it does not embrace the usual democratic process of name calling. That is not a unifying or peaceful approach. From the Sermon on the Mount we learn that the peacemakers "shall be called the Children of God."

It would appear that unifying name only applies to the actual peace delegates and not to those who engage in advance discussion of what the delegates should do. In any event I will not take your time discussing isolationists, nationalists, internationalists, Fascists, or Communists. Our job is to find common ground, not to widen differences.

FIRST STEP

The first step in our proposal is to reach an agreement, before firing ceases, between all the United Nations, that a few leading nations be appointed the joint managers or custodians or trustees of peace, and that there will not be the usual armistice or the usual general peace conference.

SECOND STEP

The second step is an agreement between all the United Nations before victory over Germany, setting up the terms of a simple provisional peace which the custodians or trustees shall impose upon belligerent Europe the moment firing ceases, and later on Asia.

THIRD STEP

The third step is a transition period from war to peace of a few years, in which the world can cool off and have time for deliberate solution of the long-view problems of lasting peace.

FOURTH STEP

The fourth and last step, after the foundations of real peace have been laid, is then to create some sort of world institution to replace the managers or trustees and preserve peace.

THE TRUSTEESHIP

Some immediate questions will arise in your minds as to the trusteeship. A few great victorious nations are going to dominate the world anyway for awhile after this war. They must do it of necessity to themselves. They always have done so after every great war. They did it after the world wars of the Napoleonic period and after the last World War. It would be a great and new step to peace if they did it out in the open, by a definite authority with positive responsibilities and limitations.

I am not proposing an elaborately written piece of paper committing nations to action in unknown circumstances. A mere joint declaration of purpose by all the United Nations would be sufficient. It needs only to be that we continue collaboration in peacemaking which we have in war and that we do it under the leadership of the principal nations conducting the war; that we do it in consultation with all our allies in the fields in which they are interested; and that we do it for a limited period. If we can do this without elaborate treaties and documents in war, why not in a transition period from war to peace?

I am not proposing a military alliance of a few victorious powers, arrogating to themselves domination over other nations such as has in reality followed those other world wars. Such alliances at once raise the antagonism and suspicion of the balance of the world. A military alliance would undermine the moral influence of the custodians or trustees and would add nothing to their strength.

THE PROVISIONAL PEACE

Questions will also arise in your minds as to the terms of the provisional peace.

These terms can be made specific and comparatively simple. They are the urgent measures necessary to get the world going again.

The first need of the world, more urgent even than bread, will be order. And the second need will be food. Hungry people abandon all restraint and defy all order. The next imperative need will be to restore economic production, for the starving cannot long be supported on charity. These questions admit no delay. Without them Europe and Asia will dissolve in chaos.

There are other urgent matters. There must be total disarmament of the enemy.

Their leaders must be punished for crimes against mankind. They must return their loot, prisoners, and displaced peoples.

There must be the restoration of sovereignty to those nations deprived of it. The trustees would need at once to determine temporary boundaries for everybody.

The defeated nations should be required to hold free elections of representative bodies excluding Fascist candidates to initiate government and national life so that there will be some responsible body with which to deal.

There should be provisional restoration of the former treaties about posts, telegraphs, ships, and planes which are necessary to the reopening of economic life for the whole world.

And the trustees should at once set up regional councils for Europe, Asia, and the Western Hemisphere and such other committees of the United Nations as are needed to work out each of the host of long-view problems without the solution of which there can be no lasting peace.

These provisional questions are not difficult to settle. But they represent the stark necessities required to start the world housekeeping again.

THE TRANSITION PERIOD

It is in a transition period that the gigantic problems which confront the world must and can be solved.

In the meantime the trustee nations would need to guide these committees and police the world against any aggressors.

I may enumerate only a few of these problems to indicate their complexity and that time is needed for their solution.

The future of the three great enemy countries and a lot of little ones must be settled.

There are great territories to be justly disposed of.

Militarism must be abolished.

The face of these nations must be turned toward peace.

Gangsterism cannot be abolished overnight.

There is demobilization of the world to be brought about.

There are many boundaries to be settled.

There are peoples to be freed. There are peoples to be placed under guardianship. The Jewish refugee and the problem of Palestine must be settled.

There are gigantic debts and reparations to be considered.

There are a thousand problems of trade, of currency, of credit to be solved.

And all of these problems must be solved in such a fashion and with such justice as to allay or still the dynamic forces which have hitherto always bred war anew. Those forces must be stimulated as they were at Versailles, where they were made stronger for evil and more explosive.

And now I come to the 11 reasons for this program and the dangers we must avoid.

FIRST REASON: PROMOTING ALLIED UNITY

The first reason is one that has been made more impressive by the events of the last month.

A statement to the enemy people that there will be a provisional peace based upon renewed self-government and revived economic life should convey to them our desire to restore them to the family of nations. Such an assurance to them might bring the war to a quicker end and save much human life.

THE SECOND REASON: GAINING PREPAREDNESS FOR PEACEMAKING

The second reason for this program is that we must resolve a double difficulty. That is how to keep unity during the war and achieve at the same time preparedness for peace in advance of victory. There is a well-founded and instinctive fear that negotiation by our officials of the gigantic long-view questions during the war would disrupt the unity of the United Nations. Hence the escapist policy of every modern world war, "Victory first, discuss peace afterwards."

In consequence, aside from a few very general aims and platitudes, victorious nations have usually come to the peace table wholly without any real preparedness for the immense problems they must meet. I agree that we cannot negotiate these long-view questions without dangers. But we could negotiate the urgent matters which lay the foundation of provisional peace. There is no ground for disunity in them. Their settlement beforehand would promote unity. And incorporated in them is the machinery for amiable solution of the long-view questions after victory.

THIRD REASON: AN ARMISTICE IS DESTRUCTIVE

The third reason is that no lasting peace can be made as was attempted at Versailles in the middle of a military armistice. An armistice simply suspends the whole world between war and peace. The machinery and routines of both war and peace are out of action. It is thus a period of economic and political degeneration with an agonized world crying out for haste. The end is hasty compromise of principle and justice, not solution.

FOURTH REASON: TO COOL OFF HATE AND GREED

The fourth reason for this proposal is that the world must have time to cool off and recover a balance of judgment if a lasting peace is to be made.

When firing ceases the world will be filled with violent emotions. There will be white-hot hate and indignation at the enemy for having brought the world to this state. The air will be filled with fear and vengeance. This is no atmosphere for long-view statesmanship, which must distinguish between guilty leadership and misled peoples. Do not forget we must live with 90,000,000 Germans, 40,000,000 Italians, 70,000,000 Japs, and their increment for some hundreds of years yet. We want to get them into the ways of peace if we can.

There will be another emotion present. That is greed or, more politely, self-interest. Each of the victorious nations will face a grim vista of impoverishment. The peoples of each nation will demand those things they believe will restore prosperity and security to them.

And these are not alone the emotions of statesmen. They are the emotions of the people at home. Statesmen are not their own masters. If they ever expect to be reelected or have monuments to their memory, or get their agreements ratified they are forced to respond to the emotions of their people.

If there be a general peace conference in the midst of all these emotions, as has been the practice hitherto, then 40 nations will send 2,000 diplomats to orate, to conspire, quarrel, and grab. The world would be crying aloud for haste, that it be allowed to get back to living again. To keep passion, greed, expediency, and compromise of principle out of the settlements under these pressures calls for more than human powers. Certainly if we are to have lasting peace, it must be based on more solid foundations than the emotions of war.

Does not all this suggest the necessity of a cooling-off period which we call the transitional period?

THE FIFTH REASON: TO GET BY THE PERIOD OF REACTION

The fifth reason for this suggested approach to peace is that soon after firing ceases an inevitable reaction sets in. Our boys want to come home—and at once. They want to start life again. Their wives, mothers, and fathers want them home. They are bound to bring home all their frictions, dislikes, and opinions of the strange peoples with whom they have been operating. At home the people will be war-weary. All the suppressed frictions between allies will come to the surface. The people just don't want anything more to do with foreigners. A period of reaction toward isolationism is inevitable. And it would be further fanned by the headlines from a general peace conference, such as Versailles, daily arousing a thousand suspicions or misgivings and confirming their suspicions.

In this period of reaction nationalism will rise to such heights as to endanger all constructive plans. It will be a time of demagoguery and prejudice. The world needs time to let this pass.

THE SIXTH REASON: THE UNKNOWN SHAPE OF THINGS TO COME

The sixth reason for these principles of peacemaking I suggest is that while nations are actually at war, or in the months after firing ceases, we cannot see the shape of things to come. These shapes are made by forces set in motion by the war and even long before the war. No one can for years predict their ultimate effect. The only thing men can be sure of is that after the war there will be profound change. If it were a question only of putting the world back to where it had been it would be hard enough to do. But the world will never be like that again.

A peace making that does not take account of these pressures of change will be certain to burst asunder. Surely we need a transition period in which to measure and accommodate these forces.

THE SEVENTH REASON: REAL FOUNDATIONS UNDER A WORLD INSTITUTION

There are those who believe we have only to quickly set up some league or some council or some world institution or some union or world parliament and then unload all of our problems upon it. It is not that easy.

When issues are vast and intricate it is easy to dodge them that way and then announce that the world will go to the dogs if evil men fail to agree.

Neither anything like the League of Nations nor any kind of world institution to keep the peace could succeed amid the passions, the political and economic chaos that press on the heels of war.

There are a hundred gigantic problems that must be settled between nations before such an agency would have a chance. To force its adoption prematurely is to condemn it to inevitable failure.

The purpose of any world institution must be to preserve peace, not to make it.

They are two entirely different jobs. They must not be confused. Having lived through Versailles, and having had to deal with its consequences, I can give you an idea of what I mean. The Treaty of Versailles consisted of 613 paragraphs, of which only 26 dealt with the League covenant. It was the 587 outside the League that did most to kill the League, and certainly it was the sins of omission and commission in these 587 paragraphs which laid some of the kindling for this war.

To solve these problems, to allay the forces of destruction and to build a new spirit in the world requires time. And a decisive hand which no world-wide institution can exert.

The temple of peace cannot be erected until its foundations are well laid. If we make a good peace, it will largely preserve itself. If we make a bad one like Versailles, we shall simply be laying the kindling for World War No. 3. And no machinery for preserving peace will stop it taking fire.

EIGHTH REASON: PRESERVING AMERICAN UNITY

The next reason I will give you for this program bears upon our American national unity.

The formulation of some sort of world institution to preserve peace is essential. Yet discussion of its details leads quickly to the

most emotional and the most dangerous question that can be raised among us. That is how much we surrender of national independence and sovereignty.

I would like to suggest that if we adopt the transition period, we can develop the practice of cooperation in stopping aggression during that time and we will learn much as to method. Of equal importance, our people will have opportunity to consider and debate this whole question away from the emotions of war and the reaction toward isolationism which will inevitably follow. It is my belief that with a growth of experience and understanding, the whole sovereignty question will become academic. But it takes time. Decision of this matter at the present time is about as important as the ancient worry over how many angels could stand on the point of a needle.

I have no doubt that with time and deliberation our people will no more consent to liquidate the independence of the United States than Mr. Churchill will consent to liquidate the British Empire or Mr. Stalin to liquidate the Soviet Republic. And none of that is necessary to preserve peace. And I may add that the primary safety of America will always rest in our strong right arm.

THE NINTH REASON: DOCUMENTS ARE NOT PEACE

The ninth reason for these principles of peace making is that out of 5,000 years of war, an illusion has been built up in the human mind that war can be ended and peace made by signing a piece of paper. Especially if it is signed with pomp and circumstance. The world has deluded itself before now that such a signed paper is the dawn of a new day. Hasty documents written at the end of wars have an infernal way of becoming the prospectus of renewed war.

We must learn that it is the conduct of nations over years which counts, not the papers they sign. A little good will goes further than documents.

TENTH REASON: THERE MUST BE RATIFICATION

If we are to have peace, any agreement or any treaty in democracies must be ratified by the people at home. The people must have time to debate, understand, and decide.

And we should be careful that our words do not carry more to other nations than we will perform and confirm. Neither by Executive action nor congressional resolution nor public assurance should we give the impression that the United States can be committed to anything without full free action by the Senate of the United States.

Is it not, therefore, better to go one step at a time and deal with different problems separately?

ELEVENTH REASON: THE SUM OF EXPERIENCE

And I might add an over-all reason which comes from the stern voice of experience. Do not the great peace settlements which followed the two other world wars of the last 150 years—those at Vienna in 1814 and at Versailles in 1919—confirm every one of these reasons for this program? Does anyone believe that either of these treaties would have been signed 5 years afterward? That no abiding successful peace can be written in a few weeks or a few months under these pressures has been proven by the greatest tragedy of modern history—Versailles.

TO SUM UP

For these reasons I am suggesting four principles of peace. A temporary trusteeship or collaboration of the leading nations, a provisional peace for each defeated country, a transition period of time, and an ultimate world institution to preserve peace.

Is it not the answer that we must first concentrate our immediate thought on definite principles of peacemaking? And, second, does not any program require defined and responsible leadership? And, third, must we not have quick and strong action to restore order and the productivity of mankind? And, fourth, must we not have time to settle our gigantic long-view questions? Time for emotions to cool off; time to pass over the reaction which inevitably sets in from war; time to assess the forces and change set in motion by war; time to allay the dynamic forces which cause war; time to deliberate; time to deal openly with all proposals; time for the peoples of the world to understand the solutions proposed; time to rebuild justice, tolerance, and good will; time to build a real world institution to preserve peace.

It was 6 years from the victory of Yorktown to the Constitution of the United States—and it was time well spent.

The die of war has been cast. We have taken up the sword to win lasting peace. For over 170 years Americans have fought on a thousand battlefields and always that men might be more free and have peace. Their million graves demand of us that we do not fail them in the halls of peacemaking.

A. M. L. Wiggins, President American Bankers' Association

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Small Town Banker Heads the American Bankers' Association." The article was published in the September 10 issue of The State, of Columbia, S. C. Let me say, Mr. President, that the article refers to a distinguished South Carolinian, Mr. A. Lee M. Wiggins, who came up the hard way. He has been a great asset to South Carolina, and I feel certain he will do great work for the American Bankers' Association.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMALL-TOWN BANKER HEADS THE AMERICAN BANKERS' ASSOCIATION—A. LEE M. WIGGINS, HARTSVILLE, RECEIVES HIGH NATIONAL HONOR—SOUTH CAROLINIAN IS ALSO CLOSE TO THE AGRICULTURAL, COMMERCIAL, JOURNALISTIC, INDUSTRIAL PROBLEMS OF THE UNITED STATES

(By Albert W. Atwood)

It has been nearly 40 years since the American Bankers' Association has chosen a president from a community as small as Hartsville, a fact which has a wholesome significance not only for the South but for the country as a whole.

Naturally, when the bankers elected a new president on September 15, they picked a man and not a town. But those who guide the destinies of the great American Bankers' Association certainly must be aware that Lee Wiggins and Hartsville are, in a very real sense, one and inseparable. The man and the community stand for the same values in American life.

Furthermore, this is the first time in its existence of nearly 70 years that the Bankers Association has taken a president from South Carolina. And only rarely has a president been chosen from a bank as small as the Bank of Hartsville, whose $3,077,429 of resources is dwarfed by the gigantic metropolitan institutions, which boast of hundreds of millions or even billions of deposits.

But this contrast only highlights the real meaning of Wiggins' selection. The small bank may serve the small community as well or even better than the great bank serves the metropolis.

THE SMALL TOWN

As for the small community itself, city people sometimes forget that nearly all our agricultural and much of our industrial wealth is produced within the sphere of its influence, a fact which applies with particular force to Hartsville.

To what extent Hartsville is responsible for Wiggins and Wiggins for Hartsville is not easy to say, but the reader can decide for himself as the joint story of town and man unfolds. Wiggins modestly remarks that he has had the advantage of being in the environment of great achievements and of long association with two great men, his first employer and his father-in-law.

Thirty years ago, directly after his graduation from the University of North Carolina, young Wiggins showed up in Hartsville to take a position as stenographer to the late David R. Coker. That he already knew the meaning of hard, intensive work will immediately appear.

Born in Durham, N. C., his father died when he was a year old and his mother worked to put him through public schools. He then saved $500 from 3 years of employment with the American Tobacco Co., and went through college without any outside assistance, beyond a scholarship, graduating with savings of $1,000.

Wiggins' business activities in college make an amusing story in themselves. He would think up one idea after another, finance it, arrange with other students to do the actual selling and split the profits. For example, he bought fruit wholesale, divided it up in baskets in his bedroom and employed students to peddle it retail.

COLLEGE JOBS

In addition to the more conventional job of managing the University Press and printing the college newspaper, catalog, and other publications, he ran a shoe store, a boarding house, and a number of other small business ventures. He did not make the highest grades, but managed to get in 1 year of law in his 4 years, was editor in chief of the college annual, and belonged to numerous organizations.

Hartsville, where the young man went to seek his fortune, is in the northeastern part of South Carolina, in the flat, fertile Pee Dee Basin, just east and south of the Sand Hills. Few communities of its size (population 6,000) have had such a remarkable development.

This is largely due to the ability and character of one Maj. James L. Coker, and two generations of his descendants, direct and collateral. Graduated from Charleston's Citadel and a student at Harvard when the Confederate war broke out, Major Coker was grievously wounded and walked with a cane or on crutches the rest of his life.

He settled in the rather desolate vacant land that is now Hartsville, in 1865, opened a small store and later a bank in Darlington, 14 miles away. Although he had practically no resources to start with he was able to use the profits from one enterprise to start another and thus develop from scratch one of the South's important communities.

Major Coker had four sons and two daughters. Only one of the sons is now living—William C., a botanist on the faculty of the

University of North Carolina. The other three all followed their father in his numerous agricultural and business enterprises, and it was for one of these that young Wiggins went to work.

David R. Coker had been interested in plant breeding as a hobby for several years; Wiggins promptly suggested that a real business be made out of it. "You'll become discouraged and leave," replied Mr. Coker. The young man promised that he wouldn't leave, but would state frankly if he couldn't make a go of the seed venture; he was, therefore, given the task of organizing its business end and in a few years became its secretary and treasurer.

SEED BREEDING

Today Coker's Pedigreed Seed Co. is known as the foremost seed breeder in the South, has 5,000 acres planted to seed, and has contributed greatly to the agricultural development of the South through breeding longer staple cottons, rust-, cold-, and smut-resistant small grains and better tobacco.

Although Wiggins was not born on a farm, has never lived on a farm, and is not a farmer, nevertheless, he was awarded Clemson College's certificate of merit in 1940 for distinguished service to agriculture.

One of Wiggins' first tasks in making the seed company a commercial success was to design the Red Heart trade-mark, and copyright the words, "Blood will tell," which appears on every bag of the company's seed and on all of its printed material.

Very proud of what he had done in designing this trade-mark, the youth took his brain child to old Major Coker, who approved of it, but warned: "You must never let that trade-mark appear on any product which is not worthy of the name."

One of the Hartsville companies, with which Wiggins is associated, owns a large herd of purebred Guernsey cows which have produced 2 national class representatives and 16 State class championships in advance register herds. Wiggins feels that one of the great needs of the South and of South Carolina is an increase in dairy cows on farms, perhaps not so much from a commercial standpoint as for the nutritional improvement of the people themselves.

At the time that Wiggins became secretary and treasurer of the seed company he was given the same positions in J. L. Coker & Co. department store, later becoming manager and managing director, which position he still holds. Conspicuously displayed over this most attractive and spacious store building is a sign which reads, "More than a store—an institution," and even a brief visit will show that there is no exaggeration in the slogan.

LARGE STORE

Wiggins' chief accomplishment as general manager of J. L. Coker & Co. has been to guide its transition from a large country store, engaged primarily in a farm-lien business, into a modern merchandising department store.

Although the store has been his particular responsibility and has taken more of his time and effort than any other, he is peculiarly attached to the seed company, and remains its treasurer.

In addition, in 1921 he purchased the local newspaper, the Hartsville Messenger, and has operated a printing business and the newspaper ever since. At the age of 12 in school vacation he worked as a printer's devil for $1.50 a week, and one of his chief joys in life is the publication of his country newspaper. During the past year he was president of the South Carolina Press Association.

Although he was made vice president of the Bank of Hartsville in 1921, he was not active in its management until 1932. In that year the skies were not only black but the bank needed a new president, and the Coker family decided upon Wiggins (he had married a daughter of J. J. Lawton, a son-in-law of Major Coker, in 1915).

Faced with running a bank through what was perhaps the worst panic in American history, he read through in a few days' time a correspondence course in banking that ordinarily takes 6 months. But he did more than that; he brought the merchant's and the borrower's viewpoint into banking. He was determined that borrowers should get over any attitude of self-consciousness or of being ill at ease.

He built for his bank the reputation of being glad to lend money; people came from a distance to borrow from it. Fortunately the public knew that the owners of the bank were behind it during the worst of the depression; because David R. Coker offered to place $1,000,000 of his personal assets at the disposal of both this and the other bank in town.

As a result, heavy withdrawals did not materialize. A farmer, known to be not at all well fixed, walked in during the worst of the panic and said: "I have a little money in my pocket; you can have it without any interest if you want it," and added $10,000 to his account.

PRESIDENT IN SOUTH CAROLINA

During the critical days of 1932 and 1933 Wiggins served as president of the South Carolina Bankers' Association, sponsoring and helping to secure passage of legislation in the State which has worked to the benefit of both banks and depositors.

It is an interesting coincidence that J. B. Redfearn, executive vice president of the Bank of Hartsville, and a keyman in the Wiggins scheme of organization in Hartsville, is president of the South Carolina Bankers' Association this year; this being the third time in 10 years that a Hartsville banker has held the position.

Wiggins is able to make trips to Washington and New York on American Bankers' Association business without being called on the telephone from Hartsville. Redfearn does not call his chief when things go well, and it is Redfearn's business to see that they do go well.

These trips away from home have been very numerous, as many as 45 in a single year. For Wiggins has taken his work on the American Bankers' Association seriously, particularly in the case of his 5 years' service as chairman of its committee on legislation, which he regarded as an opportunity to fight for democratic processes in this country and the maintenance of some measure of individual liberty and initiative for private business and banking.

But what kind of a man is this Lee Wiggins, now in his prime at 52, who is able to apply himself with such vigor to so many varied interests? How does he work and how does he look upon life?

HOME TOWN PRIDE

To this writer, a northerner and visiting the Carolinas for the first time, the attribute which most struck me was his love and pride in his own community. Whether this is of any interest to big bankers in New York, Boston, and Chicago I do not know, but I suspect it is a trait not unacceptable in the Carolinas.

It shows itself, in the first place, in pride in Hartsville achievements in which he has had no direct part. He is proud of the diversity of its products and especially of the Sonoco Products Co., in which he is not a director and has played no part, although it is owned by the Coker family and managed by the third generation, with James L. Coker, third, as president.

This is by far the largest of Hartsville's industries, with plants in four other States and Canada and 2,000 employees in Hartsville. It is also by far the largest producer in the country of certain paper specialties for the textile industry (chiefly paper cones on which yarn is spun).

Wiggins is proud of the fact that the Coker family in the third, as well as the second, generation is one of workers. There are five young men in the third generation, and they all work.

"They are able, honest, clean, and cooperative," says Wiggins, "not an idler or black sheep among them. I stress cooperation. There is no jealousy among them; there is too much work to do, everyone is too busy. The family has never had a failure, and no one dealing with them has ever lost a dollar. It is a case of 'we' not of 'I'; it is a group, a clan. It is a story of 78 years."

Wiggins believes that the salvation of the South lies in industry, but not in congested masses of factory hands in towns. Workers for the Sonoco Products Co. come from a radius of 25 miles, and are encouraged to buy small places in the country rather than in town.

"I believe that in Hartsville we have diversity and stability. Each factory worker is encouraged to be an individual, a unit on his little farm. If he has an acre of cotton and makes something of it, so much the better. But he should get his cash from industry, his living from the farm. The farmer entirely dependent upon a cash crop is in too much danger of having his equity wiped out; the key to the development of the South lies in a combination of agriculture and industry.

"But to break the circle of poverty and ignorance there must also be more education in the South, even to the point of discontent. There must be a rise in the standard of living."

THE GREAT SOUTH

Wiggins believes that the South is the great undiscovered market, because of its deficit of consumer goods. He is enthusiastic for rural electrification, if not unduly subsidized by Government funds, for he sees in electricity womankind's greatest friend, lifting, as it does, so much of the burden off her back and taking her out of the class of what is virtually slave labor.

But to return to his pride in Hartsville. Wiggins worked persistently for 7 years to promote the Hartsville Community Center, a self-liquidating group of two fine buildings containing city offices, public library, theater, auditorium, chamber of commerce, and farmers' market. He was chairman of the building committee and is chairman of the library board.

Evidence of civic spirit is noticeable in Hartsville. For a community of its size it has an unusually complete public park bordering a lake. About the whole place there is a feeling of spaciousness and charm, heightened by the campus of Coker College for Women, of which Wiggins is a trustee and treasurer of its endowment funds.

This by no means completes the list of Wiggins' civic and public activities, but a catalogue of such connections is not only in danger of becoming tiresome, but may conceal the true likeness of the man himself.

"Do not represent me as more than I am," he said. "I am not the keenest, the ablest small banker in America. I know myself, my place, and my level. It happens to be Wiggins this coming year who will speak for American banking; but it might be Smith."

There are, however, certain qualities or characteristics of the man which stand out, so plain that he who runs may read. They require no exaggeration; indeed it would only spoil the picture to heighten the actual colors.

LOVES HARTSVILLE

His love of Hartsville is part of a larger quality of zest in life, of a vivid interest and enthusiasm. His family, his State, the South, the seed company, store, bank, newspaper, college, and his manifold duties with the American Bankers' Association—all these and many other interests cause him to live fully from day to day.

"I have my difficulties and problems, like other men," he remarked, "but we had a preacher in college in whose regular prayer there was one sentence which has had a marked impact upon my personal philosophy. He said, 'Oh, Lord, guide our feet today.' I live one day at a time, and do what I can. I don't worry too much about tomorrow. I enjoy life with its struggles and problems."

Whenever a man attains high position or prominence those close to him usually ascribe his success to hard work. But the phrase may not mean much unless it is broken down. It is not necessarily a revealing phrase in itself.

Wiggins is certainly not afraid of work, of drudgery, and of the most intense application, whether to business details, reading and study, or to careful preparation for speeches and testimony.

But he himself feels that the variety of his interests, even in college, has kept him out of a narrow circle, out of a groove, and thus pushed him forward. The point I am making is that hard work is more than merely sticking to and grinding away at the same desk hour after hour, day after day, and year after year.

EFFECTIVE SPEAKER

One great asset has been the ability to speak effectively. This he began to learn in boyhood days in the Young Peoples Union of his church. He makes it a rule never to speak unless he has something to say, that is, unless he has a message for the particular group. Also, no matter how long beforehand and carefully he has prepared his speech, he likes to have an hour directly before delivery to go over it again.

In one important respect nature smiled upon Wiggins; it gave him a personality that enables him to make friends readily. More than once he has won over hostile groups to his point of view. Ability quickly to grasp the other man's viewpoint combined with tenacity of purpose served him well in dealing with congressional committees.

Nor is it flattery to say that he combines common sense and good judgment with a stimulating keenness of mind. Or at least that is the opinion of bankers from far larger communities and heading far larger institutions, who have come into close and prolonged contact with him.

I have tried throughout this article to indicate some of Wiggins' views. But it must be remembered that his long connection with the American Bankers' Association legislative committee was in a period of drastic financial experiment and legislation, and he had to study and express himself on all manner of theories and subjects. It is impossible to cover all of these in a single article.

"I give much time to study of the problems of government and society," he says, "and in attempting to translate my philosophy of life into public service. My greatest satisfaction arises from the contributions I make, however small, toward the solution of common problems and in promoting the welfare of the common man."

He is a lifelong Democrat of the old school. He believes that the people at the bottom haven't had enough consideration and that the weak need protection from the strong, but he doesn't believe in pauperizing them as wards of the Government or of regimenting the entire economy. The "four freedoms" are essential, he says, but there must also be freedom for individual achievement.

FUTURE VISION

He regrets that some bankers are interested only in the here and now, in immediate profit, and he tells them that their difficulties and troubles are small as compared with those of retailers and other businessmen in a war economy.

On the other hand, he does not believe that our American system of free enterprise can survive unless the American chartered banking system also survives, and he emphasizes in this the vital part played by the many small banks, on which the prosperity, well-being, growth, and development of so many of our small communities have depended.

He does not believe that free enterprise is possible, or even thinkable, under politically controlled and administered credit, and he began boldly and successfully 4 years ago to fight the tendency of the Government to socialize our credit system. Hitler and Mussolini got hold of the credit systems first of all, he points out.

But Wiggins does not confine his efforts to opposing what he considers pernicious tendencies in government. He is just as vigorous in urging the banks to perform the services that properly belong to them. He wants the banks to return to the type of credit that accepts reasonable risks, and he wants them to avoid excessive service charges and giving the impression that they no longer want the savings of the public.

HIS HOME

Mr. and Mrs. Wiggins live in a roomy, rambling house of the old southern plantation type, with large white pillars in front, on well named Home Avenue in Hartsville.

They have two sons and two daughters, all of whom have or are now taking college training. The youngest and oldest are girls, aged 18 and 27. The oldest boy completed work in aeronautical engineering at Georgia Tech and is now a designing engineer for Vought-Sikorsky Co. The youngest son graduated (Phi Beta Kappa) at the University of North Carolina and is now a pilot on a bomber in foreign service in the Army Air Force.

Perhaps the finest thing about Lee Wiggins is that his own community is proud of him. Flattery of those who have reached high position is cheap, and words are always cheap. But action speaks louder than words.

The fact that a large number of his fellow townsmen, family, friends, and business associates were at the Waldorf in New York City when he was inducted as president of the American Bankers' Association on September 15 speaks for itself.

Come-Back of Small Business

EXTENSION OF REMARKS

OF

HON. JAMES G. SCRUGHAM

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. SCRUGHAM. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Come-Back of Small Business: Meeting the Needs of Civilians," which was published in the September 24, 1943, issue of the National Week. The article relates to the activities of the Smaller War Plants Corporation in finding a way to put small plants into use.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COME-BACK OF SMALL BUSINESS: MEETING THE NEEDS OF CIVILIANS—HOW GOVERNMENT IS FINDING ESSENTIAL JOBS FOR IDLE PLANTS TO DO—VITAL ROLE OF S. W. P. C. IN EASING FINANCIAL STRAIN ON MANUFACTURERS

(Many small manufacturing plants were hard hit when industry converted to war. The Government, through the Smaller War Plants Corporation, has endeavored to find a way to put these small plants to use. How well the Government has succeeded is told here by one of the editors of the United States News, who visited a number of these smaller plants.)

Small business, hit hard by the war, pinched by shifting contracts, is fighting slowly back into the production of civilian goods. The pool of supply that lay in warehouses when the United States went to war is depleted. More parts are needed for washing machines and radiators and farm machinery. And small plants steadily are taking over the job of replenishing stocks.

The job is a part of the pattern that Robert Wood Johnson worked out for the Smaller War Plants Corporation to follow. Mr. Johnson is the businessman who built S. W. P. C. and worked himself into a hospital while doing so. The broad pattern that he is leaving envisages S. W. P. C. as a service agency performing all sorts of liaison and engineering and contracting jobs for small plants. Mr. Johnson views every small plant that is shifted back to civilian production as one that will not have to wrestle with reconversion after the war.

The civilian production that Mr. Johnson has in mind is not the manufacture of luxuries and nonessentials. He is thinking of those goods that are marked down by the War Production Board as essential, goods whose nonexistence Mr. Johnson regards as one of the causes for absenteeism.

He puts it this way: A woman worker breaks a washing machine. She has to stay home and wash by hand. Multiply this many times by the breakage of other home equipment and you have one angle of absenteeism.

Consequently, S. W. P. C. is maintaining close contact with the civilian section of W. P. B. All sorts of contracts for civilian goods are being turned into small plants. Of 89,000 home dehydrators contracted for by 27 manufacturers, 62,000 are being made by 19 S. W. P. C. plants. Farm implement orders are keeping 800 small plants running at 100 percent of capacity.

The Johnson view is that this work can be done by small plants with less displacement of war production than by large ones. Small plants are more readily adaptable to change than are large ones. Fewer machines have to be changed. Fewer workmen are involved. And small plants are not as completely absorbed with war production as are big ones.

Mr. Johnson's definition of a small plant is one that employs fewer than 500 persons. Few plants of this size could qualify in the bidding for prime war contracts. Some of them, did manage to wangle prime contracts by pooling resources and equipment with other manufacturers. Others fought for subcontracts. Some closed and their managers went to work elsewhere.

There are between 160,000 and 170,000 plants in the country. Of these, 500 are really large, 5,000 are middle-sized. That leaves a minimum of 155,000 small plants. But there are not yet, after almost 2 years of war and 4 years of straining at war production, any adequate figures on the number of small plants that have open facilities or any real figures on how many persons they employ.

S. W. P. C. does know that there are between 8,000 and 10,000 factories with open facilities. Of these, about half are operating at less than two-thirds of capacity, which is near the collapse line. Ten percent of these needy plants—between 350 and 500—need money and machinery. The rest simply want business.

A preliminary analysis of a representative group of firms shows their ills are lack of orders, 47.5 percent; lack of material, 13.5 percent; lack of manpower, 8.5 percent. Many of them are suffering from combinations of these three elements, but the dominant fact is that about half of them need jobs to do in a land that is clamoring to have jobs done.

S. W. P. C. acts as an advisory, research, and service agency for small business. It lends money when really needed and is not available elsewhere. It leases equipment. It spends so much time worrying about wage, labor, and material problems that Mr. Johnson says a prime Small War Plants Corporation duty is to protect small business from other Government agencies and it finds contracts for small plants.

In the search for contracts, it can take the prime contract itself. Or it may talk subcontractors into letting small plants turn out some of the parts they need. In the last 2 months Small War Plants Corporation has helped small plants to get $217,000,000 in business. This took work to 2,526 contractors, over half of whom had had no help before.

Altogether, Small War Plants Corporation has taken over $11,500,000 of prime contracts to turn out goods ranging from furniture and paint to reamers and axles. Of this amount, 108 small subcontractors have gotten $8,500,000. Under the law Small War Plants Corporation can take prime contracts when it thinks best. But Small War Plants Corporation officials say there are very practical reasons, such as specifications to be met and fulfillment dates, that stand in the way of indiscriminate use of this power.

The men at Small War Plants Corporation, both at Washington and in the field, regard much of their work as liaison. In Washington, they keep in close contact with the purchasing agencies. They do the same in the field. There they also watch closely the letting of prime contracts to big concerns, help the big concerns to find little plants equipped to turn out parts of the job, and help the little ones to find work to do.

When a contract goes to a little firm, they keep contact with the plant until the goods are delivered, lending money or leasing equipment if these are needed, giving engineering advice when wanted, helping to straighten out production kinks that arise. For the field service regards its function as a combination of liaison, service, and salesmanship. Unless the subcontractor fulfills his promise to the prime contractor, S. W. P. C. will have difficulty talking the prime contractor into spreading more work to the little plants.

Cooperative nests of small plants are growing up. This may be one of their ways of meeting the hard days that come after the war. In Philadelphia the Heintz Manufacturing Co., which does not fall into Mr. Johnson's fewer-than-500-employees definition of a small plant, is feeding work to 160 subcontractors. Along with the subcontracts, the Heintz Co. provides all sorts of research and engineering advice. When it figures out a short-cut, it sends its engineers out to spread the good word among the subcontractors. When the small plants get into production snarls, they call on Heintz. S. W. P. C. men in Philadelphia call it one of the best cooperative jobs being done.

Another Philadelphia firm, the R. S. Products Co., works with 6 other small plants. The R. S. Products Co. has only 175 employees. Before the war it built furnaces and heating equipment. It still is doing some of this work. But it also has taken over what once was a garage, installed furnaces, lathes, and screw machines, and is making shot for antiaircraft guns. It also is making tank parts on a British order. Others of the firms in its group, little machine shops using from 20 to 75 men, are making tank parts, gears, castings, and precision instruments.

The use of tools by these plants requires all sorts of ingenuity. One has a machine that performs 15 different operations. It added another gadget to perform still another operation. Its engineer, keen, tall, young, still is moving machines around and stretching them into new performances. Another of the plants needed a boring machine but couldn't afford it. The manager turned a lathe upside down, on end, and put it to doing the operation.

"We want some more work," said an official. "We're flexible. We have some good men and good equipment. We can do lots of things. But I think the time has passed for anyone to look for gravy in war contracts. We'd better pull ourselves down to a reasonable profit on a job that's going to last awhile."

One plant near Philadelphia will earn $23,000 this year on a $60,000 investment.

In Philadelphia, as elsewhere in the field, the work is done chiefly by men who are residents of the area and who know it intimately. Most of them are highly skilled engineers, bankers, and industrialists in their own right. In addition to the staff men of S. W. P. C., a board of governors helps to determine local needs and policies.

On this board are bankers, businessmen, manufacturers, retailers, big and small. Few firms in the locality can come forward to ask for aid that are not known by one or another of the members of the board from past experience. On loans, every effort is made to get money from other sources before S. W. P. C. enters the picture. That is why the S. W. P. C. proportion of rejections runs so high. In some cities the boards have enlisted the cooperation of local merchants to learn what essential civilian needs exist and to help pass out orders to small local plants.

This is the main framework of the agency that Mr. Johnson will leave to carry on when he goes into a hospital on October 1. He put aside the star of a brigadier general a month ago to be freer to work toward civilian needs as head of S. W. P. C. Then doctors caught up with him.

For years he had worked at a driving pace for a few months, directing the affairs of his surgical dressing firm of Johnson & Johnson in New Jersey, then rested a few weeks. But in Washington, with Army Ordnance and with S. W. P. C. he was unable to do that. No time ever came when he could take it easy. His doctors put him through a clinic.

"You'll have to quit," they told him. "Right now." The best compromise he could get was to take it easy and resign, effective October 1. He wanted to stay in Washington that long to see if Congress had any questions to ask about S. W. P. C.

Repeal the Smith-Connally Act

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. CELLER. Mr. Speaker, I have offerred a bill (H. R. 3233) to repeal the so-called Smith-Connally Act.

The purpose of the original act has not been served. Primarily, it was to discourage and avoid strikes and unrest among workers in the war effort so as to increase their output. It has had the opposite effect. I am informed by the Labor Department that upward of 200 notices of intention to strike have already been filed. Instead of discouraging, it encourages strikes. It is like a lightning rod. It attracts and emboldens disgruntled minorities, be they ever so small, to file applications of intention to strike. The bill is an invitation to strike.

The strike becomes unfeared—undreaded. Before a strike can actually be called, there is set up a so-called 30-day cooling-off period. Instead, during that 30-day period, experience shows that there is continual agitation, and wide scope and play is given to unruly and unreasonable labor leaders to foment dissatisfaction and unrest. Ballots and petitions are circulated constantly amongst the workers. Instead of being a cooling-off period, it becomes a seething period and a holiday for hotheads.

Prior to its enactment, labor religiously kept its "no strike" pledge. The loss of man-hours due to strikes was negligible and inconsequential.

It is better to perform a service voluntarily rather than involuntarily. The voluntary way is the American way. The coercive Smith-Connally way is the totalitarian way.

It is interesting to note that big business is fed up with the discredited Smith-Connally Labor Disputes Act. I refer to the blistering editorial in Business Week, which is a publication devoted to the interests of private industry. Business Week does not want to amend or improve the act. It wants it repealed outright. It says as follows:

> The interests of business will be best served by leaving the details of collective bargaining and personnel policy to its industrial relations experts. Better than anyone else they know what hazards inhere in further Government intervention of any sort.

With remarkable frankness, the magazine admits that the purpose of the bill was to "divest organized labor of some of its power." But the results apparently have been disappointing to big business.

> For labor's bargaining strength—
>
> Says Business Week—
>
> has not been neutralized, strikes and labor disputes have been encouraged rather than prevented, and even labor's political activities have been enlarged, despite the prohibition in the law against direct campaign contributions by unions.

I sound a warning to industry that if the Government is invited to interfere unduly with the freedoms of organized labor, concomitantly it is invited to interfere unduly with the freedoms of industry. Today it is obstructing the normal and legitimate functions of organized labor. Tomorrow it will obstruct the normal and legitimate functions of private enterprise.

It Will Be Better To Correct the Mistakes of a Necessary Agency Rather Than Destroy It by Criticisms Without Making an Effort To Correct the Mistakes—O. P. A. Not Guilty of All Charges

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 20, 1943

Mr. PATMAN. Mr. Speaker, I am certainly not in favor of the mistakes, errors of judgment, or unreasonable acts of any governmental agency. In a huge program in wartime a certain number of mistakes are to be expected. It is my belief that if it is an agency of the Government that is absolutely necessary, we should direct our criticisms in a constructive way in the direction of correcting the mistakes of that agency rather than destroying it. In other words, we should not adopt the policy of burning down the barn to destroy the rats.

The Office of Price Administration is absolutely necessary. I can see a great improvement in the policies and practices of this agency in recent months. It can be called by any name that anyone desires to call it, but the functions of this agency are absolutely necessary in wartime, and will probably be necessary for awhile after the war in order to prevent ruinous inflation. Just as soon as it is possible, such an agency should be abolished; but we know it is needed now, and instead of trying to destroy it we should help correct the mistakes that are being made. Haste makes waste. In our efforts to build the largest and best war machine on earth we may expect mistakes to be made.

I am sure that the distinguished gentleman from New York, the Honorable HAMILTON FISH, in the CONGRESSIONAL RECORD of September 17, 1943, page 7627, did not intend to do this agency an injustice when he made the statement:

> Before calling upon the pre-Pearl Harbor fathers back in our own districts and families that have already given two or three sons, why not draft Government employees, power-hungry bureaucrats, and O. P. A. Gestapo agents, if they will not volunteer themselves.

However, people unfamiliar with the facts will possibly believe that the Office of Price Administration is a haven for draft-evaders, if this statement is accepted 100 percent. If there is one single evader of the draft in the Office of Price Administration or any other agency of our Government, he should be brought to justice and compelled to give up any right or privilege that he is hiding behind. But I seriously doubt that we should make a broadside charge against a governmental agency which is not supported by the facts. There is a committee of this House that is investigating the subject matter of this complaint and if anyone has evidence to support such a charge it should be presented to this committee.

Believing that the Office of Price Administration should be supported and prices should be held down to prevent run-away inflation, and knowing that this charge is such a serious one that the agency will be reflected upon, I have taken it upon myself to ascertain the facts. I am officially advised by the Office of Price Administration that the following situation existed relative to draft deferments in this agency as of September 13, 1943:

Total deferments requested	73
Total deferments granted	56
Total deferments now in effect	13
Total deferments ended and people now in services	43
Total number of military furloughs from O. P. A.	843
Total male employees:	
In Washington	1,875
In field	12,207
	13,082

Percentage of deferments granted, forty-three one-hundredths of 1 percent.

Percentage of deferments in effect, one one-hundredth of 1 percent.

This being the only agency mentioned by Congressman FISH, it is the only one positive information can be furnished on.

Address by Senator Revercomb on the Occasion of the Congressional Recess

EXTENSION OF REMARKS

OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on July 10 of this year, over the facilities of the National Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On last Thursday the Congress of the United States recessed to reconvene September 14, unless called to convene at an earlier date. During the last 1,281 days your Congress has been in session 1,261 days. The short adjournment that has been taken will permit the Members of Congress to attend briefly to their own personal affairs and business, and better still, it will permit those who have been here for many years to come in closer contact with the people who elected them and to learn from the people their attitude and feeling upon the subjects of government.

The order of adjournment contains the unusual provision that the Congress may be called back to reconvene at any time before September 14, upon the call not only of the Vice President and the Speaker of the House of Representatives, but upon the call of the majority leaders of the Senate and the House, and even more unusual, upon the call of the minority leaders in both the Senate and the House. Thus, if the leaders of the minority party feel that the convening of Congress is necessary to the protection and the welfare of the people, they may upon 3 days' notice reconvene the Congress at any time.

From information given this morning by the Washington newspapers it looks as though the adjournment may be very short. No sooner had Congress adjourned than the President issued an order forbidding certain persons in administrative departments and bureaus from revealing information to a committee of the House of Representatives which is investigating the conduct and action of the Federal Communications Commission with particular respect to the control of radio in this country.

I charge that the Chief Executive would not have issued this order while the Congress was in session. It prevents the disclosure of facts to a committee of inquiry dealing with the suspicious conduct of the Federal Communications Commission in a charge of attempts by it to control broadcasts and the use of the radio. It strikes directly at freedom of speech in this country just as much so as any effort by the Government to control information in the newspapers.

The President bases his order for the suppression of this testimony upon the ground that it "would be contrary to the public interest" for the committee to hear it.

The Members of the House of Representatives who were sent here into the Government by the people are as much concerned with the public interests as the President or any other official of Government. While I do not belong to that body of Congress I have complete confidence in the patriotism of its Members and in their earnestness to represent the best interests of the country. Certainly there is no justification for barring or suppressing evidence upon such an important subject, and thereby to prevent that committee from hearing it. What is it that is sought to be hidden?

So here immediately upon a short adjournment of Congress, we find the Chief Executive ordering a commission or bureau to refuse to divulge facts to an investigating committee of the representatives of the citizens of this country. The consequence of that order will be that the testimony will not be heard until the Congress reconvenes in September or whenever it does reconvene, if called to reconvene before the date fixed in the adjournment order.

Those of us who were elected to the United States Senate for the first time and who have been here but 6 months entered this body with definite views based upon the expressed will of the people at the last elections. That expression, as I see it, was that the first duty of government in this country today was to move forward with all the force that we had to win the war in which we had become involved. And in doing this work, partisanship or differences in political views must be laid aside. Later I will review the actions of the Congress upon the war measures.

A second objective and one very little removed from the first, and very little less in importance than the duty of winning the war, was to preserve our form of representative government of the American people and to keep the Government sound and to keep the people established in their fundamental rights, so that when the victory has been won and the war ended, those infringements upon the personal liberties of the citizens that have been occasioned through the direction of war, may be restored to them completely.

One of the most definite and particular steps in keeping those personal liberties and in safeguarding this form of government is to keep the powers of government vested in the people through their representatives in the Congress.

Also one of the greatest dangers that had crept into our Government was a surrender of almost unlimited powers to the Chief Executive.

When the people of several of the States elected new Members to the United States Senate last year they were dissatisfied with the trend in Congress which for 10 years represented a gradual betrayal of the separation of powers between the legislative and executive branches of the Government. The new Members who entered the Senate came here aware of this existing danger and some of the older Members who had gallantly fought against vesting this absolute power and destruction of American Government continued to fight valiantly for that end. That the purpose of reestablishing the Congress in its rightful position in the protection of the rights of the people has been accomplished to some extent cannot be doubted. We who entered upon our work this year realized the very grave situation that threatened to result in vesting absolute government in the executive branch, to be carried on by the bureaus and commissions under that branch. Those bureaus and commissions were not responsible to the people. They were appointed by the Chief Executive and they did what they pleased. The duty plainly devolved upon the Congress to see to it that the will of the people should govern and not executive bureaus.

To this end we set out to revest in the Congress, and consequently in the people, the limitations and control of the actions of these bureaus.

At the same time we realized, and do realize, that such steps must be taken with judgment and caution here in a time of war so that government may not be disrupted and may continue to function. Therefore, the steps taken in that direction have been gradual but certain. The war will be continued to be fought with all the force of America, but we want to relieve the people in this country of the unjustified and unnecessary burdens and restrictions that have been placed upon them. There naturally has been some talk about grave issues between the Chief Executive and the Congress. There have been differences in judgment, of course. It is very difficult for any man, however high an office he may hold, to calmly give up powers that have been given him, but the Congress when the record is read will be shown to have acted with fairness and with consideration of the American people, and with full consideration of a functioning government. It has been an independent Congress as it should be. Whenever it definitely felt that the action of the President was wrong the Congress has opposed him, and has gone so far as to override his veto. On the other hand, it has declined to override his veto when the Congress felt that the administrative side of government should have further opportunity to carry out policies which may be worked out for some good for the people of our country; and again Congress has referred a veto back to a committee to hold the veto for further action until it can determine what course the administrative side of government will take on the particular subject that was vetoed.

The Congress must be deliberate if good results are obtained. It must not be hasty in action. There is much yet to be done in the elimination of needless bureaus and commissions. It is my hope that this Government may emerge from the war simplified in its organization and not loaded down with hundreds of thousands of unnecessary employees who have been given jobs for an apparent purpose of political partisanship only. This end will be obtained if the people of the country will send in to the Congress men and women devoted to this purpose. As I before stated, we have not achieved all that we desire and much remains to be done. We have appropriated for expenditure immense sums of money, but it will be found that most of this money appropriated has been to wage the war that confronts us; to see to it that those men and boys that have been placed in the armed forces receive the complete and unqualified support of their Government in equipment, their protection and sustenance. This certainly is the least that we can do for them now in the time of battle. They have given up their lives of peace, their plans for the future, their comforts of home, and their ambitions. They have gone to fight the enemies and to meet death, if need be. Their Government must not in anywise fail to give them its full support at any cost.

So those of us who have been opposed to unnecessary expenditures and the terrible waste that has gone on for years, have supported the immense appropriation for carrying on the war. That there has been some waste in the conduct of the war cannot be doubted, but better some waste if the war will move more rapidly and the victory be won earlier.

The 78th Congress has appropriated $71,500,000,000 to the Army and $27,000,000,000 to the Navy for use in fighting the war for the year 1944. Those sums are staggering but if they will win the war they cannot be refused.

The War and Navy Departments must be permitted to fight the war. This Congress has backed them in that effort and the Army, Navy, and Marines have done a magnificent job to this date.

There were certain steps to be taken as matters of general policy which the Congress felt should be taken and which are not pending for action. You may be interested in knowing of these. There is before the Senate, reported there with the approval of the Military Affairs Committee, a bill to prevent the drafting of fathers until January 1, 1944. This has not yet been acted upon, but, in my opinion, will be passed at an early date in the fall. We felt this necessary so that there might be settlement of this question for a definite time so that the fathers who may be inducted might make their plans. It is my hope that not only will this bill be passed but that further deferment of fathers may be allowed.

There is also pending for early action provisions to permit high school boys to finish their last half year of work before being inducted into the Army.

Already passed by the Senate and pending in the House of Representatives is a bill to defer bona fide farm workers. The need of this measure is apparent throughout the farming States. It has been too long delayed in passage.

On the domestic side of our Government there has been considerable accomplishment in curtailing expenditures of money. There is not any need here tonight to review at this time the terrible waste that has been going on in the administrative side of Government, not only during the war but for years prior to the war. Waste that is inexcusable; waste that resulted from expenditures for political power rather than service to the people of this country. Some measures have been accomplished within the last 6 months to curtail this waste, but much yet remains to be accomplished, and even this Congress has, in my own opinion, appropriated too much for domestic purposes. Some good in curtailing expenditures, however, has been accomplished.

The National Youth Administration was completely abolished because it was only a duplication of efforts of five other facilities sponsored by the National Government. Appropriations for other agencies have been pared and cut and there has been a saving of money in the conduct of the domestic government. The domestic expenditures for the Office of War Information have been substantially curtailed and they have been limited as to the amount they may spend for moving pictures and such other propaganda to the American people; propaganda that had all the marks of partisan political stuff instead of information to our citizens.

The House of Representatives, in particular, is to be commended upon its stand to curtail expenditure of money.

However, it cannot be denied that much yet remains to be done in stopping the spending of money, and unless expenditures are substantially lessened, particularly the appropriations to these bureaus, some of which must be abolished, in a short time we will find ourselves a bankrupt people with each individual crushed down with a burden of debt that will prevent him from making any headway or progress in living for himself and family. The ending of this wasteful layout of money will be accomplished only by turning out of office those who have subscribed to the policies of the New Deal and who blindly support the administrative policy of continued spending and the maintenance of unneeded commissions and bureaus.

Realizing the necessity during the time of war to place in the hands of the Chief Executive, sums of money which might be suddenly needed in an emergency arising out of the prosecution of the war, the Congress appropriated what is known as the President's emergency fund, consisting now of $94,000,000. This appropriation carried the provision that none of the funds so placed in the hands of the President may be spent on any Government agency for which Congress had denied appropriations. This was a proper limitation upon the use of that fund. Congress is vested under our Government with the power to appropriate money, and therefore, it has the duty to limit the purposes of such appropriation. It would, indeed, be futile if the Congress in its judgment should refuse an appropriation to some agency or bureau, and then have emergency funds, given for the purpose of conducting the war, diverted to such an agency or bureau, and thereby defeat the act of Congress. Indeed, what good would be obtained to refuse unneeded funds to an agency, if the Chief Executive could arbitrarily allocate part of his emergency funds for the functioning of the agency which the Congress had disapproved?

This limitation was not only within the power of Congress, but was the exercise of the plain duty of Congress, and it was not a lessening of the rightful powers of the President.

And now, may I speak to you personally for a brief time, in a general way, upon the processes of government through Congress? The 6 months that I have been here have been trying, have been exciting at times, have always been very interesting. I believe that this is the feeling of the other men who entered the Senate for the first time this year.

Members of Congress, in both Houses, recognize that theirs is not a simple task of voting "aye" or "no" on the bills that come before them. They are the chosen representatives of the people and in them reposes the responsibility of whether this is to be a Government by the people. They are expected to guard the public purse and to make certain that the public money is not dissipated by administrative extravagance. They are required to investigate the conduct of public officials. They have to reconcile the feelings, the divergent interest and concerns of 130,000,000 individuals, each of whom has all the rights given him by the Constitution of the United States. Each Senator and Representative is subject to a multitude of pressures from organizations and articulate

groups among the people. I have welcomed these pressures, as difficult as they are sometimes to bear, because the people of the United States have a right to organize to express their points of view. It is quite noticeable that certain Americans organize and lobby for their own particular aims and desires, yet become very critical of other Americans when they do the same thing. No organization of American people should be discouraged or denied the right to petition Congress for the redress of a grievance. A Senator learns in his first year, and I believe he should always remember, that a free people will speak in many glamorous and divergent voices. Even the people of his own State are varied in their interests and their points of view. All that can be asked of them is to be fair and to recognize the rights of other men and women. It is my duty and my obligation to listen to all of them, to seek to understand their wishes and their demands and to appraise them from the standpoint of what is for the best interest of our America. I shall not ignore them and I shall not put my own desire above theirs.

No man is loftier than the whole of the people; no man can attempt to be master of the people in a free country. No man by right is sovereign over the people in America. When these complex demands of varying interests are laid before us, it is our duty to do what is right for America and then we cannot wrong any man who loves America.

For a decade the Congress of the United States permitted itself to become what the people began to call "a rubber-stamp Congress" and permitted itself to accept the dictates of the Executive. It passed legislation which it was told it must pass by the various boards, bureaus, and commissions of Government until we approached an alteration in the form of the American Government from a representative republic to an administrative dictatorship.

The people of this country have inborn into them a love of the liberties that are their heritage, and a love of the Government which their fathers established here and which has safeguarded those liberties. Congress, through action of most of its Members, lost the respect and good will of the American people. It was not serving as our form of Government required but was doing what a political group dictated it should do. Executive agencies were permitted to become instruments of executive power, devoted not to the processes of Government but rather to the inquisition and prosecution of citizens who opposed what they were doing. Money was voted these agencies in almost boundless amounts and with little regard to the capacity of the people to shoulder the burden of public debt. Taxes have become hideously destructive of the people and no longer a process to provide the Government with revenue. Taxes have been used as a corrective and penitive process for the leveling of the economic and social standards of our people and for the socialization of their means of production and distribution.

The American people have become wearied of Congressional abnegation of its authorities and the surrendering of its responsibility.

In 1942 the people began to serve notice upon the Congress of this country that it must either function constitutionally, assuming full responsibility and authority, or its membership would be changed.

That voice of the people has been heeded and today we again have a more independent Congress, and I believe that in the elections of next year that we will then have a Congress of complete independence respecting definitely the will of the people and working wisely and earnestly without domination from any source, except that source which sent them here.

There is criticism of Congress that it talks too much. The Reichstag does not talk at all. The French Chamber of Deputies has been silenced. The Japanese Diet is a recording machine. In the American Congress debate is free. It is the Members' right to discuss openly, frankly, and with the sincerity which alone is convincing in such a body, the problems that face our people. Eliminate free discussion and the alternative is slavery. Curtail debate and the people must submit to dictation from little bureaucrats who love power more than they do the people and who are not representative of the people and who must be made subject to the will of the representatives of the people.

I cannot criticize Congress for its unwillingness to be rushed although it has before it the great duty to revest in the people the powers that it surrendered in past years. It must move with deliberation and without disruption of governmental functions. We are here to discover the truth and to perform legislatively in the interest of the American people. Only discussion and thoughtful investigation will lead to the truth of the situation upon which such action can be based. Only compromises among the elements of our people can minimize injustice in government and prevent any group from dominating the course of government. Government through ipse dixit of a group of our citizens is bound to lead to injustice and oppression to other citizens. That is one of the highest duties of the Congress to see that no group dominates the Government. It is not American to make government oppressive. It is not American for government to prove how powerful it can be. Government must not be despotic. It can be and will likely be if too much power is placed in the administrative side of government. The dictators of other countries have proved that conclusively.

Congress and the executive branch of the Government differed on the method of payment of income taxes by our people to meet the staggering money obligations that have been undertaken. Some of this obligation is justified in view of the war, but some of it, resulting from waste during the course of the last 10 years, can never be justified.

We were presented with the problem of enacting a pay-as-you-go plan for the payment of taxes. This plan was definitely opposed by the Treasury Department and the administrative side for reasons that were never convincing and often of doubtful validity. The Congress did not act until it observed the wishes of the people of our country and until it studied the effect of such a plan upon the future welfare of the citizens and whether or not it might lessen the burden that had grown so heavy.

We became convinced that the people wanted the pay-as-you-go plan and that law was enacted against the wishes of the executive department. This was done for the purpose of lightening the burden of the people and making it easier for them to pay the assessments placed upon them. Looking into the future the greatest duty upon Congress, it seems to me, is to rid the American people of those bureaus and departments which have fastened themselves upon the Government like barnacles to a ship and which grow heavier and heavier as time goes on. The bureaus that are necessary to the proper functioning of Government will be retained, but they will be made more responsible to the people and their representatives. That must be so in order to maintain their efficiency and their willingness to regard the welfare of the American people. The bureaus that have grown up here and are unnecessary to the functions of government must be ended. If this is to be accomplished, I want to say to the American people that it is up to you to send into the Houses of Congress those who are devoted to this purpose. When you do that then we may with more certainty reestablish the Congress as the true representative of the people and then you will have a government responsive to the needs of our citizens. This is your Government and it will be kept so as long as you will maintain an independent Congress. Only a Congress that is independent of the executive branch of government will head the call of the people to their government.

One of the most serious domestic problems that face our people is the question of food. Our people are not hungry yet, but they are being abused by a silly bureaucracy—the Office of Price Administration—that has become so entangled in the red tape of its own devising that if a halt is not called we shall be hungry. Fundamentally I am opposed to price fixing in ordinary times, but I recognize the necessity of fixing the prices of those commodities which the citizens must purchase in order to live when there arises circumstances that exist in time of war.

The Office of Price Administration has had ample authority to administer the fixing of prices in a fair and equitable way so that needed food may be produced, independent business maintained, and the people permitted to purchase food at a reasonable cost. But the administration of the bureau has been a disgrace to the country. The operation of such a bureau is an administrative matter and one with which the Congress should not have to deal.

However, unless this bureau does get its house in order, unless it cuts out its red tape and some of its foolish directives, steps must be taken by the Congress to clean house there.

There is no lack of food in our country. There are ample cattle—2,000,000 more head in the fields than ever before in the history of this country—but through the foolish regulations of the Office of Price Administration those cattle provide no meat for your table.

We have more hogs than at any time in the history of the country, yet pork is scarce upon the market. There is no shortage; there is only confusion and bungling. Further opportunity has been given this part of the administrative branch to correct this confusion. It must be corrected.

As we move forward toward the vanquishing of our foreign enemies, we must not be forgetful of the rights and the liberties to which our own American people are entitled.

First, above all else, those young men that wear the uniform and fight in the name of their country must receive our first consideration, but their people back home must be fed and must be made secure. Their right to work without domination from any group against their own will must be kept for them. The right of free enterprise so that no limit or lid may be placed upon the future success of any American boy and girl must be sustained. This has been done in the past history of America through the plan of government created by our fathers. These rights will continue to be saved by the American Government so long as this plan is maintained. The desired plan of government will be maintained when you, the people of this country, will send into the Congress enough Members who will be independent of the domination of any other branch of the Government.

There is a greatness in our people which is the reason for our survival. It is that same greatness that will win victory for our arms and keep our people secure. That greatness is rooted in our individual independence. No American can ever forget that his most treasured possession is his personal liberty. No American will ever recognize the right of government to deprive him of his personal liberty by law; by socialization of free enterprise or by political or administrative subterfuge.

That liberty of the people has been threatened in the past few years; threatened through usurpation of authority in the exec-

utive side of the Government and the domination of Congress by the Executive. That threat has been met and we will have an independent Congress, one that will recognize the rightful sphere of executive action and assist and aid in the administration of Executive duties, but one that will safeguard unto the people their rights which were entrusted to their Representatives in the Congress.

As long, and only as long, as you will send to Congress men who will have the independence and will to represent you for the best interest of America, no American need ever fear the loss of personal independence or the loss of his liberties. In such a Congress rests the safety and the hope of the American people in the preservation of the rights given to them by their fathers and which must be kept for their children.

Food by Executive Order

EXTENSION OF REMARKS

OF

HON. HARLAN BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Chicago, Ill., on September 16, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

An army travels on its belly. So does a nation. Curtail the food supply by whatever method or with whatever intent and both the nation and its army face disaster.

Marvin Jones, War Food Administrator, stated on August 27, 1943, in an address delivered over the Columbia Broadcasting System, "Food is not a political issue." I agree and earnestly hope that it can be made so, but it has been handled as a political issue by the present administration. Its planned economy, wholly political, which we have been receiving in larger and larger doses during the last 10 years, has resulted in a shortage of food and the intent of the planners is immaterial.

We have gathered here in a Nation-wide conference to consider the present food situation. To achieve any lasting benefit we must look to causes rather than results; and if the cause is man-made, we should take steps to correct it.

This conference is open to the public and to the press and not behind closed doors guarded by soldiers as was that other historic conference of 44 nations held at Hot Springs, Va., "to consider the goal of freedom from want in relation to food and agriculture." Shortly prior to that conference a joint meeting of the members of the Foreign Relations Committee and the Committee on Agriculture and Forestry of the United States Senate requested that Members of the Congress be permitted to attend. Our request was refused. What occurred at the conference is still buried in the secret archives of the White House.

The trouble with planned economy is that the plans are changed so often we cannot keep up with them. During prohibition we developed a workable and businesslike system of evading the law. Our distribution and delivery were promptly and efficiently serviced. Anyone willing to pay the price could get his drink. Then along came repeal and threw our distribution machinery all out of gear. Bootleggers went into other business ventures where a profit was still possible. By the time the planners developed that new masterpiece, the O. P. A., our prohibition bootleg machinery had completely disintegrated and now we have to start all over again.

If the planners will chart a master plan to remake America and publish it, we can then go ahead building our bootleg organization with some degree of security. It is the uncertainty of what is being planned for us in that more abundant life that keeps us in such a dither.

We are now told there is a shortage of food. Whether the shortage is real or imaginary, is immaterial, because if we cannot get the hamburger sandwich we crave or our wife demands, we are uncomfortable and perhaps a little hard to get along with. Eventually we begin to ask why, and that is what the people are doing today. They are asking why. They are demanding an explanation, and when they have all the facts, stripped clean of governmental propaganda, they are going to hold someone accountable for the mess.

But to keep the record straight, let me emphasize that there is no actual shortage, only a regulated one. "We planned it that way," says the President, "and don't let anyone tell you differently." Well, we did not intend to contradict the President. If he says, "we planned it that way," I accept him as authority, but conversely, we have a right to say that whatever shortage exists now is due to that planning.

But let us examine the facts.

This shortage is partly the effect of 10 years of a mistaken governmental policy of scarcity and partly due to present governmental regulations. By that policy of scarcity we have been forced to reduce the land planted to food crops by 47,000,000 acres. Limitation of acreage, destruction of pigs and cattle, burning of ripened wheat are all part of our boasted planned economy and is the policy of scarcity preached by the planners in Washington.

Their alleged objective was to raise prices of food products.

Today we are at war, a war which absorbs every energy, resource, and ability we possess. In prosecuting war, food is just as important as gunpowder, but the national administration refuses, even under the dire emergency of war, to suspend its ideas of planning.

Book farmers have planned us into our present shortages, and unless stopped they will plan us into complete bankruptcy.

The farmer dares not buy cattle for feeding because of ceilings. He cannot plan his next year's crop acreage because of uncertainty of farm machinery. He cannot plan the kind of crops he will plant because of crop limitations. He cannot plan his pig crop, or his sheep, or his cattle because of the uncertainty of labor.

But what of the consumers?

For months, in the larger cities, it has been difficult to procure meat. Thousands of meat markets have remained empty for days at a time. The planners tell us there is a shortage of meat. This is a malicious misrepresentation. No actual shortage exists.

Today we have approximately 7,000,000 more cattle than we have ever had in our history. There are more hogs and more sheep and more black markets.

There are those who say the shortage is due to lend-lease shipments. The facts do not support the charge. Edward R. Stettinius, Jr., Lend-Lease Administrator, says, "That during the year 1942 only one pound in every 500 pounds of American beef was sent abroad. The percentage is large today, but still it is only about 1 percent of our meat products."

Mr. Stettinius says further, "That under the reciprocal clause of lend-lease, Australia and New Zealand last year furnished our Pacific forces with 25,000,000 pounds of beef, which was 7,000,000 pounds more than we shipped under lend-lease to all countries."

Former President Hoover said recently that during the last war, "We shipped more food to our allies monthly than is being shipped today. We had no local famines in the United States as we are having now. We had no black markets."

They say the Army and Navy are consuming so much meat that it has caused a shortage. That is obviously untrue. The members of the armed forces were eating meat prior to the war. Even if they doubled their consumption, the amount used would not affect the supply, because it would amount to only 3 percent of our meat products.

They say the American people are eating more because of improved conditions financially. Even so, it could not cause a shortage. Man's ability to consume meat is very definitely set by nature within narrow limits.

None of these explanations explain. Beef, pork, and mutton are more plentiful than ever before. Then what is the answer? Regulation. The arteries of trade are damned with governmental regulations and the regulations are prepared by bureaucrats who do not know the answer to the problems.

So much for distribution, but what of production?

Early in 1942 I told General Hershey, of Selective Service, that the draft was taking essential farm labor from the farms of the Middle West and that the result would be a reduction of necessary foods. My suggestion was ignored and our farms were stripped of needed labor. When the shortage of farm labor was finally recognized, the Government promised to take care of it by recruiting hillbillies from the mountains of Tennessee, Kentucky, and West Virginia, plus school children from the towns and cities of America. Few of those laborers had ever milked a cow, assisted in the farrowing of a sow, or played wet-nurse in lambing time. None of them know anything about power machinery with which we do our farming. The planners of the Department of Agriculture said they intended to take these unskilled, unlearned, and inexperienced children and mountain people, give them a week's training and they would then be experienced farmers who could take the places of the men who had been drawn into the military service. No finer, more patriotic group of people exist anywhere than the American farmer. He works 18 hours a day in the crop-growing season. He does not strike for higher wages. He fights adverse weather and struggles on in spite of governmental regulations. Without him, neither the Army nor the civilian population could long exist, but we have made and are making it impossible for him to do his job. Regulated farming must be abolished. Freedom, labor, and equipment are the things he needs. Give him these three things and our food problems will be solved.

They say that such a course would bring inflation. I wonder if this word "inflation" isn't a bugaboo used to frighten the American people into submission to continued regulations. Inflation is already here and no one has been harmed. Inflation cannot be controlled by law. Price fixing and rationing will not prevent it.

Give the law of supply and demand an opportunity to solve this thing for us without an army of job holders snooping their unsavory way around the country, and I predict an ample food supply in 1944.

Turn the American farmer loose, remove the hamstringing regulations with which he has been curbed, repeal O. P. A. on all food products, protect the farmer where protection is needed, give his native American

genius an opportunity to operate, and this false shortage of food will disappear.

The President says he is going to reduce the cost of living 10 percent. To accomplish this the Office of Price Administration has issued an order to roll back the retail prices on butter, meat, and coffee by 10 percent. To compensate the processors of these commodities the O. P. A. proposes to pay to the processors a 10-percent subsidy from the United States Treasury.

The subcommittee on food of the Senate Committee on Agriculture and Forestry has been studying this program since it was first announced. I am convinced, as are the other members of the committee, that these subsidies cannot be justified and should be prohibited unless specifically authorized by Congress.

Jesse Jones, Secretary of Commerce and head of the R. F. C., testified before our committee recently. He stated that this subsidy program on the three commodities named will cost the United States Government $450,000,000 a year. When asked where he would get the money to pay the subsidies, he said that he had the money in his R. F. C. funds and that he proposed to pay the subsidies upon order of the President whether the Congress approved it or not, and without the necessity of an appropriation from Congress.

Nearly everyone is opposed to this program except certain C. I. O. officials and a small inner circle in the White House. Even official Washington does not approve of the program. Secretary of Commerce Jones, while declaring that he would follow orders, stated: "If you let the law of supply and demand take its course, no subsidies are needed. The subsidy plan will reduce production instead of increasing it."

Chester Davis, War Food Administrator, also appeared before our committee. He said: "I believe that a general dependence upon a broad subsidy program as the chief instrument in holding prices in line, or in expanding production, would be dangerous and would not accomplish the things we seek."

T. G. Stitts, Chief of the Dairy and Poultry Branch of Agricultural Marketing Administration, stated: "The proposal to roll back the price of butter has had an unfortunate effect. Prices—for the producer—have gone down. There is no provision to indicate that the subsidy would be passed on to the farmer."

Meat processors, dairymen, and farmers all oppose the program. Albert Goss, national president of the Grange, testified before our committee, stating his opposition to the subsidy program thus:

"We are opposed to the use of subsidies for such purposes, because they will not work. They are inflationary and will defeat the purpose sought to be accomplished. Subsidies in lieu of fair prices will lead to post-war chaos. Subsidies pass on to future generations costs which this generation should bear. Subsidies lead to the dangerous doctrine of expecting the state to support its people. Subsidies lead to political control and when once used they are almost impossible to get rid of."

Under this subsidy proposal only butter makers making 1,000 pounds or more a month will receive a subsidy. Neither the small creamery nor the hundreds of thousands of farmers' wives throughout America who make a few pounds of butter a week for sale at the local store will receive a subsidy.

But what will be the effect upon producers? The retail price of butter is reduced by the order from 64 cents a pound to 41 cents a pound. The reasoning of the bureaucrats who advocate this program is that it will have no effect upon the price to the producer. Their theories are not supported by facts. The price of butter and milk products and cattle declined immediately. So that the farmer loses millions because the processor does not and will not pass on this subsidy.

The roll-back program inflicts huge damage upon meat processors, too, because no subsidy is to be paid upon meat now in their hands. The American Meat Institute estimates their loss at $25,000,000. It will not help the consumer. It will increase the black market, and can be used as a club to enforce political obedience to those in power.

I oppose this roll-back and subsidy program not only because of the huge losses to the producers, but because it is wrong in principle and is of questionable legality.

By the terms of the Price Control Act of 1942 the President, or the administrator under him, is authorized to pay subsidy for one purpose only, and that purpose is "to make subsidy payments to domestic producers of such commodity to obtain the maximum necessary production thereof."

There is no provision whatever in the law authorizing the President to roll back prices or to pay subsidies to processors, and instead of increasing production this roll-back actually decreased production.

Every witness appearing before our committee says the program will lower production of both dairy and meat products. Both the producer and the processor will lose, but the consumer—and that includes all of us—will lose too.

Consumers are receiving higher wages and incomes today than ever before in our history, and they can continue to pay this small additional price for butter, meat, and coffee without loss worth mentioning.

Let me explain. Under the rationing now in effect, each consumer can obtain a quarter of a pound of butter a week, or 12 pounds a year. The 5 cents additional cost to the butter consumer without a roll-back for 1 year is 65 cents; to the coffee user, 24 cents; to the meat eater, $2. The entire cost to the consumer without the roll-back will be less than 1 cent a day. Isn't it better for the consumer, then, to bear the cost instead of dipping into the Federal Treasury?

Secretary Jones says that this program will cost about $450,000,000 a year. Members of the C. I. O. testifying before our committee demanded that Congress appropriate a minimum of $2,000,000,000 a year for this program. But whatever the amount required we consumers will pay it in taxes.

The Government does not have the money. It will have to be borrowed. Borrowed money requires the payment of interest. Whether the sum is $450,000,000 or $2,000,000,000, we will have to pay interest upon it by more taxes.

And do not forget the new army of thousands of jobholders to be employed to administer and enforce the subsidy program. We then have the original cost, plus the interest charge on borrowed money, plus the cost of administration. You and I know that with the Government handling it, the cost will be from two to three times the total amount of the subsidies. And who pays the bill? The taxpayer pays it and the taxpayer is the consumer.

Ladies and gentlemen, this whole scheme of roll-back and subsidy is a cheat and a fraud upon the American people, conceived to fool the people into believing that the administration is reducing the cost of living. Are we gullible enough to stand for this fraud? I do not believe we are. The policy of bureaucrats in Washington thumbing their noses at the people and Congress is going to explode in Washington's official face one of these days, and a lot of people on the Government pay roll are going to receive the shock of their lives.

Any soldier, marine, or airman will testify, if asked, that we are fighting to destroy the planners of the world. Hitler is a planner, Mussolini is a planner. Hirohito is a planner. The daily lives of their people are planned by their respective governments. We are fighting to preserve our right to do our own planning in our own way.

It would be indeed tragic irony if the boys scattered over the seven seas come home and find that the thing they fought against has fastened itself upon America and that we, too, are the slaves of planners.

The President once said, "Were it possible to find master minds so unselfish, so willing to decide unhesitatingly against their own personal interests or private prejudices, men almost Godlike in their ability to hold the scales of justice with an even hand, such a government might be to the interest of the country. There are none such on our political horizon, and we cannot expect a complete reversal of all the teachings of history." I say in extension of the President's thought, there are still no master minds on our public horizon.

This national food conference is a historic gathering. Our action may influence or determine the future policy of America. The present philosophy of dictation by the Government must give way to individual choice if we are to survive. Have we the courage to make our position clear?

I wish I could take you to the Black Hills of South Dakota and show you the Mount Rushmore Memorial. It is called the Shrine of Democracy, but it is something more. It would, I am sure, assist us to envision the crisis we face today.

Rushmore is a granite mountain thrusting its head into the heavens of the South Dakota mountains, barren of vegetation, unchangeable and as irresistible as eternity itself. Gutzon Borglum, the great sculptor, saw beneath that granite surface something which the rest of us were unable to vision, but when he had pealed it away there lay revealed the sculptured heads of our four greatest Americans, George Washington, Thomas Jefferson, Abraham Lincoln, and Theodore Roosevelt.

Millions of Americans have journeyed to the Black Hills in the last few years to see that marvelous work of man. Millions more will come as the generations come and go, for this granite mountain with its sculptured faces will remain forever. It is more than a work of art. It is thrilling and inspiring. It is sublime, because it portrays us, you and me, in its deathless faces. I would like to leave with you what I see in that memorial. I see America, in all its moving, glorious history. I see the people pushing steadily across the plains and mountains of this continent on foot, on horseback, by covered wagon, building a nation, creating something more lasting, more important than sculptured stone, a nation of freemen. These men and women came with little more than their bare hands into a savage wilderness. They conquered that wilderness, not by governmental directives, not by planned economy, not by dreamers of today's more abundant life, but with the sinew and brawn of their own hands, of their own bodies, and the determination of their own stout hearts. With a vision of personal independence in their eyes, they built churches, schools, towns, and highways as they moved westward, building America. That is what I would like to have you see in the sculptured faces on Mount Rushmore, because they are America. It is for that our sons are fighting in every country in the world, that they can come back to a land of opportunity, free from the planners and schemers of Washington.

Address by Hon. Jesse H. Jones at Back the Attack, United States Army War Bond Show

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Jesse H. Jones, Secretary of Commerce, at Back the Attack, the United States Army War Bond Show, at Washington, D. C., on September 16, 1943.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The entire personnel of the Department of Commerce considers it a privilege to Back the Attack with all their might and main.

Fifteen billion dollars is a lot of money, but there is no safer investment than the bonds of your Government. Furthermore, these bonds will come in mighty handy when the war is over, and we are looking for peace-time jobs.

We have sent, and are sending, soldiers, sailors, and marines to the remote places of the world.

They are fighting and living under every imaginable hardship and hazard—in swampy fox holes, arid deserts, and amid ice and snow. They are meeting the enemy in the air, on the sea, and under the sea.

Many of them are giving their lives. Many more will come back maimed for life.

They must have food, and clothing, and medical attention. They must have supplies, and equipment, with which to fight.

Our job is to see that they have all of these when they need them, where they need them. This is the very least we can do, and that can be accomplished only by our working to the limit of our endurance, each and every one of us, and by buying bonds to the last penny we can spare.

We are fortunate to have with us tonight five young airmen who have just returned from an amazing tour of duty in the Mediterranean area. They have been hitting the enemy from Rumania to Tunisia, over Italy and Sicily. These five airmen are strictly civilian products. They are graduates of the Civil Aeronautics Civilian Pilot Training schools of whom there were 65,000 even before Pearl Harbor. They are:

Capt. Royden L. Lebrecht, pilot of the Squaw, who received his elementary training at North Texas State Teachers College, Denton, Tex.;

Capt. Ralph M. Lower, pilot of the Warrior, who received his elementary training at Washington State College, Pullman, Wash.;

Lt. Clarence O. Seaman, copilot of the Warrior, who received all of his training at Fresno State College, Fresno, Calif.;

Lt. Clinton H. Killian, copilot of the Squaw, who received his elementary training at Utah State Agricultural College, Logan, Utah;

Lt. Albert J. Mickish, bombardier of the Squaw, who received his elementary training at Oklahoma A. & M., Stillwater, Okla.

America's Inner Fortress

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15, 1943

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. James P. Pope, Director of the Tennessee Valley Authority, before the Rotary Club of Mobile, Ala., on August 26, 1943. The address is captioned "America's inner fortress."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If one may conceive of the defense of the continental United States as an outer fortress and an inner fortress, then Mobile would form one of the most important links in the chain which constitutes the outer fortress of the country. Its natural location, near the head of Mobile Bay, 30 miles from the Gulf, attracted the attention of the earliest settlers on the Gulf coast. Fort Lewis was built immediately after the settlement of Mobile in 1669, and Fort Conde was built some years later. Mobile became the capital of the French continental empire, which covered almost the entire Mississippi Valley. It played a major part in the early development of this part of the country.

During the War Between the States, Fort Morgan and Fort Gaines formed a mighty defense of the Confederate States until they fell in the latter part of 1864. The port of Mobile was certainly one of the most important in the South during that crisis.

Today Mobile is a tower of strength in the defense of the whole country. Its great shipbuilding plants are launching cargo and combat vessels at a rapid rate. Its Brookley Field is one of the largest southeastern air depots of the Army Air Corps. To a landlubber like me, the port of Mobile is a marvel of size and activity. Its 2 miles of concrete wharves, its 35 acres of shipside sheds, its network of State-owned railroads connecting with all the main lines, and its ability to accommodate 22 ocean ships at one time, make an impressive sight. And it is backed up by countless machine shops, foundries, lumber and textile mills, and a rich farming country. Its open gates to the seven seas, serving 42 American and foreign steamship lines, give it a world-wide importance.

There is an interesting and important connection between Mobile and the Tennessee Valley area. The Aluminum Ore Co.'s alumina plant at Mobile is the largest in the Nation converting South American bauxite, and the Alcoa plant in Tennessee is the largest aluminum reduction and rolling plant in the country. These plants are vital parts of the process of the Aluminum Co. of America in the production of the metal for airplanes. One cannot imagine America playing her full part in this great war crisis without the production of these plants.

With respect to the utilization of another vital resource for war purposes, another link between Mobile and the Tennessee Valley is being forged and an appropriation made by Congress for carrying it out. I refer to the proposed plant for the production of phosphorus for munitions and for the land for food during the war. This plant would be integrated with those in the Tennessee Valley and operated by the Tennessee Valley Authority. Congress has already appropriated money for the plant, the site has been purchased and the plant designed, but its construction is being deferred by the War Production Board. T. V. A. believes this plant ought to be constructed and put into operation for the production of munitions, if necessary, and for additional agricultural production in any event. It is our hope that construction of this plant may go forward at an early date.

My purpose today is to discuss the Tennessee Valley region—a region which I choose to call the inner fortress of the country.

This region has great natural advantages in location of war plants and in the production of implements of war. It lies about 500 miles from the Atlantic seaboard and about the same distance from the Gulf Coast. It is protected on the east by the Appalachian Mountains, some of the peaks being about 6,000 feet high. In colonial days these mountains formed an almost impassable barrier to the westward expansion of the English colonies. They are made up of a bewildering multiplicity of successive ridges, with the passes through them tortuous and rough. The rivers west of these mountains flow in a southwesterly direction, which has determined the course of water and railway transportation throughout the region.

This large area, extending from western Virginia into the northern parts of Georgia, Alabama, and Mississippi, has a great variety and richness of natural resources. It has millions of acres of good farm lands, extensive timber resources, and considerable amounts of iron ore, copper, zinc, and other essential minerals and metals. It has enormous quantities of coal and water power. Altogether, it has a list of strategic, critical, and essential war minerals which is much too long to enumerate. Among them are substantial bodies of manganese, mica, tungsten, kaolin, and olivine (for magnesium). And in addition to these, there is an almost inexhaustible amount of alumina-bearing clay.

Because of these natural advantages of location and resources, the War Department selected nine sites for munitions factories during the First World War, eight of which were in the Tennessee Valley and the ninth not far away. Since then the Tennessee River development by T. V. A. has provided a supply of low-priced electricity for the region—a supply which is second to no other in the United States.

It is well known to you, of course, that during World War No. 1 the wartime project for the manufacture of explosives was begun at Muscle Shoals. The Wilson Dam, greatest single producer of power of the Tennessee Valley system, was begun during the war and completed afterward. Two large ammonium nitrate plants were constructed. This was the beginning of the Tennessee River development which has been carried on during the last 10 years by the Tennessee Valley Authority.

Since 1933, when Congress created the Tennessee Valley Authority, 14 huge dams have been built and put into operation, in addition to Wilson Dam; 2 others (Kentucky and Fontana) are now under construction; 3 others have been authorized; and 6 dams have been acquired from private concerns. One large steam plant has been built and is in operation, and 4 others have been acquired. This construction program is greater than that of the Panama Canal, and is equal to about 8 Boulder Dams. To compare it with one of the 7 ancient wonders of the world, the pyramids, the Tennessee River dams have 50 percent more cubic yardage in

them than all the pyramids of Egypt, which took 1,750 years to build. The Kentucky Dam alone is a third larger than the Great Pyramid of Cheops, upon which 100,000 Egyptians worked 30 years. There is no other river in the world so extensively developed as the Tennessee.

For obvious reasons, I cannot detail to you the extent of the war production that is now going on in this region. I can only say that there is a network of very important war industries in the region. There are vast aluminum plants, powder plants, ordnance works, aircraft factories, chemical warfare arsenals, copper works, ferromanganese plants, shell-loading plants, ammonia and ammonium nitrate plants, and plants for war goods of many other kinds. In the field of electric power where all this industry is served, T. V. A. is supplying about three-fourths of its entire output for war purposes. This agency is furnishing more electric power for war purposes than any other in the United States.

So far I have mentioned only the natural advantages of location and resources in the region, the war production which is going on, and the part that T. V. A. electric power is playing in this production. This is only a part—it may be a minor part—of the war potentialities of this region. There is located at Muscle Shoals, Ala., one of the largest chemical laboratories in the country, operated by T. V. A., and there are working arrangements between T. V. A. and the research laboratories of the various universities and colleges in the area. Experiments with the natural resources of the region are now under way, and they have vast possibilities. As an example, the Walthall process for extracting alumina from clay is now proven and ready for production when more aluminum is needed.

This process means, in the opinion of experts in this field, that the United States could have an ample native supply of aluminum in the days to come, extracted from the clays of the Tennessee Valley area. The amount of this clay appears to be practically inexhaustible. In the future, if for any reason the supply of bauxite from South America or from any other country should be shut off, the needs of the United States for this vital metal can be amply supplied.

Almost the same can be said of the process that is now under development at the Muscle Shoals laboratory for the production of magnesium from a mineral known as olivine. This mineral can be found in great quantities in western North Carolina and perhaps in other parts of the country. Magnesium is a metal which before the war had never been produced in large quantities in this country. We have always depended upon imports of the metal from other countries. The process is now far along toward completion, and our research experts are quite well convinced that it will be successful. Magnesium, as you know, is a metal much lighter than aluminum, and is being widely used now in airplane construction. The development of this process will also be a long step towards strengthening the inner defenses of the country.

And the amazing advances in the development and use of plastics are going on in this region as they are, of course, in other parts of the country. The story of plastics is one of the most thrilling in the whole history of scientific research. What the technicians are doing sounds like magic. They are taking from coal, air, and water, and some other natural resources, the materials for a host of most remarkable articles, including synthetic rubber. Actually they are tearing apart these raw materials and putting them together again into new and useful things. They are even breaking apart the molecules in waste timber and putting them together again in products of the strength of steel and aluminum. I sometimes think that we are to have a plastic age comparable to the stone and iron ages of the past. Most of the materials for these plastics are to be found in the Tennessee Valley region, and our technicians are at work upon them.

In another respect an important step has been taken in the advancement of electrochemical industries; that is, the development and use of the electric furnace. This development has grown out of the availability of electricity at a low price. Electric furnaces are now being used by the T. V. A. and by a number of the large industries in the Valley area. As an illustration of what it means to electro-chemical industries, a difference of one mill per kilowatt-hour in the cost of power in the production of aluminum is the equivalent of the cost of 1 cent per pound. The same advantages in different degrees exist in the production of phosphorus, calcium carbide, ferroalloys, and other things. The use of the electric furnace in the Tennessee Valley area has added much to the strength and efficiency of the industries of the region.

Back of all this advanced development of resources for the making of implements and munitions of war is the widespread progress that is being made in the conservation of the land and in the production of agricultural and forest products. More than 150,000,000 trees from T. V. A. nurseries have been set out in this region. Protection of the forests from fire and from destructive methods of cutting is now going on in an effective way by the States in cooperation with the T. V. A. Studies of these resources and of the best ways to utilize them are being made. The increased and effective use of wood in war production is one of the surprising developments in this war.

With reference to the land, which is the source of nearly everything by which men live, a widespread program of conservation and better use is being carried on in the Tennessee Valley and in some other parts of the country. This is the farm demonstration program of the T. V. A. and the Extension Service of the land-grant colleges in cooperation with other Federal and State agencies. The use of phosphorus is the basis of this widespread development. Large amounts of phosphorus are being produced at Muscle Shoals with the electric furnaces. Much of it is being used by the War Department in the form of elemental phosphorus. Another substantial part of it is converted into phosphatic fertilizer, most of which is being shipped to Great Britain for use there in the production of food crops. The rest is being used for demonstration purposes in the Tennessee Valley area and in other States.

Around this product have been set up some 26,000 demonstration farms in the Valley and many other thousands elsewhere in the United States. Around these demonstration farms there are hundreds of thousands of farmers who are following the methods of conservation and production used on the demonstration farms. As a result of this, the volume of production has been stepped up, and the evidences of conservation and increased fertility of the soil are sources of great satisfaction to those who are familiar with this work. Since food and fiber are essential weapons of war, this backlog of solid achievement adds strength to the inner defenses of the country.

Related to this matter of food and fiber production on the farms and in the forests is the taking of fish from the great inland lakes of the United States, created along the Tennessee River and its tributaries by the building of the huge dams. In 1942 something like 6,000,000 pounds of fish were taken from these lakes for food, and it is estimated that the lakes are capable of a yield of at least 35,000,000 pounds of edible fish annually. This is no mean contribution in these war days of meat shortage. Local fishermen last year caught about 700,000 pounds of spoonbill sturgeon in Wheeler and Wilson Reservoirs, realizing an income in excess of $50,000. In the month of May 1943, four fish dealers handled more than 80,000 pounds of spoonbill, catfish, carp, and buffalo caught from Wheeler, Wilson, and Pickwick Reservoirs, which meant to them an additional income of about $15,000.

The strength of a nation at war depends not alone upon the number of its fighting men and the abundance of its natural resources. It depends not alone upon these things plus the ability to convert them into a powerful war machine. Its strength depends quite as much upon the solid foundation of a strong and well-balanced economic system under which there is a fair degree of prosperity and contentment among the people. This makes for a united nation. The existence of an economic and political system under which all industrious people may live well, and in which they may all play an active part in an atmosphere of freedom, is of the very essence of strength in war as in peace.

Recognizing this, it has been and is the purpose of T. V. A., in the development of the resources of the Tennessee Valley, to work toward the building of a sound economic structure that will contribute to the welfare of all the people of the region and the Nation. It has done this in a democratic way. It has worked toward a balance of agriculture and industry in the region.

The Tennessee Valley area is suitable both for agriculture and for industry. Since the beginning, however, it has been predominantly agricultural. Most of its people have always lived by farming and by extraction of raw materials from the earth. It has a serious deficiency in manufacturing industries. Like the rest of the Southeastern States, it ships out a large balance of raw materials and ships in a large balance of manufactured goods. While in the United States as a whole, manufacture has contributed $188 to the average per capita income of $579, in the Southeastern States manufacture has contributed only $96 to the per capita income. If there were a balance of agriculture and industry in this section of the country, there would be an additional income from manufacture of something like 2½ billion dollars a year, with an additional capital investment of about 10 billion dollars.

This is the great problem of the South, including the Tennessee Valley area. Such a balance would greatly strengthen this region and enable it to contribute more to the general welfare of the country, both in time of war and of peace.

It is the purpose of T. V. A. to make the greatest possible contribution to this end, but in achieving it, something more is necessary than a balance of dollars or of employment statistics. The development of agriculture and industry should go hand in hand. Industry in this region should, so far as possible, process and distribute the products of our farms, our mines, and our streams. It should include the building of sound, cooperative industrial units around products indigenous to the region. It should follow a policy and practice of all-time or part-time employment of members of farm families within convenient distance of the plants, to supplement the low income of these families.

T. V. A. conceives of an agricultural-industrial balance in the Tennessee Valley region, not brought about by uprooting established industries in any other section, not by the centralization of large industries unrelated to the resources of the area. It conceives of a balance that will rest upon the foundation of

a sturdy people serving one another in the growing and processing and distributing in plenty the goods that men live by.

With such an economic background, where there would be freedom of enterprise, cooperation among all occupational groups in a democratic way, and a decent standard of living for all industrious people, there would be the firmest sort of foundation for the defense of the country. Upon such a foundation, with the natural advantages of location, the abundance and variety of highly developed natural resources, and a network of major war industries available for the Nation's defense, there would be in the Tennessee Valley area an American inner fortress of enduring strength.

The Mackinac Island Conference

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 21 (legislative day of Wednesday, September 15), 1943

Mr. GUFFEY. Mr. President, last week a number of editorials and clippings were placed in the RECORD dealing with the historic and momentous Republican conference at Mackinac Island, Mich. Lest we forget, I should like to have printed in the RECORD an editorial from the New Republic entitled "Republicans and Post-War Policy," and an editorial from The Nation beginning with the words "A momentous step was taken by the Republican Party's post-war advisory council at Mackinac Island last week."

I also ask unanimous consent to have inserted in the RECORD, in the same connection, two articles from the Times-Herald, being dispatches from the front during the conference at Mackinac Island, written by John O'Donnell, one under date of September 6, and the other under date of September 7, published in his famous column "Capitol Stuff." In this connection I want to say that both these articles are "capital" stuff.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the New Republic of September 13, 1943]

REPUBLICANS AND POST-WAR POLICY

There is one point to remember, in looking at the Mackinac Island conference of the Republicans on post-war policy. The Republicans have a bad record in regard to unfulfilled promises as to what they would do for international cooperation if they were given the responsibility for the Government. In 1920 a large majority of all Americans were in favor of joining the League of Nations and working to keep the peace. Newspaper polls, the only equivalent that then existed for the present tests of public opinion, showed a majority of about 3 to 1 for the League throughout the country. Even in the United States Senate, the League never had less than a majority, although its opponents were able to block the necessary two-thirds.

In this juncture, a committee of the most distinguished Republican elder statesmen issued a joint declaration. They promised that the Republicans would support international cooperation if they were elected to office. Their Presidential candidate, W. G. Harding, supported the same idea. But once the election was over, these promises were forgotten. The Republicans will have a hard time giving the country an effective guaranty that this will not happen again.

[From the Nation of September 18, 1943]

A momentous step was taken by the Republican Party's post-war advisory council at Mackinac Island last week, and we wish we knew what it was. It had to do with foreign policy, and we have the solemn editorial assurance of the most influential papers that it marked a turning point in the history of the party, which with this remarkable achievement is said to have come of age, to have awakened to its national responsibility, and to have pointed the way to a bright future for all the world. After seven readings of the unanimously adopted report the only achievement we can detect is the council's astonishing success in equivocating at a moment when decisiveness at last seemed inescapable. The delegates voted for "responsible participation by the United States in post-war cooperative organization among sovereign nations." But they hastily added that in the event of a conflict between national interests and international obligations, we must adhere to our own Declaration of Independence, Constitution, and Bill of Rights. Force in international affairs was condemned and a proposal made for the "attainment of a peace that will prevail by virtue of its inherent reciprocal interests and its spiritual foundation * * *." But since no sacrifice of sovereignty was countenanced, we can't imagine what the council would use in place of collective force should some sovereign power fail to reciprocate sufficiently or relax in its appreciation of the spirit. Delegates of the most conflicting views came away from Mackinac rejoicing over the party's escape from a crippling internal row. "But what good came of it at last?' quoth little Peterkin. 'Why that I cannot tell,' said he: 'But 'twas a famous victory.'"

[From the Washington Times-Herald of September 7, 1943]

CAPITOL STUFF

(By John O'Donnell)

MACKINAC ISLAND, MICH., September 6.—If we, God forbid, were Franklin Delano Roosevelt tomorrow morning, we'd be sitting up in our White House bed howling with glee over the breakfast coffee and summoning our bedside companion to share our good news from a political battle front.

From a New Deal standpoint, the latest 1944 campaign news couldn't be better. So far as the New Deal's distinguished foemen of the Republican Party, now gathered at this vacation resort, are concerned, the basic strategy for a G. O. P. victory in 1944 is this: Everything that F. D. R. has done about the war—its origin, its prosecution, its post-war developments—must not be attacked.

They decided to string along with the White House and the White House spokesman.

But everything Roosevelt has done on the domestic front is all wrong. They hope to win by a violent thrust at this sector. And, strangely enough, the G. O. P. is now going all-out in a national campaign to recover State rights, that political child of Jeffersonian democracy which they claim has been kicked out by the New Deal.

The Republican spokesmen at Mackinac, who today went into what they call their shirt-sleeve session in this swanky resort, are sounding a refrain with a Calvin Coolidge touch: "I do not choose to run against the war."

The decision at this writing—but some of the hard-boiled Senators like TAFT, of Ohio, and VANDENBERG, of Michigan, may change it—is: "Our only chance to beat the New Deal is to win on the domestic front."

The boys today talked of the errors of rationing, Government stupidity in the Capitol, but much of it smacked of Alf Landon and the 1936 campaign. As a matter of fact, the orchestra at the Grand Hotel, wherein the Republican Senators, Governors, Congressmen, and party big shots are quartered, struck up Oh, Susanna, Here I Come, a tune which brought a grimace of sour memory as they recalled this Republican campaign song which sounded forth in the days of Roosevelt's greatest of victories.

The important interfamily fight among the G. O. P. group here is being staged by the Republican Governors against the G. O. P. Members of Congress.

The prize at stake is control of the delegates to the national convention.

There are 24 G. O. P. Governors in the Nation, and 19 of them are on this Mackinac scene. The politically lusty Governors are feeling their oats, kicking up their heels, and vigorously pointing out that they are the real symbol of the anti-Roosevelt revolt and represent the sentiments of the voters back home better than the old war horses of Senate and House, who have controlled national conventions in the past.

The Governors' plea is that they are closer to the voters back home. They also point out, rather maliciously, that back before Pearl Harbor they have never made isolationist or noninterventionist commitments or speeches, and proudly point out that they cannot be attacked on the record.

Now, four of these Republican Governors on the scene are potential candidates for the Presidential nomination. These are Dewey, of New York; Bricker, of Ohio; Green, of Illinois; and Warren, of California. Here they are, sparkling, incisive in their observations, each shooting for his particular target in the national spotlight, each modestly side-stepping any definite declaration that he is a forthright candidate for the post.

To a man, this gubernatorial quartet is insisting that Roosevelt must and can be beaten on the domestic front—and then each one of them goes into his own particular song and dance about post-war relations, and the linking of this Nation with the war-or-peace future of our present allies.

California's Earl Warren summed up the joint beliefs of the potential Presidential candidates when he said bluntly—but a bit wistfully:

"The Republicans can and will win in 1944 if the international situation can be divorced from the campaign. The international situation should not be a campaign issue. I'd like to see both parties come to the same conclusion and I hope neither party will use the international situation to tear the country apart."

But each one knows in his heart that Roosevelt will go before the Nation as a war hero and will fight for his fourth term on a front which none of them dares to attack.

Meanwhile, the candidates and the master minds of platform architecture are juggling words, twisting meanings, in order to evolve some tortured phrases which will express sentiments over which neither the "nationalists" nor the "internationalists" among the anti-Roosevelt voters can fight.

Keyword of the platform architecture in the foreign relations plank is "sovereignty." None of the boys, and particularly none of the Presidential candidates, wants to go on the record and proclaim that he is willing

to surrender the sovereignty of the United States of America.

But none of them seems to know exactly what the word "sovereignty" means. All shy away from the idea that any alliance or post-war pact which they propose for the Nation will give a majority of foreigners the right to vote United States into a war against our will.

The two Governors from the seaboard States—Dewey, of New York, and Warren, of California—go farthest in their willingness to back post-war commitments. The Governor from New York and the Governor from the Pacific coast are for straight out-and-out military alliance with Great Britain, and frankly say so.

The term "military alliance" arouses the deep-seated anger of Senator VANDENBERG, of Michigan, who is chairman of the Foreign Relations Policy Committee here, and spurs TAFT, of Ohio, into opposition.

So far as extending the post-war military alliance to Russia and China is concerned, both Dewey and Warren suggest: Let time take care of this, and let us decide after the war is over.

Both Dewey and Warren frankly agree that the military alliance they propose means that we fight if any of our allies are attacked.

Tall, impressive Governor Bricker, of Ohio, whose Presidential candidacy has got its second wind and who is making a definite impression and a favorable one on the Republican bigwigs here, also wants a post-war agreement between the United States and its present allies. He, too, uses the word "fight."

Bricker does not like the phrase "military alliance" in its ordinary diplomatic meaning, but Bricker will support, as he told this correspondent today, "an agreement, understanding, pact, union, anything you want to call it except military alliance, which will bind the United States to our present allies after the war is over so that they will function jointly to control commerce, trade, and all those other sources of possible friction which may lead to war.

"The function of this group, of which the United States will be a member, is to preserve peace," Bricker said. Significantly, he added, "we may have to fight to preserve this peace."

Gov. Dwight Green, of Illinois, another possible Presidential candidate, was farthest away from post-war military alliances. Brushing aside the frank "military alliance" endorsed by Governors Dewey and Warren, as well as the post-war "agreement or pact" proposal of Bricker, Green suggested "correlation between the United States and other nations and their peoples."

"What we need around here are more diplomatic dictionaries," complained the exasperated newspapermen.

The towering, smiling Governor Warren, of California, tossed out the observation, "You don't need dictionaries; you need a crystal ball to read what's going on in some of the minds around here."

Governor Green came through with his definition of his new term: "I have deliberately chosen the word 'correlation' because its literal definition means the establishment of mutual or reciprocal relationships. In an even broader sense, it means the common consent of all those who participate."

[From the Washington Times-Herald of September 8, 1943]

CAPITOL STUFF

(By John O'Donnell)

MACKINAC ISLAND, MICH., September 7.—A very tiny Republican mouse, a timorous mouse in cold fact, and not at all in shape to challenge the Roosevelt lion for White House ownership, was born today after the mountainous 48-hour labors of the G. O. P. post-war advisory council.

The big-shot Republicans came here to map a political battle strategy for the guidance of their national convention which will write a platform and name a candidate with the simple objective of ending the Roosevelt dynasty.

They have wound up the expensive session at this vacation resort hip deep in words, snarled in the barbed wire of tricky verbiage and a bit bewildered as to "why the hell" they came here anyway.

Original plan, of course, was to tear the liver and lights out of their No. 1 political enemy, Franklin Delano Roosevelt. But the whole show moved swiftly into a land of political make-believe when the boys decided that the war and Franklin Roosevelt's connection with its origin, conduct, and results, was not a proper topic to bring before the voters of the Nation.

And so today, in its final session, this council of the G. O. P. adopted a resolution designed to tell the Nation what the Republican Party thought about the part the United States should play in a post-war world.

The resolution was fathered by pre-Pearl Harbor isolationist Senator ARTHUR VANDENBERG, of Michigan. It received the enthusiastic support of violent internationalist Senator WARREN AUSTIN, of Vermont. It gave a senatorial kick in the pants to the gubernatorial trousers of New York's Governor Dewey, who arrived on the peaceful scene bellowing for immediate all-out G. O. P. adoption of the foreign relations views of internationalist Walter Lippmann, with, above everything else, post-war military alliance with Great Britain.

The resolution was so carefully hedged about with qualifications that both hard-boiled isolationists and ardent internationalists clapped hands and chanted "that's what I wanted all the time." And the reason for this was that all the quarreling members of the G. O. P. could interpret the words just the way they wanted. It was something out of Alice in Wonderland.

The gist of the G. O. P. declaration on post-war foreign policy is this:

"One. Prosecution of the war by the United Nations to conclusive victory over all our enemies, including (A) disarmament and disorganization of the armed forces of the Axis;

"(B) Disqualification of the Axis to construct facilities for the manufacture of the implements of war;

"(C) Permanent maintenance of trained and well-equipped armed forces at home;

"Two. Responsible participation by the United States in post-war cooperative organization among sovereign nations to prevent military aggression and to attain permanent peace with organized justice in a free world."

The key words in this resolution are the commitment of the United States to "cooperative organization among sovereign nations."

This pleased its Papa VANDENBERG because it means to him that the United States will preserve its "sovereign rights" (the worthies haven't been able to agree on what that means) and more importantly will be able, in the Senator's words, "to have its freedom of action at all times, its entry into any future war to be decided only by the American people."

And it also pleased Senator VANDENBERG because it didn't follow the course suggested by Governor Dewey, of New York, and Governor Warren, of California, that we leap pronto into a permanent military alliance which would pledge us to go to war by the side of Great Britain any time London went on the march anyway at any time.

But neither Governor Dewey nor Governor Warren objected to it and neither did that other Presidential candidate, Governor Bricker, of Ohio.

The Republican Governors, of course, had been getting under the hide of the Senators and Congressmen by this time. There are 24 Republican Governors in the Nation and 18 of them are on the scene, and every manjack of them thinks that the Presidential lightning may strike him at the next convention. (And there is the snide rumor from the anti-Willkie forces that Wendell has already promised 12 of the Governors his Vice Presidential backing if they will get behind him for the No. 1 spot on the ticket.)

The beauty of it is, you can interpret the resolution to support anything you happen to be for, complacently observed one Republican Congressman as he came sweating from the council room.

"As an American firster, I am satisfied with it," proclaimed Representative CLARE HOFFMAN, of Michigan, long and bitter foe of the Roosevelt dynasty.

Willkie apostles, Governors Baldwin, of Connecticut, and Maine's dapperly mustached Sewall, came out for the Vandenberg resolution. Speaking for the two, Governor Baldwin declared:

"I understand the phrase 'cooperative organization' to mean that the Republican Party looks forward in the post-war world to some form of international organization, call it what you will, joining the United States with other sovereign nations, for the establishment and perpetuation of peace.

"I raised some question about the phrase 'organized justice.' After questions, I understand that the phrase means that the Republican Party, in its foreign policy, is committed in the future to some form of world court or call it what you will, that will be established by sovereign nations to decide disputes among nations in the interest of peace."

Only 12 hours earlier, Governors Baldwin, Sewall, and Wills, of Vermont, had roared forth a declaration which smacked suspiciously of Willkie, that this council must go on record as favoring "a council of nations, a world court, and enforcement of decisions by such court by the collaboration of the military, naval and air power of the nations of the world."

Ohio's Senator TAFT, the only Republican who has publicly denounced the White House thesis that we are fighting for Roosevelt's personal "four freedoms" or the Atlantic Charter, said that he was satisfied with the post-war resolution.

TAFT, like VANDENBERG, wished to go farther and make specific in plain, simple words, a declaration that the Republican Party will oppose any foreign entanglements which would commit this Nation to a war by the action of foreigners over whom we have no control. But such vigor would have aroused the anger of the internationalists. Hence the mealy mouthed compromise.

Before the resolution was formally adopted by the full council, Maine's internationalist, Governor Sewall, said he was going along only because he had assurance from VANDENBERG that the resolution left the door open for the United States to yield some of its sovereignty in a post-war world organization.

This drew the quick comeback from VANDENBERG that the very fact of sovereignty "includes the right to part with any portion of it. That in itself is an act of sovereignty," VANDENBERG declared.

By that time the members were thoroughly befuddled, so the resolution passed and the worthy gentlemen adjourned to the cocktail

lounge to argue their personal definitions of the word sovereignty.

The Republican Governors tested their strength and won in a sharp conflict with the G. O. P. ancients from Capitol Hill in the battle over the resolution on domestic front policy.

Senator TAFT had a resolution already written but it was promptly kicked around when brought to the floor and, much to the surprise of all, including the insurgents who were testing out the strength of the old-line organization, they bulled through a motion that it be rewritten.

It was New York's Dewey who pointed out that the resolution lacked force and exactness—which it certainly did.

As finally adopted, the G. O. P. domestic program, proposed as a substitute for present White House policy, calls for immediate increase in food production, directed by a single agency, clothed with full power over food in all of its aspects during the war emergency.

Farm provisions of the resolution—these were drawn up by two important newcomers to the G. O. P. national organization—Governors Hickenlooper, of Iowa, and Griswold, of Nebraska—sharply condemned the Roosevelt administration.

They damned the Roosevelt policies on farm manpower, restrictions on manufacture of farm machinery, and "inexpert price regulation." These, they declared, were keeping food from the domestic market baskets of the Nation.

Normal channels of trade, said the final course, have been disrupted by "bungling regulations" of the Federal Government.

The G. O. P. also went down the line for State rights, a political issue once considered the exclusive property of the Democratic party. Then it hit at the White House with these election-year resolutions which:

Threatened the United States with "fascism" if the New Deal policies with respect to the ever-increasing bureaucratic power in Washington were continued

Denounced "the political effort to reduce United States labor to the European level of a class-conscious, vote-shackled proletariat."

Promised "fair and equitable labor laws."

Promised "elimination of all unnecessary regulation of the individual and of business."

Accused the Roosevelt administration of aiming at complete socialization of "business, agriculture, and the professions."

Beautiful Isle of Cuba Is Pearl of the Antilles

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 21, 1943

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article published in the Michigan State Digest, Lansing, Mich., under date of September 9, 1943, written by Ed A. Nowack, entitled "Beautiful Isle of Cuba Is Pearl of the Antilles."

Let me call your attention to the fact that Senator ARTHUR H. VANDENBERG, of Michigan, in paying tribute to this island, says "Cuba is one of the rarest flowers in the global garden."

The article, written by Mr. Nowack, follows:

INSIDE VIEW OF THE ISLAND REPUBLIC'S POLITICAL LIFE—PRESIDENT FULGENCIO BATISTA OF CUBA, AND THE 1944 NATIONAL ELECTION, CONSIDERED IN THE LIGHT OF REVEALED FACTS—TWO MILLIONS OF QUALIFIED VOTERS

(By Ed A. Nowack)

HAVANA, CUBA, September 9.—Upon different occasions recently, President Fulgencio Batista, of Cuba, has reiterated that he would not consider being a candidate to succeed himself in 1944, when Cuba's second presidential election under the new 1940 constitution will take place. To many persons that statement may have sounded like a bid for nomination, or an entirely unnecessary statement of an obvious fact, since Cuba's new 1940 constitution expressly makes a president ineligible for another term until 4 years after he has ceased to be president. As a matter of fact it was neither a bid for another term nor an unnecessary statement of the obvious. In a world in which the heads of states still permit interested parties around them to convince them that their countries have no other citizens honest enough, strong enough, patriotic enough, or able enough to take over the effective running of the affairs of the nation, but especially in the Spanish-American countries where constitutions are discarded or revamped at will to permit whatever the leaders may want to do, President Batista's reassurances to his people are necessary to keep them convinced that he is not going to use his immense political power to overrun the small fraction of the voting strength still opposed to him in each house of the congress and among Cuba's 2,000,000 qualified voters.

Among observers of local politics in Cuba and abroad will be found those who say Señor Batista is one smooth cucumber, shrewd as sin, and resourceful as Satan. There are other observers who insist that President Fulgencio Batista, for all that, and brushing aside any human desire to maintain himself as head of state, cannot and will not forget the principles for which he fought in 1933, which resulted in the overthrow of dead ex-President Gerardo Machado.

Among those principles the former army sergeant had written the belief that Cubans should be assured of their right to select their leaders by popular vote at regular intervals. Those who really know President Batista, and appreciate his unswerving belief in those principles, will tell you that next year's elections here in Cuba will produce a new president, selected by popular vote. All the power Batista has acquired while president, power which easily could enable him to work his will in any election, will not be exercised for purposes of perpetuating himself in office, his intimates declare.

REVIEW OF ELECTION FIGURES DISCLOSES BATISTA'S POWER

A review of the 1940 presidential election figures and of the coalitions that followed are interesting for they prove that President Batista actually is in control of the politics in Cuba.
